FOR THE FINANCIAL YEAR ENDED DECEMBER 31, 2011

Commission file number: 1-14846

AngloGold Ashanti Limited

(Exact Name of Registrant as Specified in its Charter)

Republic of South Africa

(Jurisdiction of Incorporation or Organization)

76 Jeppe Street, Newtown, Johannesburg, 2001

(P.O. Box 62117, Marshalltown, 2107)

South Africa

(Address of Principal Executive Offices)

Lynda Eatwell, Company Secretary, Telephone: +27 11 6376128, Facsimile: +27 11 6376677

E-mail: leatwell@anglogoldashanti.com, 76 Jeppe Street, Newtown, Johannesburg, 2001, South Africa

(Name, Telephone, E-mail and/or Facsimile number and Address of Company Contact Person)

Securities registered pursuant to Section 12(b) of the Act:

Title of each class
American Depositary Shares

Name of each exchange on which registered
New York Stock Exchange

Edgar Filing: ANGLOGOLD ASHANTI LTD - Form 20-F

Ordinary Shares

New York Stock Exchange*

6.00 Percent Mandatory Convertible Subordinated Bonds due 2013

New York Stock Exchange

* Not for trading, but only in connection with the registration of American Depositary Shares pursuant to the requirements of the Securities and Exchange Commission

Securities registered pursuant to Section 12(g) of the Act:

None

Securities for which there is a reporting obligation pursuant to Section 15(d) of the Act:

None

Indicate the number of outstanding shares of each of the issuer's classes of capital or common stock as of the close of the period covered by the annual report:

Ordinary Shares of 25 ZAR cents each	382,242,343
E Ordinary Shares of 25 ZAR cents each	2,582,962
A Redeemable Preference Shares of 50 ZAR cents each	2,000,000
B Redeemable Preference Shares of 1 ZAR cent each	778,896

Indicate by check mark if the registrant is a well-known seasoned issuer, as defined in Rule 405 of the Securities Act.

Yes No

If this report is an annual or transition report, indicate by check mark if the registrant is not required to file reports pursuant to Section 13 or 15(d) of the

Securities Exchange Act of 1934.

Yes No

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing

requirements for the past 90 days.

Yes No

Indicate by check mark whether the registrant (1) has submitted electronically and posted on its corporate web site, if any, every Interactive Data File required to be submitted and posted pursuant to Rule 405 of Regulation S-T during the preceding 12 months (or for such shorter period that the registrant was

required to submit and post such files).

Yes No

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, or a non-accelerated filer. See definition of "accelerated filer and large accelerated filer" in Rule 12b-2 of the Exchange Act.

(Check one): Large Accelerated Filer Accelerated Filer Non-Accelerated Filer

Indicate by check mark which basis of accounting the registrant has used to prepare the financial statements included in this filing:

U.S. GAAP

International Financial Reporting Standards as issued by the International Accounting Standards Board "Other"

If this is an annual report, indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Exchange Act). Yes No

PRESENTATION OF INFORMATION

AngloGold Ashanti Limited

In this annual report on Form 20-F, unless the context otherwise requires, references to AngloGold or AngloGold Ashanti, the company or the Company and the group, are references to AngloGold Ashanti Limited or, as appropriate, subsidiaries and associate companies of AngloGold Ashanti.

US GAAP financial statements

The audited consolidated financial statements contained in this annual report on Form 20-F for the years ended December 31, 2011, 2010 and 2009 and as at December 31, 2011 and 2010 have been prepared in accordance with U.S. generally accepted accounting principles (US GAAP).

IFRS financial statements

As a company incorporated in the Republic of South Africa, AngloGold Ashanti also prepares annual audited consolidated financial statements and unaudited consolidated quarterly financial statements in accordance with International Financial Reporting Standards (IFRS) as issued by the International Accounting Standards Board (IASB). These financial statements (referred to as IFRS statements) are distributed to shareholders and are submitted to the JSE Limited (JSE), as well as the London, New York, Australian and Ghana stock exchanges and are furnished to the US Securities and Exchange Commission (SEC) on Form 6-K.

Currency

AngloGold Ashanti presents its consolidated financial statements in United States dollars.

In this annual report, references to rands, ZAR and R are to the lawful currency of the Republic of South Africa, references to US dollars, dollar or \$ are to the lawful currency of the United States, references to € are to the lawful currency of the European Union, references to C\$ or CAD are to the lawful currency of Canada, references to ARS and peso are to the lawful currency of Argentina, references to AUD and A\$ are to the lawful currency of Australia, references to BRL are to the lawful currency of Brazil, NAD and N\$ are the lawful currency of Namibia, reference to Tsh is to the lawful currency of the United Republic of Tanzania and references to GHC, cedi or ¢ are to the lawful currency of Ghana.

See Item 3A.: Selected financial data Exchange rate information for historical information regarding the US dollar/South African rand exchange rate. On April 16, 2012 the interbank US dollar/South African rand exchange rate as reported by OANDA Corporation was R7.90/\$1.00.

Non-GAAP financial measures

In this annual report on Form 20-F, AngloGold Ashanti presents the financial items total cash costs, total cash costs per ounce, total production costs and total production costs per ounce which have been determined using industry guidelines and practices promulgated by the Gold Institute and are not US GAAP measures. An investor should not consider these items in isolation or as alternatives to production costs, net income/(loss) applicable to common shareholders, income/(loss) before income tax provision, net cash provided by operating activities or any other measure of financial performance presented in accordance with US GAAP. While the Gold Institute has provided definitions for the calculation of total cash costs and total production costs, the calculation of total cash costs, total cash costs per ounce, total production costs and total production costs per ounce may vary significantly among gold mining companies, and by themselves do not necessarily provide a basis for comparison with other gold mining companies. See Glossary of selected terms Financial terms Total cash costs and Total production costs and Item 5A.: Operating results Total cash costs and total production costs.

Shares and shareholders

In this annual report on Form 20-F, references to ordinary shares, ordinary shareholders and shareholders/members, should be read as common stock, common stockholders and stockholders, respectively, and vice versa.

Table of Contents

CERTAIN FORWARD-LOOKING STATEMENTS

Certain statements contained in this document, other than statements of historical fact, including, without limitation, those concerning the economic outlook for the gold mining industry, expectations regarding gold prices, production, cash costs and other operating results, growth prospects and outlook of AngloGold Ashanti's operations, individually or in the aggregate, including the completion and commencement of commercial operations of certain of AngloGold Ashanti's exploration and production projects and completion of acquisitions and dispositions, AngloGold Ashanti's liquidity and capital resources and capital expenditure, and the outcome and consequence of any potential or pending litigation or regulatory proceedings, are forward-looking statements regarding AngloGold Ashanti's operations, economic performance and financial condition.

These forward-looking statements involve known and unknown risks, uncertainties and other factors that may cause AngloGold Ashanti's actual results, performance or achievements to differ materially from the anticipated results, performance or achievements expressed or implied in these forward-looking statements. Although AngloGold Ashanti believes that the expectations reflected in such forward-looking statements are reasonable, no assurance can be given that such expectations will prove to have been correct. Accordingly, results could differ materially from those set out in the forward-looking statements as a result of, amongst other factors, changes in economic and market conditions, success of business and operating initiatives, changes in the regulatory environment and other government actions, fluctuations in gold prices and exchange rates, and business and operational risk management and other factors as determined in Item 3D.: Risk factors and elsewhere in this annual report. These factors are not necessarily all of the important factors that could cause AngloGold Ashanti's actual results to differ materially from those expressed in any forward-looking statements. Other unknown or unpredictable factors could also have material adverse effects on future results. Consequently, readers are cautioned not to place undue reliance on forward-looking statements.

AngloGold Ashanti undertakes no obligation to update publicly or release any revisions to these forward-looking statements to reflect events or circumstances after the date of this annual report or to reflect the occurrence of unanticipated events, except to the extent required by applicable law. All subsequent written or oral forward-looking statements attributable to AngloGold Ashanti or any person acting on its behalf are qualified by the cautionary statements herein.

Table of Contents

GLOSSARY OF SELECTED TERMS

The following explanations are not intended as technical definitions but should assist the reader in understanding terminology used in this annual report. Unless expressly stated otherwise, all explanations are applicable to both underground and surface mining operations.

Mining terms

All injury frequency rate: The total number of injuries and fatalities that occurs per million hours worked.

BIF: Banded Ironstone Formation. A chemically formed iron-rich sedimentary rock.

By-products: Any products that emanate from the core process of producing gold, including silver, uranium and sulfuric acid.

Calc-silicate rock: A metamorphic rock consisting mainly of calcium-bearing silicates such as diopside and wollastonite, and formed by metamorphism of impure limestone or dolomite.

Carbon-in-leach (CIL): Gold is leached from a slurry of gold ore with cyanide in agitated tanks and adsorbed on to carbon granules in the same circuit. The carbon granules are separated from the slurry and treated in an elution circuit to remove the gold.

Carbon-in-pulp (CIP): Gold is leached conventionally from a slurry of gold ore with cyanide in agitated tanks. The leached slurry then passes into the CIP circuit where carbon granules are mixed with the slurry and gold is adsorbed on to the carbon. The granules are separated from the slurry and treated in an elution circuit to remove the gold.

Comminution: Comminution is the crushing and grinding of ore to make gold available for treatment. (See also [Milling](#)).

Contained gold: The total gold content (tons multiplied by grade) of the material being described.

Cut-off grade (surface mines): The minimum grade at which a unit of ore will be mined to achieve the desired economic outcome.

Edgar Filing: ANGLOGOLD ASHANTI LTD - Form 20-F

Depletion: The decrease in the quantity of ore in a deposit or property resulting from extraction or production.

Development: The process of accessing an orebody through shafts and/or tunneling in underground mining operations.

Diorite: An igneous rock formed by the solidification of molten material (magma).

Doré: Impure alloy of gold and silver produced at a mine to be refined to a higher purity, usually consisting of 85 percent gold on average.

Electro-winning: A process of recovering gold from solution by means of electrolytic chemical reaction into a form that can be smelted easily into gold bars.

Elution: Recovery of the gold from the activated carbon into solution before zinc precipitation or electro-winning.

Gold Produced: Refined gold in a saleable form derived from the mining process.

Grade: The quantity of gold contained within a unit weight of gold-bearing material generally expressed in ounces per short ton of ore (oz/t), or grams per metric tonne (g/t).

Greenschist: A schistose metamorphic rock whose green color is due to the presence of chlorite, epidote or actinolite.

Table of Contents

Leaching: Dissolution of gold from crushed or milled material, including reclaimed slime, prior to adsorption on to activated carbon.

Life of mine (LOM): Number of years for which an operation is planning to mine and treat ore, and is taken from the current mine plan.

Metallurgical plant: A processing plant constructed to treat ore and extract gold.

Milling: A process of reducing broken ore to a size at which concentrating can be undertaken. (See also Comminution).

Mine call factor: The ratio, expressed as a percentage, of the total quantity of recovered and unrecovered mineral product after processing with the amount estimated in the ore based on sampling. The ratio of contained gold delivered to the metallurgical plant divided by the estimated contained gold of ore mined based on sampling.

Mineral deposit: A mineral deposit is a concentration (or occurrence) of material of possible economic interest in or on the earth's crust.

Ore Reserve: That part of a mineral deposit which could be economically and legally extracted or produced at the time of the Ore Reserve determination.

Ounce (oz) (troy): Used in imperial statistics. A kilogram is equal to 32.1507 ounces. A troy ounce is equal to 31.1035 grams.

Pay limit: The grade of a unit of ore at which the revenue from the recovered mineral content of the ore is equal to the sum of total cash costs, closure costs, Ore Reserve development and stay-in-business capital. This grade is expressed as an in-situ value in grams per tonne or ounces per short ton (before dilution and mineral losses).

Precipitate: The solid product of chemical reaction by fluids such as the zinc precipitation referred to below.

Probable Ore Reserve: Ore Reserve for which quantity and grade are computed from information similar to that used for Proven Reserves, but the sites for inspection, sampling, and measurement are further apart or are otherwise less adequately spaced. The degree of assurance, although lower than that for Proven Reserves, is high enough to assume continuity between points of observation.

Productivity: An expression of labor productivity based on the ratio of grams of gold produced per month to the total number of employees in mining operations.

Proven Ore Reserve: Ore Reserve for which the (a) quantity is computed from dimensions revealed in outcrops, trenches, workings or drill holes; grade is computed from the results of detailed sampling and (b) the sites for inspection, sampling and measurement are spaced so closely and the geologic character is so well defined that size, shape, depth and mineral content of the Ore Reserve are well established.

Project capital: Capital expenditure to either bring a new operation into production; to materially increase production capacity; or to materially extend the productive life of an asset.

Reclamation: In the South African context, reclamation describes the process of reclaiming slimes (tailings) dumps using high-pressure water cannons to form a slurry which is pumped back to the metallurgical plants for processing.

Recovered grade: The recovered mineral content per unit of ore treated.

Reef: A gold-bearing sedimentary horizon, normally a conglomerate band that may contain economic levels of gold.

Refining: The final purification process of a metal or mineral.

Table of Contents

Rehabilitation: The process of reclaiming land disturbed by mining to allow an appropriate post-mining use. Rehabilitation standards are defined by country-specific laws, including but not limited to the South African Department of Mineral Resources, the US Bureau of Land Management, the US Forest Service, and the relevant Australian mining authorities, and address among other issues, ground and surface water, topsoil, final slope gradient, waste handling and re-vegetation issues.

Seismic event: A sudden inelastic deformation within a given volume of rock that radiates detectable seismic energy.

Shaft: A vertical or subvertical excavation used for accessing an underground mine; for transporting personnel, equipment and supplies; for hoisting ore and waste; for ventilation and utilities; and/or as an auxiliary exit.

Short ton: Used in imperial statistics. Equal to 2,000 pounds.

Skarn: A rock of complex mineralogical composition, formed by contact metamorphism and metasomatism of carbonate rocks.

Smelting: A pyro-metallurgical operation in which gold is further separated from impurities.

Stope: Underground excavation where the orebody is extracted.

Stoping: The process of excavating ore underground.

Syngenetic: Formed contemporaneously with the deposition of the sediment.

Tailings: Finely ground rock of low residual value from which valuable minerals have been extracted.

Tailings dam (slimes dam): Dam facilities designed to store discarded tailings.

Tonne: Used in metric statistics. Equal to 1,000 kilograms.

Tonnage: Quantity of material measured in tonnes or tons.

Waste: Material that contains insufficient mineralization for consideration for future treatment and, as such, is discarded.

Yield: The amount of valuable mineral or metal recovered from each unit mass of ore expressed as ounces per short ton or grams per metric tonne.

Zinc precipitation: Zinc precipitation is the chemical reaction using zinc dust that converts gold in solution to a solid form for smelting into unrefined gold bars.

Table of Contents

Financial terms

Average number of employees: The monthly average number of production and non-production employees and contractors employed during the year, where contractors are defined as individuals who have entered into a fixed-term contract of employment with a group company or subsidiary. Employee numbers of joint ventures represents the group's attributable share.

Capital expenditure: Total capital expenditure on tangible assets.

Discontinued operation: A component of an entity that, pursuant to a single plan, has been disposed of or abandoned or is classified as held for sale until conditions precedent to the sale have been fulfilled.

Effective tax rate: Current and deferred taxation as a percentage of profit before taxation.

Monetary asset: An asset which will be settled in a fixed or easily determinable amount of money.

OANDA: An internet-based provider of forex trading and currency information services.

Rated bonds: The \$700 million 5.375 percent bonds due 2020 and the \$300 million 6.5 percent bonds due 2040.

Region: Defines the operational management divisions within AngloGold Ashanti Limited, namely South Africa, Continental Africa (Ghana, Guinea, Mali, Namibia and Tanzania), Australasia, and the Americas (Argentina, Brazil and United States of America).

Related party: Parties are considered related if one party has the ability to control the other party or exercise significant influence over the other party in making financial and operating decisions.

Significant influence: The ability, directly or indirectly, to participate in, but not exercise control over, the financial and operating policy decision of an entity so as to obtain economic benefit from its activities.

Edgar Filing: ANGLOGOLD ASHANTI LTD - Form 20-F

STRATE: The licensed Central Securities Depository (CSD) for the electronic settlement of financial instruments in South Africa.

Total cash costs: Total cash costs include site costs for all mining, processing and administration, reduced by contributions from by-products and are inclusive of royalties and production taxes. Depreciation, depletion and amortization, rehabilitation, corporate administration, employee severance costs, capital and exploration costs are excluded. Total cash costs per ounce are the attributable total cash costs divided by the attributable ounces of gold produced.

Total production costs: Total cash costs plus depreciation, depletion and amortization, employee severance costs, rehabilitation and other non-cash costs. Corporate administration and exploration costs are excluded. Total production costs per ounce are the attributable total production costs divided by the attributable ounces of gold produced.

Weighted average number of ordinary shares: The number of ordinary shares in issue at the beginning of the year, increased by shares issued during the year, weighted on a time basis for the period during which they have participated in the income of the group, and increased by share options that are virtually certain to be exercised.

(1) Includes the acquisition of 15 percent minority interest acquired in the Iduapriem and Teberebie mine with effect from September 1, 2007.

(2) 2008 results included the acquisition of the remaining 33 percent shareholding in the Cripple Creek and Victor Gold Mining Company with effect from July 1, 2008. In prior years, the investment was consolidated as a subsidiary. The 2008 accounting treatment is therefore consistent with that of prior years.

(3) Product sales represent revenue from the sale of gold.

(4) Operating costs include production costs, exploration costs, related party transactions, general and administrative, market development costs, research and development, employment severance costs and other.

(5) The calculations of basic and diluted (loss)/earnings per common share are described in note 8 to the consolidated financial statements. Income/(loss) per common share. Amounts reflected exclude E Ordinary shares.

(6) Includes noncontrolling interests.

Table of Contents**Annual dividends**

The table below sets forth the amounts of interim, final and total dividends paid in respect of the past five years in cents per ordinary share. In respect of 2011, AngloGold Ashanti's board of directors declared two dividends of 90 South African cents per ordinary share, one in August 2011 and the other in November 2011. A fourth quarter dividend of 200 South African cents per ordinary share was declared on February 14, 2012, with a record date of March 11, 2012 and a payment date of March 16, 2012.

Year ended December 31⁽¹⁾	2007	2008	2009	2010	2011

3D. RISK FACTORS

This section describes many of the risks that could affect AngloGold Ashanti. There may however be additional risks unknown to AngloGold Ashanti and other risks, currently believed to be immaterial, that could turn out to be material. These risks, either individually or simultaneously, could significantly affect the group's business, financial results and the price of its securities.

Risks related to AngloGold Ashanti's results of operations and its financial condition as a result of factors that impact the gold mining industry generally.

Commodity market price fluctuations could adversely affect the profitability of operations.

AngloGold Ashanti's revenues are primarily derived from the sale of gold and, to a lesser extent uranium, silver and sulfuric acid. The company's current policy is to sell its products at prevailing market prices and not to enter into price hedging arrangements. The market prices for these commodities fluctuate widely. These fluctuations are caused by numerous factors beyond the company's control. For example, the market price of gold may change for a variety of reasons, including:

- speculative positions taken by investors or traders in gold;
- monetary policies announced or implemented by central banks, including the US Federal Reserve;
- changes in the demand for gold as an investment or as a result of leasing arrangements;
- changes in the demand for gold used in jewellery and for other industrial uses, including as a result of prevailing economic conditions;
- changes in the supply of gold from production, divestment, scrap and hedging;
- financial market expectations regarding the rate of inflation;
- strength of the US dollar (the currency in which the gold price trades internationally) relative to other currencies;
- changes in interest rates;
- actual or anticipated sales or purchases of gold by central banks and the International Monetary Fund;
- gold hedging and de-hedging by gold producers;
- global or regional political or economic events; and
- the cost of gold production in major gold producing countries.

The market price of gold has been and continues to be significantly volatile. During 2011, the gold price traded from a low of \$1,313 per ounce to a high of \$1,900 per ounce. On December 30, 2011, the closing price was \$1,563 per ounce. The price of gold is often subject to sharp, short-term changes as a result of speculative activities. For example, in early March 2012, the price of gold dropped by almost \$100 per ounce in one day. While the overall supply of and demand for gold can affect its market price, the considerable size of historical mined stocks of the metal means that these factors typically do not affect the gold price in the same manner or degree as for other commodities. In addition, the shift in demand from physical gold to investment and speculative demand may exacerbate the volatility of the gold price.

In 2011, price volatility dampened demand in the key jewellery markets of India and China, which both experienced mixed fortunes during the year. In the fourth quarter of 2011 and into 2012, gold appeared to trade as a risk asset, experiencing selling pressure in times of heightened turmoil, rather than as the safe haven asset it is generally deemed to be.

A sustained period of significant gold price volatility may adversely affect the company's ability to evaluate the feasibility of undertaking new capital projects, or the continuing of existing operations, or to make other long-term strategic decisions. The use of lower gold prices in reserve calculations and life-of-mine plans could result in material write-downs of the company's investment in mining properties and increased amortization, reclamation and closure charges.

Table of Contents

The spot price of uranium has been significantly volatile in past years. During 2011, the price varied between a low of about \$47 per pound and a high of \$72 per pound. Uranium prices can be affected by several factors, including demand for nuclear reactors, uranium production shortfalls and restocking by utilities. Events like those surrounding the earthquake and tsunami that occurred in Japan in 2011 can also have a material impact on the price of and demand for uranium.

The price of silver has also experienced significant fluctuations. From a low of \$26 per ounce in January 2011, the price rose steadily to reach a high of \$49 per ounce in April 2011. By December 2011, the price had dropped to around \$28 per ounce again. Factors affecting the price of silver include investor demand, physical demand for silver bars, industrial and retail off take, and silver coin minting.

If revenue from sales of gold, uranium, silver and sulfuric acid falls below the cost of production for an extended period, AngloGold Ashanti may experience losses and be forced to change its dividend payment policies and curtail or suspend some or all of its exploration capital projects and existing operations. Declining commodities prices may also force a reassessment of the feasibility of a particular project, which could cause substantial delays or interrupt operations until the reassessment can be completed.

Foreign exchange fluctuations could have a material adverse effect on operational results and financial condition.

Gold is principally a dollar-priced commodity and most of the company's revenues are realized in, or linked to, dollars while production costs are largely incurred in the local currency where the relevant operation is located. Given the company's global operations and local foreign exchange regulations, some of its funds are held in local currencies, such as the South African rand, Ghanaian cedi, Brazilian real, Argentinean peso and the Australian dollar. The weakening of the dollar, without a corresponding increase in the dollar price of gold against these local currencies, results in higher production costs in dollar terms. Conversely, the strengthening of the dollar, without a corresponding decrease in the dollar price of gold against these local currencies, yields lower production costs in dollar terms.

Exchange rate movements may have a material impact on AngloGold Ashanti's operating results. For example, a 1 percent strengthening of either the South African rand, Brazilian real, the Argentinean peso and the Australian dollar against the US dollar will, other factors remaining equal, result in an increase in total cash costs under IFRS of around \$5 per ounce or approximately 1 percent of the company's total cash costs. The impact on cash costs determined under US GAAP may be different.

The profitability of operations and the cash flows generated by these operations are significantly affected by fluctuations in input production prices, many of which are linked to the prices of oil and steel.

Fuel, energy and consumables, including diesel, heavy fuel oil, chemical reagents, explosives, tires, steel and mining equipment consumed in mining operations form a relatively large part of the operating costs and capital expenditure of any mining company.

AngloGold Ashanti has no influence over the cost of these consumables, many of which are linked to some degree to the price of oil and steel.

The price of oil has recently been volatile, fluctuating between \$94 and \$122 per barrel of Brent crude in 2011. AngloGold Ashanti estimates that for each \$1 per barrel rise in the oil price, other factors remaining equal, the average cash costs under IFRS of all its operations increases by about \$0.70 per ounce with the cash costs of certain of the company's mines, particularly Geita, Cripple Creek & Victor, Siguiri and Sadiola, which, being more dependent on fuel, are more sensitive to changes in the price of oil.

Furthermore, the price of steel has also been volatile. Steel is used in the manufacture of most forms of fixed and mobile mining equipment, which is a relatively large contributor to the operating costs and capital expenditure of a mine. For example, the price of flat hot rolled coil (North American Domestic FOB) steel traded between \$635 per tonne and \$875 per tonne in 2011.

Fluctuations in oil and steel prices have a significant impact on operating costs and capital expenditure estimates and, in the absence of other economic fluctuations, could result in significant changes in the total expenditure estimates for new mining projects or render certain projects non-viable.

Table of Contents

Energy cost increases and power fluctuations and stoppages could adversely impact the company's results of operations and its financial condition.

Increasing global demand for energy, concerns about nuclear power, and the limited growth of new supply are impacting the price and supply of energy. The transition of emerging markets to higher energy consumption, carbon taxation as well as unrest and potential conflict in the Middle East could result in constrained supply and sharply escalating oil and energy prices.

AngloGold Ashanti's mining operations are substantially dependent upon electrical power generated by local utilities or by power plants situated at some of its operations. The unreliability of these local sources of power can have a material effect on the company's operations, as large amounts of power are required for exploration, development, extraction, processing and other mining activities on the company's properties.

In South Africa, the company's operations are dependent on electricity supplied by one national power generation company, Eskom the state-owned utility. Electricity is used for most business and safety-critical operations that include cooling, hoisting and dewatering. Loss of power could therefore impact production, employee safety and prolonged outages could lead to flooding of workings and ore sterilization. In 2008, Eskom warned it could no longer guarantee the availability of electricity to the South African mining industry. A warning of the very high risk of blackouts was re-issued at the start of 2011. While a national energy conservation program is in place, Eskom cannot guarantee that there will be no power interruptions. In 2008, AngloGold Ashanti and other mining companies operating in South Africa were forced to temporarily suspend mining operations at their mines, after which the company implemented various initiatives at its South African mines to reduce electricity consumption while operating at full capacity. AngloGold Ashanti cannot offer assurance that the power supply to its South African operations will not be curtailed or interrupted again.

Eskom and the National Energy Regulator of South Africa (NERSA) recognize the need to increase electricity supply capacity and a series of tariff increases and proposals have been enacted to assist in the funding of this expansion. In 2010, NERSA approved an annual increase of 24.8 percent for 2010, 25.8 percent for 2011 and 25.9 percent for 2012 and is now reportedly considering requesting another two similar increases, one each in 2013 and 2014. As energy represents a large proportion of the company's operating costs in South Africa, these increases have an adverse impact on the cash costs of its South African operations.

The company has also identified a risk of energy shortages in Argentina and the DRC. Furthermore, the company's operations in Ghana depend on hydroelectric power supplied by the state-controlled Volta River Authority (VRA), which is supplemented by thermal power from the Takoradi plant and a smaller unit at Tema. During periods of below average inflows from the Volta reservoir, electricity supplies from the Akosombo Dam, the VRA's primary generation source, may be curtailed as occurred in 1998, 2006 and the first half of 2007. During periods of limited electricity availability, the grid is subject to disturbances and voltage fluctuations which can damage equipment. In the past, the VRA has obtained power from neighboring Côte d'Ivoire, which has intermittently experienced political instability and civil unrest. AngloGold Ashanti negotiates rates directly with the VRA and there can be no assurance that the VRA will agree to a satisfactory rate during future rounds of negotiations.

The company's mining operations in Guinea, Tanzania and Mali are dependent on power supplied by outside contractors and supplies of fuel are delivered by road. Power supplies have been disrupted in the past, resulting in production losses due to equipment failure.

Increased energy prices could negatively impact operating costs and cash flow of AngloGold Ashanti's operations.

Global economic conditions could adversely affect the profitability of operations.

AngloGold Ashanti's operations and performance depend significantly on worldwide economic conditions. The global financial markets have recently experienced increased volatility due to uncertainty surrounding the level and sustainability of the sovereign debt of various countries. In addition, some economists, observers and market participants have expressed concern regarding the sustainability of the European Monetary Union and its common currency, the euro, in their current form. These conditions and other disruptions to international credit markets and financial systems have caused a loss of investor confidence and resulted in widening credit spreads, a lack of price transparency, increased credit losses and tighter credit conditions. Despite the aggressive measures taken by governments and central banks thus far, economic recovery has been extremely slow. A significant risk remains that these measures may not prevent the global economy from falling back into an even deeper and longer lasting recession or even a depression.

Table of Contents

A global economic downturn may have follow-on effects on AngloGold Ashanti's business that include inflationary cost pressures and commodity market fluctuations.

Other effects could, for example, include:

- the insolvency of key suppliers or contractors which could result in contractual breaches and in a supply chain breakdown;
- the insolvency of our joint venture partners which could result in contractual breaches and disruptions at the operations of our joint ventures;
- other income and expense which could vary materially from expectations, depending on gains or losses realized on the sale or exchange of financial instruments, and impairment charges may be incurred with respect to our investments;
- AngloGold Ashanti's defined benefit pension fund may not achieve expected returns on its investments, which could require the company to make substantial cash payments to fund any resulting deficits;
- a reduction in the availability of credit which may make it more difficult for the company to obtain financing for its operations and capital expenditures or make that financing more costly; and
- exposure to the liquidity and insolvency risks of the company's lenders and customers which could negatively affect AngloGold Ashanti's financial condition and operational results.

Uncertainty regarding global economic conditions may increase volatility or negatively impact the market value of the company's securities.

Inflation may have a material adverse effect on results of operations.

General inflationary pressures affecting the mining industry and accelerating inflation across South American jurisdictions resulted in significant cost pressure during 2011. In Argentina, in particular, rising inflation resulted in higher labor costs and consumables costs in 2011, which could adversely affect procurement and recruitment activities as well as labor relations in 2012.

Most of AngloGold Ashanti's operations are located in countries that have experienced high rates of inflation during certain periods.

It is possible that significantly higher future inflation in the countries in which the company operates may result in an increase in operational costs in local currencies (without a concurrent devaluation of the local currency of operations against the dollar or an increase in the dollar price of gold). This could have a material adverse effect upon the company's results of operations and its financial condition. Significantly higher and sustained inflation, with a consequent increase in operational costs, could result in the rationalization of higher cost mines or projects.

Mining companies face many risks related to the development of mining projects that may adversely affect the company's results of operations and profitability.

The profitability of mining companies depends partly on the actual costs of developing and operating mines, which may differ significantly from estimates determined at the time the relevant project was approved following completion of its feasibility study. Development of mining projects may also be subject to unexpected problems and delays that could increase the development and operating costs of the relevant project.

AngloGold Ashanti's decision to develop a mineral property is typically based on the results of a feasibility study, which estimates anticipated economic returns from the project. These estimates are based on assumptions regarding:

- future prices of gold, uranium, silver and other metals;
- future currency exchange rates;
- tonnage, grades and metallurgical characteristics of ore to be mined and processed;
- anticipated recovery rates of gold, uranium, silver and other metals extracted from the ore;
- anticipated capital expenditure and cash operating costs; and
- required return on investment.

Actual cash operating costs, production and economic returns may differ significantly from those anticipated by such studies and estimates. Operating costs and capital expenditure are to a significant extent driven by the cost of commodity inputs consumed in mining, including fuel, chemical reagents, explosives, tires and steel, and also by credits from by-products, such as silver and uranium. They could also fluctuate considerably as a result of changes in the prices of mining equipment used in the construction and operation of mining projects.

Table of Contents

There are a number of uncertainties inherent in the development and construction of a new mine or the extension to an existing mine. In addition to those discussed above, these uncertainties include the:

- timing and cost of construction of mining and processing facilities, which can be considerable;
- availability and cost of mining and processing equipment;
- availability and cost of skilled labor, power, water and transportation;
- availability and cost of appropriate smelting and refining arrangements;
- requirement and time needed to obtain the necessary environmental and other governmental permits; and
- availability of funds to finance construction and development activities.

The remote location of many mining properties, permitting requirements and/or delays, third-party legal challenges to individual mining projects and broader social or political opposition to mining may increase the cost, timing and complexity of mine development and construction. New mining operations could experience unexpected problems and delays during the development, construction, commissioning and commencement of production. For example, a number of targets for greenfield exploration were missed in 2010, especially those relating to resource drilling and prefeasibility studies at La Colosa and Gramalote in Colombia and at Central Mongbwalu in the DRC. The total number of meters drilled in Colombia was significantly lower than expected due to delays in the approval of the necessary environmental (water use) and access permits. Contractual and legal issues delayed the start of regional exploration drilling on the Kilo joint venture in the DRC until the fourth quarter of 2010.

Accordingly, AngloGold Ashanti's future development activities may not result in the expansion or replacement of current production, or one or more new production sites or facilities may be less profitable than anticipated or may be loss-making. The company's operating results and financial condition are directly related to the success of its project developments. A failure in the company's ability to develop and operate mining projects in accordance with, or in excess of, expectations could negatively impact its results of operations, as well as its financial condition and prospects.

Mining companies face uncertainty and risks in exploration, feasibility studies and other project evaluation activities.

AngloGold Ashanti must continually replace Ore Reserve depleted by mining and production to maintain or increase gold production levels in the long-term. This is undertaken by exploration activities that are speculative in nature. The ability of the company to sustain or increase present levels of gold production depends in part on the success of its projects.

Feasibility studies and other project evaluation activities necessary to determine the current or future viability of a mining operation are often unproductive. Such activities often require substantial expenditure on exploration drilling to establish the presence, extent and grade (metal content) of mineralized material. AngloGold Ashanti undertakes feasibility studies to estimate the technical and economic viability of mining projects and to determine appropriate mining methods and metallurgical recovery processes. These activities are undertaken to estimate the Ore Reserve.

Once mineralization is discovered it may take several years to determine whether an adequate Ore Reserve exists, during which time the economic feasibility of the project may change due to fluctuations in factors that affect both revenue and costs, including:

- future prices of metals and other commodities;
- future foreign currency exchange rates;
- the required return on investment as based on the cost and availability of capital; and
- applicable regulatory requirements, including environmental, health and safety matters.

Feasibility studies also include activities to estimate the anticipated:

- tonnages, grades and metallurgical characteristics of the ore to be mined and processed;
- recovery rates of gold, uranium and other metals from the ore; and
- capital expenditure and cash operating costs.

These estimates depend on assumptions made on available data. Ore Reserve estimates are not precise calculations and depend on the interpretation of limited information on the location, shape and continuity of the mineral occurrence and on available sampling results. Further exploration and feasibility studies can result in new data becoming available that may change previous Ore Reserve estimates and impact the technical and economic viability of production from the project. Changes in the forecast prices of commodities, exchange rates, production costs or recovery rates may change the economic status of reserves resulting in revisions to previous Ore Reserve estimates. These revisions could impact depreciation and amortization rates, asset-carrying amounts, provisions for closedown, restoration and environmental cleanup costs.

Table of Contents

AngloGold Ashanti undertakes annual revisions to its Ore Reserve estimates based upon actual exploration and production results, depletion, new information on geology, model revisions and fluctuations in production, economic assumptions and operating and other costs. These factors may result in reductions in Ore Reserve estimates, which could adversely affect life-of-mine plans and consequently the total value of the company's mining asset base. Ore Reserve restatements could negatively affect the company's results of operations, as well as its financial condition and prospects.

The increased demand for gold and other commodities, combined with a declining rate of discovery of new gold Ore Reserve in recent years, has resulted in the accelerated depletion of the existing Ore Reserve across the global gold sector. AngloGold Ashanti therefore faces intense competition for the acquisition of attractive mining properties. From time to time, the company evaluates the acquisition of an Ore Reserve, development properties or operating mines, either as stand-alone assets or as part of companies. AngloGold Ashanti's decision to acquire these properties has been based on a variety of factors including historical operating results, estimates and assumptions regarding the extent of the Ore Reserve, cash and other operating costs, gold prices, projected economic returns and evaluations of existing or potential liabilities associated with the relevant property and its operations and how these factors may change in future. Other than historical operating results, these factors are uncertain and could have an impact on revenue, cash and other operating costs, as well as the process used to estimate the Ore Reserve.

As a result of these uncertainties, exploration and acquisitions by the company may not result in the expansion or replacement of current production or the maintenance of its existing Ore Reserve net of production or an increase in Ore Reserve. AngloGold Ashanti's results of operations and its financial condition are directly related to the success of its exploration and acquisition efforts and its ability to replace or increase the existing Ore Reserve. If the company is not able to maintain or increase its Ore Reserve, its results of operations as well as its financial condition and prospects could be adversely affected.

Mining companies face many risks related to their operations that may adversely impact cash flows and overall profitability.

Gold mining is susceptible to events that may adversely impact a mining company's ability to produce gold and meet production and cost targets. These events include, but are not limited to:

- environmental, as well as health and safety hazards, including dust generation, discharge of metals, pollutants, radioactivity or hazardous chemicals; industrial accidents or accidents during transportation;
- ground and surface water pollution;
- social or community disputes or interventions;
- security incidents;
- surface or underground fires or explosions;
- electrocution;
- falls from heights and accidents relating to mobile machinery, including shaft conveyances and elevators, drilling blasting and mining operations;
- labor force disputes and disruptions;
- loss of information integrity or data;
- activities of illegal or artisanal miners;
- material and equipment availability;
- mechanical failure or breakdowns and ageing infrastructure;
- failure of unproven or evolving technologies;
- energy and electrical power supply interruptions or rationing;
- unusual or unexpected geological formations, ground conditions, including lack of mineable face length, and ore-pass blockages;
- water ingress and flooding;
- process water shortages;
- metallurgical conditions and gold recovery;
- unexpected decline of ore grade;
- unanticipated increases in gold lock-up and inventory levels at heap-leach operations;
- fall-of-ground accidents in underground operations;
- cave-ins, sinkholes, subsidence, rock falls, rock bursts, or landslides;
- failure of mining pit slopes, heap-leach facilities, water or solution dams, waste stockpiles and tailings dam walls;
- legal and regulatory restrictions and changes to such restrictions;
- safety-related stoppages;
- gold bullion theft;

Table of Contents

corruption, fraud and theft;

seismic activity; and

other natural phenomena, such as floods, droughts or weather conditions, potentially exacerbated by climate change.

Seismic activity is of particular concern in underground mining operations, particularly in South Africa due to the extent and extreme depth of mining, and also in Australia and Brazil due to the depth of mining and residual tectonic stresses. Despite modifications to mine layouts and support technology, as well as other technological improvements employed with a view to minimizing the incidence and impact of seismic activity, seismic events have caused death and injury to employees and contractors and may do so again in future.

Seismic activity may also cause the loss of mining equipment, damage to or destruction of mineral properties or production facilities, monetary losses, environmental damage and potential legal liabilities at operations where seismic activity may be a factor. As a result, these events may have a material adverse effect on AngloGold Ashanti's results of operations and financial condition. For example, in early 2011, mining of the Ventersdorp Contact Reef shaft pillar at TauTona was suspended following a significant seismic event. New equipment had to be purchased and the shutdown contributed to the decline in the operational output of the mine as compared to the previous year.

In the past, floods have also disrupted the operations of some of our mines. For example, unprecedented heavy rains in February and March 2011 in Australia flooded the Sunrise Dam Gold Mine and forced a temporary shutdown of operations. The flood event impacted underground production for approximately four months and open pit production for approximately six months. Full costs were incurred despite the shutdown, as the mining contractors worked on remedial activities to repair damage and rehabilitate flooded areas. The considerable remedial work required adversely impacted cash costs per ounce and the impact of the flood event and the pit wall failure together significantly reduced planned production at the plant.

Water scarcity has been identified as a significant risk at AngloGold Ashanti's US operation. Production at the Cripple Creek & Victor Gold Mining Company's Cresson Project continued to be affected by a severe drought in 2011. The lack of water reduced percolation through the heap-leach pad, which curtailed production and productivity.

Mining companies' operations are vulnerable to infrastructure constraints.

Mining, processing, development and exploration activities depend on adequate infrastructure. Reliable rail, ports, roads, bridges, power sources, power transmission facilities and water supply are critical to our business operations and affect capital and operating costs.

Interferences in the maintenance or provision of infrastructure, including unusual weather phenomena, sabotage and social unrest, could impede the company's ability to deliver its products on time and adversely affect AngloGold Ashanti's business, financial condition and results of operations.

Establishing infrastructure for the company's development projects requires significant resources, identification of adequate sources of raw materials and supplies, and necessary co-operation from national and regional governments, none of which can be assured.

AngloGold Ashanti has operations or potential development projects in countries where government-provided infrastructure may be inadequate and regulatory regimes for access to infrastructure may be uncertain, which could adversely impact the efficient operation and expansion of our business. There is no guarantee that AngloGold Ashanti will secure and maintain access to adequate infrastructure in the future, nor that it can do so on reasonable terms.

We face strong competition from our peers.

The mining industry is competitive in all of its phases. AngloGold Ashanti competes with other mining companies and individuals for specialized equipment, components and supplies necessary for exploration and development, for mining claims and leases on exploration properties and for the acquisition of mining assets. These competitors may have greater financial resources, operational experience and technical capabilities than AngloGold Ashanti. Competition may increase AngloGold Ashanti's cost of acquiring suitable claims, properties and assets, should they become available to the company.

Table of Contents

Mining companies are subject to extensive health and safety laws and regulations.

Gold mining operations are subject to a variety of industry-specific health and safety laws and regulations depending on which jurisdiction they are in. These laws and regulations are designed to protect and improve the safety and health of employees. AngloGold Ashanti is also in the process of implementing an enhanced safety program, including improved incident investigation and reporting systems, which could result in significant additional costs for the company.

From time to time, new or improved health and safety laws and regulations are introduced in jurisdictions in which AngloGold Ashanti operates. Should compliance with new standards require a material increase in expenditure or material interruptions to operations or production, including as a result of any temporary failure to comply with applicable regulations, the results of operations and the financial condition of the company could be adversely affected.

In some of the jurisdictions in which we operate, the government enforces compulsory shutdowns of operations to enable investigations into the cause of accidents at those operations. Certain of the company's operations have been temporarily suspended for safety reasons in the past. In South Africa, in particular, so-called Section 54 safety stoppages have become a significant issue. In 2011, the Inspector of Mines ordered the shutdown of entire mines in cases of relatively minor violations, which had a material impact on production at these mines. In particular, the Inspector issued Kopanang 11 Section 54 directives during the year. Each directive resulted in Kopanang suspending operations either fully or partially in order to comply with the inspector's recommendations on safety. A working group comprising the inspectorate, the mining industry and organized labor has been formed to address the trend of increasing safety stoppages.

AngloGold Ashanti's reputation as a responsible company and employer could be damaged by any significant governmental investigation or enforcement of health and safety standards. Any of these factors could have a material adverse effect on the company's results of operations and financial condition.

Mining companies are increasingly required to consider and take steps to develop in a sustainable manner, and to provide benefits to the communities and countries in which they operate. Failure to consider such requirements can result in legal suits, additional operational costs, adverse reactions by investors and otherwise adversely impact mining companies' financial condition and social license to operate.

As a result of public concern about the perceived ill effects of economic globalization, businesses in general and large multinational mining corporations such as AngloGold Ashanti in particular face increasing public scrutiny of their activities.

These businesses are under pressure to demonstrate that while they seek a satisfactory return on investment for shareholders, human rights are respected and other social partners, including employees, host communities and more broadly the countries in which they operate, also benefit from their commercial activities. Such pressures tend to be particularly focused on companies whose activities are perceived to have, or have, a high impact on their social and physical environment. The potential consequences of these pressures and the adverse publicity in cases where companies are believed not to be creating sufficient social and economic benefit may result in additional operating costs, reputational damage, active community opposition, allegations of human rights abuses, legal suits and investor withdrawal.

Existing and proposed mining operations are often located at or near existing towns and villages, natural water courses and other infrastructure. As the impacts of water pollution or shortage, in particular, may be immediate and directly adverse to those communities, poor management of either the supply or the quality of water can result in community protest, regulatory sanctions or ultimately in the withdrawal of community and government support for company operations. For example, opposition to mining activity in the Tolima province of Colombia, which hosts the La Colosa deposit, has centered on the perception that large-scale mining activity will have a detrimental impact on the region's river systems. Mining operations must therefore be designed to minimize their impact on such communities and the environment, either by changing mining plans to avoid such impact, by modifying mining plans and operations, or by relocating the affected people to an agreed location. Responsive measures may also include agreed levels of compensation for any adverse impact ongoing mining operations may continue to have upon the community.

Table of Contents

In addition, as AngloGold Ashanti has a long history of mining operations in certain regions, issues may arise regarding historical as well as potential future environmental impacts to those areas. For example, certain parties, including NGOs, community groups and institutional investors, have raised concerns about surface and groundwater quality, among other issues, in the area surrounding the company's Obuasi and Iduapriem mines in Ghana, including potential impacts to local rivers and wells used for water from heavy metals, arsenic and cyanide as well as sediment and mine rock waste. Following temporary shutdowns at both mines in 2010, the company has made improvements in effluent quality management and constructed new tailings impoundments to reduce the risk of incidents that have the potential to degrade local water sources. AngloGold Ashanti is continuing to investigate allegations of impacts by the company's operations on water quality in mining areas and to consider, as appropriate, potential additional responsive actions such as remediation, engineering and operational changes at the mine sites and community outreach programs.

Disputes with surrounding communities may also affect mining operations by the restriction of access to supplies and of the workforce to mining operations. The mines' access to land may be subject to the rights or asserted rights of various community stakeholders, including indigenous people. In some cases, AngloGold Ashanti has had difficulty gaining access to new land because of perceived poor community compensation practices. For example, compensation remains a significant area of concern in Siguiri in Guinea. In 2011, a violent community protest interrupted operations for three days, which contributed to the project's decline in production as compared to 2010. Delays in projects attributable to a lack of community support can translate directly into a decrease in the value of a project or into an inability to bring the project to production.

The cost of measures and other issues relating to the sustainable development of mining operations could place significant demands on personnel resources, could increase capital and operating costs and could have an adverse impact upon AngloGold Ashanti's reputation, results of operations and financial condition.

Mining companies are subject to extensive environmental laws and regulations.

Mining companies are subject to extensive environmental laws and regulations in the various jurisdictions in which they operate. These regulations establish limits and conditions on a producer's ability to conduct its operations and govern, among other things, extraction, use and conservation of water resources; air emissions (including dust control) and water treatment and discharge; regulatory and community reporting; clean-up of contamination; worker safety and community health; and the generation, transportation, storage and disposal of solid and hazardous wastes, such as acids, radioactive materials, and mine tailings.

The cost of compliance with environmental laws and regulations is expected to continue to be significant to AngloGold Ashanti. AngloGold Ashanti could incur fines, penalties and other sanctions, clean-up costs, and third-party claims for personal injury or property damages; suffer reputational damage; and be required to install costly pollution control equipment or to modify or suspend operations, as a result of actual or alleged violations or liabilities under environmental laws and regulations. In addition, unknown environmental hazards may exist on the company's properties which may have been caused by previous owners or by existing operators.

For example, in 2010 AngloGold Ashanti's Obuasi mine in Ghana suspended gold processing operations for five days to implement a revised water management strategy aimed at reducing contaminants contained in its discharge. Furthermore, following a temporary suspension of operations at the Iduapriem mine, the company with the approval of the Ghana Environmental Protection Agency constructed an interim tailings storage facility for tailings deposition for a year while the greenfields tailings storage facility was being constructed. In addition, the company is currently investigating allegations of impacts on water quality in the area of these mines.

Failure to comply with applicable environmental laws and regulations may also result in the suspension or revocation of permits. AngloGold Ashanti's ability to obtain and maintain permits and to successfully operate in particular communities may be adversely impacted by real or perceived effects on the environment or human health and safety associated with AngloGold Ashanti's or other mining companies' activities.

For example, in Colombia various plaintiffs, including associations that represent local communities, have brought legal proceedings against AngloGold Ashanti Colombia S.A. (AGAC) alleging that AGAC has violated applicable environmental laws in connection with the La Colosa project. If the plaintiffs were to prevail, AGAC's three core concession contracts relating to the La Colosa project may be canceled, the company would be required to abandon the La Colosa project and all other existing mining concession contracts and pending proposals for new mining concession contracts of AGAC, but not also those of other companies of the AngloGold Ashanti group operating in Colombia, would also be canceled. In addition, AGAC would be banned from doing business with the Colombian government for a period of five years. See Item 8A.: Consolidated statements and other financial information - Legal proceedings .

Table of Contents

Environmental laws and regulations are continually changing and are generally becoming more restrictive. Changes to AngloGold Ashanti's environmental compliance obligations or operating practices could adversely affect the company's rate of production and revenue. Variations in laws and regulations, assumptions made to estimate liabilities, standards or operating procedures, more stringent emission or pollution thresholds or controls, or the occurrence of unanticipated conditions, may require operations to be suspended or permanently closed, and could increase AngloGold Ashanti's expenses and provisions. These expenses and provisions could adversely affect the company's results of operations and its financial condition.

For example, the use of sodium cyanide in metallurgical processing is under increasing environmental scrutiny and is prohibited in certain jurisdictions. As there are few, if any, effective substitutes in extracting gold from the ore, any ban or material restrictions on the use of sodium cyanide in mining operations in the jurisdictions where AngloGold Ashanti conducts its operations could adversely affect the company's results of operations and its financial condition. In addition, leaks or discharges of sodium cyanide or other hazardous materials could result in clean-up liabilities that may not be covered by insurance.

AngloGold Ashanti's operations are heavily dependent upon access to substantial volumes of water for use in the mining and extractive processes and typically are subject to water-use permits that govern usage and require, among other things, that mining operations maintain certain water quality upon discharge. Water quality and usage are areas of concern globally, but are particularly significant for operations in Ghana and South Africa, and for exploration projects in Colombia, where there is significant potential environmental and social impact and a high level of stakeholder scrutiny. Any failure to secure access to suitable water supplies, or achieve and maintain compliance with the requirements of the permits or licenses could result in curtailment or halting of production at the affected operation. Incidents of water pollution or shortage can, in extreme cases, lead to community protest and ultimately to the withdrawal of community and government support for the company's operations.

Mining and mineral processing operations generate waste rock and tailings. The impact of a breach, leak or other failure of a tailings storage facility can be significant. An incident at AngloGold Ashanti's operations could lead to, among others, obligations to remediate environmental contamination and claims for property damage and personal injury. Incidents at other companies' operations could result in governments tightening regulatory requirements and restricting mining activities.

In addition, mining companies are required by law to close their operations at the end of the mine life and rehabilitate the lands mined. Estimates of total ultimate closure and rehabilitation costs for gold mining operations are significant and based principally on life-of-mine profiles, changing inflation and discount rate assumptions, changing designs of tailing storage facilities and current legal and regulatory requirements that may change materially. Environmental liabilities are accrued when they become known, probable and can be reasonably estimated. Increasingly, regulators are seeking security in the form of cash collateral or bank guarantees in respect of environmental obligations, which could have an adverse impact on AngloGold Ashanti's financial condition.

Costs associated with rehabilitating land disturbed by mining processes and addressing environmental, health and community issues are estimated and financial provision made based upon current available information. Estimates may, however, be insufficient and further costs may be identified at any stage. Any underestimated or unidentified rehabilitation costs would reduce earnings and could materially and adversely affect the company's asset values, earnings and cash flows.

Compliance with emerging climate change regulations could result in significant costs and climate change may present physical risks to a mining company's operations.

Greenhouse gases (GHGs) are emitted directly by AngloGold Ashanti's operations, as well as by external utilities from which AngloGold Ashanti purchases power. Currently, a number of international and national measures to address or limit GHG emissions, including the Kyoto Protocol, the Copenhagen Accord and the Durban Platform, are in various phases of discussion or implementation in the countries in which the company operates. In particular, the Durban Platform commits all parties to the conference to develop a global mitigation regime which could take effect in 2020, with the specific terms of that legally binding accord, including individual targets, to be finalized by 2015. These, or future, measures could require AngloGold Ashanti to reduce its direct GHG emissions or energy use or to incur significant costs for GHG emissions permits or taxes or have these costs or taxes passed on by electricity utilities which supply the company. AngloGold Ashanti also could incur significant costs associated with capital equipment, GHG monitoring and reporting and other obligations to comply with applicable requirements. For example, Australia has passed legislation that will implement a carbon trading scheme commencing in July 2012. Other countries, including South Africa, Brazil and the United States, have passed or are considering GHG trading or tax schemes, and/or other regulation of GHG emissions, though the precise impact on AngloGold Ashanti's operations cannot yet be determined.

Table of Contents

In addition, AngloGold Ashanti's operations could be exposed to a number of physical risks from climate change, such as changes in rainfall rates, rising sea levels, reduced water availability, higher temperatures and extreme weather events. Events or conditions such as flooding or inadequate water supplies could disrupt mining and transport operations, mineral processing and rehabilitation efforts, could create resource shortages and could damage the company's property or equipment and increase health and safety risks on site. Such events or conditions could have other adverse effects on the company's workforce and on the communities around our mines, such as an increased risk of food insecurity, water scarcity and prevalence of disease.

Compliance with emerging conflict minerals legislation could result in significant costs.

There is increasing legislation and initiatives relating to conflict and responsible gold that include the: US Dodd-Frank Act; World Gold Council Conflict Free Gold Standard; Organization for Economic Cooperation and Development Due Diligence Guidelines for Responsible Supply Chain of Minerals from Conflict-Affected and High-Risk Areas; and London Bullion Market Association Responsible Gold Guidance. This may result in the increased cost of demonstrating compliance and difficulties in the sale of gold emanating from certain areas, such as the Democratic Republic of the Congo (DRC) and its neighbors. The complexities of the gold supply chain, especially as they relate to scrap or recycled gold, and the fragmented and often unregulated supply of artisanal and small-scale mined gold are such that there may be significant uncertainties at each stage in the chain as to the provenance of the gold, and as a result of uncertainties in the process, the costs of due diligence and audit, or the reputational risks of defining their product or a constituent part as containing a conflict mineral would be too burdensome for the company's customers. Accordingly, manufacturers may decide to switch supply sources or to substitute gold with other minerals not covered by the initiatives. This could have a material negative impact on the gold industry, including on AngloGold Ashanti's financial results.

Mining operations and projects are vulnerable to supply chain disruption with the result that operations and development projects could be adversely affected by shortages of, as well as the lead times to deliver, strategic spares, critical consumables, mining equipment or metallurgical plant.

AngloGold Ashanti's operations and development projects could be adversely affected by both shortages and long lead times to deliver strategic spares, critical consumables, mining equipment and metallurgical plant. Import restrictions, such as those introduced by the Argentine government in 2011, can also delay the delivery of parts and equipment. In the past, the company and other gold mining companies experienced shortages in critical consumables, particularly as production capacity in the global mining industry expanded in response to increased demand for commodities. AngloGold Ashanti has also experienced increased delivery times for these items. Shortages have resulted in unanticipated price increases and production delays and shortfalls, resulting in a rise in both operating costs and in the capital expenditure necessary to maintain and develop mining operations.

Individually, AngloGold Ashanti and other gold mining companies have limited influence over manufacturers and suppliers of these items. In certain cases there are a limited number of suppliers for certain strategic spares, critical consumables, mining equipment or metallurgical plant who command superior bargaining power relative to the company. The company could at times face limited supply or increased lead time in the delivery of such items. For example, poor availability of drill rigs, heavy machinery and fleet equipment hampered underground drilling and overall operational performance at the Serra Grande mine in Brazil in 2011. In addition, the unreliability of oxygen and lime supply similarly affected production at the Vaal River and West Wits Surface Operations in South Africa throughout the year.

The company's procurement policy is to source mining and processing equipment and consumables from suppliers that meet its corporate values and ethical standards although risk remains around the management of ethical supply chains. In certain locations, where a limited number of suppliers meet these standards, further strain is placed on the supply chain, thereby increasing the cost of supply and delivery times.

Furthermore, supply chains and rates can be impacted by natural disasters and other phenomena, such as earthquakes, weather patterns and climate change. For example, the 2011 earthquake and tsunami in Japan has had a limited knock-on effect on the supply of equipment, lead times and costs of certain supplies. If AngloGold Ashanti experiences shortages, or increased lead times in the delivery of strategic spares, critical consumables, mining equipment or processing plant, the company might have to suspend some of its operations and its results of operations and financial condition could be adversely impacted.

Table of Contents

Diversity in interpretation and application of accounting literature in the mining industry may impact reported financial results.

The mining industry has limited industry-specific accounting literature. As a result, there is diverse interpretation and application of accounting literature on mining specific issues. AngloGold Ashanti, for example, capitalizes drilling and costs related to defining and delineating a residual mineral deposit that has not been classified as a Proven and Probable Reserve at a development project or production stage mine. Some companies, however, expense such costs.

As and when this diverse interpretation and application is addressed, the company's reported results could be adversely impacted should the adopted interpretation differ from the position it currently follows.

A breach or breaches in governance processes, or fraud, bribery and corruption may lead to regulatory penalties, loss of licenses or permits, and loss of reputation.

Since AngloGold Ashanti operates globally in multiple jurisdictions and with numerous and complex frameworks, its governance and compliance processes may not prevent potential breaches of law, accounting or other governance practices. AngloGold Ashanti's Code of Business Principles and Ethics, among other standards and guidance may not prevent instances of fraudulent behavior and dishonesty, nor guarantee compliance with legal and regulatory requirements. Such a breach or breaches may lead to regulatory fines, litigation, and loss of operating licenses or permits, and may damage the company's reputation.

Breaches in information technology security and governance process may adversely impact business activities.

AngloGold Ashanti maintains global information technology and communication networks and applications to support its business activities. Information technology security processes may not prevent future malicious actions or fraud, resulting in corruption of operating systems, theft of commercially sensitive data, misappropriation of funds and business and operational disruption. Material system breaches and failures could result in significant interruptions that could in turn affect AngloGold Ashanti's operating results and reputation.

Risks related to AngloGold Ashanti's results of operations and its financial condition as a result of factors specific to the company and its operations

AngloGold Ashanti has removed the last of its gold hedging instruments and long-term sales contracts, which exposes the company to potential gains from subsequent commodity price increases but exposes it entirely to subsequent commodity price decreases.

AngloGold Ashanti removed the last of its gold hedging instruments in October 2010 to provide greater participation in a rising gold price environment. As a result, AngloGold Ashanti no longer has any protection against declines in the market price of gold compared with previous years.

A sustained decline in the price of gold could adversely impact the company's operating results and its financial condition.

AngloGold Ashanti's mining rights in the countries in which it operates could be altered, suspended or cancelled for a variety of reasons, including breaches in its obligations in respect of its mining rights.

AngloGold Ashanti's right to own and exploit Mineral Reserves and deposits is governed by the laws and regulations of the jurisdictions in which the mineral properties are located. Currently, a significant portion of the company's Mineral Reserves and deposits are located in countries where mining rights could be suspended or cancelled should it breach its obligations in respect of the acquisition and exploitation of these rights.

In all of the countries in which AngloGold Ashanti operates, the formulation or implementation of government policies on certain issues may be unpredictable. This may include changes in laws relating to mineral rights and ownership of mining assets and the right to prospect and mine, and in extreme cases, nationalization, expropriation or nullification of existing concessions, licenses, permits, agreements and contracts.

For example, the Guinean government has announced in media reports that it will seek to increase its equity interest in mines and there is a call for debate on nationalization and increased state ownership in South Africa. Any existing and new mining and exploration operations and projects are subject to various national and local laws, policies and regulations governing the ownership and the right to prospect or mine or develop proposed projects. For more details on the risks surrounding ownership of mining assets, see the section entitled "Title to AngloGold Ashanti's properties may be uncertain and subject to challenge".

Table of Contents

If AngloGold Ashanti is not able to obtain or maintain necessary permits, authorizations or agreements to prospect or mine or to implement planned projects, or continue its operations under conditions, or comply with all laws, regulations or requirements, or within time-frames that make such plans and operations economically viable, or if the laws impacting the company's ownership of its mineral rights, or the right to prospect or mine change materially, or should governments increase their ownership in the mines or nationalize them, AngloGold Ashanti's results of operations and its financial condition could be adversely affected.

In South Africa, mining rights are linked to meeting various obligations that include the Broad-Based Socio-Economic Empowerment Charter for the South African Mining Industry, referred to as the Mining Charter. The Mining Charter was amended in 2010 (the Revised Charter). Compliance with the Revised Charter, measured using a designated scorecard, requires that every mining company achieve 26 percent ownership by historically disadvantaged South Africans (HDSAs) of its South African mining assets by May 2014, and achieve targeted levels of participation by HDSAs in various other aspects of management. The company will incur expenses in giving further effect to the Revised Charter and the scorecard.

The outcome of the review of the Mining Charter five years after promulgation was made public in September 2010. While compliant with ownership targets to be achieved by May 2014, AngloGold Ashanti must make further progress to achieve future targets, including further participation by HDSAs in various aspects of management, the upgrade of housing and accommodation at the company's mines, further human resource development, mine community development, sustainable development and growth as well as procurement and enterprise development, certain of which are also included under the Code of Good Practice for the Minerals Industry and Housing and Living Conditions Standard, as defined and discussed below and which targets must also be achieved by May 2014.

As required by the South African Mineral and Petroleum Resources Development Act (MPRDA), the Minister of Mineral Resources published a Code of Good Practice for the Minerals Industry (Code) and the Housing and Living Conditions Standard (Standard) in April 2009. The Code was developed to create principles to facilitate effective implementation of minerals and mining legislation and enhance implementation of the Mining Charter applicable to the mining industry. The Standard aims to include the provision of housing as an integral part of infrastructure during the development of a mine. Both the Code and the Standard provide that non-compliance equates to non-compliance with the MPRDA. It is unclear whether non-compliance with the Code or the Standard would lead to the cancellation or suspension of a mining right. Subsequent to the publication of the Code and the Standard, representatives of the Department of Mineral Resources, organized labor and the South African mining industry have engaged in discussions in an effort to address the concerns of the mining industry and to possibly amend the Code and the Standard. Furthermore, discussions related to the Code and Standard have become related to the review of the Mining Charter. It is anticipated that the contents of the Code and Standard will ultimately be amended to bring them in line with the Revised Charter. Details of the final Code and Standard are currently uncertain.

AngloGold Ashanti's mining rights in South Africa can be suspended or cancelled by the Minister of Mineral Resources and AngloGold Ashanti may be unable to obtain any new mining rights if the company breaches its obligations in complying with the MPRDA or the Revised Charter.

Title to AngloGold Ashanti's properties may be uncertain and subject to challenge.

AngloGold Ashanti has operations in several countries where ownership of land is uncertain and where disputes may arise in relation to ownership. Certain of the company's properties may be subject to the rights or the asserted rights of various community stakeholders, including indigenous people. The presence of those stakeholders may have an impact on AngloGold Ashanti's ability to develop or operate its mining interests. For example, in Australia, the Native Title Act (1993) provides for the establishment and recognition of native title under certain circumstances. In South Africa, the Extension of Security of Tenure Act (1997) and the Restitution of Land Rights Act (1994) provide for various landholding rights. Such legislation is complex, difficult to predict and outside of the company's control, and could therefore negatively affect the business results of new or existing projects. Where consultation with stakeholders is statutorily or otherwise mandated, there can be no assurance that relations will remain amicable, and disputes may lead to reduced access to properties or delays in operations.

Title to the company's properties, particularly undeveloped ones, may also be defective or subject to challenge. Title insurance generally is not available, and title review does not necessarily preclude third parties from contesting ownership. Where surveys have not been conducted, the precise area and location of the company's claims may be in doubt. Accordingly, AngloGold Ashanti's mineral properties may be subject to prior unregistered liens, agreements, transfers or claims, including native land claims, and title may be affected by, among other things, undetected defects.

Table of Contents

AngloGold Ashanti may experience unforeseen difficulties, delays or costs in successfully implementing its business strategy and projects, and its strategy may not result in the anticipated benefits.

The successful implementation of the company's business strategy and projects depends upon many factors, including those outside its control. For example: the successful management of costs will depend on prevailing market prices for input costs; the ability to grow the business will depend on the successful implementation of the company's existing and proposed project development initiatives and continued exploration success, as well as on the availability of attractive merger and acquisition opportunities, all of which are subject to the relevant mining and company specific risks as outlined in these risk factors.

AngloGold Ashanti may prove unable to deliver on production targets, including in potentially critical areas, such as the Obuasi turnaround plan in Ghana, as well as on key capital project execution, including at the Tropicana project in Australia and with regard to the implementation of the company's new Enterprise Resource Planning (ERP) system. For more details on the risks surrounding the ERP implementation, see the section entitled "The implementation of an integrated Enterprise Resource Planning (ERP) system could have an adverse effect on AngloGold Ashanti's operational results and its financial condition."

AngloGold Ashanti cannot give assurance that unforeseen difficulties, delays or costs will not adversely affect the successful implementation of its business strategy, or that the strategy and projects will result in the anticipated benefits.

Any acquisition or acquisitions that AngloGold Ashanti may complete may expose the company to new geographic, political, social, operating, financial and geological risks.

AngloGold Ashanti may pursue the acquisition of producing, development and advanced stage exploration properties and companies. Any such acquisition may change the scale of the company's business and operations and may expose it to new geographic, geological, political, social, operating, financial, legal, regulatory and contractual risks. For example: there may be a significant change in commodity prices after the company has committed to complete the transaction and established the purchase price or share exchange ratio; a material orebody may prove below expectations; AngloGold Ashanti may have difficulty integrating and assimilating the operations and personnel of any acquired companies, realizing anticipated synergies and maximizing the financial and strategic position of the combined enterprise, and maintaining uniform standards, policies and controls; the integration may disrupt the company's on-going business and its relationships with employees, suppliers and contractors; the acquisition may divert management's attention from AngloGold Ashanti's day-to-day business; and the acquired business may have undetected liabilities which may be significant. Furthermore, we operate and acquire businesses in different countries, with different regulatory and operating cultures, which may exacerbate the risks described above.

In the event that the company chooses to raise debt capital to finance any such acquisition, the company's leverage will be increased. Should the company choose to use equity as consideration for an acquisition, existing shareholders may suffer dilution. Alternatively, the company may choose to finance any acquisition with its existing resources, which could decrease its ability to fund future capital expenditures.

There can be no assurance that the company would be successful in overcoming these risks or any other problems encountered in connection with acquisitions. Failure to implement our acquisition strategy or to integrate acquired businesses successfully could have material adverse effects on the company's growth and business results.

Ageing infrastructure at some of AngloGold Ashanti's operations could adversely impact its business.

Deep level gold mining shafts are usually designed with a lifespan of 25 to 30 years. Vertical shafts consist of large quantities of infrastructure steelwork for guiding conveyances and accommodating services such as high and low tension electric cables, air and water pipe columns. Rising temperatures in the deeper mining areas can also lead to increased cooling requirements in the form of upgraded and expanded ice plants. Maintaining this infrastructure requires skilled human resources, capital allocation, management and planned maintenance.

Once a shaft has reached the end of its intended lifespan, higher than normal maintenance and care is required. Incidents resulting in production delays, increased costs or industrial accidents may occur. Such incidents may have an adverse effect on the company's results of operations and financial position.

Table of Contents

Some of AngloGold Ashanti's technologies are unproven and failure could adversely impact costs and production.

AngloGold Ashanti has teamed up with various specialists to engineer new solutions to environmental management, mine design, rock breaking and underground logistics, among others. The company has invested in new technologies, including phyto-technologies to reduce seepage and address soil and groundwater contamination, and in mine support technologies to minimize the impact of seismic activity. The company is also attempting to develop technologies to access the deeper reaches of South African mines. One of the chief initiatives expected to be implemented in 2012 is a vertical transport optimization project to accelerate the delivery of consumables and other essential items to work crews, in order to increase production time at the face.

Some aspects of these technologies are unproven and their eventual operational outcome or viability cannot be assessed with certainty. The costs, productivity and other benefits from these initiatives, and the consequent effects on AngloGold Ashanti's future earnings and financial condition, may vary from expectations. Failure of the company's condition to realize the anticipated benefits could result in increased costs, an inability to realize production or growth plans, or could adversely affect its operational performance.

The level of AngloGold Ashanti's indebtedness could adversely impact its business.

As at December 31, 2011, AngloGold Ashanti had gross borrowings (excluding the mandatory convertible bonds amounting to \$760 million) of approximately \$1.7 billion.

AngloGold Ashanti's indebtedness could have a material adverse effect on its flexibility to conduct business. For example, the company may be required to use a large portion of its cash flow to pay the principal and interest on its debt, which will reduce funds available to finance existing operations, the development of new organic growth opportunities and further acquisitions. In addition, under the terms of the company's borrowing facilities from its banks, AngloGold Ashanti is obliged to meet certain financial and other covenants. The company's ability to continue to meet these covenants and to service its debt will depend on its future financial performance which will be affected by its operating performance as well as by financial and other factors, certain of which are beyond the control of the company.

Should the cash flow from operations be insufficient, AngloGold Ashanti could breach its financial and other covenants. Covenant breaches, if interpreted as events of default under debt agreements, could allow lenders to accelerate payment of the debt. Any such acceleration could result in the acceleration of indebtedness under other financial instruments. As a result, the company may be required to refinance all or part of the existing debt, use existing cash balances, issue additional equity or sell assets. AngloGold Ashanti cannot be sure that it will be able to refinance its debt on commercially reasonable terms, if at all. The company's ability to access the bank, public debt or equity capital markets on an efficient basis may be constrained by dislocation in the credit markets or capital and liquidity constraints in the banking, debt or equity markets at the time of issuance.

Certain factors may affect AngloGold Ashanti's ability to support the carrying amount of its property, plant and equipment, acquired properties, investments and goodwill on the balance sheet. If the carrying amount of its assets is not recoverable, AngloGold Ashanti may be required to recognize an impairment charge, which could be significant.

AngloGold Ashanti reviews and tests the carrying amount of its assets when events or changes in circumstances suggest that the carrying amount may not be recoverable. The company values individual mining assets at the lowest level for which cash flows are identifiable and independent of cash flows of other mining assets and liabilities.

If there are indications that impairment may have occurred, AngloGold Ashanti prepares estimates of expected future cash flows for each group of assets. Expected future cash flows are inherently uncertain, and could materially change over time. They are significantly affected by reserve and production estimates, together with economic factors such as spot and forward gold prices, discount rates, currency exchange rates, estimates of costs to produce reserves and future capital expenditure.

If any of these uncertainties occur, either alone or in combination, management could be required to recognize an impairment, which could have a material adverse effect on the company's financial condition and results of operations.

Table of Contents

AngloGold Ashanti expects to have significant financing requirements.

AngloGold Ashanti's existing board-approved development projects and exploration initiatives will require significant funding. These include: Tropicana in Australia; the Cerro Vanguardia heap leach project in Argentina; the Mponeng Ventersdorp Contact Reef, Mponeng CLR and Zaaipplaats projects in South Africa; Córrego do Sítio and Lamego in Brazil; and the mine life extension project (MLE1) at Cripple Creek & Victor in the US.

Potential future development projects will also require significant funding if and when approved by the AngloGold Ashanti board. These include the: La Colosa and Gramalote projects in Colombia; Kibali and Mongbwalu projects in the DRC; Cerro Vanguardia underground mining project in Argentina; Nova Lima Sul project in Brazil; Sadiola Deeps project in Mali; Cripple Creek & Victor further mine life extension project (MLE2) in the US; as well as various other exploration projects and feasibility studies.

AngloGold Ashanti estimates that over the next three years, growth initiatives will require project capital expenditure (excluding stay in business and ore reserve development capital expenditure) of approximately \$3.4 billion (subject to escalation). The company's capital expenditure plans and requirements are subject to a number of risks, contingencies and other factors, some of which are beyond its control, and therefore the actual future capital expenditure and investments may differ significantly from the current planned amounts.

AngloGold Ashanti's operating cash flow and credit facilities may be insufficient to meet all of these expenditures, depending on the timing and cost of development of these and other projects as well as operating performance and available headroom under its credit facilities. As a result, new sources of capital may be needed to meet the funding requirements of these developments, to fund ongoing business activities and to pay dividends. AngloGold Ashanti's ability to raise and service significant new sources of capital will be a function of macroeconomic conditions, the condition of the financial markets, future gold prices, the company's operational performance and operating cash flow and debt position, among other factors. The company's ability to raise further debt financing in the future and the cost of such financing will depend on, among other factors, its prevailing credit rating, which may be affected by the company's ability to maintain its outstanding debt and financial ratios at levels acceptable to the credit ratings agencies, its business prospects or other factors. As a result, in the event of lower gold prices, unanticipated operating or financial challenges, any dislocation in financial markets or new funding limitations, AngloGold Ashanti's ability to pursue new business opportunities, invest in existing and new projects, fund its ongoing business activities and retire or service outstanding debt and pay dividends, could be significantly constrained, all of which could adversely impact the company's results of operations and its financial condition.

AngloGold Ashanti does not operate some of its significant joint venture projects and other interests. If the operators of these projects do not perform effectively and efficiently, the company's investment in these projects could be adversely affected and its reputation could be harmed.

AngloGold Ashanti's joint ventures at Morila in Mali and at Kibali in the DRC are operated by the company's joint venture partner Randgold Resources Limited ("Randgold"). In addition, certain of AngloGold Ashanti's exploration ventures are operated by the relevant joint venture partner. AngloGold Ashanti's marine gold joint venture with De Beers is operated by an independent company jointly owned by AngloGold Ashanti and De Beers, with a significant part of the technical input subcontracted to De Beers or other marine service providers.

In South Africa, AngloGold Ashanti's Ergo operations are currently operated by Ergo Mining, a subsidiary of DRDGOLD Limited (DRDGOLD). The Ergo operations were sold in 2007 to DRDGOLD and DRDGOLD has been managing and operating the assets pending the transfer of the mining rights from AngloGold Ashanti to DRDGOLD.

While AngloGold Ashanti provides strategic management and operational advice to its joint venture partners in respect of these projects, the company cannot ensure that these projects are operated in compliance with the standards that AngloGold Ashanti applies in its other operations. If these joint ventures are not operated effectively or efficiently, including as a result of weaknesses in the policies, procedures and controls implemented by the joint venture partners, the company's investment in the relevant project could be adversely affected. In addition, negative publicity associated with ineffective and inefficient operatorship, particularly relating to any resulting accidents or environmental incidents, could harm the company's reputation and therefore its prospects and potentially its financial condition. Further, any failure of joint venture partners to meet their obligations to AngloGold Ashanti or to third parties, or any disputes with respect to the parties' respective rights and obligations, could have a material adverse impact on AngloGold Ashanti's results of operations and its financial condition. In particular, the company and Randgold retain equal representation, with neither party holding a deciding vote on the board of the two companies that have overall management control of

Table of Contents

the Morila project in Mali and the Kibali project in the DRC, respectively, and all major management decisions for each of these two projects, including approval of the budget, require board approval. If a dispute arises between the company and Randgold with respect to the Kibali or Morila project and the parties are unable to amicably resolve such dispute, it may be difficult for the parties to make strategic decisions relating to the project affected by such dispute, the day-to-day operations and the development of such project may be adversely affected and the company may have to participate in arbitration or other proceedings to resolve the dispute, which could adversely affect the company's results of operations and financial condition.

AngloGold Ashanti's Mineral Reserve, deposits and mining operations are located in countries that face political, economic and security risks.

Some of AngloGold Ashanti's mineral deposits and mining and exploration operations are located in countries that have experienced political instability and economic uncertainty. In all of the countries where the company operates, there is a focus on resource nationalism with governments seeking to get more economic benefits from the high commodity prices. This entails review of mining codes and stability agreements, which were designed under different economic environments. The formulation or implementation of government policies include regulations which impact its operations and changes in laws relating to issues such as mineral rights and asset ownership, royalties, taxation and taxation disputes, windfall or super taxation, and non-recovery of taxation refunds, import and export duties, currency transfers, restrictions on foreign currency holdings and repatriation of earnings. These regulations are continually changing and generally require progressively higher payments to governments, notably in the form of royalties and taxes.

For example, the Argentine government has introduced stricter exchange controls, which may limit the company's ability to repatriate dividends from its Argentine subsidiaries. In addition, on March 15, 2012, the Mwanza office of the Tanzania Revenue Authority notified Geita Gold Mine Limited (Geita Gold Mine) that it intends to issue additional tax assessments against Geita Gold Mine and in connection with such assessments it also challenged the validity of the existing mining development agreement (MDA) relating to the Geita gold mine, which was entered into with the Tanzanian government in June 1999. In the event that the MDA is held to be invalid, the tax burden on the company's Tanzanian operations would increase and the company would have to pay additional taxes for prior periods.

Any existing and new mining, exploration operations and projects that the company carries out will continue to be subject to various national and local laws, policies and regulations governing the ownership, prospecting, development and mining of mineral reserves, taxation and royalties, exchange controls, import and export duties and restrictions, investment approvals, employee and social community relations and other matters.

If, in one or more of these countries, AngloGold Ashanti were not able to obtain or maintain necessary permits, authorizations or agreements to implement planned projects or continue its operations under conditions or within time frames that make such plans and operations economic, or if legal, ownership, fiscal (including all royalties and duties), exchange control, employment, environmental and social laws and regimes, or the governing political authorities change materially, resulting in changes to such laws and regimes, this could have a material adverse effect on AngloGold Ashanti's operating results, financial condition, and, in extreme cases, on the viability of an operation.

Certain of the countries in which AngloGold Ashanti has mineral deposits or mining or exploration operations, including the DRC, Mali, Guinea and Colombia, have in the past experienced, and in certain cases continue to experience, a difficult security environment as well as political instability. In particular, various illegal groups active in regions in which the company is present may pose a credible threat of military repression, terrorism, civil unrest, extortion and kidnapping, which could have an adverse effect on its operations in these and other regions for example, in March 2012 Mali, one of the countries in which the company operates, experienced a military coup. Although on April 6, 2012, the opposing factions reached a settlement, agreed to reinstate the Malian constitution and implemented certain transitional political arrangements, the country continues to be exposed to significant political instability and security threats. In some instances, risk assessments categorize threats as serious enough to require resort to public security forces, such as national police or military units on a near-permanent basis. In the event that continued operation in these countries compromise the company's security or business principles, AngloGold Ashanti may withdraw from these countries on a temporary or permanent basis. This could have a material adverse impact on AngloGold Ashanti's results of operations.

Since 2009, the company has recorded an almost five-fold increase in the instances of injury to security personnel, including members of AngloGold Ashanti's internal security, private security companies and public security forces in certain jurisdictions. The rise in the number and severity of security incidents has come as a result of both increased illegal and artisanal mining and an increase in the level of organization and funding of criminal activity around some of the company's Continental African operations, spurred on by an escalating gold price. The most significant security challenges occur in areas where there is endemic poverty and high levels of unemployment. If the security environment surrounding the company's operations that are most exposed to these challenges does not improve or further

Table of Contents

deteriorates, employee, third-party and community member injuries and fatalities could also increase. Any such increase could disrupt the company's operations in certain mines and adversely affect its reputation and results of operation.

Furthermore, the company has at times experienced strained relationships with some of the communities in which it operates. AngloGold Ashanti operates in several regions where poverty, unemployment and the lack of access to alternative livelihoods mean that the creation and distribution of economic benefit from mining operations is a significant area of focus for community and government. Conflict with communities has led to community protests and business interruptions, particularly at the Siguiri mine in Guinea, where community members protested in four separate incidents in 2010 over issues relating to electricity supply, land compensation and employment, and a violent community protest interrupted operations for three days in 2011.

AngloGold Ashanti may be impacted by the outcome of elections in jurisdictions in which it has operations and ancillary political processes leading up to elections. Presidential elections are planned in the United States, Mali, Ghana, and Guinea during 2012.

Political instability and uncertainty or government changes to the fiscal terms governing AngloGold Ashanti's operations may discourage future investments in certain jurisdictions, which may have an adverse impact on the company's ability to access new assets and could potentially reduce future growth opportunities.

Early in 2011 the Guinean government confirmed its intention to review all mining contracts under the auspices of international law, indicating that Guinea would seek to own a stake of at least a third of all mining projects located in Guinea. Currently the Government of Guinea holds a stake of 15 percent in the Siguiri Gold Mine. The review process has not yet commenced and AngloGold Ashanti is currently unable to predict the timing and outcome of such review. On April 26, 2011, it was announced by Reuters that a copy of the new draft mining code includes a compulsory 15 percent stake for the government in operations, with an option to acquire an additional 20 percent. Also according to Reuters, included in the draft mining code are provisions for a new Local Empowerment Fund, which will be funded from tax levies, and changes to the price reference point used for tax purposes from free-on-board to a rolling three-month average from the London Metals Exchange.

In Guinea, Mali and Tanzania, AngloGold Ashanti is due refunds of input tax and fuel duties which remain outstanding for periods longer than those provided for in the respective statutes. In addition, the company has other outstanding assessments and unresolved tax disputes in a number of countries, including Brazil, Argentina and Ghana. If the outstanding value-added tax on inputs is not received, the disputes are not resolved and assessments favorable to AngloGold Ashanti are not made, there could be an adverse effect upon the company's results of operations and its financial condition.

The Government of Ghana recently amended its fiscal mining regime, increased its corporate taxation rates and imposed a windfall profit tax. AngloGold Ashanti may challenge some of these in light of the stability agreement entered into by the company with the government of Ghana in December 2003 and ratified by the Ghanaian Parliament in 2004. However, the Government of Ghana has recently announced that it has constituted a team to re-negotiate stability agreements with mining companies and AngloGold Ashanti expects to participate in these negotiations. No assurance can be given that the outcome of the company's negotiations with the Government of Ghana will not have a material adverse impact on the company's financial condition or operational results.

In November 2011, the lower house of the Australian Parliament passed the Mineral Resource Rent Tax (MRRT), which replaced the previously proposed Resource Super Profit Tax (RSPT) and would require a tax of 30 percent on profits above certain levels from coal and iron ore mining starting July 1, 2012. The Senate is due to debate the bill in 2012. Should the government of Australia reintroduce the RSPT or extend the MRRT to the gold mining industry, or if similar super profit taxes were introduced in Australia or any other country in which the company operates, this could have a material adverse effect on AngloGold Ashanti's results of operations and its financial condition.

Table of Contents

Illegal and artisanal mining occurs on AngloGold Ashanti's properties, which can disrupt the company's business and expose the company to liability.

Illegal and artisanal miners are active on, or adjacent to, some of AngloGold Ashanti's Continental African and South American properties, which leads at times to interference with the company's operations and results in conflict situations that present a security threat to property and human life. Artisanal mining is associated with a number of negative impacts, including environmental degradation, flouting of land rights, poor working practices, erosion of civil society, human rights abuse and funding of conflict. The environmental, social, safety and health impacts of artisanal mining are frequently attributed to formal mining activity, and it is often assumed that artisanally-mined gold is channeled through large-scale mining operators, even though artisanal and large-scale miners have distinct supply chains. These misconceptions impact negatively on the reputation of the industry.

The activities of the illegal miners, which include theft and shrinkage, could cause damage to AngloGold Ashanti's properties, including pollution, underground fires, or personal injury or death, for which AngloGold Ashanti could potentially be held responsible. Illegal mining could result in the depletion of mineral deposits, potentially making the future mining of such deposits uneconomic. The presence of illegal miners could lead to project delays and disputes regarding the development or operation of commercial gold deposits. Illegal mining and theft, including by AngloGold Ashanti employees or contractors, could also result in lost gold reserves, mine stoppages, and have a material adverse effect on AngloGold Ashanti's financial condition or results of operations.

In 2011, the company recorded an increase in the number and severity of security incidents, due in part to a greater level of organization among criminal elements and syndicates in AngloGold Ashanti's areas of operation as well as an increase in artisanal, small-scale and illegal mining activity in general.

Labor disruptions and increased labor costs could have an adverse effect on AngloGold Ashanti's results of operations and financial condition.

AngloGold Ashanti employees in South Africa, Ghana, Guinea and some South American countries, are highly unionized. Trade unions, therefore, have a significant impact on the company's labor relations, as well as on social and political reforms, most notably in South Africa. There is a risk that strikes or other types of conflict with unions or employees may occur at any of the company's operations, particularly where the labor force is unionized. Labor disruptions may be used to advocate labor, political or social goals in the future. For example, labor disruptions may occur in sympathy with strikes or labor unrest in other sectors of the economy. In late July 2011, AngloGold Ashanti miners joined others in the South African petroleum, coal and diamond industries in a wage-related strike. The action at AngloGold Ashanti's operation lasted five days and the subsequent ramp-up of production was slower than expected. The resulting payroll increases have impacted the financial performance of all South African operations. Material labor disruptions could have an adverse effect on AngloGold Ashanti's results of operations and financial condition.

In South Africa, it has become established practice to negotiate wages and conditions of employment with the unions every two years through the Chamber of Mines of South Africa. South African employment law sets out minimum terms and conditions of employment for employees, which form the benchmark for all employment contracts. As at December 31, 2011, approximately 61 percent of the company's workforce, excluding contractors, or approximately 52 percent of its total workforce, was located in South Africa.

An agreement was signed with the unions in August 2011, following negotiations between the Chamber of Mines and the National Union of Mineworkers (NUM), the United Associations of South Africa, (UASA) (on behalf of some clerical and junior management staff) and Solidarity (on behalf of a small number of miners). The mining unions and gold mining companies signed a two-year agreement for an increase of between 8 percent and 10 percent, depending on the level of worker experience. AngloGold Ashanti cannot give assurance that it will be able to renegotiate this agreement on satisfactory terms when it next expires.

In Ghana, a three-year, wage agreement for the years 2009 to 2011, effective from January 1, 2009, was reached towards the end of 2009. The next round of negotiations is expected to take place in April 2012. As at December 31, 2011, approximately 11 percent of the company's workforce, excluding contractors, or approximately 12 percent of the total workforce, was located in Ghana. AngloGold Ashanti cannot give assurance that it will be able to renegotiate this agreement on satisfactory terms following its expiry at the end of December 2011.

In Argentina, where the collective bargaining agreement that applies to the company's employees at Cerro Vanguardia is due to expire in May 2012, the trade unions have requested significant salary increases. The company and the unions have entered into a transitional agreement that provides for an average salary increase across all wage categories of approximately 17 percent and expect to negotiate a final salary increase in connection with the new collective

Table of Contents

bargaining agreement. The company may not be able to renegotiate this agreement on satisfactory terms when it expires. In particular, the new agreement may result in significantly higher labor costs for the company's Argentine operations. The unions may also resort to industrial action in connection with the renegotiation of the agreement.

Labor costs represent a substantial proportion of the company's total operating costs and at many operations, including its South African, Ghanaian and Tanzanian operations, is the company's single largest component of operating costs. Any increases in labor costs have to be offset by greater productivity efforts by all operations and employees, failing which such increase in labor costs could have a material adverse effect on AngloGold Ashanti's results of operations and its financial condition.

Results may be further impaired if the company incurs penalties for failing to meet standards set by labor laws regarding worker rights. For example, employment law in South Africa imposes monetary penalties for neglecting to report to government authorities on progress made towards achieving employment equity in the workplace, and Ghanaian law contains broad provisions requiring mining companies to recruit and train Ghanaian personnel and to use the services of Ghanaian companies. In Australia, the federal government has recently introduced a new industrial relations system that includes good faith bargaining obligations for employers, fewer restrictions on the content of collective agreements and an enhanced role for union officials as bargaining representatives, parties to agreements and participants in dispute resolution.

The use of contractors at certain of the company's operations may expose AngloGold Ashanti to delays or suspensions in mining activities and increases in mining costs.

AngloGold Ashanti uses contractors at certain of its operations to mine and deliver ore to processing plants as well as for other purposes. At mines employing mining contractors, contracting costs represent a significant proportion of the total operating costs of these operations and the company does not own all of the mining equipment. For example, increased contractor rates at the Sadiola mine in Mali contributed to a significant rise in total cash costs in the final quarter of 2011.

AngloGold Ashanti's operations could be disrupted, resulting in additional costs and liabilities, if the mining contractors at affected mines have financial difficulties or if a dispute arises in renegotiating a contract, or if there is a delay in replacing an existing contractor and its operating equipment to meet business needs at expected cost levels. Increases in contract mining rates, in the absence of associated productivity increases, will also have an adverse impact on the company's results of operations and financial condition.

In addition, AngloGold Ashanti's reduced control over those aspects of operations which are the responsibility of contractors, contractor failure to comply with applicable legal and regulatory requirements, and their inability to manage their workforce could adversely affect AngloGold Ashanti's reputation, results of operations and financial position, and may result in the company incurring liability to third parties due to the actions of the contractor.

AngloGold Ashanti competes with mining and other companies for key human resources.

AngloGold Ashanti competes on a global basis with mining and other companies, to attract and retain key human resources at all levels with the appropriate technical skills and operating and managerial experience necessary to operate its business. This is further exacerbated in the current environment of increased mining activity across the globe, combined with the global shortage of key mining skills, including geologists, mining engineers, metallurgists and skilled artisans.

The retention of staff is particularly challenging in South Africa, where, in addition to the impacts of global industry shortages of skilled labor, AngloGold Ashanti is required to achieve employment equity targets of participation by HDSAs in management and other positions. AngloGold Ashanti competes with all companies in South Africa to attract and retain a small but growing pool of HDSAs with the necessary skills and experience.

The recruitment of skilled workers is becoming increasingly competitive in Argentina as well, as more mining development occurs nationally and regionally. Also material is the scarcity of skills in the resource sector of Western Australia due to the mining boom currently underway in the region, particularly with regard to safety management. If safety systems and training cannot be strengthened to ensure that operators achieve the required level of competence, the incidence of accidents may rise.

There can be no assurance that the company will attract and retain skilled and experienced employees. Should it fail to do so or lose any of its key personnel, business and growth prospects may be harmed and this could have an adverse impact on AngloGold Ashanti's results of operations and its financial condition.

Table of Contents

The prevalence of occupational health diseases and the potential costs and liabilities related thereto may have an adverse effect on the business and results of operations of AngloGold Ashanti.

The primary areas of focus in respect of occupational health of employees within the company's operations are noise-induced hearing loss (NIHL) and occupational lung diseases (OLD), which include pulmonary diseases such as tuberculosis (TB) from various causes and silicosis in individuals exposed to silica dust. These require active dust management strategies in underground operations, particularly in South Africa where a significant number of silicosis cases by current and former employees alleging past exposures are still reported each year to the board for statutory compensation. AngloGold Ashanti provides occupational health services to its employees at its occupational health centers and clinics and continues to improve preventative occupational hygiene initiatives, such as implementing various dust control measures and supplying its employees with respiratory protection equipment. If the costs associated with providing such occupational health services, implementing such dust control measures or supplying such equipment increase significantly beyond anticipated or budgeted amounts, this could have an adverse effect on the results of operations of AngloGold Ashanti and its financial condition. Actual and alleged health and safety incidents or breaches of standards may also adversely impact the company's reputation.

A claim filed by a former employee of AngloGold Ashanti's predecessor, Vaal Reefs Mining and Exploration Company Limited, seeks approximately R2.6 million for damages resulting from silicosis allegedly contracted while working on a mine. In March 2011, the Constitutional Court rejected the lower court's decision that the claim was precluded by statutory compensation and granted leave to the decedent's executor to proceed with his case in the High Court and seek a claim for damages under common law against AngloGold Ashanti. This will comprise, among other elements, providing evidence that Mr. Mankayi contracted silicosis as a result of negligent conduct on the part of AngloGold Ashanti's predecessor. AngloGold Ashanti will continue to defend this case on its merits.

As a result of the Constitutional Court decision permitting miners with OLD to sue their current or former employers for damages outside the statutory compensation scheme, AngloGold Ashanti could be subject to numerous similar claims, including a potential class action or similar group claim. AngloGold Ashanti is studying the details of the Constitutional Court judgment and will defend any subsequent claims, if and when filed, on their merits. In view of the limited information currently available, no reliable estimate can be made for this potential liability at this time. Should AngloGold Ashanti be unsuccessful in defending actions by any other individuals or groups that lodge similar claims in the future, such claims would have an adverse impact on AngloGold Ashanti's financial condition which could potentially be material.

In light of the Constitutional Court judgment, AngloGold Ashanti is calling for the industry to engage with government (and other stakeholders) to seek an appropriate industry-wide solution. AngloGold Ashanti can provide no assurances that an industry-wide solution can be reached or that the terms thereof will not have a material adverse effect on AngloGold Ashanti's financial condition.

In response to the effects of silicosis in labor-sending communities, a number of mining companies (under the auspices of the Chamber of Mines of South Africa) together with the NUM, which is the largest union in the mining sector in South Africa, and the national and regional departments of health, have embarked on a project to assist in delivering compensation and relief by mining companies under the Occupational Diseases in Mines and Works Act (ODMWA) to affected communities.

AngloGold Ashanti faces certain risks in dealing with HIV/AIDS, particularly at its South African operations and with tropical disease outbreaks such as malaria, and other diseases which may have an adverse effect on the company's results of operations and financial condition.

AIDS and associated diseases remain one of the major health care challenges faced by AngloGold Ashanti's South African operations. Workforce prevalence studies indicate that HIV prevalence rates among AngloGold Ashanti's South African workforce may be as high as 30 percent. AngloGold Ashanti continues to develop and implement programs to help those infected with HIV and prevent new infections from spreading. Since 2001, the company has offered a voluntary counseling and HIV testing program for employees in South Africa. In 2002, it began to offer anti-retroviral therapy (ART) to HIV positive employees who met the current medical criteria for the initiation of ART. From April 2003, AngloGold Ashanti began a roll-out of the treatment to all eligible employees desiring it. As at December 2011, approximately 2,400 employees were receiving treatment using anti-retroviral drugs.

Malaria and other tropical diseases pose significant health risks at all of the company's operations in central, west and east Africa where such diseases may assume epidemic proportions because of ineffective national control programs. Malaria is a major cause of death in young children and pregnant women but also gives rise to fatalities and absenteeism in adult men. Other conditions such as heart disease, chronic diseases, and obesity are of increasing incidence and concern.

Table of Contents

Such diseases impair the health of workers and negatively affect productivity and profitability as a result of workers' diminished focus or skill, absenteeism, treatment costs and allocated resources. AngloGold Ashanti cannot guarantee that any current or future medical program will be successful in preventing or reducing the infection rate among its employees or in affecting consequent illness or mortality rates. AngloGold Ashanti may incur significant costs in addressing this issue in the future, which could also adversely impact the company's results of operations and financial condition.

The costs and impacts associated with the pumping of water inflows from closed mines adjacent to the company's operations could have an adverse effect on its results of operations.

Certain of AngloGold Ashanti's mining operations are located adjacent to the mining operations of other mining companies. The closure of a mining operation may have an impact upon continued operations at the adjacent mine if appropriate preventative steps are not taken. In particular, this can include the ingress of underground water where pumping operations at the adjacent closed mine are suspended. Such ingress could have an adverse effect on any one of the company's mining operations as a result of property damage, disruption to operations, additional pollution liabilities and pumping costs and consequently could have an adverse impact upon its results of operations and financial condition.

The potential costs associated with the remediation and prevention of groundwater contamination from the company's operations or due to flooding from closed mines adjacent to the company's operations could have a material adverse effect on the results of operations of AngloGold Ashanti and its financial condition.

AngloGold Ashanti has identified groundwater contamination plumes at certain of its operations. Numerous scientific, technical and legal studies have been undertaken to assist in determining the magnitude of the contamination and to find sustainable remediation solutions, and, based thereon, the company has instituted processes to reduce seepage and to address soil and groundwater contamination, including monitored natural attenuation by the existing environment and phyto-technologies. Subject to the completion of trials, and the technology being a proven remediation technique, no reliable estimate can be made for the potential costs of remediation and prevention of groundwater contamination at AngloGold Ashanti's operations. Should these costs be significant, this could have a material adverse impact upon AngloGold Ashanti's results of operations and its financial condition.

Deep groundwater contamination is a significant issue in South Africa, where groundwater in some older mining regions has infiltrated mined-out workings. It becomes acidic if exposed to sulfide minerals in these workings, presenting a potential contamination risk to shallow groundwater and eventually surface water resources if allowed to spread. AngloGold Ashanti has identified a flooding and future pollution risk posed by deep groundwater in the Klerksdorp and Far West Rand goldfields. AngloGold Ashanti's Vaal River operations are part of the Klerksdorp goldfield and its West Wits operations are part of the Far West Rand goldfield. Various studies have been undertaken by AngloGold Ashanti since 1999. Due to the interconnected nature of underground mining operations in South Africa, any proposed solution needs to be a combined one supported by all the companies owning mines located in these goldfields. As a result, the South African Department of Mineral Resources and affected mining companies are now involved in the development of a Regional Mine Closure Strategy.

In view of the limitation of current information for the accurate estimation of a liability, no reliable estimate can be made for this obligation, which could be material and have an adverse impact on AngloGold Ashanti's financial condition.

The occurrence of events for which AngloGold Ashanti is not insured or for which its insurance is inadequate may adversely affect cash flows and overall profitability.

AngloGold Ashanti maintains insurance to protect only against catastrophic events which could have a significant adverse effect on its operations and profitability. This insurance is maintained in amounts that the company believes to be reasonable depending upon the circumstances surrounding each identified risk. However, damage and third-party claims arising from catastrophic events may exceed the limit of liability on insurance policies the company has in place. Furthermore, AngloGold Ashanti's insurance does not cover all potential risks associated with its business and may exclude certain parts of its business. AngloGold Ashanti may elect not to insure certain risks due to the high premiums or for various other reasons, including an assessment that the risks are remote.

The company may not be able to obtain insurance coverage at acceptable premiums. Insurance for certain risks in particular, such as loss of title to mineral property, environmental pollution, or other hazards resulting from exploration and production, is not generally available to mining companies on acceptable terms. The availability and cost of insurance coverage can vary considerably from year to year as a result of events beyond the company's control or from claims, and this can result in higher premiums and periodically being unable to maintain the levels or types of insurance carried.

Table of Contents

The occurrence of events for which AngloGold Ashanti is not insured will adversely impact its cash flows, its results of operations and its financial condition.

AngloGold Ashanti is subject to the risk of litigation, the causes and costs of which are not always known.

AngloGold Ashanti is subject to litigation, arbitration and other legal proceedings arising in the normal course of business and may be involved in disputes that may result in litigation. The causes of potential future litigation cannot be known and may arise from, among other things, business activities, environmental and health and safety concerns, share price volatility or failure to comply with disclosure obligations. The results of litigation cannot be predicted with certainty but could include fines, and the loss of licenses, concessions, or rights, among other things.

In the event of a dispute involving foreign operations of the company, AngloGold Ashanti may be subject to the exclusive jurisdiction of foreign courts or may not be successful in subjecting foreign persons to the jurisdiction of courts in South Africa or the United States.

A claim filed by a former employee of AngloGold Ashanti's predecessor, Vaal Reefs Mining and Exploration Company Limited, seeks approximately R2.6 million for damages resulting from silicosis allegedly contracted while working on a mine. In March 2011, the Constitutional Court rejected the lower court's decision that the claim was precluded by statutory compensation and granted leave to the decedent's executor to proceed with his case in the High Court and seek a claim for damages under common law against AngloGold Ashanti. In Colombia, the company is also involved in an action in the Administrative Superior Court of the Cundinamarca District against the Environmental Ministry following the issuance of a fine against AngloGold Ashanti; and six class action lawsuits flowing in part from the alleged breach of Article 34 of the Mining Code and in part from allegations that activities in restricted areas contravene environmental legislation. See Item 8A.: Consolidated statements and other financial information - Legal proceedings .

Should the company be unable to resolve disputes favorably or be able to enforce its rights, this may have a material adverse impact on the company's financial performance, cash flow and results of operations.

Sales of large quantities of AngloGold Ashanti's ordinary shares and American Depositary Shares (ADSs), and the perception that these sales may occur or other dilution of the company's equity, could adversely affect the prevailing market price of the company's securities.

The bulk of AngloGold Ashanti's shares are held by a relatively small number of investors with the top four institutional holders controlling around 24 percent of free float.

The market price of the company's securities could fall if large quantities of ordinary shares or ADSs are sold in the public market, if there is divestment by certain types or groupings of investors, or if there is the perception in the marketplace that such sales could occur. Subject to applicable securities laws, holders of AngloGold Ashanti's ordinary shares or ADSs may sell them at any time. The market price of the company's ordinary shares or ADSs could also fall as a result of any future offerings AngloGold Ashanti makes of its ordinary shares, ADSs, or securities exchangeable or exercisable for the company's ordinary shares or ADSs, or the perception in the market place that these offerings might occur. AngloGold Ashanti may make such offerings, including offerings of additional ADS rights, share rights or similar securities, at any time or from time to time in the future.

Fluctuations in the exchange rate of currencies may reduce the market value of AngloGold Ashanti's securities, as well as the market value of any dividends or distributions paid by the company.

AngloGold Ashanti has historically declared all dividends in South African rands. As a result, exchange rate movements may have affected and may continue to affect the Australian dollar, the British pound, the Ghanaian cedi and the US dollar value of these dividends, as well as of any other distributions paid by the relevant depository to investors that hold the company's securities. This may reduce the value of these securities to investors.

AngloGold Ashanti's memorandum and articles of association allow for dividends and distributions to be declared in any currency at the discretion of the board of directors, or the company's shareholders at a general meeting. If and to the extent that AngloGold Ashanti opts to declare dividends and distributions in US dollars, exchange rate movements will not affect the US dollar value of any dividends or distributions. Nevertheless, the value of any dividend or distribution in Australian dollars, British pounds, Ghanaian cedis or South African rands will continue to be affected. If and to the extent that dividends and distributions are declared in South African rands, exchange rate movements will continue to affect the Australian dollar, British pound, Ghanaian cedi and US dollar value of these dividends and distributions. Furthermore, the market value of AngloGold Ashanti's securities as expressed in Australian dollars, British pounds, Ghanaian cedis, US dollars and South African rands will continue to fluctuate in part as a result of foreign exchange fluctuations.

Table of Contents

The announcement by the South African government to replace the Secondary Tax on Companies with a withholding tax on dividends and other distributions may impact the amount of dividends or other distributions received by AngloGold Ashanti's shareholders.

On February 21, 2007, the South African government announced that a 10 percent withholding tax on dividends and other distributions payable to shareholders would be implemented. In his budget speech on February 22, 2012, the South African Minister of Finance announced that the withholding tax on dividends and other distributions payable to shareholders will be 15 percent effective April 1, 2012.

This withholding tax replaces the Secondary Tax on Companies and although this may reduce the tax payable by AngloGold Ashanti's South African operations, thereby potentially increasing distributable earnings, the withholding tax on dividends and other distributions will generally reduce the amount of dividends or other distributions received by AngloGold Ashanti shareholders.

AngloGold Ashanti may not pay dividends or make similar payments to shareholders in the future.

AngloGold Ashanti pays cash dividends only if there are sufficient funds available for that purpose. Fund availability depends upon many factors that include the amount of cash available in relation to AngloGold Ashanti's capital expenditure on existing infrastructure and exploration and other projects.

Under South African law, companies are entitled to pay a dividend or similar payment to its shareholders only if the company meets the solvency and liquidity tests set out in legislation, and the company's articles of association.

Given these factors, including the capital and investment needs of the company, and the board of directors' discretion to declare a dividend that includes the amount and timing thereof, cash dividends may not be paid in the future.

The implementation of an integrated Enterprise Resource Planning (ERP) system could have an adverse effect on AngloGold Ashanti's operational results and its financial condition.

AngloGold Ashanti is implementing a single, global ERP system to support all operations managed by AngloGold Ashanti. The ERP system is being implemented over a three-and-a-half-year period which commenced in August 2011. The contemplated implementation of an ERP system on a global basis is inherently a high-risk initiative due to the potential for implementation cost and time overruns. In addition, such implementation could affect the ability of AngloGold Ashanti to report and manage information if difficulties in the implementation and operation of the system are experienced, which could have an adverse effect upon AngloGold Ashanti's operational results and its financial condition.

Table of Contents

ITEM 4: INFORMATION ON THE COMPANY

**4A. HISTORY AND DEVELOPMENT OF THE COMPANY
GROUP INFORMATION**

AngloGold Limited was founded in June 1998 with the consolidation of the gold mining interests of Anglo American plc. AngloGold Ashanti Limited, as the company exists today, was formed on April 26, 2004 following the business combination between AngloGold and Ashanti Goldfields Company Limited.

CURRENT PROFILE

AngloGold Ashanti Limited is headquartered in Johannesburg, South Africa. The company (Registration number 1944/017354/06) was incorporated in the Republic of South Africa in 1944 under the name of Vaal Reefs Exploration and Mining Company Limited and operates under the South African Companies Act 71 of 2008 (Companies Act), as amended.

Its registered office is at 76 Jeppe Street, Newtown, Johannesburg, South Africa, 2001. Telephone: +27 11 6376000.

While AngloGold Ashanti's primary listing is on the Johannesburg Stock Exchange (JSE), the company is also listed on the London Stock Exchange (LSE), the New York Stock Exchange (NYSE), the Ghana Stock Exchange (GhSE) and the Australian Securities Exchange (ASX).

AngloGold Ashanti delisted from Euronext Paris on December 23, 2011 and from Euronext Brussels on December 30, 2011.

HISTORY AND SIGNIFICANT DEVELOPMENTS

Below are highlights of key corporate activities from 1998:

1998

Formation of AngloGold Limited through the consolidation of East Rand Gold and Uranium Company Limited; Eastvaal Gold Holdings Limited; Southvaal Holdings Limited; Free State Consolidated Gold Mines Limited; Elandsrand Gold Mining Company Limited; H.J. Joel Gold Mining Company Limited and Western Deep Levels Limited into a single, focused, independent, gold mining company. Vaal Reefs Exploration and Mining Company Limited (Vaal Reefs), the vehicle for the consolidation, changed its name to AngloGold Limited and increased its authorized share capital, effective March 30, 1998.

1998-2004

Expansion of AngloGold Limited's operations outside of South Africa.

2004

Concluded the business combination with Ashanti Goldfields Company Limited, at which time the company changed its name to AngloGold Ashanti Limited.

2007

Anglo American plc sold 69,100,000 ordinary shares of AngloGold Ashanti, thereby reducing Anglo American's shareholding in AngloGold Ashanti from 41.7 percent to 16.6 percent.

2009

Anglo American plc sold its remaining shareholding to Paulson & Co. Inc.

2010

AngloGold Ashanti eliminated its hedge book, thereby gaining full exposure to spot gold prices.

Table of Contents

4B. BUSINESS OVERVIEW

AngloGold Ashanti is a global gold company with a portfolio of assets and differing orebody types in key gold producing regions. The company is currently the third-largest gold producer in the world.

PRODUCTS

AngloGold Ashanti's main product is gold. In the course of processing the ore mined, by-products such as silver, uranium oxide and sulfuric acid are produced at the Argentinian, South African and Brazilian operations.

OPERATIONS

AngloGold Ashanti's 20 operations are located in 10 countries (Argentina, Australia, Brazil, Ghana, Guinea, Mali, Namibia, South Africa, Tanzania and the United States). These include six deep-level mines and one surface operation in South Africa as well as a combination of surface and underground mining operations in the Americas, Australia and elsewhere on the African continent.

EXPLORATION

The group's exploration program, which covers greenfield, brownfield, and more recently, marine exploration, is conducted either directly or in collaboration with partners. The group's most recent greenfield discovery is the La Colosa deposit in Colombia. Brownfield exploration is conducted around existing operations. In October 2009, the group established a joint venture to explore for marine mineral deposits on the continental shelf. This complements AngloGold Ashanti's existing terrestrial exploration and mining activities.

DEVELOPMENT

AngloGold Ashanti utilizes its exploration team to build on its record of new gold discoveries and to grow its gold endowment. The company has increased its capacity to fund a significant project pipeline by incurring longer-term debt, while maintaining capital discipline and improving shareholder returns.

MARKETING

Once processed to the doré (unrefined gold bar) stage at AngloGold Ashanti's operations, this product is dispatched to various precious metal refineries where the gold is refined to a purity of at least 99.5 percent, in accordance with the standards of "good delivery" as determined by the London Bullion Market Association. It is then sold to bullion banks or refiners. Gold has been a much sought after source of wealth over the centuries, be it as an investment, a store of value, or as jewellery. AngloGold Ashanti campaigns actively to promote the demand for gold.

GOLD MARKET

AngloGold Ashanti's gold is refined at various precious metal refineries. In refined and marketable form, gold normally takes the shape of bars, varying in size from 12.5 kilogram to smaller bars weighing some 1 kilogram or less, all of which contain 99.5 percent gold. Through the refineries the gold is sold directly to bullion banks. Bullion banks are registered commercial banks which deal in gold, distributing bullion bought from mining companies and refineries to markets worldwide. These banks hold consignment stocks in all major physical markets and finance these inventories from the margins they charge physical buyers.

The physical gold market is dominated by the jewellery and investment sectors, which together account for over 80 percent of total demand. The balance of gold supply is used in electronics and dentistry. While the quantity of gold used in jewellery consumption has decreased over the last decade with the steadily rising gold price, the investment market has largely absorbed available supply. Investment in physical gold involves bar and coin hoarding, medals and other retail investment instruments, as well as the now significant market for exchange traded funds (ETFs).

Table of Contents

In 2011, the gold market continued to be profoundly influenced by ongoing economic turmoil, particularly in the United States of America in the first half of the year and latterly by the crisis triggered by the deterioration of the sovereign debt markets in the Eurozone. This trend persisted until the fourth quarter, during which the situation in Europe deteriorated, the euro started slipping against the dollar in the face of the inability of the European countries to resolve the funding crisis and the gold price failed to react favorably to these conditions. Despite this trend in the fourth quarter of 2011, the year-end spot gold price gained 11 percent in 2011 compared to 2010 and averaged \$1,572 per ounce in 2011, which is 28 percent higher than the average spot price of \$1,227 in 2010. However, prospects for the gold market continued to deteriorate in the first quarter of 2012 as uncertainty about sovereign debt and inflation eased, European economic prospects improved, investor interest for gold slowed and physical demand in India decreased. As at March 31, 2012, the price of gold was \$1,664 per ounce.

Investment market

As 2011 drew to a close, the gold price failed to respond favorably to the worsening crisis in Europe. Nevertheless, ETF holdings grew over the course of the fourth quarter of 2011, improving on a sluggish first quarter and reversing the negative trend of the second and third quarters.

As at December 31, 2011, aggregate holdings for the major ETFs totaled almost 78 million ounces, which represents a 7 percent increase of 5.2 million ounces for the year. This growth is modest when compared to the significant increases in ETF holdings of 2009 and 2010 (19.84 million ounces and 9.97 million ounces respectively). Combined ETFs rank sixth behind official sector holdings of the United States (267 million ounces), Germany (109 million ounces), IMF (91 million ounces), Italy (79 million ounces) and France (78 million ounces). As was the case in 2010, official sector demand in the gold market remained significant in 2011, with governments continuing to increase their gold holdings in the face of extreme economic uncertainty.

More traditional gold investment products such as bar and coin experienced a very mixed year. In India, the world's biggest single gold market, gold price volatility and a weakening rupee severely dampened gold demand in both investment and jewellery. In China, such volatility also played a negative role but since the value of the Yuan is so closely managed, the impacts were not as marked. Unlike India, China recorded growth in both investment and jewellery demand in 2011. In the developed markets, Europe was by far the strongest for bar and coin hoarding, and in the third quarter European demand exceeded that of India and China – a highly rare occurrence. Much of this activity was driven by the debt crisis in the Eurozone.

Jewellery markets

The key jewellery markets of India and China both experienced mixed fortunes during the year. After a record year in 2010, India's first two quarters remained strong but fell off in the second half of the year on price volatility and rupee weakness. Price volatility also dampened demand in China, but unlike India, which experienced a contraction in the third and fourth quarters, China still recorded increases all year round, with total jewellery demand growing by 16 percent to reach 524 tonnes. In the United States, the jewellery sector showed modest growth of around 3 percent as the market finally began to settle after years of turmoil. The high end of the gold jewellery market in the United States showed the greatest growth for the second year as the wealthy are less affected by a financial downturn than low to middle income earners.

COMPETITION

As gold mining is a mature and regulated industry, and very significant volumes of gold and gold derivatives trade in the world markets independent of gold mine supply, AngloGold Ashanti does not consider that competition for sales plays any role in its operations as a gold producer. However, gold producers do compete against each other for acquisition of mining assets, exploration opportunities and human resources.

INTELLECTUAL PROPERTY

AngloGold Ashanti, as a group, is not dependent on intellectual property for the conduct of its business as a whole.

Table of Contents

STRATEGY

At the end of March 2008, AngloGold Ashanti adopted a new business strategy. The company defined its strategic focus in five components:

Promote the organizational development of the group as a strategic value driver;

Maximize margins by managing both revenue and costs to ensure delivery and protection of returns throughout the economic cycle;

Manage the business as an asset portfolio by using capital deployment optimization approaches to support delivery of return targets;

Grow the business by having a definite strategy for both organic growth and growth by acquisition and be opportunistic in seeking value accretive targets; and

Embrace sustainability principles by developing business and social partnerships based on mutual value creation, while maintaining a focus on ensuring the safety and well-being of employees and managing environmental and other impacts.

The key features of each of these components of the company's strategy are:

Promote the organizational development of the group

AngloGold Ashanti recognizes the strategic importance of the group's organizational development and through its:

Mission, it seeks to define a clear view of the organization;

Vision, it seeks to reflect a clear and consistent view of the organization's future;

Values, it recognizes that the process used to achieve results is as important as the results themselves;

Business Process Framework, it seeks to define the policy, standards and operating framework necessary to establish a flexible and responsive work model within which people have the opportunity to be creative and realize their potential; and

Organizational model, it seeks to ensure that the right person, does the right work, in the right way and at the right time.

Maximize margins

AngloGold Ashanti seeks to maximize margins by actively managing revenues and costs. In particular, it seeks to maximize value from its products by:

offering exposure to spot prices;

delivering products of a consistent quality and on time;

seeking to maintain cost inflation below the industry average; and

applying resource development strategies to maintain operating margins over the lifecycle of an asset.

Manage the business as an asset portfolio

AngloGold Ashanti seeks to optimize capital deployment by investing only in assets and growth opportunities that offer attractive returns. The company ranks each asset and project as part of its business planning process, both in absolute terms and relative to its peer group, with the aim of:

ensuring that individual assets and projects meet or exceed specified risk-adjusted rates of return;

identifying the strengths and weaknesses of the portfolio, with a particular focus on portfolio risk;

implementing strategies to optimize orebody capability;

applying methods and design to optimize operating performance;

ensuring the application of detailed planning and scheduling, together with the use of best-practice operating methods associated with each asset;

optimizing returns from existing assets and growth opportunities; and

selling those assets that no longer meet the company's criteria at attractive valuations.

Table of Contents

Grow the business

AngloGold Ashanti seeks to further enhance shareholder value by:

Greenfield exploration: building upon its asset portfolio and landholdings to develop new projects, whilst continually reviewing and analyzing potential opportunities;

Brownfield exploration and project development: promoting organic growth and utilizing the existing infrastructural base;

Mergers and acquisitions: selectively pursuing value accretive merger and acquisition opportunities; and

Other commodities: maximizing the value of other commodities within the company's existing and developing asset portfolio.

Embrace sustainability principles

AngloGold Ashanti's sustainable development framework seeks to address a number of interlinked issues that are critical to business sustainability. In particular:

In a climate of increased resource competition, this framework seeks to enable countries and local communities in which the company operates to derive sustainable economic benefits from the company's mining operations by developing mutually-beneficial partnerships with host governments and local communities and participating in the co-design of projects that contribute to achieving local development goals.

As mining requires, among other things, energy, water and access to land, the company seeks to manage these resources in a way that limits any adverse impact on community relationships and production costs.

The company seeks to improve the safety and health of its employees.

The company is committed to respecting human rights as reflected in its implementation of the voluntary principles on security and human rights (VPSHR) in its security management strategies as well as the development of a human rights framework for the business based on the UN guidelines on business and human rights.

As effective stakeholder engagement is required to support the company's management of its sustainability initiatives, the company continues to work on devising and implementing a company-wide engagement standard to improve performance in this area.

The implementation of this business strategy has resulted in the significant restructuring of the company's portfolio of operations as well as the strengthening of the company's balance sheet and created the operating and financial foundation to achieve production growth. In addition, operating cash flow has increased markedly following the elimination of the hedge book, the rise in gold prices, as well as the implementation of Project ONE.

Project ONE, which the company also developed in 2008, consists of two integrated initiatives: the System for People (SP) and the Business Process Framework (BPF). The SP is a managerial effectiveness system focused on ensuring that individuals at each level of the organization are held directly accountable for their work responsibilities. The BPF defines business expectations, sets operational targets and seeks to create operating methodologies that can reduce volatility and increase average productivity. Since deploying a successful pilot project at South Africa's Mponeng mine in 2009, AngloGold Ashanti has gradually rolled out Project ONE across all of its operations.

In 2008, AngloGold Ashanti also began developing and implementing its Safety Transformation, an initiative that seeks to embed the concepts of physical risk, health and wellbeing into both components of Project ONE. More recently, in 2010, the board of directors approved a policy for the transformation and localization of labor, which aims to take into account the legislative framework of host countries, as well as the company's own values, in order to redress historical imbalances, promote gender equality and employment of local citizens at all levels, as well as the equitable employment of people with disabilities.

AngloGold Ashanti reviews its business strategy regularly to determine progress in its implementation against the backdrop of a dynamic operating and regulatory environment.

Achieving strategic and performance objectives will be impacted by any portfolio changes and is subject to a number of risks, uncertainties and other factors, some of which are beyond the company's control and any of which may prevent or delay AngloGold Ashanti from achieving its stated goals. Certain of these risks, uncertainties and other factors are described in Item 3D.: Risk factors. See also Note regarding forward-looking statements.

Table of Contents

THE REGULATORY ENVIRONMENT ENABLING ANGLOGOLD ASHANTI TO MINE

AngloGold Ashanti's rights to own and exploit mineral reserves and deposits are governed by the laws and regulations of the jurisdictions in which these mineral properties lie.

There are in some cases certain restrictions on AngloGold Ashanti's ability to independently move assets out of certain countries in which it has operations, or transfer assets within the group, without the prior consent of the local government or minority shareholders involved. See Item 10D.: Exchange controls for details.

For more information on the risks and uncertainties associated with AngloGold Ashanti's mining rights, see Item 3D.: Risk factors, in particular the risk factor entitled AngloGold Ashanti's mining rights in the countries in which it operates could be altered, suspended or canceled for a variety of reasons, including breaches in its obligations in respect of its mining rights.

South Africa

The MPRDA and the Revised Mining Charter

The Mineral and Petroleum Resources Development Act (MPRDA) came into effect on May 1, 2004. The objectives of the MPRDA are, among other things, to allow for state sovereignty over all mineral and petroleum resources in the country, to promote economic growth and the development of these resources and to expand opportunities for the historically disadvantaged. Another objective of the MPRDA is to ensure security of tenure for the respective operations concerning prospecting, exploration, mining and production. By virtue of the provisions of the MPRDA, the state ensures that holders of mining and prospecting rights contribute to the socio-economic development of the areas in which they operate.

The Mineral and Petroleum Resources Development Amendment Act (MPRDAA) was passed by Parliament in 2008 and has been signed by the State President and published, but is not yet in effect. Its purpose is to amend the MPRDA in order to, inter alia:

- make the Minister the responsible authority for implementing environmental matters in terms of the National Environmental Management Act, 1998 (NEMA) and specific environmental legislation as it relates to prospecting, mining, exploration, production and related activities incidental thereto on the prospecting, mining, exploration or production area;
- align the MPRDA with the NEMA in order to provide for one environmental management system;
- remove ambiguities in certain definitions;
- add functions to the Regional Mining Development and Environmental Committee;
- amend transitional arrangements so as to further afford statutory protection to certain existing old order rights; and
- provide for matters connected therewith.

It is not clear when, if ever, the MPRDAA will come into force. All indications are that the DMR is currently working on a set of amendments to the MPRDAA and that a bill will be published for comment in 2012.

The Broad-Based Socio-Economic Empowerment Charter for the South African Mining Industry (the Mining Charter) sprang from the MPRDA and also took effect on May 1, 2004. The Mining Charter committed all stakeholders in the mining industry to transfer ownership of 26 percent of their assets to black or historically disadvantaged South Africans (HDSAs) within 10 years. The Charter also sets targets for, among other things, the advancement of HDSAs into management positions, the employment of women, procurement of goods and services from HDSA-owned companies, training, community development and the upgrading of mine housing. Mining companies are required to devise plans to achieve these targets, must identify current levels of beneficiation and must indicate opportunities for growth.

The objectives of the Mining Charter are to:

- promote equitable access to the nation's mineral resources by all the people of South Africa;
- substantially and meaningfully expand opportunities for HDSAs, including women, to enter the mining and minerals industry and to benefit from the exploitation of the nation's mineral resources;
- use the industry's existing skills base for the empowerment of HDSAs;
- expand the skills base of HDSAs in order to serve the community;
- promote employment and advance the social and economic welfare of mining communities and the major labor-sending areas; and

promote beneficiation of South Africa's mineral commodities.

Table of Contents

The Mining Charter envisages measuring progress on transformation of ownership by:

- taking into account, among other things, attributable units of production controlled by HDSAs;
- allowing flexibility by credits or offsets, so that, for example, where HDSA participation exceeds any set target in a particular operation, the excess may be offset against shortfalls in another operation;
- taking into account previous empowerment deals in determining credits and offsets; and
- considering special incentives to encourage the retention by HDSAs of newly acquired equity for a reasonable period.

Under the Charter, the mining industry as a whole agreed to assist HDSA companies in securing finance to fund participation in an amount of Rand 100 billion over the first five years. Beyond the Rand 100 billion commitment, HDSA participation will be increased on a willing seller-willing buyer basis, at fair market value, where the mining companies are not at risk.

Following a review, the DMR amended the Mining Charter and the Revised Mining Charter was released on September 13, 2010. The requirement under the Mining Charter for mining entities to achieve a 26 percent HDSA ownership of mining assets by the year 2014 has been retained. Amendments to the Mining Charter in the Revised Mining Charter include, inter alia, the requirement by mining companies to:

- facilitate local beneficiation of mineral commodities;
- procure a minimum of 40 percent of capital goods, 70 percent of services and 50 percent of consumer goods from HDSA suppliers (i.e. suppliers of which a minimum of 25 percent + 1 vote of their share capital must be owned by HDSAs) by 2014, these targets being, however, exclusive of non-discretionary procurement expenditure;
- ensure that multinational suppliers of capital goods put a minimum of 0.5 percent of their annual income generated from South African mining companies into a social development fund beginning in 2010, to contribute to the socioeconomic development of South African communities;
- achieve a minimum of 40 percent HDSA demographic representation by 2014 at executive management (board) level, senior management (EXCO) level, core and critical skills, middle management level and junior management level;
- invest up to 5 percent of annual payroll in essential skills development activities; and
- implement measures to improve the standards of housing and living conditions for mineworkers by converting or upgrading mineworkers hostels into family units, attaining an occupancy rate of one person per room and facilitating home ownership options for all mineworkers in consultation with organized labor, all of which must be achieved by April 30, 2014.

In addition, mining companies are required to monitor and evaluate their compliance with the Revised Mining Charter, and must submit annual compliance reports to the DMR.

The government takes a Scorecard approach to the different facets of promoting the objectives of the Charter. It uses the Scorecard when considering applications for the conversion of existing old order rights into new order rights. The Scorecard sets out the requirements of the Charter in tabular form which allows the DMR to tick off areas where a mining company is in compliance. It covers the following areas:

- human resource development;
- employment equity;
- migrant labor;
- mine community and rural development;
- housing and living conditions;
- ownership and joint ventures;
- beneficiation; and
- reporting.

The new Scorecard attached to the Revised Mining Charter makes provision for a phased-in approach for compliance with the above targets over the 5-year period ending April 30, 2014. For measurement purposes, the Scorecard allocates various weightings to the different elements of the Revised Mining Charter. Failure to comply with the provisions of the Revised Mining Charter will amount to a breach of the MPRDA, may result in the cancellation or suspension of a mining company's existing mining rights and may prevent AngloGold Ashanti South African operations from obtaining any new mining rights.

On April 29, 2009, as required by section 100(1)(b) of the MPRDA, the Minister published the Code of Good Practice for the South African Mineral Industry (the Code). The purpose of the Code was to set out administrative principles to enhance implementation of the Mining Charter and the MPRDA. The Code is to be read in combination with the Mining Charter and other legislation relating to measurement of socio-economic transformation in the South African mining industry.

Table of Contents

A mining right will be granted to a successful applicant for a period not exceeding 30 years. Mining rights may be renewed for additional periods not exceeding 30 years at a time. A mining right can be canceled if the mineral to which such mining right relates is not mined at an optimal rate.

AngloGold Ashanti holds eight mining rights in South Africa, five of which have been successfully converted, executed and registered as new order mining rights at the Mineral and Petroleum Resources Titles Office (MPRTO). One old order mining right has been converted and executed and is currently awaiting registration in the MPRTO, whilst two old order mining rights are still awaiting conversion by the Minister of Mineral Resources. The deadline for the conversion process from old to new order rights was the end of April 2009 and AngloGold Ashanti has taken all necessary steps to pursue the conversion of its old order mining rights.

A prospecting right will be granted to a successful applicant for a period not exceeding five years, and may only be renewed once for three years. The MPRDA also provides for a retention period of up to three years after prospecting, with one renewal up to two years, subject to certain conditions.

AngloGold Ashanti holds three prospecting rights, one of which is in the process of being converted into a mining right. Six new prospecting right applications have been submitted to the Department of Mineral Resources (DMR) since the end of March 2011, after the moratorium on the issuing of rights was lifted. AngloGold Ashanti also holds a mining permit for the recovery of sand and clay.

AngloGold Ashanti applied for and has been granted a refining license and an import and export permit by the South African Diamond and Precious Metals Regulator.

The BBBEE Amendment Bill

In December 2011, the Department of Trade and Industry (DTI) published the Broad-based Black Empowerment Amendment Bill, 2011 (the BBBEE Amendment Bill) for public comment. If enacted, the BBBEE Amendment Bill will amend the Broad-based Black Economic Empowerment Act 53 of 2003 (the BBBEE Act) to provide a framework of principles, strategies and guidelines aimed at promoting the broad-based socio-economic empowerment of HDSAs across the South African economy and society in the form of ownership, management, employment equity, skills development, preferential procurement, enterprise development and socio-economic development. The public comment period expired in February 2012 and the BBBEE Amendment Bill is still pending in parliament. If enacted in its current form, the BBBEE Amendment Bill will introduce a number of changes to the current framework under the BBBEE Act, including:

- amending and clarifying the definition of the intended beneficiaries of such framework;
- amending the definition of "Broad-Based Black Economic Empowerment", or BBBEE, to introduce the concept of sustainable BBBEE and to indicate that preferential procurement includes the promotion of local content procurement, which refers to locally produced goods, services or works that meet a certain minimum local content threshold;
- expanding the scope of the Codes of Good Practice, and the related transformation charters, on BBBEE matters that the Minister of Trade and Industry can issue under the BBBEE Act for specific sectors of the South African economy and making it compulsory for public authorities, governmental agencies and other public entities to apply such codes;
- introducing into the BBBEE Act itself the definition of fronting BBBEE practices, which to date has been developed outside of the BBBEE Act and has now been expanded to capture the more sophisticated and unsuspecting fronting transactions, making fronting a criminal offense that is punishable with imprisonment and fines under certain circumstances, reasserting in the BBBEE Act the common law remedies for misrepresentation and more generally enhancing the enforcement mechanism against fronting;
- establishing a BBBEE Commission responsible for overseeing, supervising and promoting compliance with the BBBEE Act, as well as receiving and investigating BBBEE-related complaints; and
- introducing a new clause providing that in the event of a conflict between the BBBEE Act and any other South African law, the BBBEE Act will prevail.

Currently, it is unclear whether, when or in which final form the BBBEE Amendment Bill will be enacted.

To date, mining companies operating in South Africa have been required to comply with the BBBEE regime set out under the MPRDA and the Revised Mining Charter, which is specific to the mining industry. See "The MPRDA and the Revised Mining Charter". Currently, there is uncertainty as to whether and to what extent the BBBEE Amendment Bill, if and when enacted in its current form, will add to and conflict with the BBBEE requirements applicable to mining

Table of Contents

companies under the Revised Mining Charter. The potential implications of any such additional or conflicting regulatory requirements are also unclear. In addition, in connection with BBBEE-related matters mining companies may become subject to the regulatory authority of the DTI and the BBBEE Commission in addition to that of the DMR, which may increase the regulatory burden and compliance costs for mining companies.

The Royalty Act

The Mineral and Petroleum Resources Royalty Act, 2008, or the Royalty Act, was promulgated on November 24, 2008 and came into operation on March 1, 2010. The Royalty Act imposes a royalty on refined and unrefined minerals payable to the State.

The royalty in respect of refined minerals (which include gold and platinum) is calculated by dividing earnings before interest and taxes, or EBIT, as calculated under IFRS, by the product of 12.5 times gross revenue calculated as a percentage, plus an additional 0.5 percent. EBIT refers to taxable mining income (with certain exceptions such as no deduction for interest payable and foreign exchange losses) before assessed losses but after capital expenditure. A maximum royalty of 5 percent of revenue has been introduced for refined minerals.

The royalty in respect of unrefined minerals (which include uranium) is calculated by dividing EBIT by the product of nine times gross revenue calculated as a percentage, plus an additional 0.5 percent. Where unrefined mineral resources (such as uranium) constitute less than 10 percent in value of the total composite mineral resources, the royalty rate in respect of refined mineral resources may be used for all gross sales and a separate calculation of EBIT for each class of mineral resources is not required. For AngloGold Ashanti, this means that currently the company will pay a royalty based on refined mineral resources (as the unrefined mineral resources (such as uranium) for AngloGold Ashanti for 2011 constituted less than 10 percent in value of the total composite mineral resources). The rate of royalty tax payable for 2011 was 2.97 percent of revenue of the company's South African operations.

CONTINENTAL AFRICA

Democratic Republic of the Congo

The mining industry in the Democratic Republic of the Congo (DRC) is regulated primarily by the Mining Code enacted in July 2002 and its ancillary Mining Regulations, promulgated in March 2003 (DRC Mining Code). The DRC Mining Code vests the Minister of Mines with the authority to grant, refuse, suspend and terminate mineral rights. Mineral rights may be granted in the form of exploration permits for an initial period of four years or in the form of mining permits which are granted for an initial period of 30 years. An exploration permit may, at any time before expiry, be transformed partially into a mining license or a small-scale mining permit. Exploitation permits are granted upon successful completion of exploration and satisfaction of certain requirements, including approval of an environmental impact study and an environmental management plan.

The holder of a mining permit is required to commence development and mine construction within three years of the award of such permit. Failure to do so may lead to forfeiture of the mining permit. A permit holder must comply with specific rules relating to, among others, protection of the environment, cultural heritage, health and safety, construction and infrastructure planning. Mining and exploration activities are required to be undertaken so as to affect as little as possible the interests of lawful occupants of land and surface rights holders, including their customary rights. The exercise of mineral rights by title holders which effectively deprives or interferes with the rights of occupants and surface rights holders, requires payment of fair compensation by the mineral title holder.

To protect and enforce rights acquired under an exploration or mining permit, the DRC Mining Code provides, depending on the nature of a dispute or threat, administrative, judicial and national or international arbitral recourses.

The DRC Mining Code sets out taxes, charges, royalties and other fees payable to the treasury by a mining title holder in respect of its activities. It also provides for a level of fiscal stability, in that existing tax, customs, exchange and benefits applicable to mining activities are guaranteed to remain unchanged for a period of 10 years in favor of a mining title holder in the event that amendments to the DRC Mining Code would result in less favorable payment obligations. In 2011, the DRC Government passed a law introducing VAT at a rate of 16 percent. As this new tax framework conflicts with some of the provisions of the DRC Mining Code, the Chamber of Mines is now seeking clarification from the DRC Government. This may result in the DRC Mining Code being amended in the coming year.

Table of Contents

AngloGold Ashanti holds the majority stake and is the operator of Ashanti Goldfields Kilo (AGK) (86.22 percent), an exploration and mining joint venture with Société Minière de Kilo-Moto (SOKIMO) (13.78 percent), a state-owned gold company.

AngloGold Ashanti also holds a stake in the Kibali gold project located in northeastern DRC. The project is operated by Randgold Resources and is owned by Randgold Resources (45 percent), AngloGold Ashanti (45 percent) and SOKIMO (10 percent), which latter share represents the interest of the DRC government in the Kibali gold project. This project is currently in construction phase with first production anticipated in 2014.

Ghana

The Constitution of Ghana as well as the Minerals and Mining Act, 2006 (Act 703) (the GMM Act) provide that all minerals in Ghana in their natural state are the property of the State and title to them is vested in the President on behalf of and in trust for the people of Ghana, with rights of prospecting, recovery and associated land usage being granted under license or lease.

The grant of a mining lease by the Minister of Mines is normally subject to parliamentary ratification unless the mining lease falls into a class of transactions exempted by Parliament.

Control of mining companies

The Minister of Mines has the power to object to a person becoming or remaining a shareholder controller, a majority shareholder controller or an indirect controller of a company which has been granted a mining lease if the Minister believes the public interest would be prejudiced by the person concerned becoming or remaining such a controller.

Stability agreement

The GMM Act provides for stability agreements as a mechanism to ensure that the incentives and protection afforded by laws in force at the time of the stability agreement are guaranteed for a period of 15 years. A stability agreement is subject to ratification by Parliament.

Prior to the business combination between AngloGold and Ashanti in April 2004, AngloGold and the government of Ghana agreed on the terms of a stability agreement to govern certain aspects of the fiscal and regulatory framework under which AngloGold Ashanti would operate in Ghana following the implementation of the business combination. The stability agreement necessitated the amendment of the Obuasi mining lease which had been ratified by Parliament.

Under the stability agreement, the government of Ghana agreed:

- to extend the term of the mining lease relating to the Obuasi mine until 2054 on terms existing prior to the business combination;
- to maintain, for a period of 15 years, the royalties payable by AngloGold Ashanti with respect to its mining operations in Ghana at a rate of 3 percent per annum of the total revenue from minerals obtained by AngloGold Ashanti from such mining operations;
- to ensure the income tax rate would be 30 percent for a period of 15 years. The agreement was amended in December 2006 to make the tax rate equal to the prevailing corporate rate for listed companies; and
- to permit AngloGold Ashanti and any or all of its subsidiaries in Ghana to retain up to 80 percent of export proceeds in foreign currencies offshore, or if such foreign currency is held in Ghana, to guarantee the availability of such foreign currency.

The stability agreement also stipulates that a sale of AngloGold Ashanti's or any of its subsidiaries' assets located in Ghana remains subject to the government's approval. Furthermore, the government retains its special rights (Golden Share) under the provisions of the GMM Act pertaining to the control of a mining company, in respect of its assets and operations in Ghana.

The Government of Ghana agreed that AngloGold Ashanti's Ghanaian operations will not be adversely affected by any new enactments or orders, or by changes to the level of payments of any customs or other duties relating to mining operations, taxes, fees and other fiscal imports or laws relating to exchange control, transfer of capital and dividend remittance for a period of 15 years after the completion of the business combination. For example, AngloGold Ashanti has been exempted from the application of the National Fiscal Stabilization Act 2009 (Act 785) (NFS Act). The NFS Act

Table of Contents

imposed a 5 percent levy on all profits before tax for mining companies for fiscal years 2009 and 2010, as a temporary measure to raise additional revenue to meet critical expenditures, while maintaining the government's fiscal objectives. In its 2011 Budget Statement and Economic Policy, the Government extended the application of the NFS Act for another fiscal year. AngloGold Ashanti has also been exempted from the application of the March 2010 amendment to the GMM Act. The Minerals and Mining (Amendment) Act, 2010 (Act 794) fixed the royalty rate at 5 percent, whereas the prior GMM Act provision had stated that royalties payable would not be more than 6 percent or less than 3 percent of the total revenue of minerals obtained by the holder.

Foreseeable impact of Ghana's 2012 Budget Statement on AGA operations in Ghana

According to the November 2011 Budget Statement, Corporate Tax for mining companies will be increased from 25 percent to 35 percent and a further Windfall Profit Tax of 10 percent was imposed on profit with effect from the 2012 Ghana fiscal year, which commenced January 2012. This will have the overall effect of increasing mining companies' tax liability by 20 percent. Additionally, when determining chargeable income for tax purposes, the costs incurred by a mining company in one contract area or site will not be allowed to be set off against profits from another contract area or site belonging to such mining company.

While the stability agreement (as amended) between AGA and the Government of Ghana caps AGA's Corporate Tax liability at 30 percent and precludes AGA from being adversely affected by any new enactments that would impose obligations upon AGA or any of its Ghanaian subsidiaries, the Government of Ghana has announced that it has constituted a team to re-negotiate stability agreements with mining companies. To date, no formal communication has been received by AGA in this regard.

Retention of foreign earnings

AngloGold Ashanti's operations in Ghana are permitted to retain 80 percent of their foreign exchange earnings in an offshore foreign exchange account. In addition, the company has permission from the Bank of Ghana to retain and use dollars, outside of Ghana, required to meet payments to the company's hedge counterparts which cannot be met from the cash resources of its treasury company.

Localization policy

A detailed program must be submitted for the recruitment and training of Ghanaians with a view to achieving localization, which is the replacement of expatriate personnel by Ghanaian personnel. In addition, the holder must give preference to Ghanaian products and personnel, to the maximum extent possible, consistent with safety, efficiency and economies.

Except as otherwise provided in a specific mining lease, all immovable assets of the holder under the mining lease vest in the State upon termination, as does all moveable property that is fully depreciated for tax purposes. Moveable property that is not fully depreciated is to be offered to the State at the depreciated cost. The holder must exercise his rights subject to such limitations relating to surface rights as the Minister of Mines may prescribe.

Mining properties

Obuasi

The current mining lease for the Obuasi area was granted by the Government of Ghana on March 5, 1994. It grants mining rights to land with an area of approximately 334 square kilometers in the Amansie East and Adansi West districts of the Ashanti region for a term of 30 years from the date of the agreement. In addition, the application for a mining lease over the adjacent 140 square kilometers has also been granted, resulting in the total area under mining lease conditions increasing to 474 square kilometers, (the Lease Area). The company is required to pay rent to the Government of Ghana (subject to review every five years, when the rent may be increased by up to 20 percent) at a rate of approximately \$5 per square kilometer and such royalties as are prescribed by legislation, including royalties on timber felled within the Lease Area. The Government of Ghana agreed to extend the term of the mining lease relating to the Obuasi mine until 2054. The mining lease was formally ratified by Parliament on October 23, 2008.

Table of Contents

Iduapriem and Teberebie

Iduapriem has title to a 33 square kilometer mining lease granted on April 19, 1989 for a period of 30 years. The terms and conditions of the lease are consistent with similar leases granted in respect of the Obuasi mining lease. Teberebie has two leases, one granted in February 1998 for a term of 30 years, and another granted in June 1992 for a term of 26 years. In January 2009 Iduapriem obtained a new mining lease, the Ajopa Concession, for a period of 10 years. The concession covers an area of 48.34 square kilometers.

Guinea

In Guinea, all mineral substances are the property of the state. Mining activities are currently regulated by the Mining Code, 1995. However, a new Mining Code was promulgated on September 9, 2011 and published in the official gazette in January 2012 (New Mining Code). The New Mining Code will come into force once a presidential decree has been published. See *New Mining Code* below.

The right to undertake mining operations can only be acquired by virtue of one of the following mining titles: surveying permit, small-scale mining license, mining prospecting license, mining license or mining concession. The holders of mining titles are guaranteed the right to dispose freely of their assets, to organize their enterprises as they wish, to engage and discharge staff in accordance with the regulations in force, to freely move their staff and their products throughout Guinea and to dispose of their products in international markets.

The group's Guinea subsidiary, Société AngloGold Ashanti Goldfields de Guinée SA (SAG), has title to the Siguiiri mining concession area which was granted on November 11, 1993 for a period of 25 years. The agreement provides for an eventual extension/renegotiation after 23 years for such periods as may be required to exhaust the economic Ore Reserve.

At Siguiiri, the original area granted of 8,384 square kilometers was reduced to a concession area of four blocks totaling 1,495 square kilometers.

SAG has the exclusive right to explore and mine in the remaining Siguiiri concession area for an additional 22-year period from November 11, 1996 under conditions detailed in a Convention de Base which predates the Mining Code, 1995.

Key elements of the Convention de Base are that:

- The Republic of Guinea (the State) holds a 15 percent free-carried or non-contributory interest; is entitled to a royalty of 3 percent based on a spot gold price of less than \$475 per ounce; and is owed 5 percent of the value of gold exported, based on a spot gold price above \$475 per ounce, as fixed on the London Gold Bullion Market;

- A local development tax of 0.4 percent is payable on gross sales revenue;

- Salaries of expatriate employees are subject to a 10 percent income tax;

- Mining goods imported into Guinea are exempt from all import taxes and duties for the first two years of commercial production; and

- SAG is committed to adopting and progressively implementing a plan for the effective rehabilitation of the mining areas disturbed or affected by operations.

The Convention de Base is subject to early termination if both parties formally and expressly agree to it, if all project activities are voluntarily suspended for a continuous period of eight months or are permanently abandoned by AngloGold Ashanti's subsidiary; or if SAG goes into voluntary liquidation or is placed into liquidation by a court of competent jurisdiction.

New Mining Code

Pursuant to the New Mining Code, existing mining titles in effect on the date on which the New Mining Code comes into force remain valid for their duration and for the substances for which they have been issued.

The New Mining Code provides for the establishment of a State mining company which will hold the interests that the State has in all the mining companies present in Guinea. The granting of a mining title by the State gives rise to a State shareholding of 15 percent in the mining company, which may not be diluted. This interest is acquired upon signing of the mining title and no financial contribution may be requested from the State in return. The State further reserves the right to acquire an additional share of 20 percent in cash in accordance with the terms established with each company concerned, which could bring the total shareholding of the State to 35 percent.

Table of Contents

The provisions contained in the New Mining Code concerning mining tax, customs duties, transparency, anti-corruption and labor (Mandatory Provisions) shall apply within 60 days following the effective date of the New Mining Code to all mining companies having reached the exploitation phase. The New Mining Code does not provide for transitional, stability or harmonization provisions concerning these Mandatory Provisions. To the extent that non-mandatory provisions of the New Mining Code are inconsistent with the Convention de Base, the Government of Guinea and AGA are required to work together as soon as possible after the New Mining Code comes into force to harmonize the Convention de Base with the New Mining Code.

The aforementioned Mandatory Provisions may be applicable to AGA as it is currently in exploitation phase. To date, AGA has not received any formal communication from the Government of Guinea relating to the renegotiation of its Convention de Base.

The New Mining Code also contains a formal commitment to the principles of the Extractive Industries Transparency Initiative (EITI). The EITI sets a global standard for oil, gas and mining companies to publish what they pay and for governments to disclose what they receive. In addition to binding the government to EITI, the code requires all mining companies working in Guinea even those from countries that have not committed to EITI to respect the initiative's principles and processes.

Mali

Mineral rights in Mali are governed by Ordinance No. 99-32/P- RM of August 19, 1999 enacting the mining code, as amended by No. 013/2000/P-RM of February 10, 2000 and ratified by Law No. 00-011 of May 30, 2000 (the Mining Code), and Decree No. 99-255/P-RM of September 15, 1999 implementing the Mining Code.

Prospecting activities are carried out under prospecting authorizations (authorization de prospection). The authorizations give an individual or corporate entity the exclusive right to carry out prospecting activities over a given area for a period of three years renewable without a reduction in the area covered by the authorization. Exploration activities may be carried out under exploration permits (permis de recherche). The latter are granted to corporate entities only by order of the Minister of Mines. Exploration permits are granted for a period of three years, renewable twice for additional three-year periods. Each renewal requires the permit holder to relinquish 50 percent of the area covered by such permit. The entity applying for such a permit must provide proof of technical and financial capabilities.

An exploitation permit (permis d exploitation) is required to mine a deposit located within the area of a prospecting authorization or an exploration permit. The exploitation permit grants an exclusive right to prospect, explore and exploit the named substances for a maximum period of 30 years renewable three times for an additional 10 years. The exploitation permit is granted only to the holder of an exploration permit or of a prospecting authorization and covers only the area governed by the exploration permit or the prospecting authorization. An application must be submitted to the Minister of Mines and to the National Director of Mines.

As soon as the exploitation permit is granted, the permit holder must incorporate a company under the law of Mali. The permit holder will assign the permit for free to this company. The State will have a 10 percent free carried interest in the company. This interest will be converted into priority shares and the State's participation will not be diluted in case of an increase in capital.

Applications for exploitation permits must contain various documents attesting to the financial and technical capacity of the applicant, a detailed environmental study in respect of the impact of the project on the environment, a feasibility study and a bank deposit. The permit is granted by decree of the Head of Government. Refusal to grant a permit may only be based on two grounds: insufficient evidence to support the exploitation of the deposit or the failure of the environmental study.

Applications for prospecting authorizations and exploration permits must contain various documents attesting to the financial and technical capacity of the applicant, a detailed works and costs program, a map defining the area which is being requested and providing geographical coordinates, the exact details relating to the identity of the applicant and evidence of the authority of the signatory of the application. Such titles are granted by ministerial order. Any refusal to grant such titles shall be notified by letter from the Minister of Mines to the applicant.

All mining titles mentioned above require an establishment convention (convention d'etablissement) to be signed by the State and the titleholder defining their rights and obligations. A standard form of such establishment convention has been approved by decree of the Head of Government.

Table of Contents

AngloGold Ashanti has interests in Morila, Sadiola and Yatela, all of which are governed by establishment conventions covering exploration, mining, treatment and marketing in a comprehensive document. These documents include general provisions regarding exploration (work program, fiscal and customs framework) and exploitation (formation of a local limited liability mining company, State interest, fiscal and customs framework governing construction and exploitation phases, exchange controls, marketing of the product, accounting regime, training programs for local labor, protection of the environment, reclamation, safety, hygiene and dispute settlement).

As the establishment conventions contain stabilization clauses, the mining operations carried out by the AngloGold Ashanti entities in Mali are subject to the provisions of the previous mining codes of 1970 and 1991 but also, for residual matters, to the provisions of the Mining Code of 1999.

AngloGold Ashanti has complied with all applicable requirements and the relevant permits have been issued. Morila, Sadiola and Yatela have 30-year permits which expire in 2024, 2020 and 2024, respectively.

Namibia

The Minerals (Prospecting and Mining) Act of 1992 (the MPM Act) provides that all rights to minerals in the Republic of Namibia vest in the State. The Mining Rights and Mineral Resources division of the Directorate handles all applications for and allocation of rights in relation to minerals in the Republic of Namibia.

Prospecting and mining activities are regulated by the MPM Act which, among others, provides for the granting, refusal, suspension and termination of rights in relation to minerals. The right to undertake prospecting and mining operations can only be acquired by virtue of one of the following mining titles:

- Non-exclusive Prospecting Licenses;
- Reconnaissance Licenses;
- Mining Claims;
- Exclusive Prospecting Licenses;
- Mineral Deposit Retention Licenses; and
- Mining Licenses.

To enable a company to prospect or mine, the Ministry of Mines and Energy may grant an Exclusive Prospecting License (or a Mining Claim in some instances). Upon application and presentation of a feasibility study, the Ministry then grants a Mining License. Licensing decisions take into account the abilities of the company (including its mining, financial and technical capabilities), projected rehabilitation programs and the payment of royalties. Mining Licenses are only awarded to Namibian citizens and companies registered in Namibia, which includes foreign companies registered with the Namibian registrar of companies.

In 2011, the government adopted the New Equitable Economic Empowerment Framework (NEEEF). The objectives of the NEEEF are aimed at redressing past inequalities and providing measures for empowerment. No legislation implementing the NEEEF has to date been enacted. In addition, the Chamber of Mines is in the process of negotiating its own charter with the government.

AngloGold Namibia (Pty) Ltd was granted the necessary licenses in respect of its mining and prospecting activities in Namibia. Its current 15-year Mining License expires in October 2018. An application has been submitted to the Ministry of Mines and Energy for the extension of the aforementioned Mining License to 2030. This application includes the mining area known as the Anomaly 16.

Taxes

The Namibian Government appears to have withdrawn or deferred the mining tax proposals that it made in 2011. These proposals included, amongst others, a requirement for mines to pay a value added tax of 15 percent on the export value of unprocessed minerals, a 5 percent export duty and an increased corporate tax rate of 44 percent, up from 37.5 percent. The minimum historic corporate tax rate on mining companies is 25 percent. Most mining companies currently pay between 25 and 40 percent, with diamond mines taxed at 55 percent. A corporate tax of 40 percent applies to profits from non-mining activities. There is a 10 percent withholding tax on interest earned by foreigners on their deposits held with Namibian banks or unit trust schemes. There is also a 25 percent withholding tax on certain services, management and consultancy fees rendered by foreigners.

Table of Contents

An amount received from the sale or other disposal of a mineral license or the shares in a company holding a mineral license is deemed to be an income source in Namibia for purposes of calculating income tax, regardless of where the transaction takes place.

Royalties

In 2008, the Government confirmed a royalty schedule that originally had been introduced in 2004. Since then all mining companies, at the discretion of the Minister of Mines and Energy, pay a royalty of between 3 percent and 10 percent on the market value of base, precious, and rare metals and non-nuclear mineral fuels. AGA currently pays a royalty of 3 percent. The government also introduced a windfall royalty, which is payable at the discretion of the Minister, and a new type of royalty in respect of all minerals other than precious stones and dimension stones, which might function as a penalty royalty. For example, this penalty may be imposed on minerals that are not in their most refined state that have been or are about to be exported and are of such a nature that their value can be increased by way of a practical and economical refining process that is available in Namibia.

Tanzania

Mineral rights in the United Republic of Tanzania are principally governed by the Mining Act of 2010 (the Mining Act), and the Mining Regulations, 2010. The Mining Act and the Regulations came into force in November 2010. Ownership of and control over minerals on, in or under the land vest in the President of the United Republic of Tanzania. No person is allowed to prospect for minerals or carry on mining operations except pursuant to the authority of a mineral right license granted, or deemed to have been granted, under the Mining Act or its predecessor acts.

To enable a company to prospect or mine, the Ministry of Energy and Minerals (the MEM) initially grants an exclusive prospecting license. Upon presentation of a feasibility study, together with certain other environmental, social and financial assurances, the MEM may then grants a form of license for mining. Licensing decisions take into account the abilities of the company (including its mining, financial and technical capabilities), projected rehabilitation programs, environmental compliance and the payment of royalties.

The following licenses can be applied for under the Mining Act:

Licenses for Exploration:

- Prospecting license;
- Gemstone prospecting license; and
- Retention license.

Licenses for Mining:

- Special mining license (if the proposed capital investment is equal to at least US\$100 million);
- Mining license (if the proposed capital investment is equal to between US\$100,000 and US\$100 million); and
- Primary mining license (reserved for Tanzanian citizens).

Licenses for Ancillary Activities:

- Processing license;
- Smelting license; and
- Refining license.

For purpose of AngloGold Ashanti's Geita Gold Mine, only prospecting, retention and special mining licenses are relevant.

A prospecting license grants the holder the exclusive right to prospect in the area covered by the license for all minerals within the class of minerals applied for. The classes that can be applied for include (amongst others):

- metallic minerals;
- energy minerals;
- gemstones other than kimberlitic diamonds; and
- kimberlitic diamonds.

Table of Contents

An application for a prospecting license is made to the Commissioner for Minerals and the license is valid for a period of four years. Thereafter, the license is renewable for three further periods – the first period being for three years and the second and third periods being for two years each. Upon each renewal, 50 percent of the area covered by the license must be relinquished. A company applying for a prospecting license must, inter alia, state the financial and technical resources available to it.

If the holder of a prospecting license has identified a mineral deposit within the prospecting area that is potentially of commercial significance but that cannot be developed immediately because of technical constraints, adverse market conditions or other economic factors of a temporary character, it can apply for a retention license. A retention license can also be requested from the Minister after the expiry of a prospecting license period, for reasons ranging from financial to technical considerations. A retention license is valid for a period not exceeding five years and is thereafter renewable for a single period of five years. The advantage of converting a prospecting license into a retention license is that the MEM may not revoke a retention license if the license holder fails to meet its obligations within the time frame agreed on application for the license (as would be the case with a prospecting license).

Holders of prospecting or retention licenses over a tenement will not automatically have first right to any mining license granted over that tenement. However, in practice, they will be best positioned to meet the requirements to be granted a form of license for mining.

Mining is mainly carried out through either a mining license or a special mining license, both of which confer on their holder the exclusive right to conduct mining operations in or on the area covered by the license. A special mining license is granted for the shorter of either the estimated life of the ore body indicated in the feasibility study report or such period as the applicant may request. It is renewable for a further period not exceeding the estimated life of the remaining ore body.

Except in the case of a special mining license, a mineral right may be freely transferred by its holder (in whole or in part) to another person or entity without requiring consent from the MEM. However, the Commissioner for Minerals must be notified of any transfer of a prospecting or retention license and will refuse to register the transfer unless the transferee proves that it meets the financial and technical capability criteria required to apply for such licenses. The assignment of a special mining license generally requires the prior consent of the MEM, such consent not to be unreasonably withheld or delayed. There are limited exceptions to the requirement for the Minister's consent (such as transfers to an affiliate company of the license holder or to a financial institution or bank as security for any loan or guarantee in respect of mining operations).

Special mining licenses have certain fiscal and other advantages over mining licenses, as the holder of a special mining license may enter into a mining development agreement with the government of Tanzania to guarantee the fiscal stability of a long-term mining project and make special provision for the payment of royalties, taxes, fees and other fiscal imposts and a special mining license holder may, in certain circumstances, unilaterally amend the program of the mining operations agreed with the MEM.

AngloGold Ashanti has concluded a development agreement with the Ministry and was issued a mining license for a period of 25 years, which expires in 2023.

AUSTRALASIA

Australia

In Australia, with a few exceptions, all onshore minerals are owned by the Crown (in right of the State). The respective Minister for each State and Territory is responsible for administering the relevant mining legislation enacted by the States and Territories.

Native Title legislation applies to certain mining tenures within Australia. Australia recognizes and protects a form of Native Title that reflects the entitlement of Aboriginal people to their traditional lands in accordance with their traditional custom and laws. Should Native Title claims or determinations exist, certain Native Title processes and procedures will apply under the Native Title Act 1993 (Cth) before the tenure is granted. Tenure may be granted subject to conditions relating to Native Title rights. In the mining context, Native Title matters are managed as part of the tenement grant process. If disputes arise in relation to the grant of a particular tenement, they can be referred to the National Native Title Tribunal, established under the Native Title Act, for resolution.

Table of Contents

Other Federal and State Aboriginal heritage laws operate in parallel to the Native Title legislation. They exist predominantly for the purposes of protecting Aboriginal sites and areas of significance from disturbance. To date, there has not been any significant impact on any of AngloGold Ashanti's tenure due to Native Title or Aboriginal Heritage legislation.

AngloGold Ashanti's operating properties are located in the state of Western Australia where tenure is issued under, and mining operations are governed by, the Mining Act 1978 (WA). The most common forms of tenure are exploration and prospecting licenses, mining leases, miscellaneous licenses and general purpose leases. In most Australian states, if the holder of an exploration license establishes indications of an economic mineral deposit in the area covered by the exploration license and complies with the conditions of the grant, the holder of the exploration license has a priority right against all others to be granted a mining lease which gives the holder exclusive mining rights with respect to minerals on the property. A general purpose lease may also be granted for one or more of a number of permitted purposes. These purposes include erecting, placing and operating machinery and plant in connection with mining operations, depositing or treating minerals or tailings and using the land for any other specified purpose directly connected with mining operations.

Mining tenures will be granted with conditions relating to protection of the environment. Exploration and mining operations may also require separate approval from the State, Territory or Federal Environment Minister under environmental impact assessment and protection legislation prior to commencement. Further, an operating license under the State or Territory environmental protection legislation may also be required for certain mine processing or mining-related operations.

It is possible for an individual or entity to own an area of land and for another individual or entity to be granted the right to explore for or mine any minerals located on or under the surface of the same area. Typically, the maximum initial term of a mining lease is 21 years and the holder has the right to renew the lease for an additional 21 years. Subsequent renewals are granted at the discretion of the respective State or Territory's minister responsible for mining rights. In Western Australia, mining leases can only be assigned with the prior written consent of the minister.

Government royalties are payable by the holder of mining tenure in respect of minerals obtained from the relevant area of land, at the rates specified in the relevant legislation in each State or Territory. The royalty on gold production in Western Australia is payable quarterly at a fixed rate of 2.5 percent of the royalty value of gold metal produced and sold. The royalty value is calculated by multiplying the amount of gold produced during a given month by the average gold spot price for that month. In addition, the holder of mining tenure may be required to pay annual rent in respect of the tenure. In Western Australia there is a minimum annual expenditure requirement for prospecting and exploration licenses and mining leases. Exemptions from the expenditure requirement can be obtained if certain conditions are satisfied.

AngloGold Ashanti has been granted 21-year term mining leases with rights of renewal to all of its mining areas in Australia, including its proportionate share of joint venture operations and accordingly it has, together with its joint venture partners where applicable, the exclusive right to mine in those areas. Both the group and its joint venture partners are fully authorized to conduct operations in accordance with relevant laws and regulations. The mining leases and rights of renewal cover the current life-of-mine at AngloGold Ashanti's operations in Australia.

AMERICAS

Argentina

Land ownership & mining rights

The Argentine Mining Code governs mining activity in the country. Special regimes exist for hydrocarbons and nuclear minerals. In the case of most minerals, the Mining Code establishes that the owner of the land is not the owner of the mineral rights; these are held by the national or provincial governments (depending on the location of the minerals). The national or provincial government, as applicable, is required by the Argentine Mining Code to grant whomever discovers a new mine title to the mining concession.

Table of Contents

The Argentine Mining Code regulates exploration permits and mining concessions. Exploration permits grant their holders exclusivity rights to any mineral discoveries, including those made by a third party within the exploration area covered by the permit. Exploration permits are limited in time and as to the extent of the exploration area, are subject to the payment of a single-time fee, and also require a minimum exploration work program and schedule to keep the permit in force.

The Argentine Mining Code also regulates mining concessions, or exploitation rights. Priority for receiving a mining concession is given to the registered discoverer of the mine, which holds the exploration permit. Once the application for a mine has been submitted, the applicant may commence works and must submit a legal survey of the units requested for the new mine. The application and the legal survey may be opposed by third parties following specific proceedings set forth in the Argentine Mining Code. Approval and registration of the legal survey by the Provincial mining authority constitutes formal title to the mining concession.

Any mining company wishing to commence or modify any mining-related activity, as defined by the Argentine Mining Code, including prospecting, exploration, exploitation, development, preparation, extraction, and storage of mineral substances, as well as property abandonment or mine closure activity, is required to prepare and submit to the competent Provincial environmental authority an Environmental Impact Assessment (EIA) prior to commencing the work. Each EIA is required to describe the nature of the proposed work, its potential risk to the environment, and the measures that will be taken to mitigate that risk. If accepted by the competent authority, the EIA is used as the basis to create a Declaration of Environmental Impact (DEI) to which the mining company is required to adhere during the mining-related activity at issue. The DEI is required to be updated at least on a bi-annual basis. Sanctions and penalties for non-compliance with the DEI are outlined in the Environmental Protection section of the Argentine Mining Code, and may include warnings, fines, suspension of quality certifications, restoration of the environment, temporary or permanent closure of activities, and withdrawal of authorization to conduct mining-related activities.

Holders of mining concessions must comply with three main conditions: payment of an annual fee, investment of a minimum amount of capital, and the carrying out of a reasonable level of exploitation. Failure to do so could lead to forfeiture of the mining concession, which would then revert back to the Province.

In the case of Cerro Vanguardia, AngloGold Ashanti's operation in Argentina, the mining concession holder is AngloGold Ashanti's partner, Fomento Minero de Santa Cruz S.A. (Fomicruz). On December 27, 1996, Fomicruz entered into a usufruct agreement whereby Cerro Vanguardia S.A. was granted an irrevocable right to exploit the Cerro Vanguardia deposit for a 40-year period, which expires on December 27, 2036. Cerro Vanguardia S.A. is an Argentine company controlled by AngloGold Ashanti, with Fomicruz as minority shareholder.

In addition to the Argentine Mining Code, between 1993 and 1995, Argentina implemented several federal laws to offer foreign companies attractive incentives for exploration and mining in Argentina, the Mining Investment Law (Law No. 24, 196, as amended, and related legal provisions) being the most important one. Such incentives include, among others, import duty exemptions, accelerated depreciation of fixed assets, a 3 percent cap on Provincial royalties, value added tax refunds for exploration-related expenses incurred by companies registered under the Mining Investment Law, and, subject to the filing of a feasibility study for the relevant mining project, a 30-year stability as to tax, customs and foreign exchange duties. Cerro Vanguardia S.A. obtained its tax, customs and foreign exchange stability certificate in 1996.

Recent and potential regulatory changes

On September 30, 2010, the National Law on Minimum Requirements for the Protection of Glaciers was enacted in Argentina, banning new mining exploration and exploitation activities on glaciers and peri-glacial areas. The law also subjects the ongoing mining activities to an environmental audit. If such audit results in material impacts on glaciers and peri-glacial areas, the relevant authority is empowered to take action, including suspension or relocation of the activity. The law establishes a broad definition of peri-glacial areas that, together with glacial areas, must yet be surveyed by an existing national Government Agency specifically appointed to this end. The constitutionality of the law has been challenged by the Province of San Juan (which hosts large mining projects) resulting in the granting of injunctions that have suspended the application of the law in that Province. The National Supreme Court of Justice of Argentina presides over the case, which is in its early stages.

Table of Contents

On October 26, 2011, Decree 1722/2011 (the Repatriation Decree) was issued, which imposes on oil, gas and mining companies operating in Argentina the obligation to repatriate all the proceeds of their exports from Argentina and to exchange such proceeds for Argentine legal currency in the domestic banking system. All exporters, other than oil, gas and mining companies, have been operating under such regime since late 2001. Mining companies, on the other hand, were entitled to two exceptions: (i) a decree of 2003 applicable to mining companies with tax, customs and foreign exchange stability certificates obtained prior to the date on which such a decree was enacted (which is the case of Cerro Vanguardia S.A.); and (ii) a decree of 2004 applicable to mining companies with tax, customs and foreign exchange stability certificates obtained after the date on which such decree was enacted. Both exceptions have not been formally superseded by the Repatriation Decree, but appear to conflict with it, and such conflict may result, in some cases, in a violation of mining companies' rights under the Mining Investment Law.

On December 27, 2011, the Argentine National Congress passed Law 26,737 which implemented a set of rules restricting the ownership of rural land by foreigners (including foreign individuals or any kind of legal entity controlled by foreign individuals or legal entities). The main restrictions are as follows: (i) foreigners cannot own in the aggregate more than 15 percent of the entire rural land of Argentina, the same cap being applicable to each province and municipality; (ii) foreigners will not be allowed to purchase more than 1,000 hectares in the so-called *zona núcleo*, which comprises the main agricultural areas of central Argentina or an equivalent surface depending on the location of the land and its productive potential; and (iii) foreigners will not be allowed to buy land that contains, or is adjacent to, relevant and permanent water bodies (such as rivers and lakes). Although exploration permits and mining concessions are not the subject matter of the restrictions placed by this law, certain rights granted to foreign mining companies under the Argentine Mining Code may be restricted by this new law. For example, the right that holders of mining concessions currently have to force the surface owner to sell the land to the holder of the mining concession might be restricted if the concession holder is a foreign individual or a legal entity controlled by foreigners.

Ten provinces in whose territories the main mining projects of Argentina are located, signed a document with the Federal Government entitled Federal Mining Agreement, or FMA. The purpose of the FMA is, among other things, to increase provincial revenues from the mining industry by creating legal entities owned by provincial governments that would work in association with private mining companies. This scheme is not new in Argentina and it has been used by some provincial governments, among them Santa Cruz Province (through Fomicruz), in the Cerro Vanguardia project. The FMA also contemplates other forms of revenues such as the formation of special trusts to be funded by mining companies in order to finance education, health and other programs. Increase in royalty rates is not specifically contemplated in the FMA. The Provinces that signed the FMA had previously formed a special association of provinces, supported by the National Government.

In Argentina, the current regulatory regime of royalty payments is expected to change and several different options and payment thresholds have been discussed. However, no immediate change is anticipated.

Brazil

Land ownership and mining rights

General legal aspects

The Brazilian Constitution of 1934 states that, for purposes of exploration and exploitation, deposits and other mineral resources constitute property separate from the soil and belong to the Federal Union. Exploration and exploitation of such mineral resources may take place only with the Federal Union's authorization or concession and in such a way as to protect the national interest. Federal law sets out penal and administrative sanctions for conduct and activities deemed to be harmful to the environment.

In Brazil, the National Department of Mineral Production (DNPM) is the State body within the Mines and Energy Ministry (MME) that is responsible for: (i) the registration of mining titles, (ii) the grant of authorizations and concessions, (iii) the supervision of mining activities and mining titleholders, and (iv) the issuance of supplementary rules in relation to mining activity.

Under the current Mining Code, there are two kinds of mines: (i) claimstake mines (*Minas Manifestadas*), for which rights were acquired before 1934 and exist independently of any mining license or authorization from the Federal Government, and (ii) granted mines, which are those that rely on grants from the Federal Government for mineral exploration or exploitation (pursuant to the Constitution). All of AngloGold Ashanti's operations in Brazil are granted mines.

Table of Contents

Mining activities in granted mines must be performed in two defined stages: (i) exploration, which entails defining and evaluating the deposit and determining the feasibility of exploitation, and (ii) exploitation, which involves coordinating operations aimed at the industrial exploitation of the mineral deposit, from the extraction of useful minerals to their processing. Exploration authorizations issued by DNPM are valid for one to three years. Extensions can be obtained if necessary. In contrast, exploitation rights, once granted, are valid for the lifetime of the deposit, provided the mining titleholder complies with all legal requirements. Pursuant to these requirements, for example, titleholders must (i) start work on mineral exploitation within six (6) months from the date of publication of the Exploitation Concession, (ii) continue their mining activities until the mineral deposit has been exhausted, in accordance with the Economic Exploitation Plan (Plano de Aproveitamento Econômico) approved by DNPM and (iii) refrain from suspending mining activities without prior notice to DNPM.

During the exploration period, the mining titleholder has to pay an Annual Rate per Hectare (TAH – Taxa Anual por Hectare), subject to a maximum value set by law. In the exploitation period, regardless of the legal regime governing the project (whether claimstake or granted mines), the mining titleholder has to pay the Financial Compensation for Exploiting Mineral Resources (CFEM – Compensação Financeira pela Exploração Mineral). The CFEM is currently calculated based on revenues, minus some deductions authorized by mining law.

At the end of 2011 and the beginning of 2012 the States of Minas Gerais, Pará and Amapá created a new tax (duty) on research, extraction and exploration activities as well as on the use of mineral resources carried out in those States. This tax could range from BRL3.00 to BRL6.50 per ton. In the State of Minas Gerais, however, gold ore was exempted from the collection of this new duty.

Potential regulatory changes

The Federal Government is contemplating changes to mining legislation. Its goals would be to (i) strengthen the role of the Federal Government in regulating the mining industry, (ii) attract more and better investments to the mineral sector, (iii) encourage maximal use of mineral reserves and (iv) encourage members of the industry to add value to mineral products.

The government's proposals have institutional, legal and financial facets. Institutionally, the proposals would create a National Council of Mineral Policy to advise the Presidency of Brazil and the MME on, and develop guidelines and directives for, the mining sector. They would also transform the DNPM into a regulatory agency with negotiation and inspection powers.

On the legal front, the proposals would change the rules governing access to mining titles. While exploration authorizations would be effective for a longer period of five (5) years, they would be renewable for only one extra year, at the discretion of authorities. Companies would also have to demonstrate that they are investing in exploration activities on a yearly basis. Exploitation rights would be limited to 35- or 40-year grants renewable at the discretion of authorities. The granting of rights would become a more discretionary process and would result in a Formal Adhesion Contract for Exploitation rather than in an open-ended concession.

On the financial front, the proposals would raise CFEM rates for trade in gold ore from 1 percent on net invoicing to 2 percent on gross invoicing. They would also create new calculation methods and incidence hypotheses, notably with regard to transactions between related parties.

Colombia

Land ownership and mining rights

In Colombia, all mineral substances are the property of the State of Colombia. The underlying principle of Colombian mining legislation is first-in-time, first-in-right.

Mining activities are regulated by the Mining Code, Act 685, 2001. Amendments to the Mining Code enacted in 2010 pursuant to Act 1382 were found unconstitutional. The Constitutional Court stayed its ruling for two years to give the government the opportunity to present a new law. The government is expected to make its new changes to the Mining Code public in the second half of 2012.

The filing of an exploration and exploitation proposal triggers a right of preference to obtain rights over the targeted area, provided it is available. Such area cannot exceed 10,000 hectares. Upon receipt of a proposal, the relevant government agency determines whether another proposal or contract already governs the area. If there are no pre-existing claims, the government agency grants the applicant a "free zone".

Table of Contents

The concession contract

The government agency grants exclusive concession contracts for exploration and exploitation. Such concessions allow concessionaires to conduct the studies, works and installations necessary to establish the existence of minerals and to organize their exploitation. Upon being awarded a mining concession, a company must take out an insurance policy to cover any possible environmental damage as well as breaches of its mining obligations. It may then proceed with exploration activities. Once the exploration phase is complete, the concessionaire files a new plan regarding works and installations. An environmental impact study must also be filed and approved in order for the concessionaire to receive an environmental license prior to beginning construction and development.

The initial term of concessions is 30 years. To receive an extension, a concessionaire must file a request two years before the termination of the initial term, and must substantiate the application with economic, environmental and technical information. Because the extension is not automatic, the concessionaire must renegotiate the conditions of the grant. The term of a concession and all the contractual obligations that arise from it are deemed to take effect as of the date of registration of the contract at the National Mining Register.

AngloGold Ashanti's core mining concession contracts at the La Colosa project provide that Ingeominas, the Colombian regulatory agency for mining activities, has the discretion to declare the underlying concession void if AngloGold Ashanti Colombia S.A. (AGAC) breaches applicable environmental laws or regulations. If Ingeominas were to exercise such discretion against AGAC, AGAC would be required to abandon the La Colosa project and all of its other existing mining concession contracts. Pending proposals for new mining concession contracts would also be canceled and AGAC would be banned from doing business with the Colombian government for a period of five years. As a result, AGAC would be unable to conduct any mining exploration or development activities during such period. However, this would not affect other AngloGold Ashanti subsidiaries operating in Colombia, which hold singularly or in concert with joint venture partners the majority of the company's concession contracts in Colombia.

There are some areas where mining activity is prohibited. These areas are:

- National parks;
- Regional parks;
- Protected forest reserves;
- Paramus (included in Act 1382, introduced in 2010); and
- Wetlands, pursuant to the Ramsar Convention.

Some forest reserves are not protected, but are set aside for active forestry purposes. Such forest reserves must be extracted after initial prospection, meaning that the concessionaire must obtain a specific permit to partially and temporarily change the use of the soil before pursuing exploration activities.

Cannon fees and royalties

Cannon fees are due from the moment the area is declared available for the company (rather than from the time the concession contract is signed). Such fees change based on the number of years that the company has been a concessionaire, as follows:

- From 1 to 5 years: approximately \$9.00 per hectare per year.
- For years 6 and after, approximately \$11.00 per hectare per year.

Once exploration is complete and the mining infrastructure is in place, the concessionaire must begin paying royalties. Royalties paid to the Colombian government consist of a percentage of the primary product and sub-products being exploited. For gold, the percentage to be paid is 4 percent.

Potential regulatory changes

In 2012, the government is expected to modify the process for obtaining a mining concession. Instead of using a first-in-time, first-in-right approach in all cases, the government plans on subjecting some areas to a bidding process open to any qualified entity.

Table of Contents

United States of America

Land ownership & mining rights

Mineral and surface rights in the United States are owned by private parties, state governments or the federal government. Although not the case at Cripple Creek & Victor Gold Mining Company's (CC&V) Cresson Project, the majority of land utilized for precious metals exploration, development and mining in the western United States is owned by the federal government. The right to mine on such land is governed by the General Mining Law of 1872, as amended (General Mining Law). The General Mining Law allows mining claims on certain federal lands upon the discovery of a valuable mineral deposit and proper compliance with claim location requirements. Until 1993, unpatented mining claim holders could apply for patents to their claims from the federal government, and, if granted, those patented mining claims became private lands owned by the mining claimant, limited only by reservations and restrictions contained in the patent from the federal government, and subject to the same permitting, environmental and reclamation laws and regulations as other private lands.

Individual states, including Colorado, typically follow a leasing system for state-owned minerals. Private parties have the right to sell, lease or enter into other agreements, such as joint ventures, with respect to minerals that they own or control. CC&V's Cresson Project covers approximately 7,100 acres, the vast majority of which consists of owned, patented mining claims from former public lands, with a small percentage of private and state lands, some of which are critical to the Cresson Project, being leased. All of the Cresson Project's current reserves are within the patented claims.

State permitting and reclamation

In addition to the permits required in connection with the laws and regulations described above, CC&V's Cresson Project is subject to a number of state and local permitting requirements, including permitting requirements imposed by the Colorado Mined Land Reclamation Act (MLRA) and Teller County. Under the MLRA, the Colorado Mined Land Reclamation Board (MLRB) issues and enforces mining and reclamation permits for all non-coal mines in Colorado on state, federal or private lands. In carrying out the statutory requirements of the MLRA, the MLRB (i) reviews mine permit applications and amendments and related matters, (ii) inspects active mine sites and prospecting sites and (iii) ensures financial warranties are posted for the actual cost of reclamation.

CC&V's Cresson Project is currently operating under a permit generally referred to as mine life extension one (MLE1) issued by the MLRB and Teller County. Among other things, MLE1 permits CC&V to continue active mining at the Cresson Project through 2016 and imposes reclamation requirements on CC&V, including requiring (i) the stabilization and re-vegetation of disturbed lands, (ii) the control of storm water and drainage from portals and waste rock dumps, (iii) the removal of roads and structures, (iv) the treatment and the elimination of process solutions, (v) the treatment of mine water prior to discharge into the environment, and (vi) visual mitigation.

Potential regulatory changes

In recent years, the U.S. Congress has considered a number of proposed amendments to the General Mining Law. Among the significant features contained in previously proposed legislation were a production royalty obligation, new and more stringent environmental standards and conditions, additional reclamation requirements, extensive new procedural steps which would likely result in delays in permitting, and granting counties the ability to petition the Secretary of the Interior to make certain areas unavailable for the location of unpatented mining claims. The ultimate content of future proposed legislation, if enacted, is uncertain. If any of the above-referenced provisions were imposed, CC&V's operations could be adversely affected. Although no such legislation has been adopted to date, there can be no assurance that such legislation will not be adopted in the future.

MINE SITE REHABILITATION AND CLOSURE

Closure, an integral part of operations

All mining operations eventually cease. An integral aspect of operating our mines is the on-going planning for closure planning, together with estimates of associated liability costs and the assurance of adequate financial provisions to cover these costs.

A group closure and rehabilitation management standard was completed in 2009 and all operations were required to comply with the standard by December 2011. The Continental Africa operations have been granted an extension to December 2012.

Table of Contents

Closure planning is an activity that starts at the exploration and mine design stage and continues throughout the life of mine:

The evaluation of new projects takes into account closure and associated costs in a conceptual closure plan.

Our standard requires that an interim closure plan be prepared within three years of commissioning an operation, or earlier if required by legislation.

This plan is reviewed and updated every three years (annually in the final three years of a mine's life) or whenever significant changes are made, and takes into account operational conditions, planning and legislative requirements, international protocols, technological developments and advances in practice.

For many of the older mines, closure planning and the evaluation of environmental liabilities is a complex process. This is particularly so in Brazil, Ghana and South Africa, where many of the long-life operations present environmental legacies that may have developed over a century or more.

A particular challenge is concurrent rehabilitation, which is carried out while a mine is still operational. This practice serves to decrease the current liability and reduces the final rehabilitation and closure work that must be undertaken, but has the potential to sterilize reserves, which the company might wish to exploit should conditions, such as the gold price, change.

Our closure standard stipulates that closure planning must be undertaken in consultation with the community. In the course of these consultations, different issues are raised which require site-specific solutions. Livelihood preservation and infrastructure are often key requirements. Local people, who were previously employed at the mine, may receive education and training so as to seek viable employment alternatives. Communities also require information on rehabilitation of the landscape and on any lasting environmental impacts.

Our long-term remediation obligations include decommissioning and restoration liabilities relating to past operations, and are based on our environmental management plans and comply with current environmental and regulatory requirements.

Provisions for remediation costs are made when there is a present obligation, it is probable that expenditure on remediation work will be required and the cost can be estimated within a reasonable range of possible outcomes. These costs are based on facts currently available, technology expected to be available at the time of the clean-up, laws and regulations presently or virtually certain to be enacted, and previous experience in the remediation of contaminated sites.

Provision for restoration and decommissioning costs are made at the present value of the expenditures expected to settle the obligation, using estimated cash flows based on current prices and discounted at a pre-tax rate that reflects current market assessments of the time value of money. An assessment of closure liabilities is undertaken annually.

Discounted closure liabilities (excluding joint ventures) increased from \$530 million in 2010 to \$653 million in 2011. This change is largely attributable to a change in mine plans resulting in accelerated cash flows, change in economic assumptions and discount rates, change in design of tailings storage facilities and change in methodology following requests from the Ghana Environmental Protection Agency.

ENVIRONMENTAL, HEALTH AND SAFETY MATTERS

In addition to post-mining land reclamation and closure requirements, AngloGold Ashanti is subject to extensive environmental, health and safety (EHS) laws and regulations in the various jurisdictions in which the company operates. These requirements govern, among other things, extraction, use, conservation and discharge of water; air emissions (including dust control); regulatory and community reporting; clean-up of contamination; worker health and safety and community health; and the generation, transportation, storage and disposal of solid and hazardous wastes, such as acids, radioactive materials, and mine tailings. In addition, environmental laws and regulations, including the requirements contained in environmental permits, are generally becoming more restrictive or more strictly enforced. Significant EHS requirements, risks and trends affecting our mining and processing operations are described below. For additional discussion of EHS performance on a mine-by-mine basis, see Item 4B.: Business overview Operating performance.

Table of Contents

Regulatory Compliance

Capital and operating costs to comply with EHS laws and regulations have been, and are expected to continue to be, significant to AngloGold Ashanti. AngloGold Ashanti could incur fines, penalties and other sanctions, clean-up costs, and third-party claims for personal injury or property damages; suffer reputational damages; and be required to install costly pollution control equipment or to modify or suspend operations, as a result of actual or alleged violations or liabilities under EHS laws and regulations. Failure to comply with applicable EHS laws and regulations may result in the suspension or revocation of permits. AngloGold Ashanti's ability to obtain and maintain permits and to successfully operate in particular communities may be adversely impacted by real or perceived effects on the environment or human health and safety associated with AngloGold Ashanti's or other mining companies' activities.

AngloGold Ashanti is involved in two EHS-related legal proceedings in Colombia. See Item 8A.: Financial information - Legal proceedings for details.

Water Management

AngloGold Ashanti's mining and processing operations are heavily dependent upon access to substantial volumes of water required for such operations. Typically, water-use permits or water rights in each country impose limits on the quantity of water that can be extracted from certain sources and require, among other things, that wastewater from mining operations meet certain water quality criteria upon discharge. Water quality and usage are areas of concern globally, but are particularly significant for operations in Ghana and South Africa, and for exploration projects in Colombia, where there is significant potential environmental and social impact and a high level of stakeholder scrutiny. Any failure to secure access to suitable water supplies, or achieve and maintain compliance with the requirements of the permits or licenses, could result in curtailment or suspension of production at the affected operation. Incidents of water pollution or shortage can, in extreme cases, lead to community protest and ultimately the withdrawal of community and government support for our operations.

Where feasible, we operate a closed loop system, recycling the water used in our operations without discharging it to the environment. In some areas, however, such as Ghana, high levels of rainfall and surface water runoff mean that a closed loop system is not feasible and that discharges, after water treatment, must take place. During 2011, we commissioned a reverse osmosis plant in the northern section of the Obuasi mine which functions in conjunction with complementary water treatment technologies to ensure that water released is compliant with Ghana's water quality standards. At the southern section of the mine, additional equipment was commissioned in 2011 to increase the volume of water that can be recycled into the production process. At the Iduapriem mine, a plant extension was commissioned to ensure that the operation can release excess water while meeting effluent discharge standards.

Waste Management

Mining and mineral processing operations generate waste rock and tailings.

During open-pit mining, large volumes of soil and/or rock (overburden) are generated to expose the orebody. Similarly, waste rock is generated during drilling and developing access to underground ore bodies. Overburden and waste rock typically contain sub-economic levels of gold and are deposited as large waste rock dumps. Mine tailings are the process effluents generated once grinding and extraction of gold from the ore is completed in the milling process and are deposited as slurry in large storage facilities specifically designed for this purpose.

The impact of a breach, leak or other failure of a tailings storage facility can be significant, and the company therefore monitors such facilities closely to ensure that their management is in accordance with national regulatory requirements and commitments made to local communities. The occasional well-publicized failure of a tailings facility and the potential impact of such failure also mean that these facilities are generally tightly regulated. An incident at our operations could result, among other things, in enforcement, obligations to remediate environmental contamination, and claims for property damage and personal injury. Even an incident at another company's operations has potential to result in governments tightening regulatory requirements and restricting mining in response.

Table of Contents

Groundwater Impacts and Environmental Remediation

AngloGold Ashanti has identified groundwater contamination plumes at certain of its operations. Numerous scientific, technical and legal studies have been undertaken to assist in determining the magnitude of the impact and to find sustainable remediation solutions. Based on those studies as well as discussion with regulators, the company has taken steps, including monitored natural attenuation and phyto-technologies, to reduce seepage and to address soil and groundwater contamination. Subject to the completion of trials and the technology being a proven remediation technique, no reliable estimate can be made for the obligation. Should these costs be significant, this could have a material adverse impact upon AngloGold Ashanti's results of operations and its financial condition.

In addition, as AngloGold Ashanti has a long history of mining operations in certain regions, issues may arise regarding historical as well as potential future environmental impacts to those areas. For example, certain parties, including NGOs, community groups and institutional investors, have raised concerns about surface and groundwater quality, among other issues, in the area surrounding the company's Obuasi and Iduapriem mines in Ghana, including potential impacts to local rivers and wells used for water from heavy metals, arsenic and cyanide as well as sediment and mine rock waste. Following temporary shutdowns at both mines in 2010, the company has made improvements in effluent quality management and constructed new tailings impoundments to reduce the risk of incidents that have the potential to degrade local water sources. AngloGold Ashanti is continuing to investigate allegations of impacts by the company's operations on water quality in mining areas and to consider, as appropriate, potential additional responsive actions such as remediation, engineering and operational changes at the mine sites and community outreach programs.

In addition, AngloGold Ashanti has identified a flooding and future pollution risk to deep groundwater in the Klerksdorp and Far West Rand goldfields in South Africa. AngloGold Ashanti's Vaal River operations are part of the Klerksdorp goldfield and its West Wits operations are part of the Far West Rand goldfield. Various studies have been undertaken by AngloGold Ashanti since 1999 to better understand groundwater conditions in mined-out workings, including potential groundwater infiltration and acidification concerns. Due to the interconnected nature of underground mining operations in South Africa, any proposed solution needs to be a combined one supported by all the companies owning mines located in these goldfields. As a result, the South African Department of Mineral Resources and affected mining companies are now involved in the development of a Regional Mine Closure Strategy. In view of the limitation of current information for the accurate estimation of a liability, no reliable estimate can be made for the obligation. If material, obligations for this matter could have an adverse impact on AngloGold Ashanti's financial condition.

Climate Change and Greenhouse Gas Regulation

Greenhouse gases, or GHGs, are emitted directly by AngloGold Ashanti's operations, as well as by external utilities from which AngloGold Ashanti purchases power. Currently, a number of international and national measures to address or limit GHG emissions, including the Kyoto Protocol, the Copenhagen Accord and the Durban Platform, are in various phases of discussion or implementation in the countries in which the company operates. In particular, the Durban Platform extends the Kyoto Protocol for up to eight years and commits all parties to the UN climate convention to develop a global mitigation regime which could take effect in 2020, with the specific terms of that legally binding accord, including individual targets, to be finalized by 2015. These, or future, measures could require AngloGold Ashanti to reduce its direct GHG emissions or energy use or to incur significant costs for GHG emissions permits or taxes or have these costs or taxes passed on by electricity utilities which supply the company. AngloGold Ashanti also could incur significant costs associated with capital equipment, GHG monitoring and reporting and other obligations to comply with applicable requirements.

For example, the Australian government approved legislation that will implement a carbon trading scheme commencing in July 2012. Under the applicable requirements, approximately five hundred of Australia's biggest emitters, including AngloGold Ashanti, will pay A\$23 per tonne of carbon dioxide generated from July 2012. The charge will increase by 2.5 percent each year until 2015, when it will be set by the market under a trading scheme, similar to the existing Emissions Trading Scheme in the European Union.

In 2011, the South African government released a climate change response white paper. In February 2012, the South African Minister of Finance announced his intention to introduce a carbon tax in 2013, with a draft discussion paper setting out proposed details to be published in 2012. AngloGold Ashanti already pays a levy of ZAR0.025 per kilowatt hour of electricity that it purchases and that is generated from fossil fuels. The Minister of Finance also announced that this will increase to ZAR0.035 per kilowatt hour.

Table of Contents

In 2010, Brazil launched sector-specific plans to meet a voluntary reduction target of 1.2 billion tonnes of CO₂ by 2020. Amongst other plans, it is intended to reduce de-forestation in the Cerrado biome, where AngloGold Ashanti operates, by 40 percent and expand renewable energy production and energy efficiency programs. The decree also provided for a Brazilian GHG trading scheme, which is yet to be designed. While Brazil is not yet formally regulating GHG emissions at the national level, some state environmental agencies have requested companies to voluntarily submit GHG emissions management plans.

In addition, potential physical risks to our operations as a result of climate change include changes in rainfall rates or reduced water availability, rising sea levels, higher temperatures and extreme weather events. Events or conditions such as flooding or inadequate water supplies could disrupt mining and transport operations, mineral processing and rehabilitation efforts, could create resource shortages and could damage the company's property or equipment and increase health and safety risks on site. Such events or conditions could have other adverse effects on the company's workforce and on the communities in the area around our mines, such as an increased risk of food insecurity, water scarcity and prevalence of disease.

Occupational Safety and Health and Tropical Diseases

AngloGold Ashanti's operations are subject to a variety of laws and regulations designed to protect and improve the safety and health of employees. In some of the jurisdictions in which we operate, the government enforces compulsory shutdowns of operations to enable investigations into the cause of accidents at those operations. Certain of the company's operations have been temporarily suspended for safety reasons in the past. In South Africa, in particular, so-called Section 54 safety stoppages have become a significant issue. In 2011, the State Inspector of Mines ordered the shutdown of entire mines in cases of relatively minor violations, which had a material impact on production at these mines. In particular, the Inspector issued Kopanang 11 Section 54 directives during the year. Each directive resulted in Kopanang suspending operations either fully or partially in order to comply with the inspector's recommendations on safety. A working group comprising the inspectorate, the mining industry and organized labor has been formed to address the trend of increasing safety stoppages. AngloGold Ashanti is also in the process of implementing an enhanced safety program, including improved incident investigation and reporting systems, which could result in significant additional costs for the company.

In addition, AngloGold Ashanti is subject to health and safety regulations relating to occupational disease. The primary areas of focus in respect of occupational health of employees within the company's operations are noise-induced hearing loss (NIHL) and occupational lung diseases (OLD), which include pulmonary tuberculosis (TB) from various causes and silicosis in individuals exposed to silica dust. This issue has been particularly prevalent in South Africa and has also arisen at the company's Continental Africa and Brazilian operations, albeit to a lesser extent. AngloGold Ashanti provides occupational health services to its employees at its occupational health centers and clinics, and continues to improve preventative occupational hygiene initiatives, such as implementing various dust control measures and supplying its employees with respiratory protection equipment. If the costs associated with providing such occupational health services, implementing such dust control measures or supplying such equipment increase significantly beyond anticipated or budgeted amounts, this could have an adverse effect on the results of operations of AngloGold Ashanti and its financial condition. Actual and alleged health and safety incidents or breaches of standards may also adversely impact the company's reputation.

The South African government, by way of a cabinet resolution in 1999, proposed a possible combination and alignment of benefits of the Occupational Diseases in Mines and Works Act (ODMWA) that provides for compensation to miners who have OLD, and the Compensation for Occupational Injuries and Diseases Act (COIDA), that provides for compensation of non-miners who have OLD. It appears less likely that the proposed combination of the two acts will occur in the short to medium term, but some alignment of benefits may be considered in the future. COIDA provides for compensation payments to workers suffering permanent disabilities from OLD, which are classified as pension liabilities if the permanent disability is above a certain threshold, or a lump sum compensation payment if the permanent disability is below a certain threshold. ODMWA only provides for a lump sum compensation payment to workers suffering from OLD as well as the payment of medical expenses over the claimant's lifetime. If the proposed combination of COIDA and ODMWA were to occur, this could further increase the amount of statutory compensation that miners employed by AngloGold Ashanti could claim, which consequently could have an adverse effect on AngloGold Ashanti's financial condition.

Table of Contents

On November 23, 2010, the Chamber of Mines of South Africa applied to the North Gauteng High Court for a declaratory order as to whether or not the Compensation Commissioner may include in the levy to be paid by any specific mine under ODMWA any amount that is intended to be used for funding benefits payable to: (1) ex-mine workers who had never worked at that mine; or (2) ex-mine workers who used to work at the mine, but no longer work at the mine. On April 29, 2011, the Honorable Judge Zondo dismissed the Chamber's application with costs. The judge concluded that the Compensation Commissioner has authority under ODMWA to address an historical or actuarial deficit in the Compensation Fund by increasing the levy payable by current mines and works to cover the shortfall in respect of all ex-mine workers. The Chamber is considering whether to appeal the judgment. Should the Chamber's appeal be unsuccessful this could further increase the levy payable by AngloGold Ashanti to the ODMWA fund, which could have material adverse effect on its business, financial condition or results of operations.

In October 2006, Mr. Thembekile Mankayi instituted legal action against AngloGold Ashanti in the South Gauteng High Court, claiming approximately R2.6 million for damages allegedly suffered by him as a result of silicosis allegedly contracted while working on a mine of Vaal Reefs Mining and Exploration Company Limited (Vaal Reefs). Vaal Reefs was renamed AngloGold Limited in 1998 and AngloGold Ashanti Limited in 2004. On June 26, 2008, judgment was rendered in the company's favor on the basis that mine employers are indemnified under ODMWA and COIDA against claims by employees against employers for damages relating to compensable diseases. Mr. Mankayi's appeal to the Supreme Court of Appeal of South Africa was dismissed. On August 17, 2010, the Constitutional Court of South Africa heard Mr. Mankayi's application for leave to appeal to the Constitutional Court. The Constitutional Court rendered its decision on March 3, 2011, granting the application for leave to appeal and then addressing the matter as a full appeal. The Constitutional Court rejected the lower court's decision that Mr. Mankayi's claim was precluded by statutory compensation, and granted leave to Mr. Mankayi's executor, as the plaintiff was deceased prior to this judgment in the Constitutional Court, to proceed with his case in the High Court and seek a claim for damages under common law against AngloGold Ashanti. This will comprise, amongst other elements, providing evidence that Mr. Mankayi contracted silicosis as a result of negligent conduct on the part of AngloGold Ashanti or its predecessor. AngloGold Ashanti will continue to defend this case on its merits.

As a result of the Constitutional Court decision permitting miners with OLD to sue their current or former employers for damages outside the statutory compensation scheme, AngloGold Ashanti could be subject to numerous similar claims, including a potential class action or similar group claim. AngloGold Ashanti is studying the details of the Constitutional Court judgment and will defend any subsequent claims, if and when filed, on their merits. In view of the limited information currently available, no reliable estimate can be made for this potential liability at this time. Should AngloGold Ashanti be unsuccessful in defending actions by any other individuals or groups that lodge similar claims in the future, such claims would have an adverse impact on AngloGold Ashanti's financial condition which could potentially be material.

In light of the Constitutional Court judgment, AngloGold Ashanti is calling for the industry to engage with government (and other stakeholders) to seek an appropriate industry-wide solution. AngloGold Ashanti can provide no assurances that an industry-wide solution can be reached or that the terms thereof will not have a material adverse effect on AngloGold Ashanti's financial condition.

In addition to OLD, AIDS and associated diseases remain major health care challenges faced by AngloGold Ashanti's South African operations. Workforce prevalence studies indicate that HIV prevalence rates among AngloGold Ashanti's South African workforce may be as high as thirty percent. AngloGold Ashanti continues to develop and implement programs to help those infected with HIV and prevent new infections from spreading. Since 2001, the company has offered a voluntary counseling and HIV testing program for employees in South Africa and, since 2003, has offered anti-retroviral therapy, or ART, to HIV positive employees who met the current medical criteria and who desire this treatment.

Malaria and other tropical diseases also pose significant health risks at all of the company's operations in Central, West and East Africa where such diseases may assume epidemic proportions because of ineffective national control programs. Malaria is a major cause of death in young children and pregnant women but also gives rise to fatalities and absenteeism in adult men. Other conditions such as heart disease, chronic diseases, and obesity are of increasing incidence and concern.

Such diseases impair the health of workers and negatively affect productivity and profitability as a result of workers' diminished focus or skill, absenteeism, treatment costs and allocated resources. AngloGold Ashanti cannot guarantee that any current or future medical program will be successful in preventing or reducing the injury and illness rates amongst its employees or in affecting consequent morbidity or mortality rates. AngloGold Ashanti may incur significant costs in addressing this issue in the future, which could also adversely impact the company's results of operations and financial condition.

Table of Contents

ANGLOGOLD ASHANTI GLOBAL OPERATIONS: 2011

OPERATING PERFORMANCE

Group description

AngloGold Ashanti's operations are divided into four regions:

- South Africa operations in Vaal River and West Wits;
- Continental Africa operations in Ghana, Guinea, Mali, Namibia and Tanzania;
- Australasia operation in Australia; and
- Americas operations in Argentina, Brazil and the United States.

The above four regions also correspond to AngloGold Ashanti's four business segments.

Performance

In 2011, AngloGold Ashanti produced 4.33 million ounces of gold (2010: 4.52 million ounces) as well as 1.38 million pounds of uranium, 2.96 million ounces of silver and 206.54 tonnes of sulfuric acid as by-products. In all, 61,242 people, including contractors, were employed.

Given the focus on optimizing operational performance and maintaining costs, AngloGold Ashanti continued to invest significantly in capital expenditure. Capital expenditure, including equity accounted joint ventures, in 2011 amounted to \$1,527 million (2010: \$1,015 million).

Safety

Regrettably, there were 15 fatalities across the group's operations in 2011. The all injury frequency rate improved to 9.76 per million hours worked compared to 11.50 in 2010 and 12.88 in 2009.

(1) Sold effective August 1, 2010.

(2) The yields of TauTona, Obuasi and, AGA Mineração represent underground operations;

(3) The yields of Yatela and Cripple Creek & Victor reflect recoverable gold placed/tonnes placed from heap leach operations.

(4) Prior to December 29, 2009 AngloGold Ashanti's shareholding in Sadiola was 38 percent;

(5) Equity-accounted investments.

Table of Contents

SOUTH AFRICA

AngloGold Ashanti's South African operations comprise six deep-level mines and a surface operation. They are:

The Vaal River operations – Great Noligwa, Kopanang, Moab Khotsong and the surface operation; and
The West Wits operations – Mponeng, Savuka and TauTona.

Performance

These operations produced 1.62 million ounces of gold in 2011, or 37 percent of group production, (Vaal River operations, 51 percent and West Wits operations, 49 percent) and 1.38 million pounds of uranium as a by-product. The South African operations employed an average of 32,082 people in 2011.

Total capital expenditure in South Africa in 2011 was \$549 million (2010: \$430 million). The bulk of this was spent at Mponeng \$172 million, Moab Khotsong \$147 million, Kopanang \$92 million and TauTona \$79 million.

In 2011, all South African mines felt the impact of Section 54 safety stoppages imposed by the state mines inspector, as well as power-price increases, the industry-wide wage strike and resultant payroll increase, and increases in the price of steel, oil and fuel.

Geology

The Witwatersrand Basin comprises a six-kilometer thick sequence of inter-bedded argillaceous and arenaceous sediments that extend laterally for some 300 kilometers north-east/south-west and 100 kilometers north-west/south-east on the Kaapvaal Craton. The upper portion of the basin, which contains the orebodies, crops out at its northern extent near Johannesburg. Further west, south and east the basin is overlain by up to four kilometers of Archaean, Proterozoic and Mesozoic volcanic and sedimentary rocks. The Witwatersrand Basin is late Archaean in age and is considered to be in the order of 2.7 to 2.8 billion years old.

Gold occurs in laterally extensive quartz pebble conglomerate horizons or reefs, generally less than two meters thick, which are widely considered to represent laterally extensive braided fluvial deposits. Separate fan systems were developed at different entry points and these are preserved as distinct goldfields. The most fundamental control to the gold distribution in the Basin remains the sedimentary features, such as facies variations and channel directions. Gold generally occurs in native form often associated with pyrite and carbon, with quartz being the main gangue mineral.

Table of Contents

Safety

Regrettably, there were nine fatalities during the year. The all injury frequency rate (AIFR) improved to 15.56 per million hours worked in 2011 from 16.69 in 2010.

The South African operations three-pillar strategy focuses on removing people from areas of risk, modifying behaviour and attitudes to risk and improving planning. Teams of employees have attended the Simunye training process. The introduction of the Safety Management Program is expected to assist in further improving safety through its requirements to ensure regular inspections, behavior observations, group meetings and frequent workplace risk assessments. Simunye translates as we are ONE, indicating its relation to Project ONE and the desired training outcome of safe and productive teams who are united in a common purpose.

Growth and improvement

Socio-economic development is an essential aspect of the South Africa region's business strategy, both from the perspective of compliance to ensure the retention of mining licenses and because a downward trend in the region's gold production profile, together with a strategy of removing employees from high-risk areas, will inevitably lead to significant reductions in the labor force over the medium term.

Following extensive stakeholder engagement, the region has designed a framework to integrate community development into core business activities, while providing support for national and international development policies and objectives, particularly those addressing youth unemployment.

South African Revised Mining Charter

The management teams of the South African operations have held and will continue to hold regular meetings with labor unions to track progress towards reaching the employment equity target of 40 percent of management roles held by historically disadvantaged South Africans.

Table of Contents**Vaal River operations****Description**

The Vaal River operations consist of Great Noligwa, Kopanang, Moab Khotsong as well as surface operations.

Geology

In order of importance, the reefs mined at the Vaal River operations are the Vaal Reef, the VCR and the C Reef:

The Vaal Reef contains approximately 85 percent of the reserve tonnage with mining grades between 10 and 20g/t and comprises a series of oligomictic conglomerates and quartzite packages developed on successive unconformities. Several distinct facies have been identified, each with its unique gold distribution and grade characteristic.

The VCR has a lower grade than the Vaal Reef, and contains approximately 15 percent of the estimated reserves. The economic portion is mainly concentrated in the western part of the lease area and can take the form of a massive conglomerate, a pyritic sand unit with intermittent pebble layers or a thin conglomerate horizon. The reef is located at the contact between the overlying Kliprivierberg Lavas of the Ventersdorp SuperGroup and the underlying sediments of the Witwatersrand SuperGroup which creates a distinctive seismic reflector. The VCR is located up to one kilometer above the Vaal Reef.

The C Reef is a thin, small pebble conglomerate with a carbon-rich basal contact, located approximately 270 meters above the Vaal Reef. It has less than 1 percent of the estimated reserves with grades similar to the Vaal Reef, but more erratic. The most significant structural features are the north-east striking normal faults which dip to the north-west and south-east, resulting in zones of fault loss.

Vaal River Summary of metallurgical operations

	West Gold Plant	East Gold Acid and Float Plant	Noligwa Gold Plant	Mispah Gold Plant	Kopanang Gold Plant

Table of Contents

Vaal River Great Noligwa

Description

Great Noligwa is a mature operation which adjoins Kopanang and Moab Khotsong and is located close to the town of Orkney, near the Vaal River. The Vaal Reef, the operation's primary reef, and the Crystalkop Reef, a secondary reef, are mined from a twin-shaft system over eight main levels at an average depth of 2,400 meters. Given the geological complexity of the orebody at Great Noligwa, a pillar mining method is employed.

The mine shares a milling and treatment circuit with Moab Khotsong and Kopanang.

Performance

Great Noligwa produced 94,000 ounces at a total cash cost of \$1,191 per ounce in 2011, compared with 132,000 ounces at a total cash cost of \$894 per ounce the previous year. The strategy at the operations has shifted from conventional mining to pillar extraction, given its limited remaining life and the fact that mining has reached boundary limits.

The mine faced a challenging year in 2011, with a combination of factors curtailing production and pushing costs higher. These included a lack of mineable face length caused by the intersection of unexpected geological features, followed by difficulties encountered in quickly re-establishing and equipping pillars. Ore-pass blockages caused by poor ground conditions further limited output.

An 81 percent improvement in contribution from uranium by-product output helped mitigate some of those headwinds, following an increase in the price for the nuclear fuel and opportunistic sales to take advantage of the higher prices.

Growth and improvement

Great Noligwa is a mature mine with little opportunity to significantly increase the production base. Growth initiatives in 2012 will consist mainly of vamping operations in old working areas and extraction of higher-grade pillars. The mine's Crystalkop reef will be used to test technology which, if successful, may be used on other group mines. In the meantime, the rollout of Project ONE at the mine aims to improve overall operating efficiencies by improving the capability and accountability of all crews and management, and enhancing planning and scheduling activities.

A high-grade block of ore, named Fish, within a large fault loss area, was initially identified in 2006. Access required extensive opening up, rehabilitation and re-equipping of old haulages in order to start development. Subsequent to initiation of access procedure, a seismic event caused extensive damage. The area was modelled from a rock engineering point of view during 2010 and a recommendation was made that a second escape was required to enable safe mining. Additional capital for this work was approved at the beginning 2011 and this is expected to be completed during 2013.

Although reef meters improved from 2010 levels, improved flexibility is only expected to be realized in 12 to 18 months. Being a pillar mine, flexibility is partially created by development and partially by re-establishment of previously abandoned face length which often poses delays and difficulty when accessing old workings. Alternate access methods are being explored with the help of external experts. Holing into old workings revealed increased requirements for re-support of the holing areas due to deteriorated ground conditions, further delaying development. Given its age and the large database of information on the orebody, grade estimation is not a significant risk. As far as practically possible, however, geological drilling into pillars that were abandoned in past years will be undertaken.

Pillar mining introduces a constraint on the mine call factor mainly due to multiple ore handling stages before the product is delivered to the plant, as well as the effect of dilution in negotiating geological structures. Recovered grade remains fairly constant and is only disrupted by unforeseen anomalies, if and when they occur.

Safety

Tragically, one fatality was recorded in January 2011 during scraper winch operations.

The mine recorded 500,000 fatality-free shifts during September 2011. The OHSAS 18001 and ISO 14001 certification was maintained. However, the all injury frequency rate was 23.92 per million hours worked compared with 21.63 the previous year.

Table of Contents

Vaal River Kopanang

Description

Kopanang is located in the Free State province, roughly 170 kilometers south-west of Johannesburg and approximately 10 kilometers southeast of the town of Orkney on a lease area of 35km². The operation is west of neighbour Great Nologwa and bound to the south by the Jersey Fault. Gold is the primary output with uranium oxide as a by-product from a single shaft system to a depth of 2,600 meters.

Kopanang almost exclusively exploits the Vaal Reef, although minor amounts of gold are also extracted from the secondary Crystalkop Reef. Given the geologically complex orebody, scattered mining is used.

Performance

Kopanang produced 307,000 ounces at a total cash cost of \$684 per ounce in 2011, compared with 305,000 ounces at a total cash cost of \$613 per ounce the previous year.

Progress was made in reducing the number of mine-wide safety stoppages through a forum comprising government, labor and management. During 2011, 20 shifts were lost compared with 29 in 2010. In addition, a combination of pipe failures underground, engineering work required to rehabilitate a portion of the shaft, along with a shortage of key underground mining skills, limited the increase in production.

Despite these challenges, the cost increase was contained at 12 percent with the help of an improved by-product contribution and a 6 percent increase in reef yield. The latter resulted from the operation's improved efficiency rate, or mine-call factor, less reef dilution and higher mining grades compared with 2010. Geological drilling targets were achieved, which improved confidence in planning for face length and reef meters. Reserve availability also increased, improving the flexibility of the operation. Overall productivity improved 3 percent from 2010, despite the skills shortage. Additional apprentices were employed and training increased in order to obviate this scarcity.

Growth and improvement

Production at Kopanang is expected to remain stable. In addition there is continued focus on improving mine-call factor, which rose by two percentage points in 2011. This measure of efficiency in extracting available gold has been historically low at Kopanang and efforts to improve it are focused on retrieving old gold from abandoned working areas, reducing fragmentation and improving sampling quality.

Additional production crews will be used to sustain production targets when Simunye training continues. Pillar crews are expected to be in place by mid-year.

Life extension projects identified in 2011 include the Shaft Fault area, pillars and potential resources above 42 level, offlease opportunities and the Ventersdorp Contact Reef (VCR). Additional information will be obtained from ongoing exploration to convert resources to reserve. Reef was intersected west of the current mining front, above 42 level, returning encouraging values of 16.35g/t. Incorporation of new sampling data from drilling and underground chip sampling added to Mineral Resource during 2011.

The Shaft Fault remains a very prospective target area for new ounces and exploration will continue during 2012. Below 68 level drilling has commenced. The major structure, the Jersey Fault, has been intersected, resulting in more accurate modelling of the fault to identify reef target blocks.

Three surface drill rigs have also been mobilized to explore the Vaal Reef and VCR both on- and off-lease. This exploration plan will continue during 2012. The mining rights application for the Altona area has been lodged with the Department of Mineral Resources.

Six strategic thrusts – consistent daily blast, improving the quality of mining and the mine-call factor, meeting business expectations and life-of-mine extension, re-design of western mining front, and adoption of off-the-shelf technology to achieve productivity – have been identified to achieve targets and reduce unit costs.

Energy efficiency is expected to be addressed with the introduction of the cooling auxiliary project to reduce electricity usage by the refrigeration plants. This project also involves the implementation of compressed air valves to control pressure at the stations and to minimize power consumption during offpeak periods. In addition, water jets will be modified to reduce the pumping load, and thus energy demand.

Table of Contents

Safety

Tragically, four fatalities occurred at the mine during the year. The first occurred in August when a rescue triage member was inundated by super-fine ore during silo maintenance. In October, a stope team leader was fatally injured in an accident during waterjet cleaning operations and in December a winch operator and an acting team leader were fatally injured in two separate fall of ground incidents. Specific new strategies for operating waterjets and for cleaning ore boxes and silos for maintenance purposes have been employed. Strategic plans to prevent falls of ground were also revised and rolled out. These accidents followed Kopanang's achievement of more than 1 million fatality free shifts and more than a year without a fatality related to a fall of ground.

Kopanang maintained its OHSAS 18001 and ISO 14001 certifications during the year.

Vaal River Moab Khotsong

Description

Moab Khotsong is AGA's newest gold mine in South Africa. It is situated near Orkney, Klerksdorp and Viljoenskroon, about 180 kilometers southwest of Johannesburg. Stopping operations began in November 2003, with the mine expected to reach full production in 2013. Given the geological complexity of the Vaal Reef, scattered mining is employed.

The Zaaipplaats orebody in the Moab Khotsong lease area presents a significant growth opportunity and capital has been allocated to support its development in phases.

Performance

Moab Khotsong produced 266,000 ounces at a total cash cost of \$688 per ounce in 2011, compared with 292,000 ounces at a total cash cost of \$586 per ounce the previous year. The 9 percent decline in production and the resultant increase in costs were due to Section 54 safety-related stoppages enforced by the state mine inspector, as well as complex geological structures which complicated normal mining operations.

Notwithstanding a difficult operating environment, the mine achieved a strong development performance which helped create more face length than that depleted and, as a result, maintain flexibility in terms of the area to mine in future years. Ore Reserve development and long-inclined borehole drilling (LIB) proceeded according to plan in 2011.

In order to obtain critical information on a timely basis, a comprehensive risk-drilling program was revised to include macro drilling up to three cross-cuts ahead of the current development ends, thus improving grade prediction and development planning. This allowed more proactive mine design and the opening up of reef, while the development of new raises provided additional grade information. The active drilling program employs five LIB drilling and ten hydraulic drilling machines to ameliorate the risk of intersecting dip features within the 12-month mining plan.

Moab Khotsong improved overall efficiency, evidenced in the improvement of its mine-call factor by two percentage points to 84.2 percent.

Growth and improvement

The Simunye training component of Project ONE commenced midway through 2011 and will continue in 2012, with the aim of improving productivity rates. The continued ramp-up of Project ONE, and specifically its work management component, are expected to assist in mitigating cost inflation at the mine.

The key focus areas identified for Project ONE are the area mined in square meters, Ore Reserve development, reef development, tonnes hoisted and grade.

Project Zaaipplaats is designed to extend the operation's life by exploiting the Zaaipplaats block southwest of the current mine, unlocking 5.4 million ounces of gold. Phase 1, which was approved in August 2010, is currently underway. It will establish the infrastructure required for phase 2 which in turn will create a drilling platform to further increase the geological (structural) confidence of a bigger portion of the Zaaipplaats orebody, while delivering first production from the project to bridge the gap between current mining activities and access to the main portion of the Zaaipplaats orebody.

Edgar Filing: ANGLOGOLD ASHANTI LTD - Form 20-F

Phase 1 is expected to conclude in 2012 with the establishment of the infrastructure to continue with phase 2. Phase 2 will follow with development of the eastern access. Redesign and supplementary studies will continue along the way, with changes incorporated from drilling information and practical experience of the use of trackless equipment. During phase 3, scheduled for 2014, full approval of the remaining phase of the Zaaiplaats project will be sought.

Phase 1 is currently in the implementation stage and access development has been completed ahead of schedule.

Table of Contents

Construction of two 800 tonne ore-storage silos is in process and is expected to be completed in 2012. This crucial component of phase 1 will increase rock-handling capacity on 101 and 102 levels in anticipation of phase 2 and phase 3.

The Zaaiplaats project will use a modified approach to predevelopment to facilitate drilling platforms for gathering orebody and structural information, together with the possibility of earlier gold production given the anticipated drilling outcomes. A mechanized development contract is expected to be negotiated in 2012.

Safety

Tragically, a fatality was recorded at Moab Khotsong as a result of a tramping incident. Despite this, the mine sustained a year-on-year improvement in the fatal injury frequency rate, from 0.13 per million hours worked in 2010 to 0.06 in 2011. This improvement aligns the mine's performance with industry milestones for 2013.

Moab Khotsong mine recorded 1.96 million fatality-free shifts in August 2011, a new record for this operation. There were also 2.5 million fall-of-ground fatality-free shifts, which milestone was achieved over a period of 18 months.

The mine retained its OHSAS 18001 and ISO 14001 certification during 2011.

Vaal River and West Wits Surface operations

Description

The surface operation (metallurgy) extracts gold from marginal ore dumps and tailings storage facilities at surface as there is more metallurgical capacity than reef mined. Uranium is produced as a by-product. In addition, backfill product is produced for mining operations. Operating units are: Nologwa Gold Plant, which takes feed from the Vaal River mines and processes marginal ore-dump material; Mispah plant, which also treats marginal ore-dump materials; Kopanang Gold Plant, which treats marginal ore-dump material and Kopanang reef; West Gold Plant, which treats marginal ore-dump material; East Gold Plant, which treats feed from the Sulphur Pay dam and environmental clean-up material; Mponeng Gold Plant, dedicated to reef from the Mponeng mine; Savuka Gold Plant, which services TauTona and Savuka and treats dump material; South Uranium Plant, which operates in reverse leach mode with Nologwa Gold Plant; and Nufcor, which undertakes Calcining of South Uranium Plant's final product. Metallurgy also has rail transport infrastructure, the Vaal River and West Wits Laboratories and tailings management facilities.

Performance

The surface operation produced 164,000 ounces of gold at a total cash cost of \$665 per ounce in 2011, compared to 179,000 ounces at a total cash cost of \$486 per ounce the previous year. Uranium production was 1.38 million pounds compared with 1.46 million pounds the previous year.

Following unseasonal rains, the water containment circuits were unable to manage the amount of water resulting in a number of overflows. A new water management regime was introduced to improve available stormwater dam capacity. Since its introduction, there have been no overflows. Later in the year, unseasonal late rainfall resulted in a water shortage which necessitated a stoppage of the East Gold Plant for three days. Short-term action minimized the impact. In addition, a pipeline is being installed which will make it possible to take some mildly saline water from neighboring third-party operations, currently discharged into the Koekemoerspruit, into AngloGold Ashanti's metallurgical circuit. A second project has been undertaken which will allow well-field water to be pumped into the metallurgical circuit.

Surface operations experienced 12 reportable environmental incidents during 2011, of which eight were due to dam overflows. The water management philosophy has been revised taking into consideration the infrastructure and operational management of the total water balance. The actions that were put in place ensured that water could be managed during the wet fourth quarter. The replacement of the Mponeng residue pipeline and improvements in operational management have reduced the overall risk of major pipe failures.

The failure of the Mispah mill further impacted production, motivating the redesign of the lubrication system on this and similar mills. The unexpected decline of grade in marginal ore dumps is a concern and has been met with increased focus on optimizing mill use, while an additional dump was equipped for mining to improve flexibility. Poor reliability of oxygen and lime supply also affected production. An oxygen plant has now been built on site to ensure supply and a new lime-slaking facility has been constructed to facilitate the use of powdered instead of unslaked lime.

Table of Contents

Growth and improvement

Project ONE and in particular its business process framework component has been rolled out at all plants in South Africa. As part of the second phase, processes are being optimized to ensure maximum benefits are derived. Data based process management is being used at all plants to determine the appropriate measures to be monitored to reduce variability. Encouraging results have been achieved at the South Uranium plant and Mispah plant. The methodologies employed have been implemented at all other plants.

There are three focus areas for growth and improvement, namely:

Uranium Expansion Project to upgrade infrastructure to transport Kopanang ore to the South Uranium Plant to recover additional uranium. Completion is scheduled for July 2012;

Replacement of the uranium solvent extraction section within the plant to ensure sustainable operations over the life of the operation. Completion is scheduled for the end of the third quarter 2013; and

Uranium tailings storage facility (TSF) project designed to recover uranium and gold from existing tailing storage facilities.

A project was initiated to conduct test work to improve understanding of each surface resource. The potential upgrade to material from marginal ore dumps is being investigated.

Community complaints were received regarding dust in the Vaal River area. A best practice guideline was developed regarding dust mitigation and is being implemented. The initial focus was on the western extension TSF which contributes most of the dust. Capital of \$0.2 million was made available for phase 1, involving the installation of wind curtains and water spray systems on this TSF. This has been completed. Phase 2, which involves the grassing of high-risk areas on the TSF, is due for completion in 2012.

Safety

Metallurgy holds the following certifications:

ISO 14001 Environment;

OHSAS 18001 Occupational Health and Safety;

ICMI Internal Cyanide Management Institute Certification; and

ISO/17025/IEC International Standard for Testing Laboratories (Vaal River laboratory).

Table of Contents**West Wits operations****Description**

The Mponeng, Savuka and TauTona mines are situated on the West Wits Line near the town of Carletonville, straddling the border of Gauteng and North West Province. Mponeng has its own gold processing plant, while the Savuka and TauTona operations share a plant.

Geology

Two reef horizons are exploited at the West Wits operations, the Ventersdorp contact Reef (VCR) located at the top of the Central Rand Group and the Carbon Leader Reef (CLR) near the base. The separation between the two reefs increases from east to west from 400 to 900 meters, due to unconformity in the VCR. TauTona and Savuka exploit both reefs, whereas Mponeng only mines the VCR. Faults of greater than 70 meters are rare. The CLR consists of one or more conglomerate units and varies from several centimeters to more than three meters in thickness. Regionally, the VCR dips at approximately 21 degrees but may vary between 5 degrees and 50 degrees, accompanied by changes in thickness of the conglomerate units. Where the conglomerate has the attitude of the regional dip, it tends to be thick, well-developed and accompanied by higher gold accumulations. Where the attitude departs significantly from the regional dip, the reef is thin, varying from several centimeters to more than three meters in thickness.

Table of Contents

West Wits Mponeng

Description

Mponeng is located between the towns of Carletonville and Fochville on the border between Gauteng and the North West Province, southwest of Johannesburg. The operation, the world's deepest mine, extracts the Ventersdorp Contact Reef (VCR) at depths between 2,400 meters and 3,900 meters through sequential-grid mining. The Mponeng lease area is constrained to the north by the TauTona and Savuka mines, to the east by Gold Fields' Driefontein mine and to the west by Harmony's Kusasaletu. Mponeng comprises a twin-shaft system housing two surface shafts and two sub-shafts. Ore is treated and smelted at the mine's gold plant.

Performance

Mponeng produced 500,000 ounces at a total cash cost of \$547 per ounce in 2011, compared with 532,000 ounces at a total cash cost of \$452 per ounce the previous year. The decline in production was due to a combination of factors which interrupted normal operations at various periods throughout the year and higher than-anticipated temperatures in the deeper mining areas. An upgrade and expansion of the ice plant on surface, which contributed to higher costs, was necessitated by the increased cooling requirements as underground operations at Mponeng deepened. Work on this upgrade began in 2010 and was completed in 2011.

The Mponeng operating teams contended with the breakdown of a winder and also trackless equipment used for the deepening project. An increase in the number of Section 54 safety stoppages, ordered by the state mine inspector, caused considerable disruption during the year. Management teams have intensified efforts to avoid these stoppages by continuing to improve overall safety at the mine and ensuring compliance with all relevant safety regulations. Improving development performance remains a key area of focus.

Growth and improvement

Mponeng hosts the most significant of the group's South African investments in its below 120 deepening project, which will extend the life of this operation. This project, which will access the Carbon Leader and Ventersdorp Contact reefs below the current 120 level, is being tackled in a phased approach with the development of a decline from the existing infrastructure to gain quicker access to the ore and improve payback, project returns and future expansion options.

The CLR portion of the project will ultimately access 11.3 million ounces and the VCR another 3.2 million ounces. Phase 1 refers to the VCR below 120 project, currently being implemented to develop four declines from 120 level to the 126/127 levels to exploit the VCR orebody. It includes the installation of the supporting infrastructure (refrigeration, backfill, decline equipping, etc) required to service a 10,000m²/month production plan.

The feasibility study is underway for phase 2, which will focus on the CLR on two levels from 120 level down to 126 level. The access design showing best fit with existing infrastructure and schedule, as well as the best returns and potential for expansion, is the construction of a central ramp, supported by an extension of the SS2 shaft for long-term transportation of men and material. The rock will be trucked up the ramp from 126 and 123 level to 119 level and hoisted to surface through the SS1 shaft rock hoisting system. Phase 2 is expected to be mined at a rate of 12,000m² per month. The dedicated decline ramp from 120 level will provide fast access to ounces and will minimize the dependence of phase 2 on phase 1 infrastructure, making phase 1 infrastructure available for a phase 3 project opportunity. Phase 2 will be implemented following board approval which is anticipated during 2012.

At the existing Mponeng operation, additional exploration was undertaken to gain greater knowledge of the orebody and its geological structures in order to improve planning, scheduling and confidence in production targets. Along with this program, a decision has been taken to minimize ongoing mining activities in the lower-grade eastern sections of the mine.

The grade mined at Mponeng was marginally higher than that achieved in 2010 following the decision to move crews from the eastern areas of the mine, where values were found to decline significantly. The mine call factor improved marginally to 79.2 percent.

The introduction of Project ONE at Mponeng will focus on safety transformation to reduce injury rates and eliminate disruptive stoppages; improvement of compliance with mining cycles; improving blast frequency; and optimizing vertical transport. Gains in these areas are expected to result in ongoing productivity improvements at the mine through improvements in face advance, mitigating occasional shortages in certain underground mining skills. Rail-bound drill rigs will also be introduced to accelerate development rates and as with all the mines in the South Africa region work crews will undergo the Simunye training program.

Table of Contents

New technologies that are introduced at Mponeng to increase productivity are the use of high pressure drill rigs and drill jigs that achieve better development advancement compared to conventional mining equipment. Ore handling improvements at Mponeng are achieved through the use of bigger hoppers that transport higher tonnage of ore and the use of front driven trains. Wi-fi communication was installed underground to assist with better scheduling of handling of material and ore to save time and cost.

Water and waste management in the West Wits region is another key area of focus. Construction of storm water diversion trenches, containment evaporation ponds, waste water control dams and the upgrade of the salvage yard were initiated in 2011. The only work completed in 2011 was the salvage yard upgrade and about 70 percent of the storm water diversion trenches.

During 2011 the majority of the cooling towers were converted from potable to service water use as part of the goal of cutting potable water consumption to 120,000 kiloliters a month. This was surpassed, with use now stabilized at between 80,000 kiloliters and 100,000 kiloliters a month.

A similar focus will be placed on energy use in 2012, with targets set for the reduction of compressed-air and pumping costs. The flow meters installed at each level help to minimize pumping during Eskom's high-demand times, thus assisting with reduced power consumption.

Safety

Tragically, two fatalities were recorded at Mponeng. In May 2011, an employee died when a seismic event of 0.6 magnitude resulted in a fall of ground. In August 2011, another employee died when a seismic event of local magnitude 2.0 again led to an extensive fall of ground.

Management believes that the improved planning and scheduling that stem from Project ONE, as well as the more cohesive and productive teams resulting from the Simunye training, will help achieve further improvements in safety. Crews have also been initiated into the Simunye training process. The introduction of the safety management program is expected to assist in further improving safety through its requirements to ensure regular inspections, behavior observations, group meetings and frequent workplace risk assessments.

During 2011, the all injury frequency rate improved to 15.39 per million hours worked, from 15.93 in 2010 and the mine also achieved 500,000 fatality-free shifts. Improved engagement with the entire workforce regarding every aspect of their responsibilities and daily tasks will be an ongoing responsibility for management.

Mponeng has the following certification:

- ISO 14001 Environments; and
- OHSAS 18001 Occupational health and safety.

The company plans to have employees and contractors at Mponeng undergo hazardous substance training during 2012.

West Wits Savuka

Description

Savuka is situated on the West Wits line in the province of Gauteng, close to the town of Carletonville and approximately 70 kilometers southwest of Johannesburg. The Carbon Leader Reef (CLR) is mined at depths varying between 3,137 meters and 3,457 meters below surface and the Ventersdorp Contact Reef (VCR) at a depth of 1,808 meters below surface.

Savuka shares a processing plant with neighbouring TauTona.

Performance

Savuka produced 49,000 ounces at a total cash cost of \$857 per ounce in 2011, compared with 22,000 ounces at a total cash cost of \$1,136 per ounce the previous year. The mine was placed on care and maintenance during 2011 following a shaft accident that damaged underground infrastructure in May 2009. Limited operations continued throughout 2011 using previously developed reserves. Parts of the Savuka deposit will be accessed from the neighbouring Mponeng operation.

Growth and improvement

Edgar Filing: ANGLOGOLD ASHANTI LTD - Form 20-F

The mine's infrastructure was mothballed at the end of 2011. Ongoing maintenance is required in order to continue water pumping activities for AngloGold Ashanti's remaining mines in the immediate vicinity.

Table of Contents

Safety

Savuka has received the following certifications:

ISO 14001 Environment; and
OHSAS 18001 Occupational health and safety.

West Wits TauTona

Description

TauTona lies on the West Wits Line, just south of Carletonville in Gauteng, about 70 kilometers southwest of Johannesburg. Mining takes place at depths of 1,850 meters to 3,450 meters. The mine has a three-shaft system, supported by secondary and tertiary shafts, and is in the process of converting from longwall to scattered-grid mining. The change in mining method was necessitated by the increasingly complex geology being encountered and the unsuitability of the current method for mining through the Pretorius fault. This change is also expected to improve safety.

Performance

TauTona produced 244,000 ounces at a total cash cost of \$816 per ounce in 2011, compared with 259,000 ounce at a total cash cost of \$699 per ounce the previous year.

A decision was taken early in 2011, following a significant seismic event, to cease mining of the Ventersdorp Contact Reef (VCR) shaft pillar and remove it from the immediate mine plan in the interests of safety. This decision contributed to the decline in output.

The increase in costs resulted from lower production, replacement of equipment and additional shifts needed to claw back some of the lost production.

Production crews were deployed to focus on increased sweeping and vamping of old production areas to capture valuable ore-chips and gold displaced after blasting and left behind after work areas were vacated. This helped improve the overall mine-call factor of the operation. Increased geological drilling enhanced the overall knowledge of the orebody and contributed to the improved grade in the second half of the year.

Growth and improvement

In line with the rollout of the Project ONE business improvement initiative across the South African operations in 2011, continued focus will be placed on productivity improvements through improved scheduling and planning, as well as continued training of work crews through the Simunye initiative.

One of the chief initiatives expected to be implemented in 2012 is a vertical transport optimization project to accelerate the delivery of consumables and other essential items to work crews, in order to increase production time at the face. Similarly, management expects that the Carbon Leader transfer system will significantly reduce times for horizontal transport, or tramming, due to the reduction in tramming kilometers and elimination of inter-level transfers.

The following energy projects are currently being undertaken:

Installation of a pre-cooling tower at the surface fridge plant this project was started and completed in 2011. The pre-cooling tower results in improved power consumption in ambient temperatures, as the fridge plant does not have to be activated.

Compressed air automation this project is expected to be completed in the third quarter of 2012 and should also result in lower power consumption.

Energy recovery turbine this project is expected to be completed by March 2012.

There will be continued emphasis on the management of seismicity to further improve safety and limit production interruption.

Following the success achieved in 2011, additional geological drilling will be undertaken to enhance knowledge of geological structures. Plans and schedules will be revised accordingly. At year-end, more than half the mine had converted to scattered grid mining and increased efforts were made to achieve development targets to improve future underground flexibility.

Edgar Filing: ANGLOGOLD ASHANTI LTD - Form 20-F

AngloGold Ashanti has also reached an agreement to drill in the IC2 block, an area belonging to Gold Fields that is adjacent to TauTona's existing workings and can be more quickly accessed from there. Drilling started in December 2011 and is expected to be completed by the end of 2012. Scoping work is also underway to determine the viability of mining parts of the Savuka orebody from TauTona, by establishing a link between the two mines.

Table of Contents

Safety

There were no fatalities in 2011. The all injury frequency rate improved significantly to 13.36 per million hours worked, as AngloGold Ashanti employees at all levels focused on implementation of the safety transformation plan and the basic tenets of Project ONE. The mine achieved more than 1 million shifts without a fatality and more than three years without a fatality related to falls of ground.

TauTona has received the following certification:

ISO 14001 Environment; and
OHSAS 18001 Occupational Health and Safety.

Table of Contents

CONTINENTAL AFRICA

AngloGold Ashanti has eight mining operations in its Continental Africa region:

Iduapriem and Obuasi in Ghana;
Siguiiri in Guinea;
Morila, Sadiola and Yatela in Mali;
Navachab in Namibia; and
Geita in Tanzania.

AngloGold Ashanti also conducts an active greenfield exploration program, principally in the Democratic Republic of the Congo (DRC), focused on the Mongbwalu concession and the Kibali joint venture with Randgold Resources and the DRC government. This is in addition to brownfield exploration being conducted in and around its existing operations. For further information on the group's exploration program in Continental Africa, see Item 4B.: Business overview Global exploration .

Performance

Combined production from Continental African operations increased by 5 percent to 1.57 million ounces of gold in 2011, equivalent to 36 percent of group production. Declines in production at the Siguiiri, Obuasi, Yatela and Navachab operations were offset by increases at Geita, Iduapriem, Sadiola and Morila. Production at Geita rose by 38 percent. In all, these operations employed 16,539 people, including contractors, 778 more than in 2010. Total attributable capital expenditure for the region was \$418 million (2010: \$232 million). The bulk of this was spent at the Obuasi and Iduapriem operations in Ghana, at Geita in Tanzania and at Navachab in Namibia.

Safety

Regrettably, three contractors were involved in fatal occupational accidents during 2011. The AIFR for the year was 3.03 per million hours worked, a significant improvement on the 5.26 recorded in 2010.

Table of Contents**GHANA - Summary of metallurgical operations**

	OBUASI Tailings Oxide Treatment		IDUAPRIEM
	Sulfide Treatment		PLANT
	Plant	Treatment Plant	Plant
Capacity (000 tonnes/month)	200	200	150
Ghana Iduapriem			375

Description

Iduapriem, wholly owned by AngloGold Ashanti since September 2007, comprises the Iduapriem and Teberebie properties on a 110km² concession. The mine is situated in the western region of Ghana, some 70 kilometers north of the coastal city of Takoradi and 10 kilometers southwest of Tarkwa.

Iduapriem is an open-pit mine and its processing facilities include a Carbon-in-pulp (CIP) plant.

Geology

The Iduapriem and Teberebie gold mines are located along the southern end of the Tarkwa basin. The mineralization is contained in the Basket Series of rocks within the Tarkwaian System of Proterozoic age. The outcropping Basket Series of rocks in the mine area form prominent, arcuate ridges extending southwards from Tarkwa, westwards through Iduapriem and northwards towards Teberebie.

(1) Total cash costs and total production costs are non-GAAP measures. For further information on these non-GAAP measures, see Item 5A.: Operating results Total cash costs and total production costs .

(2) Average for the period.

Performance

Gold production for the year totaled 199,000 ounces, an 8 percent increase on production in 2010, due in large part to the increase in volumes milled. Record monthly throughput of 404,000 tonnes was achieved in August 2011. This was despite a deterioration in the average grade over the year to 1.44g/t, which was 15 percent lower year-on-year.

Edgar Filing: ANGLOGOLD ASHANTI LTD - Form 20-F

A highlight of the year was the commissioning of the new tailings storage facility (TSF) in the first half of the year – a timely development given the declining capacity of the interim tailings storage facility.

A critical operating challenge was the repeated failure of the newly installed high pressure valves, installed on the plant tailings discharge line going into the new TSF facility tailings pumps. This resulted in a halt to production at the plant as the pumps operate off the same pipeline. A separate pipeline is to be installed from the pumps and is expected to be commissioned in May 2012. In the interim, the existing valves will be closely monitored and maintained. Another challenge during the year was the heavy rainfall, which required plant throughput to be curtailed in order to manage the new TSF freeboard (the maximum level to which the water is allowed to rise).

Total cash costs per ounce increased by 8 percent from the previous year to \$839 per ounce, owing primarily to higher fuel and power costs. Total capital expenditure for the year was \$73 million, including \$60 million for the TSF and \$2 million relating to the Ajopa project.

Table of Contents

Growth and improvement

Work began on the implementation of the BPF component of Project ONE in August 2010 at the CIP plant. Performance relating to the process is being measured and monitored and has currently reached the stabilization stage. Plant output is also being measured and recorded. Analysis and optimization was initiated to identify the key causes of production losses in the plant. As a result, several control actions have emerged from this and these have been developed and championed by team leaders for the crushing and CIP plants.

The emphasis in 2012 will be to stabilize and minimize downtime at the crushing plant, to improve the primary crusher feeding rate.

In 2012, the BPF is expected to be introduced into the mining operation. While the mine has limited growth prospects on surface, the sustained increase in the gold price has led to renewed interest in evaluating the considerable low-grade resource in the Tarkwaian conglomerates beyond the economic limits of the existing pits.

A scoping study will examine the expansion of the open pit operation by increasing throughput. Long-hole drilling is also planned to determine if there is an economic resource sufficient to support underground mining.

The Ajopa project is now scheduled to start in mid-2012 and is expected to cost an estimated \$12 million. Ajopa hosts an Ore Reserve estimated at 4.97 million tonnes at a grade of 2.05g/t, equivalent to around 363,000 ounces of gold.

A new cyanide sparging plant was commissioned in August 2011 as part of the infrastructure development required for compliance with the cyanide code.

Safety

For the third consecutive year, occupational injuries have continued to decline. The focus in the year was on contractor engagement in safety programs, fatigue management and the implementation of risk-based medical surveillance. Emergency response planning and crisis management were reviewed in the year, while safety campaigns continued in order to focus and procure commitment from all employees.

An OHSAS 18001 certification audit was conducted during August 2011 and the next recertification will be concluded during 2014. An ISO 14001 recertification audit will be conducted during 2012.

Ghana Obuasi

Description

Obuasi, wholly owned by AngloGold Ashanti, is located in the Ashanti Region of Ghana, approximately 60 kilometers south of Kumasi. Mining operations are primarily underground, to a depth of 1.5 kilometers. However, some surface mining in the form of open pit and tailings reclamation also occurs. Obuasi currently treats sulfide ores from underground at the south plant, following the decommissioning of the tailings treatment plant in October 2010. The south plant also treats sulfide tailings and has a capacity of 360,000 tonnes per month.

Geology

The gold deposits at Obuasi are part of a prominent gold belt of Proterozoic (Birimian) volcano-sedimentary and igneous formations which extend for a distance of approximately 300 kilometers in a north-east/south-west trend in south-western Ghana. Obuasi mineralization is shear-zone related and there are three main structural trends hosting gold mineralization: the Obuasi trend, the Gyabunsu trend and the Binsere trend.

Two main ore types are mined:

quartz veins which consist mainly of quartz with free gold in association with lesser amounts of various metal sulfides such as iron, zinc, lead and copper. The gold particles are generally fine-grained and occasionally are visible to the naked eye. This ore type is generally non-refractory; and

sulfide ore which is characterized by the inclusion of gold in the crystal structure of a sulfide material. The gold in these ores is fine-grained and often locked in arsenopyrite. Higher gold grades tend to be associated with finer grained arsenopyrite crystals. Other prominent minerals include quartz, chlorite and sericite. Sulfide ore is generally refractory.

Table of Contents**Operating and production data for Obuasi**

(1) Pay limits and recovered grade refer to underground ore resources.

(2) Total cash costs and total production costs are non-GAAP measures. For further information on these non-GAAP measures, see Item 5A.: Operating results Total cash costs and total production costs .

(3) Average for the period.

Performance

Obuasi achieved its production targets in 2011, despite facing significant operating challenges. This achievement followed focused intervention from the multi-disciplinary taskforce appointed to effect the turnaround of the operation. Additional planning, design and scheduling of work is required to further improve operational performance. Ore Reserve development improved in 2011. Nevertheless, the ability of the mine to adapt to changing circumstances remains a key challenge for this operation. Underground tonnages came in at 1.84 million tonnes (2010: 1.80 million tonnes).

Production declined by just over 1 percent, as planned, to 313,000 ounces as the taskforce worked at formulating a strategy to realize the full potential for the Obuasi operations. The south treatment plant was stopped for a total of 51 milling hours in October 2011, due to water levels on the south tailings storage facility.

Gains in efficiencies and volumes failed to translate into improved total cash costs, which were 13 percent higher year-on-year at \$859 per ounce. The higher costs reflected the effects of lower grades and increases in the price of steel, oil, fuel and other consumables.

Growth and improvement

The Obuasi taskforce has made good progress in putting measures in place to effect a turnaround at the operation. A 12-hour shift was introduced and fully rolled out at all underground and processing functions to provide more productive time at work. The BPF component of Project ONE has been fully rolled out in mining, processing and transport.

A development contract is currently being finalized with the existing contractor, under a new framework and structure, and new equipment for development was purchased and is ready for use. Ageing infrastructure at the mine and plant is being repaired or replaced where necessary.

Although there is some indication of higher costs initially on implementation of the BPF, trends indicate that appropriate maintenance should result in cost reductions and improved performance of the mining fleet and infrastructure. In the medium term, this should have a positive impact on mining flexibility and lead to increased throughput and higher production.

Underground drilling to explore the Obuasi Deeps below 50 level and the southern extensions of the current mining areas above 50 level continued in the year.

Safety

Regrettably, three contractor employees lost their lives in occupational accidents during 2011 at Obuasi mine. The Obuasi management team conducted investigations into the circumstances that contributed to these incidents. Measures have been put in place to help ensure that such incidents are not repeated.

Table of Contents

Good strides were made with employee safety and occupational health, with the Continental Africa region safety strategy being implemented and 22 safety standards executed. The emphasis has been on the creation and communication of a deliverable vision for fatality elimination by identifying and increasing the focus on high-potential near-fatal events. Through training and awareness creation, there has been an attempt at reinforcing safe behavior, and the AIFR for the year was 2.37, an improvement of 17 percent on the previous year. This was bolstered also by the employee engagement process aimed at improving communication and performance, which was rolled out in phases during 2011.

The OHSAS 18001 certification was successfully completed during January 2012, and an ISO 14001 recertification audit will be held in 2012.

GUINEA**Guinea Siguri****Description**

Siguri, a multiple open-pit oxide gold mine, is AngloGold Ashanti's sole operation in the Republic of Guinea. It is located in the district of Siguri, around 850 kilometers northeast of the country's capital Conakry. Conventional mining activities are performed by contractors in multiple open pits using conventional techniques. On surface, Siguri's gold processing plant treats about 30,000 tonnes daily.

AngloGold Ashanti holds an 85 percent interest in Siguri and the balance of 15 percent is held by the Government of Guinea.

Geology

This concession is dominated by Proterozoic Birimian rocks which consist of turbidite facies sedimentary sequences. The two main types of gold deposits which occur in the Siguri basin and are mined are:

- laterite or CAP mineralization which occurs as aprons of colluvial or as palaeo-channels of alluvial lateritic gravel adjacent to, and immediately above; and
- in situ quartz-vein related mineralization hosted in meta-sediments with the better mineralization associated with vein stockworks that occurs preferentially in the coarser, brittle siltstones and sandstones.

The mineralized rocks have been deeply weathered to below 100 meters in places to form saprolite or SAP mineralization. With the percentage of available CAP ore decreasing, a carbon-in-pulp (CIP) plant is used to treat predominantly SAP ore.

Operating and production data for Siguri

All injury frequency rate	1.27	6.15	5.54

(1) Total cash costs and total production costs are non-GAAP measures. For further information on these non-GAAP measures, see Item 5A.: Operating results Total cash costs and total production costs .

(2) Average for the period.

Table of Contents

Performance

Attributable gold production declined by 9 percent to 249,000 ounces. Lower-than-anticipated grades had the most significant impact on production. A number of challenges were encountered during the year, mainly with regard to the increasing number of illegal miners in the Siguiri mining areas. Mining operations were also hampered in the year by a community protest over issues relating to electricity supply, land compensation and employment, which interrupted production for three days, while mining the Sanutinti push back hampered excavator productivity, with the wet ground conditions encountered resulting in increased mining costs. Other challenges were the lower grade in the saprolite stockpile, which also contained some hard oxide materials, causing delays in material supply.

Throughput tonnes in 2011 were 10 percent higher year-on-year at 9.7 million tonnes (2010: 8.8 million tonnes), helping to mitigate the impact of lower grades. Recoveries in the plant were marginally down to 89 percent, attributable mainly to the lower grades and higher throughput, and a leach tank maintenance program.

The lower volumes drove costs up, with unit cash costs 33 percent higher at \$871 per ounce (2010: \$656 per ounce). Higher labor costs and fuel prices also contributed to increased cash costs.

Growth and improvement

In mid-2011, a program was initiated to accelerate the upgrade of the inferred oxide resource to an indicated resource. This program aims to partly replace depletions in the Ore Reserve. An assay laboratory upgrade and expansion is planned for 2012.

The BPF component of Project ONE is being implemented across the operation after the successful implementation at the plant resulted in a 1 million-tonne increase in throughput on an annual basis. A modular mining fleet management system was installed on trucks and primary loaders to improve productivity and reduce costs. The process is currently being implemented in the mining and geology department to reduce unit costs by working more efficiently.

A new growth strategy provides for the expansion of the current plant. The expanded plant will have the capacity to treat 18 million tonnes of material annually by 2017, reaching capacity in 2018. To support this expansion strategy, significant exploration projects to find new reserves are underway.

Environmental management remains a critical area of focus and ongoing initiatives are in place to control dust and emissions, and also to ensure compliance with all the relevant legislation. Siguiri contributed to the management of dust by the watering of linking roads between villages at a total cost of \$619,000. No reportable environmental incidents were recorded in the year. A pipeline from the tailings facility, which previously contributed to the bulk of incidents, is expected to be replaced in 2012.

Safety

The all injury frequency rate dropped to 1.27 per million hours worked from 6.15 in 2010.

OHSAS 18001 recertification will be conducted during 2012. The ISO 14001 certification was successfully completed and is valid until July 2012.

MALI

AngloGold Ashanti has interests in three gold mining operations in Mali, namely, Sadiola, Yatela and Morila. It manages two of these operations, Sadiola and Yatela.

Mali Morila (attributable 40 percent)

Description

The Morila mine is situated 180 kilometers southeast of Bamako, the capital of Mali. The operation treats low-grade stockpiles while the plant, which incorporates a conventional carbon-in-leach process with an upfront gravity section to extract the free gold, has annual throughput capacity of 4.3 million tonnes. Since mining was concluded in 2009 with the depletion of the orebody, operations at Morila currently involve processing of the stockpile which stood at 1.8 million tonnes as at year-end.

Table of Contents

AngloGold Ashanti has an effective 40 percent stake in Morila, as does Randgold Resources Limited (which manages the mine). The Government of Mali owns the remaining 20 percent.

Geology

Morila is a mesothermal flat lying shear-zone hosted deposit which, apart from rising to the surface in the west against steep faulting, lies flat. The deposit occurs within a sequence Birimian metal-arkoses of amphibolite metamorphic grade. Mineralization is characterized by silica-feldspar alteration and sulfide mineralization consists of arsenopyrite, pyrrhotite, pyrite and chalcopyrite.

Operating and production data for Morila

	000,000,000,000	000,000,000,000	000,000,000,000
	2011	2010	2009
Pay limit (oz/t)	0.02	0.02	0.04
Pay limit (g/t)	0.60	0.67	1.21
Recovered grade (oz/t)	0.050	0.050	0.072
Recovered grade (g/t)	1.70	1.70	2.47
Gold production (000 oz) 100 percent	248	238	342
Gold production (000 oz) 40 percent	99	95	137
Total cash costs (\$/oz) ⁽¹⁾	818	716	526
Total production costs (\$/oz) ⁽¹⁾	859	768	577
Capital expenditure (\$ million) 100 percent	3	3	10
Capital expenditure (\$ million) 40 percent	1	1	4
Employees ⁽²⁾	435	476	518
Outside contractors ⁽²⁾	385	415	535

(1) Total cash costs and total production costs are non-GAAP measures. For further information on these non-GAAP measures, see Item 5A.: Operating results
Total cash costs and total production costs .

(2) Average for the year.

Performance

In line with improvements, attributable gold production rose 4 percent to 99,000 ounces. Tonnages were 4 percent higher, reaching 4.5 million tonnes. The plant was also more effectively utilized in 2011, after the primary crusher breakdown in January 2010. However, crushing and milling improvements will be difficult to sustain given the limits of the carbon-in-leach operation. Total cash costs increased by 14 percent, with direct operating costs adversely affected by large price increases for diesel and reagents.

Growth and improvement

A large part of stay-in-business capital of \$1 million was expended on process enhancements at the plant, mainly in order to maintain capacity. Feasibility studies were undertaken during the year to investigate possible extensions to and reclamation of the tailings storage facilities. During the year, work by the mineral resources team on the tailings storage facility retreatment project indicated that the mine's life could be extended. A final decision has not yet been taken in this regard.

Closure preparations continue, including implementation of the social plan. An employee assistance fund has been created and is managed by the unions. An agri-business project aims to sustain livelihoods post closure, although some land ownership issues still require resolution. Management is in negotiations with the local authorities and government to this end. Other pilot projects include animal husbandry, poultry farming, honey production and fish breeding, along with the establishment of a micro credit facility (CAMIDE).

Safety

Safety statistics for Morila are reported by Randgold Resources, the operator, and are not included in AngloGold Ashanti's statistics.

Table of Contents**Mali Sadiola (attributable 41 percent effective December 29, 2009, previously 38 percent)****Description**

The Sadiola mine is situated in western Mali, some 77 kilometers south-southwest of the regional capital Kayes. The mine is a joint venture between AngloGold Ashanti (41 percent) and IAMGOLD (41 percent) and the government of Mali (18 percent). Mining activities take place in five open pits. On-site surface infrastructure includes a 4.9 million tonnes per annum carbon-in-leach gold plant where the ore is eluted and smelted. Sadiola's future lies in the expansion of the Sadiola main pit and a new plant, construction of which is planned to start in 2012.

Geology

The Sadiola deposit occurs within an inlier of greenschist facies metamorphosed Birimian rocks known as the Kenieba Window. The specific rocks which host the mineralization are marbles and greywackes which have been intensely weathered to a maximum depth of 200 meters. A series of north-south trending faults occur that are the feeders to the Sadiola mineralization. As a result of an east-west regional compression event, deformation occurs along a north-south striking marble-greywacke contact, increasing the porosity of this zone. North-east striking structures which intersect the north-south contact have introduced mineralization, mainly with the marble where the porosity was greatest. The Sadiola Hill deposit generally consists of two zones, an upper oxidized cap and an underlying sulfide zone. From 1996 until 2002, shallow saprolite oxide ore from the Sadiola Hill pit was the primary ore source. Since 2002, the deeper saprolitic sulfide ore has been mined and in future will progressively replace the depleting oxide reserves.

Operating and production data for Sadiola

	000,000,000,000	000,000,000,000	000,000,000,000

Recovered grade (oz/t)	0.055	0.060	0.074
Recovered grade (g/t)	1.90	2.04	2.52
Gold production (000 oz) 100 percent	295	287	354
Gold production (000 oz) 41 percent ⁽¹⁾	121	118	135
Total cash costs (\$/oz) ⁽²⁾	835	686	489
Total production costs (\$/oz) ⁽²⁾	868	737	585
Capital expenditure (\$ million) 100 percent	34	20	10
Capital expenditure (\$ million) 41 percent ⁽¹⁾	14	8	4
Employees ⁽³⁾	846	790	705
Outside contractors ⁽³⁾	998	981	827
All injury frequency rate	2.44	1.65	2.31

(1) Effective December 29, 2009, the company increased its interest from 38 percent to 41 percent.

(2) Total cash costs and total production costs are non-GAAP measures. For further information on these non-GAAP measures, see Item 5A.: Operating results
Total cash costs and total production costs .

(3) Average for the year.

Performance

Gold production increased to 121,000 ounces in 2011 (2010: 118,000 ounces) with tonnes treated increasing to 2 million tonnes from 1.8 million tonnes, countering a 7 percent decline in grade recovered to 1.90g/t.

Total cash costs were 22 percent higher at \$835 per ounce (2010: \$686 per ounce), driven by increases in fuel prices and higher dollar prices for a number of consumables.

Growth and improvement

Edgar Filing: ANGLOGOLD ASHANTI LTD - Form 20-F

Productivity initiatives focused on a number of activities, from truck and shovel utilization to haul road optimization, along with the implementation of the fleet management system which provides a dispatch and high-level data capture system for analysis.

In the plant, a crusher has been installed to pre-treat feed material which should enhance throughput and reduce delays owing to damage caused by rocks and other hard material through the plant.

The BPF component of Project ONE was activated at Sadiola in the fourth quarter of 2011. The operation is currently stabilizing and with better planning, resourcing and scheduling, it is anticipated that plant availability will improve, which should have a positive impact on production. Sadiola's focus will be on mining the FE3 and FE4 pits in 2012. Mining is then expected to extend into the Tambali and level 3 pits.

Table of Contents

Preparatory work on the detailed design of the plant and operational readiness for the Sadiola Sulfide Project has begun. This project will give access to the deeper sulfide material and includes construction of a new plant.

The Environmental Study and Impact Assessment (ESIA) has been approved for the project and work on the associated powerline is currently in progress. Long-lead items, including mining equipment, have been ordered and are expected to start arriving on site in 2012. Operations at the Sadiola Sulfide Project are expected to begin towards the end of 2012. The project is awaiting final board approval in 2012.

Safety

An increase in finger injuries prompted a finger safety campaign at Sadiola. A comprehensive and integrated safety program focused on leadership, the reinforcement of risk assessments in the planning phases and on refresher training for safety officers.

The mine maintained its OHSAS 18001 certification in 2011. ISO 14001 recertification is scheduled for 2012.

Mali Yatela (attributable 40 percent)

Description

Yatela is 80 percent owned by the Sadiola Exploration Company Limited, a joint venture between AngloGold Ashanti and IAMGOLD, giving each a 40 percent stake in Yatela. The balance of 20 percent is owned by the government of Mali.

The Yatela mine is situated in western Mali, some 25 kilometers north of Sadiola and approximately 50 kilometers south-southwest of the regional capital Kayes. Ore extraction has been conducted from a number of pits including the Yatela main pit, Alamoutala, four Alamoutala satellite pits, KW18 and the North-west Extension.

Mining in most of these pits has been completed. For the remaining years of the life of mine, the focus will be on a final cutback in Yatela Main pit (Pushback 8) as well as a new pit north of the Yatela Main pit. The ore mined is treated on heap-leach pads together with carbon loading. The carbon is then transported to Sadiola for elution and smelting.

Geology

Yatela mineralization occurs as a keel-shaped body in Birimian metacarbonates. The keel is centered on a fault which was the feeder for the original mesothermal mineralization, with an associated weakly mineralized diorite intrusion. Mineralization occurs as a layer along the sides and in the bottom of the keel. The ore dips almost vertically on the west limb and more gently towards the west on the east limb, with tight closure to the south.

Operating and production data for Yatela

	000,000,000,000	000,000,000,000	000,000,000,000

Total cash costs and total production costs .*
- (2) *Average for the year.*

Table of Contents

Performance

The mine plan was adjusted in 2011 to allow for the completion of the Yatela main pit. Mining, which has now been completed, was then advanced in the Alamoutala main and satellite pits. As Yatela approaches closure, the grade of the ore has declined incrementally. The increase in tonnages mined failed to compensate for the lower grades, which had a knock-on effect on gold production which declined to an attributable 29,000 ounces.

Total cash costs rose to \$1,483 per ounce as a result of higher input costs, including efforts to extend the life of mine and the hauling of material over a relatively long distance from Alamoutala to the Yatela plant.

Growth and improvement

Yatela plans to mine at two pits, the Yatela main pit and Yatela North during 2012. Mining in the main pit was delayed in 2011 with the re-optimization of the main pit in order to reduce stripping ratios and maintain practical mining widths. There is an intense focus on optimizing residual opportunities.

Management has focused on putting in place steps to foster sustainable development in surrounding communities as the mine approaches closure. Voluntary retirements were encouraged during the year, and the only positions which have been filled are those critical to production targets. The temporary labor complement is also being reduced by 5 percent annually, and no contracts are being renewed. A closure consultant was appointed in 2011. The rehabilitation target to date is 312 hectares, of which 214 hectares have been rehabilitated. This is below target as a result of changes in the mine plan and the unavailability of equipment.

Safety

The all injury frequency rate (AIFR) was 1.52 per million hours worked in 2011. Intensive efforts remain focused on safety campaigns and risk assessments. The mine maintained its ISO 14001 certification in 2011. ISO 14001 recertification is scheduled for 2013.

NAMIBIA

Namibia Navachab

Description

The Navachab gold mine is situated near the town of Karibib, some 170 kilometers northwest of the capital Windhoek and 171 kilometers inland on the southwest coast of Africa.

Navachab, which began operations in 1989, is an open-pit mine with a processing plant which includes a mill as well as CIP and electro-winning facilities, all with a monthly capacity of 120,000 tonnes.

Geology

The Navachab deposit is hosted by Damaran greenschist- amphibolite facies, calc-silicates, marbles and volcanoclastics. The rocks have been intruded by granites, pegmatites and (quartz-porphyry dykes) aplite and have also been deformed into a series of alternating dome and basin structures. The mineralized zone forms a sheet-like body which plunges at an angle of approximately 20 degrees to the north-west. The mineralization is predominantly hosted in a sheeted vein set (± 60 percent) and a replacement skarn body (± 40 percent). The gold is very fine-grained and associated with pyrrhotite, and minor to trace amounts of pyrite, chalcopyrite, maldonite and bismuthinite. Approximately 80 percent of the gold is free milling.

Table of Contents**Operating and production data for Navachab**

	2011	2010	2009
Pay limit (oz/t)	0.06	0.07	0.051
Pay limit (g/t)	2.00	2.53	1.55

All injury frequency rate	2.00*	25.60	26.30

(1) Total cash costs and total production costs are non-GAAP measures. For further information on these non-GAAP measures, see Item 5A.: Operating results Total cash costs and total production costs .

(2) Average for the year.

* 2011 only includes medical treatment cases and lost-time injuries and excludes all first aid and dressing cases.

Performance

Gold production of 66,000 ounces was 23 percent lower than the 86,000 ounces produced the previous year, largely as a result of the reduced volumes of concentrate supplied by the DMS plant. The reduced level of gold production and inflation resulted in a 30 percent increase in total cash costs to \$939 per ounce.

A mining fleet has been contracted for a three-year period to complete the required near-surface waste stripping of the main pit expansion cut back to extract ore and increase mining volumes. Although the start of this contract was delayed, waste stripping began during the year, resulting in a 16 percent increase in tonnes mined.

Growth and improvement

The BPF component of Project ONE was rolled out at Navachab during the second half of the year in an effort to generate improved efficiencies across the operation.

Work has begun on a prefeasibility study, scheduled for completion by mid-2012, to determine the viability of achieving planned production targets as well as optimal mine and process options. The proposed expansion is expected to improve economies of scale and focus on cost control and continuous improvement initiatives. It is also expected to create additional jobs.

Exploration during the year focused on pit expansion drilling so as to increase confidence in the orebody, to follow up on geochemical anomalies and to optimize asset use.

Safety

The annual safety plan was implemented, supported by a road show, safety awareness campaigns and observer training, which is ongoing. There were no fatalities during 2011. The AIFR improved dramatically, declining from 25.60 per million hours worked in 2010 to 2.0 in 2011.

Navachab received ISO 14001 certification during 2011. The OHSAS 18001 certification audit was completed. Nonconformances identified are continuously addressed.

TANZANIA**Tanzania Geita**

Description

The Geita gold mine is located in the Lake Victoria goldfields of the Mwanza region of Tanzania, about 120 kilometers from Mwanza and 4 kilometers west of the town of Geita. The mine is wholly owned and managed by AngloGold Ashanti.

Table of Contents

The Geita gold mine is a multiple open pit operation with underground potential and is currently serviced by a 5.2 million tonnes per annum CIL processing plant.

Geology

Geita is an Archaean mesothermal mainly BIF-hosted deposit. Mineralization is located where auriferous fluids, which are interpreted to have moved along shears often on BIF-diorite contacts, reacted with the BIF. Some lower-grade mineralization can occur in the diorite as well (usually in association with BIF-hosted mineralization), and approximately 20 percent of the gold is hosted in the diorite.

Operating and production data for Geita

	2011	2010	2009
Pay limit (oz/t)	0.06	0.07	0.09
Pay limit (g/t)	2.06	2.38	3.08

All injury frequency rate	3.60	5.38	5.56

(1) Total cash costs and total production costs are non-GAAP measures. For further information on these non-GAAP measures, see Item 5A.: Operating results
Total cash costs and total production costs .

(2) Average for the year.

Performance

Geita produced 494,000 ounces at a total cash cost of \$488 per ounce in 2011, compared with 357,000 ounces at a total cash cost of \$697 per ounce the previous year. The turnaround in Geita operating performance continued in 2011, following the rollout of the Project ONE business improvement initiative as a pilot site. Progress continues to be made in all areas, not least of all fleet reduction and improved plant availability and recoveries. In 2011, over 55.8 million tonnes were mined, compared with 45.5 million tonnes the previous year.

The overall production performance for the year was further aided by higher grades mined at the Nyankanga Cut 6 and operation of the ball mill in single stage, which offset extended downtime of the SAG mill during unscheduled shutdowns in May and June to repair the feed end and during October to replace the mill gearbox.

The fleet rationalization program continued to deliver productivity improvements in engineering stores, fuel and labor cost. This included completion of the larger light-weight truck tray project, the resultant phasing out of aged trucks and reducing the fleet from 34 to 27 trucks, and manpower rationalization resulting from improved training and performance. Improved drill and blast performance contributed to improved mining performance and significant cost reductions. Average broken stocks have increased from 150,000bcm to 500,000bcm while the number of drilling rigs decreased from 14 to 8. Powder factors reduced from 0.95kg/bcm to 0.72kg/bcm while achieving improved material fragmentation. Continued progress was made on the reagent optimization started in 2010, with improved gravity recovery and optimization of the CIL circuit further contributing to lower reagent consumption. The tire life optimization program also achieved success through improved tire management, equipment operator training and improved haul road conditions. Mining operations were undertaken in three areas. Mining recommenced at the Star and Comet satellite pit, using contractors, after production was stopped in early 2010. Nyankanga pit cutback 5 was completed and cutback 7 began. Cutback 6 was the main source of ore for 2011 and this is expected to continue in 2012. Geita Hill pit cutback 1 was completed in late 2011 with mining progressing in cutback 2.

Table of Contents

Growth and improvement

From the base year 2010, production and productivity have already increased by more than 20 percent. The target is to maintain production at 500,000 ounces a year and focus on improving employee productivity through focused specialized training to improve employee capability in role. The success achieved at Geita is largely due to the implementation of the BPF component of Project ONE. The operation is now strongly cash positive, with a plan focussing on stability and delivery. The key area of focus is asset reliability, with the team on site receiving strong support from the teams conducting the group-wide asset integrity audit. Capital expenditure has been approved, among others, for the replacement of the SAG-mill.

Work is also ongoing to create opportunities for mine-life extension from surface and underground sources, as well as for on-lease growth by establishing sustainable satellite- and refractory-ore open-pit projects that complement proposed underground projects. Emphasis will be placed on cash flow margins and returns on invested capital.

Key initiatives to reduce real costs which have been incorporated in Geita's strategy include the implementation of the fleet rationalization, reagent optimization, tire life optimization and contracting mining for satellite pits.

Other cost containment and production improvement initiatives include: improvement of mining practices to reduce ore loss to the waste dump; stabilizing and improving SAG-mill feed once a new mill is installed, from 612 tonnes per hour, to 650 tonnes per hour; optimizing the gravity circuit to increase gold recovery through improved availability of the plant; achieving higher fleet productivity by raising shift output; and optimizing liner design.

Challenges include scarce critical skills, particularly engineers, geologists and technicians. An internal pipeline of skills has been created, with 15 people a year enrolled in a graduate training program and 60 people on an integrated technical mining training program. Succession planning, talent management and increased focus on placing Tanzanians in key roles and reducing expatriate recruitments are areas of focus for management.

During the year, the company engaged with the local miners' union, Tamico, and the International Chemical Engineering and Mining Union Federation (ICEM) to improve the relationship with the workforce at Geita. The parties concluded there was a need to renegotiate the existing recognition agreement to improve union access to the mine. The access agreement negotiations with Tamico commenced in 2012.

Over the past two years detailed geological work has been undertaken in Nyankanga, Geita Hill and Star & Comet pits in order to better understand controls of mineralization in each pit. In Nyankanga, mineralization is associated with the Nyankanga main fault zone while at Geita Hill pit, mineralization is associated with the axial planar cleavage of a large synformantiform fold pair. In the Star and Comet pit, mineralization is controlled by the contact between quartz feldspar porphyry and banded iron formation and a major shear zone cross cutting the middle of the pit.

The Geita town water project will begin once environmental approval has been granted in 2012. Completion of the front end of the project, from the treatment plant and pumping station to the water reservoir, is expected in July 2012.

A budget of \$2.6 million for cyanide destruction infrastructure has been approved for 2012. In the meantime, a tailings dilution system is being used to reduce the levels of cyanide at discharge points. Weak acid dissociable (WAD) cyanide at the pool has remained as low as 0.01ppm. Geita's Cyanide Code compliance audit was held in December, with compliance targeted by the end of 2012. The approval and procurement of a new incinerator for the disposal of hazardous material took place in 2011 and the facility is expected to be commissioned in 2012.

Safety

Geita recorded an AIFR of 3.60 per million hours worked in 2011, an improvement on the 5.38 recorded in 2010. Continued focus is placed on high-potential incidents analysis and follow-up remedial action. Geita demonstrates that safety is its first value through management leadership, the holding of regular safety meetings, training, development of standards and safe-work procedures and risk management through conducting frequent risk assessments.

Emergency response and health facilities were improved during the period and additional equipment purchased to ensure emergency preparedness.

Edgar Filing: ANGLOGOLD ASHANTI LTD - Form 20-F

Fatigue has been identified as a critical safety area to be proactively managed. The fatigue program started in 2009 was upgraded in 2010, and training on fatigue management continued throughout 2011.

ISO 14001 certification for the environmental management system was maintained during the year.

Table of Contents

AUSTRALASIA

AngloGold Ashanti's sole operating mine in Australasia is Sunrise Dam in Australia, while development of the Tropicana project, also in Australia, is proceeding.

Performance

Production from Australasia declined by 38 percent to 246,000 ounces in 2011. This was equivalent to 6 percent of group production. This decline in production was due to the flood related work stoppage with the excessive rainfall resulting in operations both underground and at the open pit being adversely affected for approximately six months.

Total cash costs increased by 97 percent to \$1,362 per ounce due primarily to lower production and the cost of remedial work.

In all, an average of 509 people, including contractors were employed at the Sunrise Dam operation, 3 percent more than in 2010.

Total capital expenditure for the region more than doubled to \$102 million, the bulk of which (\$73 million) was spent on the Tropicana project, which is scheduled to begin production in 2013. The bulk of this was spent on the main access road, operational readiness and accommodation.

The Tropicana gold mine is being developed by AngloGold Ashanti (70 percent) and joint venture partner, Independence Group Ltd. (30 percent). AngloGold Ashanti is managing the Tropicana project and has also undertaken an extensive exploration program in the area that covers some 13,500km² of tenements along a 600 kilometers strike length. This area in Western Australia is considered one of the most prospective for new gold discoveries in Australia.

At year-end, the attributable Ore Reserve totaled 4.26 million ounces.

Table of Contents**AUSTRALIA****Australia Sunrise Dam****Description**

The Sunrise Dam gold mine is located in the northern goldfields of Western Australia, 220 kilometers northeast of Kalgoorlie and 55 kilometers south of Laverton.

The mine consists of a large open pit which is now in its fifteenth year of operation, and an underground mine which began in 2004. Mining is conducted by contractors and the ore is treated in a conventional gravity and carbon-in-leach (CIL) processing plant, which is managed by AngloGold Ashanti.

Geology

Gold ore at Sunrise Dam is structurally and lithologically controlled within gently dipping high strain shear zones (for example, Sunrise Shear) and steeply dipping brittle-ductile low strain shear zones (for example, Western Shear). Host rocks include andesitic volcanic rocks, volcanogenic sediments and magnetic shales.

(2) Open-pit operations.

(3) Average for the year.

Performance

Sunrise Dam produced 246,000 ounces at a total cash cost of \$1,362 per ounce in 2011, compared with 396,000 ounces at a total cash cost of \$692 per ounce the previous year. There were two significant events during 2011 that negatively impacted production. A major flood occurred in February, when 220 millimeters of rain fell in two storms, less than five days apart. This was the highest rainfall recorded in the 129 years of records for the Laverton district. In April, a wall failed in the southeastern portion of the open pit, which prevented access to the open pit working areas. A new access ramp was constructed, which took approximately six months. No injuries were sustained in either event, or in the work required to re-establish production. The two events described above necessitated a substantial change to the mine plan and production schedule for 2011, with a consequential change to the annual gold output.

The flood event impacted underground production for approximately four months. During this period the mining contractor worked on remedial activities to repair damage and rehabilitate flooded areas, thus full costs were incurred. Production from the open pit was interrupted for approximately six months while the new access ramp was constructed. Again the open pit mining contractor was fully occupied for most of the period, undertaking stockpile relocation, construction of the new access ramp and waste dump and tailings dam rehabilitation work. The impact of the flood event and the pit wall failure together reduced planned production by about 100,000 ounces. The considerable remedial work

negatively impacted cash costs per ounce.

The underground operation returned to full production in the second half of 2011, and by the fourth quarter had achieved an ore production rate of 1.5 million tonnes per annum on an annualized basis, which is close to the budgeted rate. This was achieved through much improved short- and medium-term planning in line with the business process framework principles of Project ONE.

Table of Contents

Growth and improvement

An extensive mineralized system below the currently mined Cosmo and adjacent Dolly underground domains was discovered in 2011. Initial drill testing of these targets highlighted significant opportunity for a new mineralized domain, named Vogue. The mineralization is an extension of the Cosmo and Dolly gold system that extends beyond the existing mine infrastructure by up to 400 meters and to depths of at least 800 meters below surface. It is hosted within volcanic rocks and structures equivalent to those that host the Cosmo, Western Shear and GQ mineralization.

Dimensions of the Vogue mineralization are significantly larger than Cosmo and Dolly, with an opportunity for either extensive bulk or selective mining zones, close to existing underground mine infrastructure. A conceptual study was completed at the end of 2011 and a prefeasibility study into the expansion of the Sunrise Dam underground mine has commenced, with a substantial exploration commitment that is expected to span two to three years.

Production at Sunrise Dam has been steadily declining from a peak in 2007 when the main high-grade ore zone was mined in the base of the open pit. Since then, open pit production has been declining and underground production steadily increasing. Production from underground will not reach the previous highs of the open pit as volumes of high-grade ore do not reach the same concentration as previously encountered in the base of the open pit. A plan was implemented in 2011 to increase production in the period 2012 – 2014.

There are four main areas of focus for this plan:

The Crown Pillar between the base of the pit and the underground mine contains high-grade ore. The pillar itself contains many pathways for water so by mining and replacing it, an engineered cemented backfill will improve water management in the event of flooding and high grade, low-cost gold production will be brought;

A study was undertaken during 2011 on the most suitable mining method for the GQ orebody. A substantial tonnage will now be mined via more productive and cost effective long hole open stope methods and alternative mine design options are currently being assessed to optimize the extraction of areas of narrow, high grade mineralization that extend beyond bulk mining zones within GQ;

The underground production improvement project will focus on underground stope production, trucking, bogging, maintenance and retention of skilled people, using the analyze and improve processes of Project ONE. The objective is to lift ore production with minimal additional people and equipment. Management expects that this will improve mining costs and have the added benefit of lowering the cut-off grade and bringing more material into reserve; and

The Vogue discovery is an extremely broad domain of high- and low-grade gold mineralization. There are some well drilled areas at the top of the Vogue deposit where the potential exists for higher-grade coherent zones similar in scale to Cosmo.

Other key capital projects underway at Sunrise Dam include the installation of an underground dewatering/pumping system designed to enable the volumes of water encountered in the flood of February 2011 to be removed from the underground mine within 14 days. Another capital project in the underground mine consists of the construction of an underground workshop to service and repair the underground mobile fleet. It is expected that this investment will be recouped in less than three years as equipment will no longer have to travel all the way to surface for services and maintenance work. Installation of two primary ventilation fans (Cosmo and GQ) with remote control system will improve energy efficiency.

Safety

Sunrise Dam continues to maintain a lost-time injury frequency rate (LTIFR) below the Australian industry average. At the end of 2011, Sunrise Dam recorded an AIFR of 19.40 per million hours worked.

Table of Contents

THE AMERICAS

AngloGold Ashanti owns the Cripple Creek & Victor mine in the United States, the Cerro Vanguardia mine in Argentina, the AngloGold Ashanti Córrego do Sítio Mineração (AGA Mineração) and Serra Grande operations, both in Brazil. The Americas represents an important growth region for AngloGold Ashanti.

Performance

Combined production from these operations increased by 6 percent to 891,000 ounces of gold in 2011, increasing its contribution to group production to 21 percent (2010: 19 percent). In all, 7,389 people, including contractors, were employed, 807 more than in 2010.

Total capital expenditure for the region was \$452 million, an increase of 46 percent on the \$309 million spent in 2010. The bulk of this was expended at the AGA Mineração, CC&V and Cerro Vanguardia projects.

The stronger real and scarce mining skills along with accelerating inflation across the South American jurisdictions presented significant cost pressures during the year.

The total attributable Ore Reserve for the Americas region was 11 million ounces.

Safety

Regrettably, two contractor employees lost their lives in occupational accidents during 2011. The first was in Brazil where a worker was run over by a tractor on a construction site, and the second was in Colombia where a worker was inundated by a naturally occurring landslide after unusually heavy rainfall. An all injury frequency rate of 6.33 per million hours worked (2010: 5.66) was achieved in 2011.

Growth and improvement

A far-reaching greenfield exploration program is underway in the Americas region, most notably in Colombia, South America, where AngloGold Ashanti has extensive land holdings.

Exploration activities are also conducted by either AngloGold Ashanti teams or together with joint venture partners, in Canada, Brazil and Argentina.

UNITED STATES OF AMERICA

Table of Contents**United States of America Cripple Creek & Victor****Description**

AngloGold Ashanti holds a 100 percent interest in Cripple Creek & Victor (CC&V) Gold Mining Company's Cresson Project, located in the state of Colorado in the United States. A surface mining operation provides ore to a crusher and valley-leach facility, one of the largest in the world. Production here began in 1994. Production from the mine life extension (MLE1) project, which involved expanding capacity at the heap-leach pad, began in 2011.

Geology

The district of Cripple Creek is centered on an intensely altered alkaline, Tertiary-aged, diatreme-volcanic, intrusive complex, approximately circular in shape covering 18.4 square kilometers and surrounded by Precambrian rocks. The Precambrian rocks consist of biotite gneiss, granodiorite and quartz monzonite and granite.

The intersection of these four units and regional tectonic events formed an area of regional dilation which subsequently facilitated the formation of the volcanic complex. The majority of the complex then in-filled with the eruptive phase Cripple Creek Breccia host rock. This complex was subsequently intruded by a series of intrusive dykes and sills that include syenites, phonolites, phonotephrites and lamprophyres. These intrusives occupy all of the dominant district structural orientations. District structures are generally near vertical and strike north-north-west to north-east. These structures acted as primary conduits for the late-stage gold mineralizing solutions. Higher grade pods of mineralization occur at structural intersections and/or as sheeted veins along zones of strike deflection. High-grade gold mineralization is associated with K-feldspar + pyrite +/- carbonate alteration and occurs adjacent to the major structural and intrusive dyke zones. The broader zones of disseminated mineralization occur primarily as micro-fracture halos around the stronger alteration zones in the more permeable Cripple Creek Breccia wall rocks.

The average depth of oxidation is 120 meters and is also developed along major structural zones to even greater depths. Individual orebodies can be tabular, pipe-like, irregular or massive. Individual gold particles are generally less than 20 microns in size and occur as native gold with pyrite or native gold after gold-silver tellurides. Gold occurs within hydrous iron and manganese oxides and as gold-silver tellurides. Silver is present but is economically unimportant. Gold mineralization can be encapsulated by iron and manganese oxides, pyrite, K-feldspar alteration and quartz.

Cripple Creek & Victor Summary of metallurgical operations**Gold plants**

Table of Contents

Performance

Production at CC&V increased by 15 percent to 267,000 ounces in 2011 at a total cash cost of \$569 per ounce, compared with 233,000 ounces at a total cash cost of \$500 per ounce the previous year.

Major construction of the MLE1 project was completed during the year and this contributed to production as ore was placed closer to the liner on the new section of the pad. An all phase 5 pad liner was placed in 2011, a county road was relocated and additional adjacent land was purchased in support of the project.

Operations continued to be affected by a severe drought in the Colorado River Basin. The lack of water reduced percolation through the pad, curtailing production and productivity. Total tonnage mined was increased from 180,000 tonnes a day to more than 200,000 tonnes a day to offset a higher strip ratio and decreasing grades.

Commodity inflation was the primary driver of the year-on-year increase in cash costs along with higher diesel consumption as mining occurred deeper in the Cresson pit and waste hauls were longer. Development and mining progressed on the Wild Horse Extension of the orebody which is expected to provide new ore at shallower depths, while additional working faces in the existing mining areas are expected to be available in the future.

Growth and improvement

CC&V's Ore Reserve increased by 1 million ounces in 2011. Exploration in the concession area immediately surrounding the operation will continue. The feasibility study on the mine life extension 2 (MLE2) project was initiated by the Americas project team during the year. This expansion includes the addition of a mill and a second valley heap leach facility. Selective mining of mill-grade ore is to take place to feed the new plant and is expected to generate improvements to productivity, operating unit costs and production. The mill's processing stream in MLE2 should allow a marked improvement in recoveries from the heap leach.

Safety

CC&V has a strong safety record with no fatalities in 2011, maintaining its long-term fatality-free record. The all injury frequency rate deteriorated to 19.80 from 12.26 per million hours worked in 2010, mainly due to an increase in relatively minor incidents of strains and sprains. The Environmental Observation Program continued in its second year and encouraged all employees to submit observations of safe as well as unsafe activities, unsafe conditions, near-miss incidents and environmental concerns. These observations are reviewed weekly by the management team and appropriate actions taken to resolve each issue.

The Project ONE and Safety Transformation initiatives were rolled out with standards being implemented as they are finalized. As part of the improvement initiatives, management is engaging all employees in soliciting, developing and implementing improvement ideas related to safety and production. This effort includes regular, scheduled meetings with top management and the hourly paid workforce.

In October, CC&V received recognition of continued certification at the Gold level in the Environmental Leadership Program sponsored by Colorado Department of Public Health and Environment (CDPHE).

Table of Contents

SOUTH AMERICA

AngloGold Ashanti has three operations in South America - Cerro Vanguardia in Argentina and AngloGold Ashanti Córrego do Sítio Mineração (AGA Mineração) and Serra Grande in Brazil.

AngloGold Ashanti has had an active exploration program in Colombia for some years, with the most favorable of the prospects being in the La Colosa district.

ARGENTINA

Argentina Cerro Vanguardia

Description

AngloGold Ashanti has a 92.5 percent interest in Cerro Vanguardia with Fomicruz (the province of Santa Cruz) owning the remaining 7.5 percent. Located to the northwest of Puerto San Julian in the province of Santa Cruz, Cerro Vanguardia consists of multiple small open pits. Shallow underground mining began in 2010 to access high-grade material and in 2011 accounted for about 19 percent of the mine's production. The orebodies comprise a series of hydrothermal vein deposits containing gold and large quantities of silver, which is mined as a by-product. Ore is processed at the metallurgical plant which has a capacity of 3,000 tonnes per day and includes a cyanide recovery facility.

Table of Contents**Geology**

The oldest rocks in this part of Patagonia are metamorphics of the Precambrian-Cambrian age. These are overlain by Permian and Triassic continental clastic rocks which have been faulted into a series of horsts and grabens and are associated with both limited basaltic sills and dykes and with calc-alkaline granite and granodiorite intrusions. Thick andesite flows of Lower Jurassic age occur above these sedimentary units. A large volume of rhyolitic ignimbrites was emplaced during the Middle and Upper Jurassic age over an area of approximately 100,000 square kilometers. These volcanic rocks include the Chon Aike formation ignimbrite units that host the gold bearing veins at Cerro Vanguardia. Post-mineral units include Cretaceous and Tertiary rocks of both marine and continental origin, the Quaternary La Avenida formation, the Patagonia gravel and the overlying La Angelita basalt flows. These flows do not cover the area of the Cerro Vanguardia veins.

Gold and silver mineralization at Cerro Vanguardia occurs within a vertical range of about 150 meters to 200 meters in a series of narrow, banded quartz veins that occupy structures within the Chon Aike ignimbrites. These veins form a typical structural pattern related to major north-south (Concepcion) and east-west (Vanguardia) shears. Two sets of veins have formed in response to this shearing - one set strikes about N40W and generally dips 65 to 90 degrees to the east; while the other set strikes about N75W and the veins dip 60 degrees to 80 degrees to the south.

The veins are typical of epithermal, low-temperature, adularia-sericite character and consist primarily of quartz in several forms: as massive quartz, banded chalcedonic quartz, and quartz-cemented breccias. Dark bands in the quartz are due to finely disseminated pyrite, now oxidized to limonite. The veins show sharp contacts with the surrounding ignimbrite which hosts narrow stockwork zones that are weakly mineralized and appear to have been cut by a sequence of north-east-trending faults that have southerly movement with no appreciable lateral displacement.

(1) Total cash costs and total production costs are non-GAAP measures. For further information on these non-GAAP measures, see Item 5A.: Operating results
Total cash costs and total production costs .

(2) Average for the year.

Performance

Cerro Vanguardia was the group's lowest cost producer in 2011. Attributable gold production of 196,000 ounces was marginally higher than the previous year total of 194,000 ounces and met operating targets. Total cash costs of \$403 per ounce were lower than projected at the beginning of the year due to improved efficiencies at the mine and also the positive impact of higher-than-forecast silver production and prices. Ensuring a consistent supply of feed to keep the plant running at capacity was a principal focus during the year, as was the consolidation of the fledgling underground operation. Two mine portals were opened in the Mangas Centro and Mangas Sur pits during the year and more than 6 million tonnes of underground development achieved.

Meeting production goals was complicated somewhat by the introduction of import restrictions by the federal government which delayed the delivery of some spare parts and capital equipment. In addition, accelerating inflation in Argentina pushed costs higher for both consumables

and the payroll. These factors continue to pose a significant challenge in Argentina and may present additional hurdles to imports, in recruitment and labor relations in the year ahead.

Table of Contents

Construction of the new heap leach was delayed from the third quarter of 2011 to the first quarter of 2012, principally owing to construction delays caused by unseasonably inclement weather. The delay curtailed production but was mitigated by additional output achieved by rescheduling some open pit operations as well as optimizing capacity of the underground operation. The heap leach project will allow Cerro Vanguardia to exploit additional sources of low-grade ore previously excluded from the mine plan.

Growth and improvement

About 34,000 meters of diamond drilling and 19,000 meters of reverse circulation holes were done during the year with the aim of expanding the resource at depth and to the north and west of the concession.

Given the continued inflationary challenges facing companies in Argentina, the potential reduction in unit costs that will accompany additional production, makes further expansion of the operation an attractive option. The mine continued work on the underground and heap leach projects which are expected to add incremental production in coming years. Given the continued success of the brownfield exploration team in identifying new, high-grade sources of ore in the vein structures at the mine, the Americas team is investigating further expansion possibilities. These include increasing the size of the plant and further expanding the scale of the heap leach footprint.

To improve the knowledge of the orebody and to provide more certainty of both grade and tonnage, the Gabriela, Lucy, Cuncuna, Rocio, El Lazo, Loma del Muerto, Osvaldo 4 and Liliana veins were drilled.

Focus will remain on the recruitment of skilled workers in an increasingly competitive environment for human resources as more mining development occurs nationally and regionally. Maintenance and planning strategies will also be adapted to cope with the more complex set of import restrictions.

Seminars, workshops and ongoing training of employees at all levels are aimed at ensuring a reduction in reportable environmental and safety incidents. At Cerro Vanguardia, close attention will be paid to the management of underground water in order to prevent pollution as this portion of the mine's development increases.

Safety

Cerro Vanguardia's safety performance improved further during 2011, and the mine recorded its ninth straight year with no fatality. The AIFR improved markedly from 8.08 to 1.59 per million hours worked, a new record for the mine. The safety transformation program was launched during the first half of the year with several initiatives developed to reinforce safety awareness.

BRAZIL

Brazil AngloGold Ashanti Córrego do Sítio Mineração (AGA Mineração)

Description

AngloGold Ashanti Córrego do Sítio Mineração (AGA Mineração) comprises two operational units, namely the Cuiabá and the Córrego do Sítio complexes. The Cuiabá complex includes the Cuiabá and Lamego mines and the Cuiabá and Queiroz plants. In operation for 26 years, the Cuiabá mine is principally a cut-and-fill mine accessed by ramp and shaft. Lamego is a new mine developed to mine an underground sulfide ore. The first stage of the processing of the ore from Cuiabá and Lamego mines is in the gold plant at the Cuiabá complex, where concentrate is produced. The material is then transported 15 kilometers by aerial ropeway to the Queiroz plant where milling, flotation, roasting, leaching, precipitation and refining occur. Total capacity of the complete circuit is 1.65 million tonnes per year and recoveries of 93 percent are achieved.

The Córrego do Sítio operation comprises one surface (oxide) and two underground (sulfide) mines, as well as a heap leach pad and sulfide plant, the latter originally acquired from Eldorado late in 2008 and since refurbished.

Geology

The area in which Brasil Mineração is located is known as the Iron Quadrangle and is host to historic and current gold mining operations, as well as a number of open-pit limestone and iron ore operations. The geology of the Iron Quadrangle is composed of Proterozoic and Archaean volcano-sedimentary sequences and Pre-Cambrian granitic complexes. The host to the gold mineralization is the volcano-sedimentary Nova Lima Group (NLG) that occurs at the base of the Rio das Velhas SuperGroup (RDVS). The upper sequence of the RDVS is the

Edgar Filing: ANGLOGOLD ASHANTI LTD - Form 20-F

meta-sedimentary Maquiné Group. Cuiabá mine, located at Sabara Municipality, has gold mineralization associated with sulfides and quartz veins in Banded Ironstone Formation (BIF) and volcanic sequences. At this mine, structural control and fluids flow ascension are

Table of Contents

the most important factors for gold mineralization with a common association between large-scale shear zones and their associated structures. Where BIF is mineralized the ore appears strongly stratiform due to the selective sulfidation of the iron rich layers. Steeply plunging shear zones tend to control the ore shoots, which commonly plunge parallel to intersections between the shears and other structures.

The controlling mineralization structures are the apparent intersection of thrust faults with tight isoclinal folds in a ductile environment. The host rocks at Brasil Mineração are BIF, Lapa Seca and mafic volcanics (principally basaltic). Mineralization is due to the interaction of low salinity carbon dioxide rich fluids with the high-iron BIF, basalts and carbonaceous graphitic schists. Sulfide mineralization consists of pyrrhotite and pyrite with subordinate pyrite and chalcopyrite; the latter tends to occur as a late-stage fracture fill and is not associated with gold mineralization. Wallrock alteration is typically carbonate, potassic and silicic.

Brazil Summary of metallurgical operations

Total cash costs and total production costs .

(3) Average for the year.

Performance

At AGA Mineração, production in 2011 was 361,000 ounces, 7 percent higher than the prior year. The higher output followed the ramp-up at Lamego and the start of production from Córrego do Sítio. Production was, however, negatively impacted by lower tonnage at Cuiabá, due mainly to geotechnical and fleet availability issues.

Cash costs of \$571 per ounce were 29 percent up on the previous year, mainly due to labor cost inflation and higher energy consumption following the commissioning of the refrigeration plant in Cuiabá. Other factors were the stronger Brazilian real, which appreciated by 5 percent against the dollar in 2011, lower volumes and higher unit costs from new Córrego do Sítio sulfide production. An improved price received for sulfuric acid, a by-product at the Cuiabá complex, had a positive impact on costs during the year.

The cost and availability of specialized mining skills remained key challenges in Brazil, where a surfeit of mining and engineering projects exacerbated an already tight labor market and inflated salaries. This trend is likely to continue for some time with additional mining and infrastructure projects set to proliferate in Brazil in coming years, along with additional development of iron ore capacity and preparations for

the next FIFA World Cup in 2014 and the Olympic Games in 2016.

Project ONE implementation is ongoing and the BPF stabilization phase was completed at Cuiabá, with benefits achieved in maintenance and production to counter the low availability of the fleet of heavy mechanized equipment. Renewed focus was placed on training to improve safety and productivity in high-dip areas, while trial mining using the sub-level bench method was successfully piloted and will now be extended to other areas of the mine. This change also mitigated geomechanical instability and is expected to result in improved productivity in 2012 and 2013.

Table of Contents

Given the increased mining depth to more than 1,100 meters at Cuiabá by the end of 2011 and the resultant rise in working temperatures, a refrigeration plant was commissioned to service the deeper areas of the mine.

At Lamego, where tonnages improved by 15 percent, the drill method was changed to cross-cut instead of driving the ramp down to the mine's deepest levels so as to improve knowledge of the orebody at depth. Now, more than 2.5 years of reserves are estimated to be available at current production rates, following development of ore drives from level 3.1 to level 4 at the Carruagem orebody. This enables a high level of mining flexibility.

While the scheduled maintenance shutdown at the pyrometallurgy plant at Queiroz was undertaken during the year, there was an unexpected shutdown of Plant A to undertake screening of the catalyst bed and removal of the roasters. Three new flotation cells were added to the Cuiabá plant and the wall of the tailings dam was lifted to cope with incremental production.

At Córrego do Sítio, the underground sulfide mine was developed and the orebodies prepared for the start of production during 2011. This mine had reached production capacity of 40 percent by year-end. The underground mine produced 171,000 tonnes in 2011. The metallurgical plant was commissioned in January 2012. The oxide heap leach plant improved its productivity 18 percent by increasing bench heights on the heap leach by 1 meter to 7 meters.

Growth and improvement

Both greenfield and brownfield exploration drilling campaigns continued, with the focus on increasing the gold resource base.

Commissioning and mine ramp-up of the Córrego do Sítio project proceeded during the year and full production at Lamego mine was achieved in 2011. Scoping studies are in progress for both mines to determine further expansion opportunities. At Córrego do Sítio, additional sources of oxide and sulfide ores will enable an expansion.

The underground sulfide operation is ramping up and is expected to reach full production by the end of 2012. One of the principal operating challenges is to control dilution from the sub-level stoping by a greater focus on grade control, while keeping the ramp-up on track with the development of ramps and ore drives to ensure appropriate flexibility.

The Lamego project was completed at the end of 2011, with only minor changes to civil infrastructure required at a cost of some \$2 million. Meanwhile, further work is planned to improve knowledge of the upside in the oxide and sulfide endowment.

At Lamego, management focused on improvements to equipment reliability as well as better planning and scheduling. The success of crews in using the business improvement framework to realize significant improvements in productivity without increased capital expenditure, have demonstrated the possibility of increased throughput. The establishment of an operational control centre at the mine has further helped streamline operations.

At Cuiabá, work is underway to stabilize production in narrow veins and to investigate use of satellite orebodies to further boost production. Management also began investigating mining at depths greater than those envisaged in the current mine plan, beginning with a drilling campaign below the 24 level and the formation of a team to conduct improved geological mapping of the mine. Increased infill drilling will also be undertaken to facilitate the change of mining method, while brownfield exploration drilling will be conducted to determine the viability of restarting mothballed mining operations previously closed during periods of low prices and of locating satellite orebodies. Among the latter is the Nova Lima Sul project which envisages the development of smaller deposits close to current operations, which will use spare capacity at the Queiroz plant.

Safety

The safety performance at AGA Mineração deteriorated when compared to 2010, recording an all injury frequency rate of 4.05 per million hours worked. Regrettably, a contractor died when he was run over by a tractor at the tailings facility construction site.

Following a culture survey undertaken during the year, a safety behaviour plan was launched at all of AngloGold Ashanti's Brazilian operations. Initiatives include improvements to the new employee induction course, a review of on-the-job training processes, and standardization of safety processes. Also a new approach to incident investigation and analysis was established during the year. A proactive safety indicator to evaluate the quality of processes has been developed.

Table of Contents

The company also holds the following certifications:

ISO 14001 Environment;
OHSAS 18001 Occupational Health and Safety;
ISO 17025 Laboratory analysis;
NBR 16001 Social responsibility 1st Brazilian mine company;
International Cyanide Management Code; and
ISO 9001 Quality (Laboratory and smelter house).

Brazil Serra Grande (attributable 50 percent)

Description

Serra Grande is owned equally by AngloGold Ashanti and Kinross Gold Corporation. AngloGold Ashanti manages the operation located in central Brazil, in the state of Goiás, about 5km from the city of Crixás. Serra Grande comprises three mechanised underground mines: Mina III, Mina Nova (which includes the Pequizeiro orebody) and Palmeiras and an open pit on the outcrop of Mina III orebody. One dedicated metallurgical plant treats ore from these different sources. Annual capacity of the processing circuit, which has grinding, leaching, filtration, precipitation and smelting facilities, is 1.15 million tonnes.

Geology

The deposits are in the Rio Vermelho and Ribeirão das Antas Formations of the Archaean Pilar de Goiás Group which together account for a large proportion of the Crixás Greenstone Belt in central Brazil.

The stratigraphy of the belt is dominated by basics and ultrabasics in the lower sequences with volcano sedimentary units forming the upper successions.

The gold deposits are hosted in a sequence of schists, volcanics and carbonates occurring in a typical greenstone belt structural setting. The host rocks are of the Pilar de Goiás Group of the Upper Archaean. Gold mineralization is associated with massive sulfides and vein quartz material associated with graphitic and sericitic schists and dolomites. The ore shoots plunge to the north-west with dips of between 6 and 35 degrees. The stratigraphy is overturned and thrusts towards the east.

The greenstone belt lithologies are surrounded by Archaean tonalitic gneiss and granodiorite. The metamorphosed sediments are primarily composed of quartz, chlorite, sericite, graphitic and garnetiferous schists. The carbonates have been metamorphosed to ferroan dolomite marble with development of siderite and ankerite veining in the surrounding wallrock, usually associated with quartz veining. The basalts are relatively unaltered but do show pronounced stretching with elongation of pillow structures evident.

The Crixás greenstone belt comprises a series of Archaean to Palaeoproterozoic metavolcanics, metasediments and basement granitoids stacked within a series of north to north-east transported thrust sheet. Thrusting (D1) was accompanied by significant F1 folding/foliation development and progressive alteration in a brittle-ductile regime. D1 thrusting developed with irregular thrust ramp geometry, in part controlled by concealed early basin faults. The main Crixás orebodies are adjacent to a major north-north-west structural corridor, and up the main fault ramp/corner, to become dispersed to the east and north in zones of foreland thrust flats. Fluid alteration also diminished to the west away from the main fault corner. A series of concealed east-west to north-west-south-east basement block faults may have provided secondary fluid migration, and development of early anti-formal warps in the thrust sheets; these structures probably define the quasi-regular spacing of significant mineralization within the belt. The D1 thrust stack was gently folded by non-cylindrical folds. Gold mineralizing fluids probably migrated during this event, with similar south-south-west to north-north-east migration, and focusing on bedding slip during folding. Gold mineralization became minor and dispersed to the north and east along the formal thrust flat zone. Concentrations of gold along the case of quartz vein may be due to the damming of fluids migrating upward along layering.

Table of Contents**Operating and production data for Serra Grande**

	2011	2010	2009
Pay limit (oz/t)	0.11	0.09	0.11

(1) Total cash costs and total production costs are non-GAAP measures. For further information on these non-GAAP measures, see Item 5A.: Operating results Total cash costs and total production costs .

(2) Average for the year.

Performance

Attributable production in 2011 was 67,000 ounces, compared with 77,000 ounces in 2010. The reduction was due primarily to higher-than-expected dilution and the resultant impact on mined grades. This was partly offset by a 5 percent increase in the total ore mined at the operation to 1.33 million tonnes, with strong performance from the open pit and the Palmeiras underground mine in particular.

To improve the grade mined at Serra Grande, an action plan was compiled and new operational control measures for dilution and close monitoring of the drilling and blasting processes were implemented. Total dilution for all Serra Grande's mining operations started in 2011 at more than 30 percent and closed the year with significant reduction to 18 percent. Other factors which contributed to the decline in production included delays in development which in turn slowed the preparation of production stopes. Poor availability of drill rigs, as well as heavy machinery and the equipment fleet, hampered underground drilling and overall operational performance.

In the plant, recoveries were curtailed by problems encountered in the grinding and filtering circuits. Each of these issues has been addressed and Project ONE implementation is on track to support the operations.

Total cash costs increased by 77 percent to \$851 per ounce as a result of reduced production as well as continued inflationary pressure on all mining-related inputs in Brazil and the impact of the stronger Brazilian real.

Growth and improvement

A priority for Serra Grande's management is to facilitate closer co-operation between the geology, mine, plant and maintenance teams so as to reduce variability and increase both underground mine output and plant throughput. This is a key benefit that will follow Project ONE's BPF stabilization on site and will assist in maintaining the required feed to the mill while also rebuilding the strategic stockpile which was depleted in 2010. Optimization of the gravity circuit is planned to be completed in mid-2012, with expected further improvements in recoveries.

An operational control center has been established on site to improve maintenance and enhance the general skill level of operators in order to achieve better operational performance and reduce breakdowns.

Pequizaõ and Palmeiras are the most recent discoveries and are the newest underground mines. Importantly, they have the highest grade reserves of all the Serra Grande operating areas but currently have modest development programs, given that focus was previously on Orebody IV at Mina III. The focus now is on developing an optimal mine sequencing plan to make the best possible use of these higher grade areas.

Edgar Filing: ANGLOGOLD ASHANTI LTD - Form 20-F

In the longer term, beyond 2013, the focus of the exploration effort will shift to increasing the operation's mineral endowment to increase mine life.

A new program will also evaluate technical alternatives in mine design, sequencing and metallurgical processes to seek improvements in production and returns on invested capital.

Table of Contents

Safety

The operation's all injury frequency rate of 3.48 per million hours worked in 2011 improved when compared with 7.22 in 2010. No lost time injuries have been reported for 19 months and no fatalities for more than three years.

Following a culture survey undertaken during the year, a safety behavior plan was launched at all Brazilian operations. Initiatives include improvements to new employee induction, a review of on-the-job training processes, and standardization of safety processes. A new approach to incident investigation and analysis was established in 2011. A proactive safety indicator to evaluate the quality of processes has been developed.

The company also holds the following certifications:

- ISO 14001 Environment;
- OHSAS 18001 Occupational health and safety;
- International Cyanide Management Code; and
- ISO 9001 Quality (Laboratory and smelter house).

Table of Contents

GLOBAL EXPLORATION

Total expensed exploration including joint ventures for 2011 amounted to \$313 million, of which \$98 million was spent on greenfield exploration, \$87 million on brownfield exploration, \$19 million on marine exploration and the balance of \$109 million on prefeasibility studies.

An expansive greenfield exploration program was undertaken during 2011 in 17 countries. A total of 213,441 meters of diamond, reverse circulation and aircore drilling was completed in testing existing priority targets and in the delineation of new targets in Australia, Colombia, Brazil, Argentina, the Solomon Islands, Gabon, Guinea, Egypt, Ethiopia, the Democratic Republic of Congo (DRC) and Canada. Significant airborne geophysical surveys were undertaken in Colombia.

Greenfield activities were undertaken through joint ventures, strategic alliances and on wholly owned ground holdings. The principal objective of the greenfield exploration team is value creation through the discovery of new long-life, low-cost mines that maximize shareholder value. Discoveries and ground positions that do not meet certain investment criteria are joint-ventured or divested to maximize AngloGold Ashanti's return on its exploration investment.

Table of Contents

AngloGold Ashanti's investment in greenfield exploration and projects in recent years has resulted in five greenfield projects being advanced and developed further to date.

They are:

In Colombia, in the Americas region:

Gramalote; and
La Colosa.

In the DRC, in the Continental Africa region:

Kibali; and
Mongbwalu.

In Australia, in the Australasia region:

Tropicana.

Of these, Tropicana is the most advanced.

Americas Colombia

Gramalote

Description

The Gramalote project, a joint venture between AngloGold Ashanti Limited (51 percent) and Vancouver-based B2Gold, is located 110 kilometers northeast of Medellin in the municipality of San Roque, which is in the department of Antioquia, Colombia. The project, managed by AngloGold Ashanti, is expected to be the group's first operating gold mine in Colombia, establishing its operating credentials in the country.

Progress

During 2010, AngloGold Ashanti resumed its role as operator and project manager of Gramalote after it acquired part of B2Gold's interest and undertook the prefeasibility and feasibility analyses. AngloGold Ashanti immediately accelerated the drilling program to improve knowledge of the orebody and increased the project's resource.

During 2011, a total of 30,683 meters of drilling was undertaken. Drilling was undertaken on satellite areas adjacent to the main Cerro Gramalote orebody. This work built on the foundation created by B2Gold, which had completed an earlier scoping study on the project.

Since September 2010, when AngloGold Ashanti assumed control of the project, 33 kilometers of drilling has been completed.

Continued exploration success and favourable metallurgical testwork suggest the potential to increase the scale of the project.

The successful development of Gramalote also offers an ideal opportunity for AngloGold Ashanti to establish its project development credentials to the host community and to the broader Colombian population.

Almost \$30 million was spent on the prefeasibility study in 2011, which included exploration on only about 10 percent of the 30,000 hectare concession area. This study is expected to be completed during 2012 and will be followed immediately by the full feasibility study which is expected to be completed in 2013.

La Colosa

Description

The exploration rights at the La Colosa project are wholly held by AngloGold Ashanti. This gold project is located 14 kilometers from the town of Cajamarca, in the department of Tolima, in Colombia. La Colosa, which lies in steep terrain in Colombia's central Cordillera province, is the largest greenfields discovery made by AngloGold Ashanti to date. Exploration drilling at site resumed toward the middle of 2010 after a two-year suspension to receive or renew permits necessary to continue work on this gold porphyry deposit.

Table of Contents**Progress**

The prefeasibility study currently underway is scheduled for completion in 2014. It is expected to define the extent and size of the resource, conduct metallurgical testwork, weigh the alternatives for mining and processing infrastructure, purchase land necessary for access and infrastructure development and conduct the necessary social and environmental impact baseline studies.

About 47,619 meters of drilling was completed during 2011. Almost \$64 million was spent on the prefeasibility study during the year. At a time when many of the world's newest gold deposits are built in remote regions, La Colosa lies less than 6 kilometers from a national highway, close to Colombia's main power grid.

Exploratory activities at the La Colosa project in Colombia have been challenged by legal suits petitioning the court to order the government not to declare the project feasible on the grounds that the project threatens a healthy environment, public health and food safety for local residents. See Item 8A.: Consolidated statements and other financial information -- Legal proceedings .

Continental Africa DRC**Kibali****Description**

The Kibali gold project is a joint venture between AngloGold Ashanti and Randgold Resources, with each owning a 45 percent stake and Société des Mines d'Or de Kilo-Moto (SOKIMO), a state-owned gold company, which owns the balance.

Kibali, which the company acquired as a result of the acquisition of Moto Goldmines in 2009, lies in the north-eastern DRC, adjacent to the town of Doko, a staging point for the project and 180 kilometers by road from Arua, on the Ugandan border. Jersey-based Randgold, which is also AngloGold Ashanti's partner at the Morila gold mine in Mali, is the operator and project manager at Kibali. The project does not currently produce any gold. Furthermore the company does not purchase gold or other conflict minerals from any local mining companies and/or artisanal miners.

Key statistics Kibali

		2011
Ore Reserve	Moz	4.52
Capital expenditure	\$m	73

Progress

By the end of 2011, the construction crew had started mobilizing on site, a process that was substantially completed by the end of the first quarter of 2012. Long-lead plant and equipment items were secured, key contractors selected and a development management team assembled.

The Kibali mine is expected to comprise an integrated open pit and underground mining operation, feeding a larger 6 million tonnes a year processing plant which is expected to include a full flotation section for treating sulfide ore. The complex is ultimately expected to be supplied by four hydropower stations supported by a thermal power station for low rainfall periods and back-up. The core capital program is scheduled to run over the next four years.

Phase 1 of the project, which is expected to end with the delivery of the mine's first gold production, is expected to consist of the construction of the metallurgical facility, one hydropower station and back-up thermal power facility, a tailings storage facility, and all shared infrastructure as well as relocation of villages and open-pit mining. This phase is expected to run over a two-year period.

Phase 2, which is expected to run concurrently with Phase 1 but extend over four years, is expected to focus primarily on development of the underground mine and include a twin-decline and vertical shaft system, along with three hydropower stations.

Table of Contents**Mongbwalu****Description**

The Mongbwalu gold project in the northeastern DRC is a venture between AngloGold Ashanti, which owns an 86.22 percent interest and Société des Mines d'Or de Kilo-Moto (SOKIMO), the DRC's state-owned gold company, which owns the balance. The deposit lies about 48 kilometers northwest of the town of Bunia, a staging point for the project. Preparatory work at the project has been completed.

The venture holds 18 tenements which, at the end of the year, covered an extensive area of 5,487m². About 600 people are currently employed on site.

Progress

The preliminary scoping work envisaged an initial underground mine in the Adidi area of the resource, with the necessary infrastructure designed to generate cash flow to fund further exploration and expansion activities within the demarcated area belonging to the venture.

The feasibility study for the project was completed in March 2011, after which the business and technical development teams conducted the normal optimization process through the balance of the year. The final feasibility study and integrated execution schedule was submitted to the Board of the venture company in March and approved by the Board as submitted.

Regional exploration continued on the 5,487km² Kilo concession. The brownfield exploration team continued drilling in support of the project on the Adidi and Kanga Mineral Resource. Greenfield exploration activities continued on five targets, namely Lodjo, Issuru, Dala, Alosi Camp 3 and Petsi. An IP survey was completed for Camp 3 (Kilo Central) while diamond drilling continued at Pili Pili (Pluto North-Issuru). Trenching and soil sampling continued in Kilo Central and Kilo North.

Australasia Australia**Tropicana****Description**

The Tropicana project, an unincorporated joint venture between AngloGold Ashanti Australia Ltd (70 percent) and Independence Group NL (30 percent), is located 330 kilometers eastnortheast of Kalgoorlie in Western Australia. The project is managed by AngloGold Ashanti on behalf of the joint venture partners.

Key statistics Tropicana

		2011
Ore Reserve	Moz	2.74
Capital expenditure	\$m	73

Progress

The project development approval was obtained in November 2010 at a total attributable capitalized development cost of A\$530 million.

Lycopodium Minerals was engaged in early 2011 to provide engineering, procurement and construction management services to develop the infrastructure and processing plant. Macmahon was awarded the mining contract and is responsible for the design and establishment of the infrastructure required to support mining operations.

By December 31, 2011, the project had progressed to schedule and within the approved budget. All regulatory approvals were obtained. The necessary infrastructure, including access road, airstrip, accommodation village and telecommunications services were at advanced stages of development. Full transportation access to the site was achieved.

Edgar Filing: ANGLOGOLD ASHANTI LTD - Form 20-F

As at December 31, 2011, engineering and design for processing plant and infrastructure was approximately 75 percent complete, procurement of all equipment was 90 percent complete and the delivery of the equipment was in line with the project schedule.

Construction of the processing plant began in late 2011. Bulk earthworks for the plant site and internal access roads and concrete works commenced in early 2012.

Table of Contents

Achievements

Significant achievements for 2011 included the delineation of additional pre-inferred gold ounces in Guinea and the resumption of drilling at the Quebradona project in Colombia.

Considerable progress was also made in advancing AngloGold Ashanti's greenfield exploration portfolio elsewhere in 2011. Following the company's entry into four new regions in 2009, 2011 saw rapid progress in the delineation of exploration targets, license applications and associated approvals and exploration activities, including drilling, airborne and ground geophysics and diamond drilling.

Encouraging drilling and trench results have been received from Egypt, Guinea, the DRC and the Solomon Islands.

Following the La Colosa, Gramalote, Tropicana-Havana and Mongbwalu discoveries, greenfield exploration teams are targeting new discoveries in Colombia, Australia and the DRC. At the same time, prospects in Guinea and Egypt have advanced from early stage to tangible projects, where multiple intersections of potentially economic gold mineralization have been intersected.

Expansion

During the course of 2011, AngloGold Ashanti entered into a number of new joint ventures and strategic alliances. These new ventures include the Nome joint venture in Alaska, the Gordon joint venture in Ethiopia as well as joint ventures in Saudi Arabia.

Initiatives to enhance the success of the greenfield exploration team included a rigorous assessment of the existing exploration portfolio. The work focused on establishing the appropriate split between frontier, emerging and known geological terranes. As a consequence, the team is well positioned to increase drilling on both existing and new projects that were at or near drill-ready stage in 2011.

To further improve decision-making processes in project and portfolio management, a global portfolio management process is being implemented to encompass both technical and commercial gating elements.

COLOMBIA

The synthesis of proprietary airborne and ground geophysical and geochemical data sets built up over the last decade of AngloGold Ashanti's involvement in Colombia has facilitated consolidation of a tenement portfolio with a robust project pipeline.

The principal area of focus has been to advance exploration on a number of key projects in Colombia. This has included further mapping and airborne surveys over the Anaima-Tocha project area, covering some 600km² predominantly to the north of La Colosa. It is anticipated that a number of drill-ready projects will be explored in 2012 once permits have been obtained. Elsewhere in Colombia, the completion of airborne magnetics and radiometrics and further mapping has resulted in new targets being defined and drilled at Quebradona (AngloGold Ashanti/B2Gold joint venture). Here a total of 4,711 meters was drilled targeting porphyry gold-copper mineralization.

Elsewhere in Colombia, exploration among others was undertaken on the Rio Dulce and La Llanada tenement groups.

CANADA

In Canada, exploration continued on properties forming part of the superior joint venture with Laurentian Goldfields, where drill testing of targets generated by lake sediment geochemistry was completed in late 2011 in the Goldpines South joint venture. On the Baffin Island joint venture with Commander Resources, exploration work was limited to mapping and IP surveys on specific targets.

Table of Contents

BRAZIL

In Brazil, early stage exploration comprised of mapping and regional geochemical programs was undertaken on the wholly owned Jurena Belt tenements. The Falcão joint venture with Horizonte Minerals commenced drill testing of greenstone hosted gold mineralization, using a combination of aeromagnetic interpretations and gold-in-soil geochemistry to target initial drill holes. A total of 15 diamond holes for a total of 3,663 meters were completed in 2011. The drill testing produced some encouraging early results but no ore grade intercepts.

DEMOCRATIC REPUBLIC OF THE CONGO

In the DRC, AngloGold Ashanti holds an 86.22 percent interest in Ashanti Goldfields Kilo (AGK), while the remaining 13.78 percent is held by the state-owned gold company SOKIMO. Of the 7,443km² previously held under exploitation licenses by SOKIMO, 5,447km² have been transferred to AGK under the terms of an agreement with the government, with 399km² pending transfer at the end of the year. Significant progress was made with regional soil geochemistry programs that are expected to provide significant coverage over much of the landholding during 2012. This, combined with detailed geologic mapping and structural interpretation, has enabled the ranking and prioritization of drill targets. During 2011, a total of 4,009 diamond meters were drilled, with some encouraging results. A total of 789 trench samples were taken at a number of prospects, some of which returned promising gold grades.

GABON

In Gabon, AngloGold Ashanti is conducting exploration on an exclusive basis on the Ndjole and Mevang properties in partnership with Silver Bull Resources (formally Dome Ventures). The work has comprised regional geochemical sampling programs and completion of a diamond drilling program on the Ndjole license.

MIDDLE EAST AND NORTH AFRICA (MENA)

In the Middle East and North Africa, exploration is conducted through a regional strategic alliance with Dubai based Thani Investments. Since the inception of the alliance in mid-2009, significant progress has been made on advancing exploration projects on the Wadi Kareem and Hodine concessions in Egypt. The Hutite project, located on the Hodine concession, is an orogenic gold deposit where the alliance has to date completed 54 diamond holes for a total of 12,352 meters. Visible gold and significant intercepts have been returned from many of the completed diamond holes. Mineralization extends over a strike length greater than 1.6 kilometers.

In Eritrea, AngloGold Ashanti is currently reviewing its investment. Exploration in partnership with Stratex International was conducted for epithermal gold mineralization in the Afar depression of Ethiopia where the first-phase drill program intersected encouraging low- to moderate-tenor gold mineralization.

The alliance has continued with project generation activities in Saudi Arabia and a number of license applications have been made.

CHINA

In China AngloGold Ashanti is in the process of divesting its 70 percent interest in Gansu Longxin Minerals CJV located in the Gansu Province of western China. All active exploration activities in China have been concluded.

AUSTRALIA

The Tropicana joint venture (AngloGold Ashanti 70 percent, Independence Group NL 30 percent) is systematically targeting a belt of tectonically reworked Archaean and Proterozoic rocks on the eastern margin of the Yilgarn Craton, Western Australia. Greenfields exploration in the Tropicana joint venture during 2011 focused on regional aircore drilling and reverse circulation/ diamond drilling of seven priority targets. A number of prospects have been identified for further work including the Iceberg prospect, located 35 kilometers south of the Tropicana Gold Mine, where aircore and RC drilling identified mineralization. Best results include 20 meters @ 1 gram per tonne Au from 32 meters.

Table of Contents

The wholly owned Viking project covers the interpreted southeast extensions of the Tropicana belt. Exploration during 2011 included airborne magnetics/radiometrics, regional auger sampling and aircore drilling of selected targets. Several auger anomalies have been identified for drill testing.

In Australia, a total of 2,231 Aircore/RAB holes were drilled for 102,278 meters, 109 reverse circulation holes for 15,945 meters and six diamond holes for 1,032 meters. In addition, 18,417 surface auger samples were collected, 30,861-line kilometers of aeromagnetic and radiometric surveys were flown and 1,223 line kilometers of ground gravity data were acquired.

SOLOMON ISLANDS

In the Solomon Islands, where AngloGold Ashanti is in joint venture with XDM Resources, an extensive land position is held over the New Georgia Island chain. Work has been focused on specific epithermal and porphyry targets, including Vulu, Mase and Konga. The potential for substantive epithermal gold mineralization appears limited in the Vulu area. Exploration will now focus on the broader region in anticipation of securing additional land access agreements. The joint ventures collectively cover 1,707km² in the New Georgia Belt, effectively consolidating the entire island chain. Exploration activities in 2011 included drilling 4,911 meters, trenching, field mapping, soil and rock chip sampling, spectral studies and airborne electromagnetic surveying.

ANGLOGOLD ASHANTI / DE BEERS JOINT VENTURE

Results from the seafield sampling campaign in New Zealand were analyzed and although offshore gold was detected, the grades did not warrant any further follow up work. Subsequently, a decision was made to relinquish the offshore prospecting licenses.

Exploration activities in the South African sea areas (SASA) offshore concessions of ~28,000km² entailed the following:

- Logging, sampling and the assay of a large number of historical vibro cores and samples;

- A geophysical survey campaign of ~3,300 kilometres of seismic data;

- An 11-day vibrocoring campaign during which 38 cores were collected; and

- A reconnaissance field trip to the west coast of South Africa.

All of the above was used to complete a geological and mineralization model which was used to derive exploration targets for the coring campaign that began during December 2011 and was completed during February 2012.

Table of Contents

**4C. ORGANIZATIONAL STRUCTURE
GROUP STRUCTURE**

AngloGold Ashanti's operations are divided into the following regions:

- South Africa operations in Vaal River and West Wits;
- Continental Africa operations in Ghana, Guinea, Mali, Namibia and Tanzania;
- Australasia operation in Australia; and
- Americas operations in Argentina, Brazil and the United States.

The above four regions also correspond to AngloGold Ashanti's four business segments.

Management of the group is entrusted to AngloGold Ashanti's executive committee which is chaired by the Chief Executive Officer, comprising the two executive directors, nine executive vice presidents and one senior vice president. See Item 6.: Directors, executive management and employees .

Support is provided to the executive committee in managing AngloGold Ashanti's corporate activities at both the central and local levels. Activities managed centrally include strategic and business planning, marketing, corporate finance, treasury, exploration, technology and innovation, corporate secretarial and corporate affairs. Specialized services directed from the center but managed by local operations include mining, engineering, metallurgy, mineral resource management, safety and health, the environment and human resources.

SUBSIDIARIES

AngloGold Ashanti has investments in numerous principal subsidiaries and joint venture interests, see Item 19.: Exhibits Exhibit 19.8 List of AngloGold Ashanti Limited subsidiaries for details.

Table of Contents**4D. PROPERTY, PLANTS AND EQUIPMENT**

For a discussion of AngloGold Ashanti's mining properties, plant and equipment, see Item 4B.: Business Overview Operating performance .

ORE RESERVES

The combined Proven and Probable Ore Reserve of the group amounted to 75.6 million ounces as at December 31, 2011.

Ore Reserve estimates are reported in accordance with the requirements of the SEC's Industry Guide 7. Accordingly, as of the date of reporting, all Ore Reserves are planned to be mined out under the life-of-mine plans within the period of AngloGold Ashanti's existing rights to mine, or within the renewal periods of AngloGold Ashanti's rights to mine. In addition, as of the date of reporting, all Ore Reserves are covered by required permits and governmental approvals. See Item 4B: Business overview The regulatory environment enabling AngloGold Ashanti to mine .

AngloGold Ashanti has standard procedures for the estimation of Ore Reserves. These standard procedures are performed by technical personnel at the mining operations and reviewed by regional and corporate competent persons.

In the case of its underground mines, the procedure is as follows: Firstly, gold content and tonnage are estimated for in-situ mineralized material at a mining operation. This mineralized material is not necessarily economically viable. Exclusions on the grounds of safety (for example, stability pillars and shaft pillars) are then defined. Grade and tonnage curves specific for each of the deposits, in conjunction with parameters such as the cost structure; yield; mine call factor and gold price estimates are used to determine an optimal mining mix. This process facilitates the determination of the average grade to be mined by each operation. This grade is then applied to the grade-tonnage curves, which in turn facilitates the determination of the cut-off grade and Ore Reserve tonnage for the operation. A full mine design is carried out on the blocks of mineralized material, excluding large mining areas that do not meet the cut-off grade criterion. This mining plan is reviewed to ensure that it satisfies the economic criterion and practical limitations of access and timing. If the review process is positive then the mineralized material (with dilution) included in the mining plan is declared and published as the Ore Reserve for that operation. In the case of open-pit mines the procedure is as follows: revenue and costs are calculated for each mining block within a three-dimensional model of the orebody using assumed values for gold price, operating costs and metallurgical recoveries. An optimization process is then applied to determine the combination of blocks within the model that make a positive contribution under these assumptions. Block selection is within a shell whose limits are defined by the planned slope angles of the pit. Within this process, a cut-off grade is applied which determines the ore blocks to be treated and included in the Ore Reserves. These blocks are scheduled with consideration being given to practical mining considerations and limitations. Scheduled ore blocks that are classified as Proven or Probable constitute the Ore Reserve.

The gold price and exchange rate used for 2011 and 2010 Reserves are outlined in the following table.

	2011 (3 year average)	2011 (Business Plan)	2010 (3 year average)	Units
Reserve Gold Price	1,256	1,100	1,015	US\$/oz
Exchange Rate South Africa	7.64	7.63	8.00	ZAR/US\$
Reserve Gold Price (South African rand per ounce)	9,479	8,393	8,120	ZAR/oz

The Ore Reserves have been determined using the company's business plan assumptions - a gold price of \$1,100 per ounce and a South African rand exchange rate of 7.63 to the US dollar, which translates to a South African rand gold price of ZAR8,393 per ounce.

As in prior years, the Ore Reserves determined from the planning process were then tested for economic viability at the three-year historical average gold price and currency exchange rates shown in the above table for determining SEC compliant Ore Reserves. This did not result in any changes. The resultant SEC compliant Proven and Probable Ore Reserves are shown in the following pages.

Table of Contents

In Australia and South Africa, AngloGold Ashanti is legally required to publicly report Ore Reserves and Mineral Resources according to the Australasian Code for Reporting of Mineral Resources and Ore Reserves (The JORC Code, 2004 Edition) and the South African Code for Reporting of Mineral Resources and Ore Reserves (The SAMREC Code, 2007 Edition). The SEC's Industry Guide 7 does not recognize Mineral Resources. Accordingly, AngloGold Ashanti does not report estimates of Mineral Resources in this annual report on Form 20-F.

The AngloGold Ashanti Ore Reserve increased from 71.2 million ounces in 2010 to 75.6 million ounces in December 2011. A year-on-year increase of 9.6 million ounces occurred before the subtraction of 5.2 million ounces for depletion, resulting in an increase of 4.4 million ounces after the subtraction of depletion. A gold price of \$1,100 per ounce (ZAR8,393 per ounce) was used for Ore Reserve estimates (2010: \$850 per ounce, ZAR7,404 per ounce).

The principal changes in AngloGold Ashanti's Ore Reserves as at December 31, 2011 compared with those published as at December 31, 2010 are as follows:

Ore Reserve		Million oz
Ore Reserves as at December 31, 2010		71.2
Reductions		
Moab Khotsong	Depletion and minor model revision	(0.5)
Other	Total of non-significant changes	(1.1)
Additions		
Geita	Improved Ore Reserve price	0.5
Cripple Creek & Victor	Mine Life Extension added to Ore Reserve	0.5
Vaal River Surface	Technical studies showed that the economic extraction of gold and uranium from the tailings is viable	3.2
Other	Total of non-significant changes	1.7
Ore Reserves as at December 31, 2011		75.6

Rounding may result in computational differences.

AngloGold Ashanti will continue to pursue a strategy of increasing value-adding Ore Reserves through expansion projects, brownfields and greenfields exploration and acquisition of new assets.

The Ore Reserve estimates in this document include Ore Reserves below current infrastructure in the case of certain South African, Brazilian and Ghanaian underground mines which are in production. These Ore Reserves have been determined based upon completed economic studies.

By-products

Several by-products are recovered as a result of the processing of gold Ore Reserves. These include 126.32 million pounds of uranium oxide from the South African operations, 0.45 million tons of sulfur from Brazil and 46.93 million ounces of silver from Argentina. Details of by-product Ore Reserves are given in the Mineral Resource and Ore Reserve Report 2011, which is available on the corporate website.

Table of Contents

External Audit of Mineral Resource and Ore Reserve Statement

During the course of the year the following AngloGold Ashanti operations were subjected to external audits by a number of consulting companies:

AGA Mineração
Cripple Creek & Victor
Geita
Moab Khotsong
Mponeng
Obuasi
Siguiri
Tropicana

The company has been informed that the audits identified no material shortcomings in the process by which AngloGold Ashanti's grade models were evaluated. It is the company's intention to continue a process whereby each of its operations will be audited, on average, every three years.

Competent Persons

The information in this report that relates to Ore Reserves is based on information compiled by the Competent Persons. The Competent Persons consent to the inclusion of Exploration Results and Ore Reserves information in this report, in the form and context in which it appears.

During the past decade, the company has developed and implemented a rigorous system of internal and external reviews of Exploration Results, Mineral Resources and Ore Reserves. A chain of responsibility exists from the Competent Persons at the operations to the company's Mineral Resource and Ore Reserve Steering Committee. Accordingly, the Chairman of the Mineral Resource and Ore Reserve Steering Committee, VA Chamberlain, MSc (Mining Engineering), BSc Hons (Geology), MGSSA, FAusIMM, assumes responsibility for the Mineral Resource and Ore Reserve processes for AngloGold Ashanti and is satisfied that the Competent Persons have fulfilled their responsibilities.

ITEM 5: OPERATING AND FINANCIAL REVIEW AND PROSPECTS

The following discussion provides information that management believes is relevant to an assessment and understanding of the consolidated financial condition and results of operations of AngloGold Ashanti Limited under US GAAP for the three years ended and as at December 31, 2011, 2010 and 2009.

This item should be read in conjunction with the Company's consolidated financial statements and the notes thereto which are included under Item 18 of this annual report.

The principal accountant of AngloGold Ashanti has made reference to the work of other auditors in its report on the consolidated financial statements of AngloGold Ashanti Limited for the year ended December 31, 2010 and therefore in compliance with Regulation S-X Rule 2-05 the separate report of the other auditor is included in Item 18.

Overview

AngloGold Ashanti is a global gold mining company headquartered in Johannesburg, South Africa. AngloGold Ashanti's main product is gold. As part of extracting gold the Company also produces silver, uranium oxide and sulfuric acid as by-products. The Company sells its products on world markets.

AngloGold Ashanti conducts gold-mining operations in the following regions, which represent its business segments:

South Africa (comprising the Vaal River and West Wits operations)

Continental Africa (comprising Ghana, Guinea, Mali, Namibia and Tanzania operations)

Australasia (comprising Australia)

Americas (comprising Argentina, Brazil and United States of America)

In particular, AngloGold Ashanti has 20 operations in the four regions comprising open-pit and underground mines and surface metallurgical plants, which are supported by extensive, yet focused, exploration activities. For more information on the Company's business and operations, see Item 4B.: Business Overview Products, operations and geographical locations .

As at December 31, 2011 the Company had on an attributable basis, Proven and Probable Ore Reserves of approximately 75.6 million ounces (including joint ventures). For the year ended December 31, 2011, AngloGold Ashanti had an attributable gold production of approximately 4.3 million ounces (including joint ventures).

AngloGold Ashanti's costs and expenses consist primarily of production costs, royalties, exploration, general and administration costs and depreciation, depletion and amortization. Production costs include labor, mining contracts, fuel, lubricants, power, consumable stores (which include explosives, timber, other consumables), utilities and costs of environmental rehabilitation. The Company's mining operations consist of deep-level underground mining methods as well as open-pit operations, both of which are labor intensive, therefore labor is a significant component of production costs.

Outlook

Gold production for 2012 is forecast to be between 4.3 million and 4.4 million ounces. Capital expenditure is expected to be approximately \$2.2 billion to \$2.3 billion in 2012 (2011: \$1,527 million), of which 27 percent relates to South Africa, 40 percent to Continental Africa, 16 percent to the Americas, 14 percent to Australasia and 3 percent to other.

AngloGold Ashanti's results of operations, financial condition and prospects, as well as the company's ability to meet its targets, may be adversely affected by a number of factors, risks and uncertainties, some of which are beyond the company's control, including gold prices, exchange rate fluctuations, inflation, as well as political, mining and other risks. In particular production outlook is subject to, among other things, unplanned stoppages and safety related interventions, the stability and availability of power as well as other operational risks generally. Certain of these risks, uncertainties and other factors are described in Item 3D.: Risk factors . See also Note regarding forward-looking statements .

Table of Contents**5A. OPERATING RESULTS****INTRODUCTION**

In 2011, the gold market continued to be profoundly influenced by ongoing economic turmoil, particularly in the United States of America in the first half of the year and latterly by the Eurozone crisis triggered by the deterioration of the sovereign debt markets. This trend persisted until the fourth quarter, during which the situation in Europe deteriorated, the euro started slipping against the US Dollar in the face of the inability of the European countries to resolve the funding crisis and the gold price failed to react favorably to these conditions. Despite this trend in the fourth quarter of 2011, the year-end spot gold price gained 11 percent in 2011 compared to 2010 and averaged \$1,572 per ounce in 2011, which is 28 percent higher than the average spot price of \$1,227 per ounce in 2010. However, prospects for the gold market continued to deteriorate in the first quarter of 2012 as uncertainty about sovereign debt and inflation eased, European economic prospects improved, investor interest for gold slowed and physical demand in India decreased.

As AngloGold Ashanti had eliminated its hedge book in 2010, it had full exposure to the higher spot gold prices in 2011 as reflected in the increased net income for 2011 when compared to 2010, notwithstanding lower production levels, stronger exchange rates and increased costs.

Key factors affecting results***Gold prices***

AngloGold Ashanti's operating results are directly related to the price of gold, which can fluctuate widely and is affected by numerous factors beyond its control, including investment, jewellery and industrial demand, expectations with respect to the rate of inflation, the strength of the US dollar (the currency in which the price of gold is generally quoted) and of other currencies, interest rates, actual or expected gold sales and purchases by central banks and the International Monetary Fund (IMF), global or regional political or economic events, and production and cost levels in major gold-producing regions. In addition, the price of gold is often subject to sharp, short-term changes because of speculative activities. The shift in gold demand from physical demand to investment and speculative demand may exacerbate the volatility of gold prices.

The current demand for and supply of gold may affect gold prices, but not necessarily in the same manner as current supply and demand affects the prices of other commodities. The supply of gold consists of a combination of new production and fabricated gold held by governments, public and private financial institutions, industrial organizations and private individuals. As the global gold production in any single year constitutes a small portion of the total potential supply of gold, short term variations in current production do not necessarily have a significant impact on the supply of gold or on its prices.

Yearly average spot gold prices have increased during the three years under review as follows:

2009 - \$974 per ounce
 2010 - \$1,227 per ounce
 2011 - \$1,572 per ounce

AngloGold Ashanti's net income for 2009 and 2010 was adversely impacted by its hedge book, which was eliminated in 2010. The Company had no hedge contracts in 2011 and was therefore fully exposed to spot gold prices, which resulted in higher net income for 2011. If revenue from gold sales falls for a substantial period below the Company's cost of production at its operations, AngloGold Ashanti could determine that it is not economically feasible to continue commercial production at any or all of its operations or to continue the development of some or all of its projects.

In the first quarter of 2012, the gold price came under some pressure and it reached lows of \$1,562 per ounce on January 3, 2012 due to muted jewellery demand from India and lower than anticipated investment demand. On April 16, 2012, the afternoon fixing price for gold on the London Bullion Market was \$1,653 per ounce.

Table of Contents

Production levels

In addition to gold prices, AngloGold Ashanti's revenue in any year is also influenced by its level of gold production. Production levels are in turn influenced by grades, tonnages mined and processed through the plant, and metallurgical recoveries. Attributable gold production (including joint ventures) declined from 4.6 million ounces in 2009 to 4.3 million ounces in 2011. The decline in production levels is due to a variety of factors, as follows:

South Africa: Sale of Tau Leko mine in 2010 and increased levels of safety related stoppages at the mines resulting in lower tonnages being mined and processed.

Continental Africa: Production levels have remained relatively flat over this period with declines in Ghana, Guinea and Mali, compensated by higher production from Tanzania on the back of improved grades and productivity improvements.

Australasia: 38 percent decline in production due to unprecedented rainfalls, pitwall and access ramp failure at Sunrise Dam, together with forecast decline in grades at the mine.

Americas: 6 percent increase in production from Americas came from Brazil on the back of grade and productivity improvements. This increase partially offset the decline from the other regions.

Grades from gold ore bodies tend to decline as they mature over time. With a view to reversing the grade decline, the Company embarked on the following initiatives:

Short-term: Continued implementation of Project ONE (roll out started in 2009) and aims to put in place optimum resources, business processes to restore stability, initially by minimising variations, and once stable, to further enhance productivity.

Medium-term: Active exploration programmes to replenish depletion in existing ore bodies by mine life extensions and new mines.

Long-term: Technology project in South Africa with a view to accessing the ore body at greater depth and further distance from existing infrastructure.

Concurrently, AngloGold Ashanti also embarked on ways of increasing the tonnage mined and processed, and processing improvements to enhance metallurgical recoveries.

Foreign exchange fluctuations

Production costs in all business segments are largely incurred in local currency where the relevant operation is located. US dollar denominated production costs and net income tend to be adversely impacted by local currency strength and favorably impacted by local currency weakness, assuming there are no other offsetting factors. AngloGold Ashanti's financial results can be influenced significantly by the fluctuations in the South African Rand, Brazilian Real, Australian Dollar and, to a lesser extent, the Argentinean Peso, Ghanaian Cedi and other local currencies. As set out below, during the years ended December 31, 2011, 2010 and 2009, the US Dollar weakened and the South African Rand, Brazilian Real and Australian Dollar strengthened, which had an unfavorable impact on AngloGold Ashanti's US Dollar denominated production costs.

Average annual exchange rates to the US dollar

	2011	2010	2009
South African Rand	7.26	7.30	8.39
Brazilian Real	1.68	1.76	2.00
Australian Dollar	0.97	1.09	1.26

In 2011, the Company derived 61 percent (58 percent including joint ventures) of its revenues from South Africa, Brazil, Australia and Argentina, and incurred 61 percent (57 percent including joint ventures) of its production costs in these local currencies. A one percent strengthening of these local currencies against the US dollar will result in an increase of total cash costs incurred of nearly \$5 per ounce.

Certain exchange controls are currently in force in most emerging markets in which the Company operates, including for example South Africa and Argentina. In the case of South Africa, though the exchange rate of the rand is primarily market determined, its value at any time may not be considered a true reflection of the underlying value while exchange controls exist. The government has indicated its intention to relax exchange controls over time. As exchange controls are relaxed, rand exchange rates will be more closely tied to market forces. It is not possible to predict

whether or when this will occur or the future value of the rand. For a detailed discussion of these exchange controls, see Item 10D.: Exchange controls .

Table of Contents

Production costs and effects of inflation

Production costs include the cost of labor, mining contracts, fuel, lubricants, power, consumable stores (which include explosives, timber and other consumables), utilities and environmental rehabilitation costs. The mining industry continues to experience price inflation for costs of inputs used in the production of gold, which leads to higher production costs reported by many gold producers.

AngloGold Ashanti's operations have not been materially adversely affected by inflation in recent years, given that it has benefited from sustained periods of rising gold prices. However, the Company is unable to control the prices at which it sells its gold. Accordingly, in the event of significant inflation in South Africa or, to a lesser extent, Brazil, Argentina or Australia, without a concurrent devaluation of the local currency or an increase in the price of gold, there could be a material adverse effect upon the Company's results and financial condition.

AngloGold Ashanti employs over 60,000 people globally, most of whom are members of trade unions, particularly in South Africa, Continental Africa and the Americas. Labor and mining contracts account for a significant component of production costs and are impacted by annual wage increases. During the period under review, given the rally in the gold price, trade unions have been successful in negotiating and securing higher than inflationary wage increases. During the years ended December 31, 2009, 2010 and 2011, management used Project ONE to claw back some of the increases through productivity improvements.

Energy costs, comprising power, fuel and lubricants, are another material component of production costs. Due to the remote location of some of its mines in Continental Africa, AngloGold Ashanti uses fuel to generate power and uses fuel and lubricants at its mines to run its fleet and processing plants. The price of oil has recently been volatile, fluctuating between \$94.20 and \$122.60 per barrel of Brent crude in 2011. AngloGold Ashanti estimates that for each \$1 per barrel rise in the oil price, other factors remaining equal, the average cash costs under IFRS of all its operations increases by about \$0.70 per ounce with the cash costs of certain of the company's mines, particularly Geita, Cripple Creek & Victor, Siguiri and Sadiola, which are more dependent on fuel, being more sensitive to changes in the price of oil. Energy costs, even in business segments which are supported by grid power, like South Africa, have increased considerably over the three year period with price increases from Eskom (South Africa's power utility) of approximately 26 percent per annum, far higher than average inflation. These increases have adversely impacted production costs.

AngloGold Ashanti has no influence over the cost of most consumables, many of which are linked to some degree to the price of oil and steel and in a number of cases have exceeded inflation. Furthermore, there has also been volatility recently in the price of steel, used in the manufacture of most forms of fixed and mobile mining equipment, which is a relatively large contributor to the operating costs and capital expenditure of a mine. All of these cost pressures have adversely impacted net income during the period.

Discounted closure liabilities (excluding joint ventures) increased from \$530 million in 2010 to \$653 million in 2011. This change is largely attributable to a change in mine plans resulting in accelerated cash flows, change in economic assumptions and discount rates, change in design of tailings storage facilities and change in methodology following requests from the Ghana Environmental Protection Agency.

Exploration costs

Growing the business is one of AngloGold Ashanti's key strategies. Accordingly, the Company has incurred increasing amounts of exploration expenditure during the years ended December 31, 2009, 2010 and 2011 in order to replenish depleting gold reserves and bring new ore bodies into pre-feasibility or feasibility. The exploration costs incurred over the last three fiscal years amounted to \$150 million in 2009, \$206 million in 2010 and \$279 million in 2011 and have adversely impacted net income.

General and administrative costs

In order to meet AngloGold Ashanti's strategic objectives, management has incurred increasing levels of costs to build talent, capacity and expertise globally and in particular to support its Project ONE initiatives. The increase in costs over the 2009 - 2011 period had an adverse impact on net income. The costs incurred over such period amounted to \$158 million in 2009, \$228 million in 2010 and \$287 million in 2011.

Table of Contents

Royalties

Royalties, which are generally calculated as a percentage of revenue, more than doubled from the \$84 million incurred in 2009 to \$193 million incurred in 2011, due to:

the introduction of royalties in South Africa effective March 1, 2010; and
the higher spot gold prices resulting in increased royalties.

Royalties are likely to continue to increase in the coming years as in a number of jurisdictions host governments increasingly seek to obtain a higher share of revenue by increasing the royalty rates for gold mines.

Depreciation, depletion and amortization

Depreciation, depletion and amortization increased during the 2009-2011 period largely due to higher capital expenditure, reassessment of useful lives of assets and revisions in life of mine plans. Due to the higher capital investment expenditure required to complete new projects, depreciation, depletion and amortization is likely to continue to increase in the coming years.

Impairments

AngloGold Ashanti reviews and tests the carrying value of its assets when events or changes in circumstances suggest that the carrying amount may not be recoverable. AngloGold Ashanti values individual mining assets at the lowest level for which cash flows are identifiable as independent of cash flows of other mining assets and liabilities.

If there are indications that impairment may have occurred, AngloGold Ashanti prepares estimates of expected future cash flows for each group of assets. Expected future cash flows are inherently uncertain, and could materially change over time. They are significantly affected by reserve and production estimates, together with economic factors such as spot and forward gold prices, discount rates, currency exchange rates, estimates of costs to produce reserves and future capital expenditures.

If any of these uncertainties occur either alone or in combination, it could require management to recognize impairments. In 2011, AngloGold Ashanti incurred an impairment charge of \$17 million on long-lived assets. In 2010, AngloGold Ashanti incurred an impairment charge of \$91 million on long-lived assets. See Note 5 Costs and Expenses to the consolidated financial statements for a detailed description of impairments.

Taxation

Taxation expense increased significantly over the period from a benefit of \$33 million in 2009 to an expense of \$705 million in 2011. The sharp increase in the tax charge is as a result of utilization of tax losses and higher spot prices resulting in higher pre-tax net income.

Similar to royalties, taxation expense is likely to continue to increase in the coming years as in a number of jurisdictions host governments increasingly seek to obtain a higher share of revenue by increasing rates for existing taxes and introducing new taxes on gold mines.

Acquisitions and dispositions

The global gold mining industry has experienced active consolidation and rationalization activities in recent years. Accordingly, AngloGold Ashanti has been, and expects to continue to be, involved in assessing a number of acquisitions and dispositions as part of this global trend and to identify value-adding business combination and acquisition opportunities.

Acquisitions and dispositions are described in note 3 to the consolidated financial statements Acquisitions and disposals of businesses and assets . See also note 29 to the consolidated financial statements Subsequent events . The consolidated financial statements reflect the operations and financial condition of AngloGold Ashanti, assuming that acquisitions and disposals took place on the effective date of these transactions.

Table of Contents***South African economic and other factors***

AngloGold Ashanti is a company domiciled in South Africa with significant operations in South Africa. As a result, the Company is subject to various economic, fiscal and monetary factors that affect South African companies generally.

Comparison of operating performance in 2011, 2010 and 2009

The following table presents operating data for the AngloGold Ashanti group for the three year period ended December 31, 2011:

Operating data for AngloGold Ashanti	Year ended December 31		
	2011	2010	2009
Total attributable gold production (thousand ounces)	4,331	4,515	4,599
Total cash costs (\$/oz) ⁽¹⁾	733	627	534
Total production costs (\$/oz) ⁽¹⁾	948	812	683
Production costs (million US dollars) - per financial statements	2,977	2,656	2,229
Capital expenditure (million US dollars) ⁽²⁾	1,527	1,015	1,027
- Consolidated entities	1,439	973	1,019
- Equity accounted joint ventures	88	42	8

⁽¹⁾Total cash costs and total production costs are non-GAAP measures. For further information on these non-GAAP measures, see Item 5A.: Operating results
Total cash costs and total production costs .

⁽²⁾Including capital expenditure of Boddington in 2009.

Table of Contents

Attributable gold production

Production in 2011

For the year ended December 31, 2011, AngloGold Ashanti's total attributable gold production from continuing operations at 4.33 million ounces was 184,000 ounces, or 4 percent, lower when compared to 2010 production of 4.52 million ounces.

In **South Africa**, gold production decreased by 9 percent or 161,000 ounces in 2011 of which 63,000 ounces relate to the sale of Tau Lekoa effective August 1, 2010. The balance of the production decrease occurred across most of the South African mines. The lower output was mainly due to industrial strike actions and an increased number of government imposed safety related stoppages. At TauTona, a decision was taken early in 2011, following a significant seismic event, to cease mining of the Ventersdorp Contact Reef (VCR) shaft pillar and remove it from the immediate mine plan in the interests of safety. This decision contributed to the decline in output. Great Noligwa experienced lower production due to a combination of ore pass blockages and the closure of two haulages.

Production increased by 5 percent or 78,000 ounces in 2011 in **Continental Africa** mainly due to a significant increase in production at Geita in Tanzania, where gold produced increased from 357,000 ounces in the year ended December 31, 2010 to 494,000 ounces in 2011. The increase in production was due to the mining of higher grade material in 2011. This increase was partially offset by lower production at Yatela, Siguiiri and Navachab due to lower recovered grades.

Production decreased by 38 percent or 150,000 ounces in 2011 in **Australia** mainly due to the impact of unprecedented heavy rainfall and the ramp failure in the first quarter of 2011 at Sunrise Dam in Australia, which severely affected all aspects of the operation during the rest of the year.

In the **Americas** region, production increased by 6 percent or 49,000 ounces to 891,000 ounces. The increase was mainly due to better ounce recovery from the heap leach pad at Cripple Creek & Victor in North America, which benefited from better pad pH chemistry and the strategy of stacking higher grade ore closer to the pad liner. In Brazil at AngloGold Ashanti Córrego do Sítio Mineração higher tonnage and grades contributed to increased production. These increases were partially offset by lower production at Serra Grande in Brazil due to lower recovered grades.

Production in 2010

For the year ended December 31, 2010, AngloGold Ashanti's total attributable gold production from continuing operations at 4.52 million ounces was 84,000 ounces, or 2 percent, lower when compared to 2009 production of 4.6 million ounces.

In **South Africa**, gold production decreased by 1 percent or 12,000 ounces in 2010 mainly due to a 13 percent decline in volumes mined and a 9 percent decline in recovered grade at Kopanang and the sale of Tau Lekoa effective August 1, 2010. The decrease was partially offset by an increase in gold production at Moab Khotsong due to higher volumes mined and at TauTona due to the successful resumption of mining in January 2010 following the temporary closure of the shaft in October 2009.

Production decreased by 6 percent or 93,000 ounces in 2010 in **Continental Africa** mainly due to lower grades mined and processed at Siguiiri, Morila, Yatela and Sadiola. Lower production at Obuasi was mainly attributable to underground tonnages declining by 8 percent as a result of reduced flexibility in developed ore reserves, in addition to stoppages to address environmental issues at the Tailings Storage Facility and elution problems at the Tailings Treatment Plant. The decrease was partially offset by an increase in gold production due to the treatment of higher tonnes and higher grade material at Geita.

Table of Contents

Total cash costs and total production costs

Comparison of total cash costs and total production costs in 2011 with 2010

Most local currencies (South Africa, Australia and Brazil) were on average stronger against the US dollar during 2011 compared to 2010. Consequently, total cash costs in US dollar terms were negatively impacted for 2011.

Cash costs per ounce at most of the operations situated in South Africa increased in 2011 when compared to 2010. This was largely a result of increases in the cost of labor, power and stores and royalty payments which came into effect on March 1, 2010, as well as the strengthening of the rand. The lower production in 2011 also negatively impacted the cash costs per ounce.

Geita, in Tanzania, reported a 30 percent decrease in cash costs from \$697 per ounce in 2010 to \$488 per ounce in 2011. This was mainly as a result of higher production and inventory adjustments.

In Mali, at Morila, cash costs increased in 2011 to \$818 per ounce compared to \$716 per ounce in 2010 mainly due to higher reagent costs and fuel used in power generation. At Sadiola cash costs increased from \$686 per ounce in 2010 to \$835 per ounce in 2011. These were driven by increases in fuel prices, mining contractor costs were higher as a result of the longer haulage distance and higher maintenance costs. The cash costs at Yatela increased from \$817 per ounce in 2010 to \$1,483 per ounce in 2011 mainly due to the significant decrease in production of 31,000 ounces (52 percent).

In Ghana, at Obuasi, cash costs increased in 2011 to \$859 per ounce compared to \$760 per ounce in 2010 mainly due to the decline in production and an increase in the power tariff and inventory adjustments. At Siguiri, in Guinea, cash costs increased to \$871 per ounce in 2011 from \$656 per ounce in 2010 mainly due to the decline in production, higher fuel prices, an increase in inventory adjustments and increased costs related to labor and mining contractors.

In the United States, Cripple Creek reported a \$69 per ounce increase in cash costs to \$569 per ounce in 2011 due primarily to rising commodity prices (diesel fuel in particular) and increased labor costs. In Brazil at AngloGold Ashanti Córrego do Sítio Mineração cash costs increased to \$571 per ounce in 2011 from \$444 per ounce in 2010 driven largely by labor cost increases and higher energy consumption following the commissioning of the refrigeration plant in Cuiabá. Other factors were the stronger Brazilian real, lower volumes and higher unit costs from new Córrego do Sítio sulfide production. These effects were partially offset, however, by higher revenue from the sale of sulfuric acid, a by-product of the Cuiabá mining operation. At Serra Grande cash costs increased by \$370 per ounce to \$851 per ounce in 2011 due to reduced production as well as continued inflationary pressure on all mining-related inputs, such as power, consumables and labor in Brazil and the impact of the stronger Brazilian real.

In Australia, at Sunrise Dam, cash costs increased in 2011 to \$1,362 per ounce compared to \$692 per ounce in 2010 mainly due to the significant decrease in production of 150,000 ounces (38 percent). The decrease in production was due to the impact of unprecedented heavy rainfall and the ramp failure in the first quarter of 2011. The considerable remedial work and the stronger Australian Dollar negatively impacted cash costs per ounce.

Overall the Company's total cash costs increased by \$106 per ounce, or 17 percent when compared to the previous year. Of this increase, inflation accounted for \$47 per ounce, lower production accounted for \$20 per ounce, royalties accounted for \$12 per ounce and local currency strength accounted for \$9 per ounce.

Comparison of total cash costs and total production costs in 2010 with 2009

Most local currencies (South Africa, Australia and Brazil) were on average stronger against the US dollar during 2010 compared to 2009. Consequently, total cash costs in US dollar terms were negatively impacted for 2010.

Cash costs at all the operations situated in South Africa increased in 2010 when compared to 2009. This was largely a result of increases in the cost of labor, power and stores and royalty payments which came into effect on March 1, 2010, as well as the strengthening of the rand. The cash cost increase at the Savuka operation was offset by an insurance claim received for normal business interruption and material damage following the seismic event which occurred in May 2009. The insurance claim was for \$46 million of which payments received and credited to working costs during 2010 were \$16 million. The Company utilized the proceeds to reopen the mining area and equipping of infrastructure damaged during the seismic event.

Table of Contents

Geita, in Tanzania, reported a 29 percent decrease in cash costs from \$985 per ounce in 2009 to \$697 per ounce in 2010. This was mainly as a result of higher production, lower reagent costs and a reduction in general and engineering stores.

In Mali, at Morila, cash costs increased in 2010 to \$716 per ounce compared to \$526 per ounce in 2009 mainly due to the lower production and higher reagent costs and fuel used in power generation. At Sadiola cash costs increased from \$489 per ounce in 2009 to \$686 per ounce in 2010. The increase in cash costs was mainly due to the lower-grade feed supplied to the priority plant. In addition, mining contractor costs were higher as a result of the longer haulage distance, higher maintenance costs and increases in the fuel price. The cash costs at Yatela increased from \$326 per ounce in 2009 to \$817 per ounce in 2010 mainly due to the significant decrease in production of 29,000 ounces (33 percent) and an increase in contract mining costs.

In Ghana, at Obuasi, cash costs increased in 2010 to \$760 per ounce compared to \$630 per ounce in 2009 mainly due to the decline in production, an increase in the power tariff and the once-off settlement of historical wage claims. These negative factors were partially offset by a reduction in the cost of consumables, which were sourced via a focused procurement strategy. At Siguiri, in Guinea, cash costs increased to \$656 per ounce in 2010 from \$513 per ounce in 2009 mainly due to higher fuel prices and costs related to labor and mining contractors.

In North America, Cripple Creek reported a \$129 per ounce increase in cash costs to \$500 per ounce in 2010 due primarily to the higher unit cost for the new ounces placed, rising commodity prices (diesel fuel in particular), and increased royalty costs, driven by higher gold prices. In Brazil at AngloGold Ashanti Córrego do Sítio Mineração cash costs increased to \$444 per ounce in 2010 from \$347 per ounce in 2009 driven largely by higher maintenance costs and stronger local currencies. These effects were partially offset, however, by higher revenue from the sale of sulfuric acid, a by-product of the Cuiabá mining operation.

Overall the Company's total cash costs increased by \$93 per ounce, or 17 percent when compared to the previous year. Of this increase, inflation accounted for \$46 per ounce and local currency strength accounted for \$45 per ounce.

Reconciliation of total cash costs and total production costs to financial statements

Total cash costs and total production costs are calculated in accordance with the guidelines of the Gold Institute industry standard and industry practice and are not US GAAP measures. The Gold Institute, which has been incorporated into the National Mining Association, is a non-profit international association of miners, refiners, bullion suppliers and manufacturers of gold products, which developed a uniform format for reporting total production costs on a per ounce basis. The guidance was first adopted in 1996 and revised in November 1999.

Total cash costs, as defined in the Gold Institute industry guidelines, are production costs as recorded in the statement of operations, less offsite (i.e. central), general and administrative expenses (including head office costs charged to the mines, central training expenses, industry association fees, refinery charges and social development costs) and rehabilitation costs, plus royalties and employee termination costs.

Total cash costs as calculated and reported by AngloGold Ashanti include costs for all mining, processing, onsite administration costs, royalties and production taxes, as well as contributions from by-products, but exclusive of depreciation, depletion and amortization, rehabilitation costs, employment severance costs, corporate administration costs, capital costs and exploration costs. Total cash costs per ounce are calculated by dividing attributable total cash costs by attributable ounces of gold produced.

Total production costs, as defined in the Gold Institute industry guidelines, are total cash costs, as calculated using the Gold Institute industry guidelines, plus amortization, depreciation and rehabilitation costs.

Total production costs as calculated and reported by AngloGold Ashanti include total cash costs, plus depreciation, depletion and amortization, employee severance costs and rehabilitation and other non-cash costs. Total production costs per ounce are calculated by dividing attributable total production costs by attributable ounces of gold produced.

Table of Contents

Total cash costs and total production costs should not be considered by investors in isolation or as alternatives to production costs, net income/(loss) applicable to common stockholders, income/(loss) before income tax provision, net cash provided by operating activities or any other measure of financial performance presented in accordance with US GAAP or as an indicator of the company's performance. While the Gold Institute has provided definitions for the calculation of total cash costs and total production costs, the calculation of total cash costs, total cash costs per ounce, total production costs and total production costs per ounce may vary significantly among gold mining companies, and by themselves do not necessarily provide a basis for comparison with other gold mining companies.

However, AngloGold Ashanti believes that total cash costs and total production costs in total by mine and per ounce by mine are useful indicators to investors and management as they provide:

- an indication of profitability, efficiency and cash flows;
- the change in costs as the mining operations mature over time on a consistent basis; and
- an internal benchmark of performance to allow for comparison against other mines, both within the AngloGold Ashanti group and of other gold mining companies.

A reconciliation of production costs as included in the company's audited financial statements to total cash costs and to total production costs for each of the three years in the period ended December 31, 2011 is presented below. In addition the Company has provided below detail of the attributable ounces of gold produced by mine for each of those periods.

Table of Contents**Capital expenditure**

Total capital expenditure of \$1,527 million was recorded in the year ended December 31, 2011 compared to \$1,015 million in the same period in 2010. This represents a \$512 million, or 50 percent increase from 2010. The increased capital expenditure during 2011 relates to increased spending to sustain existing operations of \$265 million and growth related projects of \$247 million. Capital expenditure increased at AngloGold Ashanti Córrego do Sítio Mineração by \$117 million, Tropicana by \$63 million, Iduapriem by \$56 million, Mponeng by \$50 million, Kibali joint venture by \$43 million, Cerro Vanguardia by \$35 million, Navachab by \$34 million, Kopanang by \$31 million, Moab Khotsong by \$27 million, Obuasi by \$23 million and Geita by \$20 million.

Total capital expenditure of \$1,015 million was recorded in the year ended December 31, 2010 compared to \$1,027 million in the same period in 2009. This represents a \$12 million, or 1 percent, decrease from 2009. In Australia, total capital expenditure decreased from \$177 million in 2009 to \$40 million in 2010 as a result of the sale of Boddington during 2009. Capital expenditure increased at Obuasi by \$15 million, AngloGold Ashanti Córrego do Sítio Mineração by \$58 million, Geita by \$19 million, Mponeng by \$13 million, Moab Khotsong by \$16 million and Cerro Vanguardia by \$21 million.

Comparison of financial performance on a segment basis for 2011, 2010 and 2009

The Company produces gold as its primary product and does not have distinct divisional segments in terms of principal business activity, but manages its business on the basis of different geographic segments. Therefore, information regarding separate geographic segments is provided. Revenues presented below exclude allocated realized gains/losses on non-hedge derivatives to individual geographic areas.

At December 31, 2011, 27 percent of AngloGold Ashanti's total assets were located in South Africa compared with 32 percent at the end of 2010, mainly due to the weakening of the rand against the US dollar (2011: \$/R8.0407, 2010: \$/R6.5701). The remaining operations collectively accounted for approximately 73 percent of AngloGold Ashanti's total assets at December 31, 2011 compared to 68 percent at the end of the same period in 2010.

At December 31, 2010, 32 percent of AngloGold Ashanti's total assets were located in South Africa compared with 31 percent at the end of 2009, mainly due to increased capital expenditure and the strengthening of the rand against the US dollar (2010: \$/R6.5701, 2009: \$/R7.435). The remaining operations collectively accounted for approximately 68 percent of AngloGold Ashanti's total assets at December 31, 2010 compared to 69 percent at the end of the same period in 2009.

Comparison of financial performance in 2011, 2010 and 2009

Financial performance of AngloGold Ashanti (in millions)	Year ended December 31		
	2011	2010	2009

Net income/(loss)	1,425	112	(825)

Table of Contents**Comparison of financial performance in 2011 with 2010*****Revenues***

Revenues from product sales and other income increased by \$1,240 million from \$5,402 million in 2010 to \$6,642 million in 2011, representing a 23 percent increase over the period. This increase was mainly due to the increase in the average spot price of gold. The average spot price of gold was \$1,572 per ounce during 2011, \$345 per ounce, or 28 percent, higher than \$1,227 per ounce in 2010. The year on year increase in revenue was partially offset by reduced gold production of 184,000 ounces in 2011 when compared to 2010. The majority of product sales consisted of US dollar-denominated gold sales.

Total revenues from the South African operations increased by \$320 million to \$2,596 million from \$2,276 million in 2010, mainly as a result of the increase in the average spot price of gold. This increase was offset by the reduced gold production at the South African operations (1,624,000 ounces in 2011 compared to 1,785,000 ounces in 2010).

Total revenues from the Continental Africa operations increased by \$658 million to \$2,529 million from \$1,871 million in 2010, mainly as a result of the increase in the average spot price of gold and the treatment of higher tonnes and higher grade material at Geita.

Total revenue from the Australian operation at Sunrise Dam decreased from \$468 million in 2010 to \$389 million in 2011. The decrease in revenue was mainly due to the decrease in production of 150,000 ounces in 2011.

Total revenues from the Americas operations increased from \$1,125 million in 2010 to \$1,499 million in 2011 mainly as a result of the increase in the average spot price of gold and an increase in gold produced from 842,000 attributable ounces in 2010 to 891,000 ounces in 2011.

Production costs

Production costs increased from \$2,656 million in 2010 to \$2,977 million in 2011, which represents a \$321 million, or 12 percent increase. The production costs of most of the operations increased in 2011. The increase was mainly as a result of an increase in rehabilitation and operational costs including labor, consumables and power. Operational cost increases were mainly due to annual labor cost increases and increased contractor costs at Sunrise Dam, power tariff increases mainly in South Africa and at AngloGold Ashanti Córrego do Sítio Mineração in Brazil and higher rehabilitation costs that were recorded at Obuasi in Ghana and Serra Grande in Brazil.

Exploration costs

Exploration costs increased from \$206 million in 2010 to \$279 million in 2011 mainly due to higher prefeasibility expenditure at La Colosa in Colombia, additional exploration at Tropicana in Australia and Mongbwalu in the Democratic Republic of the Congo, as well as increased exploration activities in Guinea, the Solomon Islands and marine exploration areas. For a discussion of AngloGold Ashanti's exploration activities in 2011, see Item 4B.: Business overview Global exploration .

Royalties

Royalties paid by AngloGold Ashanti increased from \$142 million in 2010 to \$193 million in 2011, mainly due to payments of royalties under the South African Mineral and Petroleum Resources Act and the higher average spot price of gold. Royalties recorded by the South African mines increased from \$38 million in 2010 to \$73 million in 2011. Royalties in Argentina increased from \$21 million in 2010 to \$27 million in 2011 as a result of higher average spot prices of gold. In Argentina, royalties are payable to Fomicruz, a State owned company in the Santa Cruz Province, being the minority shareholder of the Cerro Vanguardia operation and are calculated as a percentage of revenues. Royalties paid in Tanzania amounted to \$23 million in 2011 compared to \$13 million in 2010. Royalties in Tanzania increased due to the higher production and the higher gold price.

Depreciation, depletion and amortization

Depreciation, depletion and amortization expense increased by \$69 million or 10 percent, to \$789 million in 2011 when compared to \$720 million recorded in 2010. This increase was mainly due to increases in depreciation, depletion and amortization expense in Tanzania (Continental Africa) and the Americas from \$55 million and \$152 million, respectively, incurred in the year ended December 31, 2010 to \$82 million and \$173 million, respectively, for the same period of 2011 mainly as a result of higher production and changes in estimated useful life of assets which are used in the calculation of depreciation, depletion and amortization.

Table of Contents***Impairment of assets***

In 2011, AngloGold Ashanti recorded impairments amounting to \$17 million compared to \$91 million in 2010. This was mainly due to the impairment of Savuka, waste wash plant at Kopanang and abandoned shaft pillar development at Tau Tona in South Africa during 2011 and the write-off of assets at Obuasi in Continental Africa. Tau Tona and Savuka were impaired due to changes in the mine plan resulting in areas being abandoned and safety related concerns. See Note 5 Costs and expenses: Impairment of assets to the consolidated financial statements for additional information.

Interest expense

Interest expense increased by \$27 million to \$178 million in 2011, compared to \$151 million recorded in 2010. The increase is mainly due to interest charges for the full year on the rated bonds and mandatory convertible bonds which were issued in April 2010 and September 2010, respectively, partially offset by lower interest paid due to the repayment of the 2009 Term Facility during 2010. Interest expense recorded in the year ended December 31, 2010 includes \$8 million related to accelerated amortization of fees on debt facilities cancelled.

Accretion expense

Accretion expense of \$28 million was recorded in 2011 compared with \$22 million in 2010. Accretion relates to the unwinding of discounted future rehabilitation obligations to present values and increases in the reclamation obligations to its future estimated payout.

Employment severance cost

Employment severance costs decreased to \$15 million in 2011 from \$23 million in 2010. Employment severance costs recorded for the year ended December 31, 2011 relates to retrenchments in the South Africa region at Great Nologwa, Kopanang, TauTona and Mponeng and in Continental Africa reflecting rationalization of operations.

Profit/(loss) on sale of assets, realization of loans, indirect taxes and other

In 2011, the Company recorded a profit of \$43 million compared to a profit of \$3 million recorded in 2010. The profit in 2011 mainly related to royalties received from Newmont Mining Corporation (2009 Boddington Gold mine sale) and Franco Nevada Corporation (2011 sale of royalty stream in Ayanfuri mine). These profits were partially offset by the impairment of investments, the loss on disposal of land, equipment and assets, mineral rights and exploration properties, reassessment of indirect taxes payable and Black economic empowerment transaction restructuring costs.

The profit in 2010 mainly related to profit on sale of investments held in B2Gold Corporation and Red 5 Limited, an insurance claim recovery at Savuka mine and royalties received. These profits was partially offset by the mandatory convertible bond underwriting and professional fees, the loss on disposal of land, equipment and assets, mineral rights and exploration properties and reassessment of indirect taxes payable in Tanzania, Brazil, Guinea and South Africa.

Non-hedge derivative (gain)/loss and movement on bonds***Non-hedge derivative (gain)/loss***

A gain on non-hedge derivatives of \$83 million was recorded in 2011 compared to a loss of \$703 million in 2010 (which included normal purchase and sale exempted (NPSE) contracts re-designated to non-hedging instruments in previous years) relating to the use of non-hedging instruments. These represent derivatives not designated in formal hedge accounting relationships. The change in fair value of these derivatives are recorded each period in the income statement.

The net gain recorded for the year ended December 31, 2011 relates to the fair value movements of the conversion features of convertible bonds amounting to \$84 million and the revaluation of non-hedge derivatives resulting from changes in the prevailing forward gold price, exchange rates, interest rates and volatilities during the year amounting to a loss of \$1 million.

Table of Contents

During 2010, the Company eliminated its gold hedge book. The loss on scheduled hedge book maturities during 2010 was \$277 million. Loss on non-hedge derivatives included a realized loss of \$2,698 million related to the final tranche of the accelerated hedge buy-back, that commenced in September 2010 and was concluded on October 7, 2010. The final phase of hedge restructuring was funded with proceeds from the equity offering and the mandatory convertible bonds in September 2010, as well as cash from internal sources and debt facilities.

The loss on non-hedge derivatives recorded for the year ended December 31, 2010 relates to the accelerated hedge book settlement, normal realized losses on non-hedge derivatives, the fair value movement of the conversion features of convertible bonds and the revaluation of non-hedge derivative that resulted from changes in the prevailing spot gold price, exchange rates, interest rates, volatilities and non-performance risk during 2010.

The hedge buy-back and re-designation of contracts (effected in 2009) resulted in an increase in current non-hedge derivative liabilities and a consequential loss recorded in (gain)/loss on non-hedge derivatives. During 2010, the opening balance of the derivative liability of \$556 million further declined by \$131 million in fair value, before all these contracts were settled for \$687 million.

Non-hedge derivatives recorded for the years ended December 31, 2011 and 2010 included:

	<u>Year ended December 31,</u>	
	<u>2011</u>	<u>2010</u>
	<u>(in US Dollars, million)</u>	
Loss on realized non-hedge derivatives	-	2,975
Loss/(gain) on unrealized non-hedge derivatives	1	(2,273)
Fair value (gain)/loss on option component of convertible bonds	(84)	1
Net (gain)/loss	(83)	703

Movement on bonds

	<u>Year ended December</u>	
	<u>31,</u>	<u>2010</u>
	<u>(in US Dollars, million)</u>	
Fair value (gain)/loss on mandatory convertible bonds	(113)	83

Fair value movements on the mandatory convertible bonds were based on to the ex interest NYSE closing price of these bonds.

Equity income in associates

Equity income in equity method investments increased from \$40 million in 2010 to \$59 million in 2011, mainly as a result of the increase in revenue from gold sales at Sadiola and Morila mines in Mali from \$143 million and \$117 million, respectively, in 2010 to \$189 million and \$157 million, respectively, in 2011. The increase was mainly due to the increase in the average spot price of gold for 2011.

Taxation expense/benefit

A net taxation expense of \$705 million was recorded in 2011 compared to \$255 million in 2010. Charges for current tax in 2011 amounted to \$406 million compared to \$117 million in 2010. The increase in the tax charge in 2011 is mainly due to higher income as a result of the higher gold price and losses having been fully utilized during the current year in South Africa and Tanzania. Charges for deferred tax in 2011 amounted to a net tax expense of \$299 million compared to \$138 million in 2010. The increase in the deferred tax charge in 2011 is mainly due to the reversal of deferred tax credits on losses utilized in South Africa, Geita and the Americas. Refer to Note 7 Taxation of the consolidated financial statements.

Table of Contents**Comparison of financial performance in 2010 with 2009*****Revenues***

Revenues from product sales and other income increased by \$1,447 million from \$3,955 million in 2009 to \$5,402 million in 2010, representing a 37 percent increase over the period. This increase was mainly due to the increase in the average spot price of gold. The average spot price of gold was \$1,227 per ounce during 2010, \$253 per ounce, or 26 percent, higher than \$974 per ounce in 2009. In addition, included in the 2009 gold income, were normal purchase and sale exempted (NPSE) contract losses which from July 2009 onwards were redesignated at fair value on the balance sheet and reported under the loss from non-hedge derivatives. The year on year increase in revenue was partially offset by reduced gold production of 84,000 ounces in 2010 when compared to 2009. The majority of product sales consisted of US dollar-denominated gold sales.

Total revenues from the South African operations increased by \$589 million to \$2,276 million from \$1,687 million in 2009, mainly as a result of the increase in the average spot price of gold. This increase was offset by the reduced gold production at the South African operations (1,785,000 ounces in 2010 compared to 1,797,000 ounces in 2009).

Total revenues from the Americas operations increased from \$804 million in 2009 to \$1,125 million in 2010 mainly as a result of the increase in the average spot price of gold and an increase in gold produced from 816,000 attributable ounces in 2009 to 842,000 ounces in 2010.

Total revenues from the Continental Africa operations increased by \$420 million to \$1,871 million from \$1,451 million in 2009, mainly as a result of the increase in the average spot price of gold and the treatment of higher tonnes and higher grade material at Geita.

Total revenue from the Australian operation at Sunrise Dam increased from \$239 million in 2009 to \$468 million in 2010 mainly due to the increase in the average spot price of gold. Average recovered grade increased from 2.87 grams per tonne in 2009 to 3.22 grams per tonne in 2010.

Production costs

Production costs increased from \$2,229 million in 2009 to \$2,656 million in 2010, which represents a \$427 million, or 19 percent increase. The production costs of most of the operations increased in 2010. The increase was mainly as a result of an increase in operational costs including labor, consumables and power and the increase in the rehabilitation provision. The increase in production costs was partially offset by the effects of cost saving initiatives.

South Africa continued to grapple with steeply rising (31 percent) electricity tariffs, effective from July 2009. On February 24, 2010 Eskom Holdings Limited, the state-owned utility, was also granted permission by the National Energy Regulator to raise prices annually by a further average 25 percent for each of the next three years to fund the construction of new power generation capacity. This will significantly increase the cost structure of AngloGold Ashanti's South African operations which currently account for approximately 40 percent of annual production. In 2010 power costs increased by \$71 million of which \$51 million was in South Africa.

Production costs in Tanzania (Continental Africa) marginally decreased from \$261 million in 2009 to \$256 million in 2010. This was due to a decrease in consumables used and the effects of cost saving initiatives.

Exploration costs

Exploration costs increased from \$150 million in 2009 to \$206 million in 2010 mainly due to higher prefeasibility expenditure at La Colosa in Colombia, Tropicana in Australia and Mongbwalu in the Democratic Republic of the Congo. For a discussion of AngloGold Ashanti's exploration activities in 2010, see Item 4B.: Business overview Global exploration .

General and administrative

General and administrative expenses increased from \$158 million in 2009 to \$228 million in 2010, mainly due to higher labor costs, the roll out of Project ONE business improvement initiatives, the implementation of a global security framework, corporate office costs, consultancy fees and the strengthening of the rand relative to the US dollar.

Table of Contents***Royalties***

Royalties paid by AngloGold Ashanti increased from \$84 million in 2009 to \$142 million paid in 2010 mainly due to the introduction of the South African Mineral and Petroleum Resources Act of royalties payable in South Africa from March 1, 2010 as well as the high spot price of gold. Royalties recorded by the South African mines were \$38 million in 2010. Royalties in Argentina increased from \$16 million in 2009 to \$21 million in 2010 as a result of higher spot prices of gold. In Argentina, royalties are payable to Fomicruz, a State owned company in the Santa Cruz Province, being the minority shareholder of the Cerro Vanguardia operation and are calculated as a percentage of revenues. Royalties paid in Ghana and Guinea amounted to \$48 million in 2010 compared to \$46 million in 2009. In Ghana, royalties are payable to the government at a fixed rate of 3 percent per annum based on revenue, as agreed to under the Stability Agreement entered into with AngloGold as part of the AngloGold Ashanti business combination. In Guinea, royalties are paid to the government, Union Miniere and the International Finance Corporation and are calculated as a percentage of revenues.

Depreciation, depletion and amortization

Depreciation, depletion and amortization expense increased by \$105 million or 17 percent, to \$720 million in 2010 when compared to \$615 million recorded in 2009. This increase was mainly due to increases in depreciation, depletion and amortization expense in South Africa, Tanzania (Continental Africa) and the Americas from \$281 million, \$53 million and \$111 million, respectively, incurred in the year ended December 31, 2009 to \$357 million, \$55 million and \$152 million, respectively, for the same period of 2010 mainly as a result of changes in estimated lives of assets, as well as stronger local currencies. This was partially offset by a decrease in depreciation, depletion and amortization expense in Ghana (Continental Africa) which decreased from \$101 million incurred in the year ended December 31, 2009 to \$87 million in the same period in 2010 as a result of a decrease in gold production.

Impairment of assets

In 2010, AngloGold Ashanti recorded impairments amounting to \$91 million compared to \$8 million in 2009. The increase was mainly due to the impairment of Tau Lekoa (held for sale), Tau Tona and Savuka in South Africa during 2010, the write-off of assets at Iduapriem, Geita and Serra Grande in Brazil. Tau Tona and Savuka were impaired due to changes in the mine plan resulting in areas being abandoned and safety related concerns. Total impairment recognized for Tau Tona and Savuka during 2010 was \$63 million. Following the classification of Tau Lekoa as held for sale, impairment testing was performed on the held for sale asset and since the estimated fair value did not support the carrying value, an impairment of \$8 million was recorded. See Note 5 Costs and expenses: Impairment of assets to the consolidated financial statements for additional information.

Interest expense

Interest expense increased by \$28 million to \$151 million in 2010, compared to \$123 million recorded in 2009. The increase is mainly due to interest on the rated bonds and mandatory convertible bonds, which was partially offset by lower interest paid due to the repayment of the 2009 Term Facility and \$1.5 billion Revolving Credit Facility during 2010. Interest expense recorded in the year ended December 31, 2010 includes \$8 million related to accelerated amortization of fees on debt facilities cancelled.

Accretion expense

Accretion expense of \$22 million was recorded in 2010 compared with \$17 million in 2009. Accretion relates to the unwinding of discounted future reclamation obligations to present values and increases in the reclamation obligations to its future estimated payout.

Employment severance cost

Employment severance costs increased to \$23 million in 2010 from \$14 million in 2009. Employment severance costs recorded for the year ended December 31, 2010 relates to retrenchments in the South Africa region reflecting rationalization of operations at Great Noligwa, Kopanang, TauTona and Mponeng.

Table of Contents***Profit/loss on sale of assets, realization of loans, indirect taxes and other***

In 2010, the Company recorded a profit of \$3 million compared to a loss of \$10 million recorded in 2009. The profit in 2010 mainly related to profit on sale of investments held in B2Gold Corporation and Red 5 Limited, an insurance claim recovery at Savuka mine and royalties received. These profits were partially offset by the mandatory convertible bond underwriting and professional fees, the loss on disposal of land, equipment and assets, mineral rights and exploration properties and reassessment of indirect taxes payable in Tanzania, Brazil, Guinea and South Africa.

The loss in 2009 mainly related to the impairment of Pamodzi Gold debtor in South Africa whose operations were liquidated during October 2009, a loss on consignment stock and reassessment of indirect taxes payable in Tanzania, Brazil and Guinea being offset by the profit on disposal of the indirect 33.33 percent joint venture interest in Boddington Gold mine in Australia to Newmont Mining Corporation.

Non-hedge derivative loss

A loss on non-hedge derivatives of \$703 million was recorded in 2010 compared to a loss of \$1,452 million in 2009 (which included normal purchase and sale exempted (NPSE) contracts re-designated to non-hedging instruments during the period) relating to the use of non-hedging instruments. These represent derivatives not designated in formal hedge accounting relationships. The change in fair value of such derivatives is recorded each period in the income statement.

During 2010, the Company eliminated its gold hedge book. The loss on scheduled hedge book maturities during 2010 was \$277 million. Loss on non-hedge derivatives includes a realized loss of \$2,698 million relating to the final tranche of the accelerated hedge buy-back, that commenced in September 2010 and was concluded on October 7, 2010. The final phase of hedge restructuring was funded with proceeds from the equity offering and the mandatory convertible bonds in September 2010, as well as cash from internal sources and debt facilities.

Therefore, the loss on non-hedge derivatives recorded for the year ended December 31, 2010 relates to the accelerated hedge book settlement, normal realized losses on non-hedge derivatives, the fair value movement of the conversion features of convertible bonds and the revaluation of non-hedge derivatives resulting from changes in the prevailing spot gold price, exchange rates, interest rates, volatilities and non-performance risk during 2010.

During 2009, the Company embarked on a hedge buy-back that resulted in the accelerated settlement of both non-hedge and forward gold contracts qualifying for the normal purchases and sales exemption (which permits the Company to not record such amounts in its financial statements until the maturity date of the contract) under which the Company had committed to deliver a specified quantity of gold at a future date in exchange for an agreed price. Of the total hedge buy-back cost of \$797 million, the majority, being \$580 million, related to contracts previously designated as NPSE, which allowed them to be accounted for off-balance sheet in prior periods. A further \$217 million was also incurred in accelerating the cash settlement of existing non-hedge derivative contracts that were not previously designated as NPSE contracts. However, as a result of the accelerated cash settlement of the NPSE contracts during July 2009, the FASB ASC guidance on derivatives and hedging necessitated a review of the continuing designation of, and accounting treatment for, the remaining NPSE contracts that were not part of the accelerated settlement. As the Company continued to consider alternatives to reduce its outstanding gold derivatives position in future periods including, where appropriate, the accelerated settlement of contracts previously qualifying for the NPSE designation, management concluded, in accordance with the provisions of the FASB ASC guidance, to re-designate all remaining NPSE contracts as non-hedge derivatives and to account for such contracts at fair value on the balance sheet with changes in fair value accounted for in the income statement.

The impact in July 2009 of the related re-designation of the contracts discussed above resulted in an increase in the current non-hedge derivative liability and a consequential loss on non-hedge derivatives of \$543 million. During the remainder of 2009, the contracts that were previously NPSE designated experienced a further fair value decline (recorded in loss on non-hedge derivatives) of \$143 million, settlements of \$130 million and thus resulted in a \$556 million derivative liability balance as of December 31, 2009. During 2010, the contracts had a further fair value decline of \$131 million, before all these contracts were settled for \$687 million throughout the year.

Table of Contents

Non-hedge derivatives recorded for the years ended December 31, 2010 and 2009 included:

	Year ended December 31,	
	2010	2009
	(in US Dollars, million)	
Loss on realized non-hedge derivatives	2,975	543
Loss/(gain) on unrealized non-hedge derivatives	(2,273)	876
Fair value loss on option component of convertible bonds	1	33
Net loss	703	1,452

Movement on bonds

	Year ended December 31,	
	2010	2009
	(in US Dollars, million)	
Fair value loss on mandatory convertible bonds	83	-

Fair value movements on the mandatory convertible bonds relate to the ex interest NYSE closing price of these bonds.

Equity income in associates

Equity income in equity method investments decreased from \$88 million in 2009 to \$40 million in 2010, mainly as a result of a decrease in revenue from gold sales at Yatela and Morila mines in Mali from \$89 million and \$135 million, respectively, in 2009 to \$71 million and \$117 million, respectively, in 2010. The decrease was mainly due to a decrease in production in 2010 compared to 2009. The decrease in production was partially offset by the increase in the average spot price of gold for 2010.

Taxation expense/benefit

A net taxation expense of \$255 million was recorded in 2010 compared to a net tax benefit of \$33 million recorded in 2009. Charges for current tax in 2010 amounted to \$117 million compared to \$166 million in 2009. The decrease in the current tax charge in 2010 mainly related to tax benefits on losses relating to the early hedge settlement and tax benefits relating to prior year in South Africa. This decrease was partly offset by an increase in the tax charge due to higher income as a result of the higher gold price. Charges for deferred tax in 2010 amounted to a net tax expense of \$138 million compared to a net tax benefit of \$199 million in 2009. The increase in the deferred tax charge in 2010 is mainly related to the reversal of deferred tax on unrealized non-hedge derivative losses. Refer to Note 7 Taxation of the consolidated financial statements for deductible temporary differences expected to reverse.

Table of Contents

5B. LIQUIDITY AND CAPITAL RESOURCES

In the board's opinion, AngloGold Ashanti's working capital is sufficient to meet the Company's present requirements.

Operating activities

2011

Net cash provided by operating activities was \$2,550 million in 2011, higher than the 2010 amount of \$1,038 million. The increase in net cash provided by operations was mainly as a result of an increase in the average spot price of gold received during 2011 and the elimination of the hedge book in 2010.

Net cash outflow from operating working capital items amounted to \$131 million in 2011, compared with an outflow of \$314 million in 2010.

2010

Net cash provided by operating activities was \$1,038 million in 2010, higher than the 2009 amount of \$443 million. The increase in net cash provided by operations was mainly as a result of an increase in the gold price received during 2010.

Net cash outflow from operating working capital items amounted to \$314 million in 2010, compared with an outflow of \$21 million in 2009.

Investing activities

2011

Investing activities in 2011 resulted in a net cash outflow of \$1,603 million, which is a decrease of \$284 million from an outflow of \$1,887 million in 2010. Additions to property, plant and equipment increased to \$1,393 million in 2011 compared to \$973 million in 2010. Investing activities for non-hedge derivatives maturing resulted in an outflow of \$nil million in the year ended December 31, 2011 compared to an outflow of \$984 million for the same period in 2010.

2010

Investing activities in 2010 resulted in a net cash outflow of \$1,887 million, which is an increase of \$1,619 million from an outflow of \$268 million in 2009. Investing activities for non-hedge derivatives maturing resulted in an outflow of \$984 million in the year ended December 31, 2010 compared to an outflow of \$18 million for the same period in 2009. Proceeds received from the sale of assets decreased from \$1,142 million in 2009 to \$69 million in 2010 due to the inclusion of the sale of Boddington 2009.

Financing activities

2011

Net cash generated by financing activities in the year ended December 31, 2011 amounted to an outflow of \$319 million, which is a decrease of \$549 million from an inflow of \$230 million in the year ended December 31, 2010. Cash inflows from proceeds from loans in 2011 amounted to \$109 million and included gross proceeds of \$100 million raised from the \$1 billion Syndicated loan facility.

Cash outflows from repayment of debt of \$268 million during the year ended December 31, 2011 included the capital repayment of \$99 million towards the FirstRand Bank Limited loan facility, \$150 million towards the \$1.0 billion syndicated loan facility and normal scheduled loan repayments of \$19 million.

Dividends paid increased from \$117 million in 2010 to \$169 million in 2011. Dividends are proposed and approved by the board of directors of AngloGold Ashanti, based on the Company's financial performance. During the third quarter of 2011, the Company changed the frequency of dividend payments to quarterly, rather than half-yearly.

Table of Contents**2010**

During the second and third quarter of 2010, AngloGold Ashanti completed the following key financing transactions, namely:

The issue of two rated US dollar bonds maturing in 10 and 30 years aggregating \$1.0 billion. The net proceeds of \$983 million were applied to repay and cancel amounts drawn under the \$1.15 billion syndicated loan facility and the 2009 Term Facility;

The entering of a four year unsecured Syndicated loan facility with a group of banks for \$1.0 billion of which \$950 million remained undrawn as at December 31, 2010;

The entering of a ZAR1.5 billion (\$222 million) short-term loan from FirstRand Bank Limited, of which \$107 million was drawn as at December 31, 2010, to fund, in part, the closing of the hedge book; and

The raising of aggregate net proceeds of \$1,562 million in equal parts of a dual tranche capital raising comprising equity and three-year mandatory convertible bonds in order to, together with cash and drawings from credit facilities, fund the elimination of the hedge book.

Net cash generated by financing activities in the year ended December 31, 2010 amounted to an inflow of \$230 million, which is a decrease of \$73 million from an inflow of \$303 million in the year ended December 31, 2009. Cash inflows from proceeds from loans in 2010 amounted to \$2,316 million and included gross proceeds of \$994 million raised from the rated bonds issued during April 2010, \$789 million raised from mandatory convertible bonds during September 2010, \$326 million raised from the FirstRand Bank Limited loan facility raised and \$170 million raised from the \$1 billion Syndicated loan facility. Financing activities for non-hedge derivatives maturing resulted in an outflow of \$1,065 million in the year ended December 31, 2010 compared to an inflow of \$35 million for the same period in 2009. Debt issuance costs paid during the year ended December 31, 2010 included \$26 million on the mandatory convertible bonds and \$13 million on the rated bonds.

Cash outflows from repayment of debt of \$1,642 million during the year ended December 31, 2010 included the capital repayment of \$1,060 million towards the \$1.15 billion syndicated loan facility during June 2010, \$250 million towards the 2009 Term Facility, \$200 million towards the FirstRand Bank Limited loan facility, \$120 million towards the \$1.0 billion syndicated loan facility and normal scheduled loan repayments of \$12 million.

Dividends paid increased from \$56 million in 2009 to \$117 million in 2010.

Liquidity

AngloGold Ashanti's revenues are derived primarily from the sale of gold produced at its mines. Cash generated by operating activities is therefore the function of gold produced sold at a specific price. The market price of gold can fluctuate widely which impacts the profitability of the Company's operations and the cash flows generated by these operations.

AngloGold Ashanti's cash and cash equivalents increased to \$1,112 million at December 31, 2011 compared with \$586 million at December 31, 2010 (which includes \$11 million for held for sale assets). In accordance with South African Reserve Bank regulations, cash generated by South African operations is held in rands and is therefore subject to exchange controls. At December 31, 2011, approximately 50 percent of the Company's cash and cash equivalents were held in US dollars, 36 percent were held in South African rands and 14 percent were held in other currencies.

On May 22, 2009, the Company concluded an issue of convertible bonds, in the aggregate principal amount of \$732.5 million at an interest rate of 3.5 percent convertible into ADS of AngloGold Ashanti at an initial conversion price of \$47.6126. The conversion price is subject to standard weighted average anti-dilution protection. The convertible bonds were issued by AngloGold Ashanti Holdings Finance plc, a finance company subsidiary wholly-owned by AngloGold Ashanti Limited. The business of AngloGold Ashanti Holdings Finance plc is to issue debt securities to finance the activities of AngloGold Ashanti Limited and its subsidiaries and associates. AngloGold Ashanti Limited has fully and unconditionally guaranteed the convertible bonds issued by AngloGold Ashanti Holdings Finance plc. There are no significant restrictions on the ability of AngloGold Ashanti Limited to obtain funds from its subsidiaries by dividend, loan or advances. The convertible bonds mature on May 22, 2014.

Table of Contents

On April 22, 2010, the Company announced the pricing of an offering of a \$700 million 10-year note and a \$300 million 30-year note. The offering closed on April 28, 2010. The notes were issued by AngloGold Ashanti Holdings plc, a wholly owned subsidiary of AngloGold Ashanti Limited, and are fully and unconditionally guaranteed by AngloGold Ashanti Limited. The notes are unsecured and interest is payable semi-annually at a rate of 5.375 percent on the \$700 million bond and 6.50 percent on the \$300 million bond. The bonds are payable in April 2020 and April 2040, respectively.

In September 2010, the Company issued mandatory convertible bonds at a coupon rate of 6 percent due in September 2013. The conversion of the mandatory convertible bonds into ADSs was subject to shareholder approval, which was granted in October 2010. These bonds are convertible into a variable number of shares ranging from 18,140,000 at a share price equal to or lesser than \$43.50, to 14,511,937 at a share price equal to or greater than \$54.375, each as calculated in accordance with the formula set forth in the indenture and subject to adjustment. Concurrent with the mandatory convertible bonds offering was an equity offering which resulted in the issue of 18,140,000 shares at an issue price of R308.37 per share. Total gross proceeds of \$789 million were received from each of these offerings. The mandatory convertible bonds issued during 2010 are not included in basic earnings per ordinary share as they contain features that could result in their settlement in cash and therefore do not meet the definition of an equity instrument. The principal of this bond will be settled by the issue of shares as mentioned earlier and only the interest payments will be settled in cash.

On December 22, 2011, AngloGold Ashanti Australia Limited entered into a four year revolving credit facility of A\$600 million with a syndication of banks. Interest is charged at BBSY plus 2 percent per annum. AngloGold Ashanti Limited together with AngloGold Ashanti Holdings plc has each guaranteed all payments and other obligations of AngloGold Ashanti Australia Limited under the facility. Amounts may be repaid and reborrowed under the facility during its four year term. No draw down was made during 2011 under the facility. A commitment fee of 50 percent of the applicable margin is payable quarterly in arrears on the undrawn portion of the facility. This facility will be used to fund working capital and development costs associated with mining operations in Australia.

During 2012, approximately \$32 million of AngloGold Ashanti's debt is scheduled to mature, consisting mainly of interest payable under the Rated bonds and the Navachab Lewcor Mining contract loan.

AngloGold Ashanti intends to finance its capital expenditure and debt repayment requirements in 2012 from cash on hand, cash flow from operations, existing credit facilities and, potentially if deemed appropriate long-term debt financing, the issuance of equity and equity linked instruments.

Short-term debt

AngloGold Ashanti's short-term debt decreased to \$32 million at December 31, 2011 from \$135 million at December 31, 2010. Included in the short-term debt at December 31, 2011, were:

\$8 million in interest payable under the \$700 million 10-year bond (interest charged at 5.375 percent per annum; the bonds are repayable in April 2020 and are US dollar-based);

\$4 million in interest payable under the \$300 million 30-year bond (interest charged at 6.50 percent per annum; the bonds are repayable in April 2040 and are US dollar-based); and

\$8 million payable under the Navachab Lewcor Mining contract loan (interest charged at 8.40 percent per annum; the loan is repayable by April 2015 and is Namibian dollar-based).

Long-term debt

AngloGold Ashanti's long-term debt decreased to \$2,473 million at December 31, 2011 compared with \$2,602 million at December 31, 2010. As at December 31, 2011, the Company's long-term borrowings included:

Unsecured loans:

\$994 million outstanding under the \$700 million 10 year and \$300 million 30 year rated bonds issued April 2010 (interest charged at 5.375 percent and 6.50 percent, respectively, per annum; the bonds are repayable in April 2020 and April 2040, respectively, and are US dollar-based).

Edgar Filing: ANGLOGOLD ASHANTI LTD - Form 20-F

The fair value of \$758 million outstanding under the Mandatory Convertible Bonds issued September 2010 (quarterly coupons are paid at 6 percent per annum; the bonds are convertible into ADS until their maturity in September 2013 and are US dollar-based). The principal of this bond will be settled by the issue of shares as mentioned earlier and only the interest payments will be settled in cash.

\$659 million outstanding under the convertible bonds issued on May 22, 2009 (interest charged at 3.50 percent per annum; the bonds are convertible, at holders' option, into ADS up to May 2014 and are US dollar-based).

Table of Contents

Secured capital leases:

\$29 million is repayable to Navachab Lewcor Mining Contract for equipment financed (interest charged at a rate of 8.4 percent per annum. Loans are repayable in April 2015 and are Namibian dollar-based. The equipment financed is used as security for these loans).

\$33 million is repayable to Turbine Square Two (Proprietary) Limited for buildings financed (interest charged at an implied rate of 9.8 percent per annum, lease payments are payable in monthly installments terminating in March 2022, are rand-based and the buildings financed are used as security for these loans).

\$10 million is repayable to Caterpillar Financial Services Corporation (Interest charged at an average rate of 5.46 percent per annum. Loans are repayable in monthly installments terminating in January 2015 and are US dollar-based. The equipment financed is used as security for these loans.)

Table of Contents

As at December 31, 2011, AngloGold Ashanti's total long-term debt, including the short-term portion maturing within 2011, was made up as follows:

	\$ (million)
Unsecured loans	2,429
Secured capital leases	76
Total	2,505
Less: Short-term maturities	32
Long-term debt	2,473

Debt maturities are scheduled as follows:

	\$ (million)
2012	32
2013	773
2014	673
2015	4
2016	2
Thereafter	1,021
Total	2,505

At December 31, 2011 the currencies in which the borrowings were denominated were as follows:

	\$ (million)
United States dollars	2,437
South African rands	33
Brazilian real	6
Namibian dollars	29
Total	2,505

Repayments of short-term and long-term borrowings amounted to \$118 million and \$150 million, respectively, in 2011.

At December 31, 2011, AngloGold Ashanti had the following undrawn amounts available under its borrowing facilities:

	\$ (million)
Syndicated Loan Facility (\$1,0 billion) US dollar	1,000
Syndicated Loan Facility (A\$600 million) Australian dollar	617
FirstRand Bank Limited US dollar	50
Absa Bank Limited US dollar	42
Nedbank Limited US Dollar	2
FirstRand Bank Limited rands	14
Standard Bank of South Africa Limited rands	23
Nedbank Limited rands	13
Absa Bank Limited rands	4
Total undrawn	1,765

AngloGold Ashanti had no other committed lines of credit as of December 31, 2011.

As of December 31, 2011, the Company was in compliance with all debt covenants and provisions related to potential defaults.

Table of Contents

AngloGold Ashanti, through its executive committee, reviews its short, medium and long-term funding, treasury and liquidity requirements and positions monthly. The Audit Committee also reviews these on a quarterly basis at its meetings.

Commitments and contingencies

For a detailed discussion of commitments and contingencies, see note 20 to the consolidated financial statements Commitments and contingencies .

As at December 31, 2011, capital commitments⁽¹⁾ and contingencies can be summarized over the periods shown below as follows:

Commitment	Expiration per period				
	Total amount	1 year	1 3 years	4 5 years	Over 5 years
(in millions)	\$	\$	\$	\$	\$
Capital expenditure (contracted and not yet contracted) ⁽¹⁾	1,330	1,253	77	-	-
Guarantees	2,848	12	1,527	-	1,309
Other commercial commitments ⁽²⁾	463	334	68	42	19
Total	4,641	1,599	1,672	42	1,328

⁽¹⁾ Including commitments through contractual arrangements with equity accounted joint ventures of \$14 million (2010: \$12 million).

⁽²⁾ Excludes commitments through contractual arrangements with equity accounted joint ventures.

Table of Contents**Derivatives accounted for at fair value**

In the normal course of its operations, the Company is exposed to gold and other commodity price, currency, interest rate, liquidity and non-performance risk, which includes credit risk. The Company is also exposed to certain by-product commodity price risk. In order to manage these risks, the Company may enter into transactions which make use of derivatives. The Company has developed a risk management process to facilitate, control and monitor these risks. The board approves and monitors this risk management process, inclusive of documented treasury policies, counterpart limits, controlling and reporting structures. The Company does not acquire, hold or issue derivatives for trading purposes. Until 2010 the Company had utilized a number of derivatives as part of its hedging of these risks. In order to provide financial exposure to the rising spot price of gold and the potential for enhanced cash-flow generation the Company completed its final tranche of hedge buy-back program during 2010 and settled all forward gold and foreign exchange contracts that had been used by the Company in the past to manage those risks.

The estimated fair values of financial instruments are determined at discrete points in time based on relevant market information. The following table represents the change in fair value of all derivative financial instruments:

	\$ (million)
Fair value of derivatives at January 1, 2011	(175)
Option component of convertible bonds	84
Embedded derivatives	(1)
Warrants on shares	(1)
Fair value of derivatives at December 31, 2011	(93)

The fair value of the on-balance sheet derivatives at December 31, 2011 included:

	\$ (million)
Derivatives non-current liabilities	(93)
Derivatives net liabilities	(93)

The maturity of the fair value of derivatives as at December 31, 2011 was as follows:

Source of fair value	Maturity less than 1 year	Fair value of derivatives at December 31			Total Fair value
		Maturity 1 - 3 years	Maturity 4 - 5 years	Maturity excess of 5 years	
(in millions)	\$	\$	\$	\$	\$
Prices actively quoted	-	-	-	-	-
Prices provided by other external sources	-	-	-	-	-
Prices based on models and other valuation methods ⁽¹⁾	-	(92)	-	(1)	(93)

⁽¹⁾Fair value of volatility-based instruments (i.e. options) are calculated based on market prices, volatilities, credit risk and interest rates.

Recent developments

For a detailed discussion of recent developments, see note 29 to the consolidated financial statements Subsequent events .

Related party transactions

For a detailed discussion of related party transactions, see Item 7B.: Related party transactions .

Recently adopted accounting policies and pending adoption of new accounting standards

AngloGold Ashanti's accounting policies are described in note 4 to the consolidated financial statements. Significant accounting policies are described in note 2 to the consolidated financial statements. Accounting changes and recent pronouncements are described in note 4.27 to the consolidated financial statements. Recent pronouncements.

Table of Contents**Critical accounting policies**

AngloGold Ashanti's accounting policies are described in note 4 to the consolidated financial statements. Significant accounting policies are as follows. The preparation of the Company's financial statements in conformity with US GAAP requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosures of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the year. The following are considered to be the accounting policies that are most critical to the Company's results of operations, financial condition and cash flows.

Use of estimates and making of assumptions

The most critical accounting estimates upon which AngloGold Ashanti's financial reporting depends are those requiring estimates of Proven and Probable Reserves, recoverable ounces there from, and/or assumptions of future gold prices. Such estimates and assumptions affect the value of inventories (which are stated at the lower of average cost or net realizable value) and the potential impairment of long-lived assets and intangibles as detailed below. These estimates and assumptions also affect the rate at which depreciation and amortization are charged to earnings. On an ongoing basis, management evaluates its estimates and assumptions; however, actual amounts could differ significantly due to the ultimate conclusion of uncertainties.

Ore reserves and life-of-mines

AngloGold Ashanti estimates on an annual basis its Ore Reserves at its mining operations. There are a number of uncertainties inherent in estimating quantities of reserves, including many factors beyond the Company's control. Estimates of Ore Reserves are based upon engineering evaluations of assay values derived from samplings of drill holes and other openings. Additionally, declines in the market price of gold may render certain reserves containing relatively lower grades of mineralization uneconomic to mine. Further, availability of permits, changes in operating and capital costs, and other factors could materially and adversely affect Ore Reserves. The Company uses its estimates of Ore Reserves to determine the unit basis for mine depreciation and closure rates, and to evaluate mine asset impairments. Changes in estimates of Ore Reserves could significantly affect these items. At least annually, the Company reviews mining schedules, production levels and asset lives in the Company's life-of-mine planning for all of the Company's operating and development properties. Significant changes in the life-of-mine plans may occur as a result of mining experience, new ore discoveries, changes in mining methods and rates, process changes, investment in new equipment and technology and gold prices. Based on the life-of-mine analysis the Company reviews its accounting estimates and adjusts depreciation, amortization, reclamation costs and evaluation of each mine for impairment where necessary. Accordingly, this analysis and the estimates made therein have a significant impact on the Company's results of financial condition.

Drilling and related costs

Drilling and related costs incurred on sites without an existing mine and on areas outside the boundary of a known mineral deposit that contain proven and probable reserves are recorded as exploration expenditures and are expensed as incurred.

Drilling and related costs incurred to define and delineate a residual mineral deposit that has not been classified as proven and probable reserves at a development stage or production stage mine are capitalized when management determines that there is sufficient evidence that the expenditure will result in a future economic benefit to the Company in the accounting period when the expenditure is made. Management evaluates whether or not there is sufficient geologic and economic certainty of being able to convert a residual mineral deposit into a proven and probable reserve at a development stage or production stage mine, based on the known geologic and metallurgy, existing mining and processing facilities, operating permits and environmental programs. Therefore prior to capitalizing such costs, management determines that the following conditions have been met:

There is a probable future benefit;
AngloGold Ashanti can obtain the benefit and control access to it; and
The transaction or event giving rise to it has already occurred.

Table of Contents

The Company understands that there is diversity in practice within the mining industry, in that some companies expense the drilling and related costs incurred to define and delineate residual mineral deposits that have not been classified as proven and probable reserves at a development stage or production stage mine. Had AngloGold Ashanti expensed such costs as incurred, net income, earnings per share and retained earnings would have been lower by approximately the following amounts:

	000000000	000000000	000000000
	2011	2010	2009
Net income (\$ millions)	10	27	16
Earnings per share (cents) ⁽¹⁾	3	7	4
Retained income January 1 (\$ millions)	113	86	70
Retained income December 31 (\$ millions)	123	113	86

⁽¹⁾Impact per basic and diluted earnings per common share.

Contingencies

AngloGold Ashanti accounts for contingencies in accordance with the FASB ASC guidance for contingencies. It requires the recording of an estimated loss for a loss contingency when information available indicates that it is probable that an asset has been impaired or a liability has been incurred, and the amount of the loss can be reasonably estimated. Accounting for contingencies such as legal and income tax matters requires the use of judgments to determine the amount to be recorded in the financial statements. By their nature, contingencies will only be resolved when one or more future events occur or fail to occur and typically, those events will occur a number of years into the future. The Company assesses such contingent liabilities, which inherently involves the exercise of significant management judgment and estimates of the outcome of future events. Also, see **Taxation** discussed below.

Impairment of long-lived assets

AngloGold Ashanti's long-lived assets include property, plant and equipment, acquired properties, goodwill and other tangible assets. In assessing the potential impairment of its long-lived assets held for use, the Company must make assumptions regarding estimated future cash flows and other factors relating to the respective assets. To the extent that the carrying value of the long-lived asset as recorded in the consolidated financial statements exceeds the undiscounted cash flows associated with these assets, an impairment charge is recognized in the consolidated financial statements based on the fair value of the asset. The Company performs impairment tests for goodwill at least annually during the fourth quarter and whenever certain indicators of impairment exist. Impairment calculation assumptions are included in notes to the consolidated financial statements **Note 5 Costs and expenses**.

Taxation

AngloGold Ashanti follows the liability method of accounting for deferred taxation whereby the Company recognizes the tax consequences of temporary differences by applying current statutory tax rates applicable to future years to differences between financial statement amounts and the tax bases of certain assets and liabilities. Changes in deferred tax assets and liabilities include the impact of any tax rate changes enacted during the year. Deferred tax is estimated at the future average anticipated taxation rates at which temporary differences are expected to reverse. Future average anticipated taxation rates are determined from revenue and expenditure outlined in life-of-mine business plans that are revised annually. When a deferred tax asset arises the Company reviews the asset for recoverability and establishes a valuation allowance where the Company determines it is more likely than not that such an asset will not be realized. These determinations are based on the projected realization of tax allowances and tax losses. If these tax assets are not to be realized, an adjustment to the valuation allowance would be required, which would be charged to income in the period that the determination was made.

If the Company determines that it would be able to realize tax assets in the future in excess of the recorded amount thereof, an adjustment to reduce the valuation allowance would be recorded as a credit to income in the period that the determination is made. Management classifies taxes payable based on the likelihood of the amount required to be settled within twelve months, which are then reported within current liabilities. All other taxes payable are recorded within non-current liabilities.

Table of Contents***Provision for environmental rehabilitation***

AngloGold Ashanti's mining and exploration activities are subject to various laws and regulations governing the protection of the environment. The Company recognizes management's best estimate for asset retirement obligations in the period in which they are incurred. Actual costs incurred in future periods could differ materially from the estimates. Additionally, future changes to environmental laws and regulations, life of mine estimates and discount rates could affect the carrying amount of this provision. Changes in Mineral Reserves could similarly affect the useful lives of assets depreciated on a straight-line-basis, where those lives are limited to the life of mine.

Discounted closure liabilities (excluding joint ventures) increased from \$530 million in 2010 to \$653 million in 2011. This change is largely attributable to a change in mine plans resulting in accelerated cash flows, change in economic assumptions and discount rates, change in design of tailings storage facilities and change in methodology following requests from the Ghana Environmental Protection Agency.

Ore on Leach Pads

The recovery of gold from certain oxide ores is achieved through the heap-leaching process. Under this method, ore is placed on leach pads where it is permeated with a chemical solution, which dissolves the gold contained in the ore. The resulting pregnant solution is further processed in a process plant where the gold is recovered. For accounting purposes, costs are added to leach pads based on current mining costs, including applicable depreciation, depletion and amortization relating to mining operations. Costs are removed from the leach pad as ounces are recovered in circuit at the leach plant based on the average cost per recoverable ounce of gold on the leach pad.

The engineering estimates of recoverable gold on the leach pads are calculated from the quantities of ore placed on the pads (measured tons added to the leach pads), the grade of ore placed on the leach pads (based on assay data) and a recovery percentage (based on metallurgical testing and ore type). Leach pad production cycles vary from several months to multiple years dependant on the height of the heap leach pad. The increased height of the pad and the resultant associated lengthy transport time of the solution to the internal collection ponds from which the pregnant solution is pumped significantly increase the time from placement of ore to the ultimate gold recovery.

Although the quantities of recoverable gold placed on the leach pads are reconciled by comparing the grades of ore placed on pads to the quantities of gold actually recovered (metallurgical balancing), the nature of the leaching process inherently limits the ability to precisely monitor recoverability levels. As a result, the metallurgical balancing process is constantly monitored and the engineering estimates are refined based on actual results over time. Historically, AngloGold Ashanti's operating results have not been materially impacted by variations between the estimated and actual recoverable quantities of gold on its leach pads. For operations with long-term leach production cycles, variations in recovery estimates from new metallurgical data or production variances would be accounted for as an adjustment to the recoverable ounces and the average cost per recoverable ounce of gold on the leach pad. Variations between actual and estimated quantities resulting from changes in assumptions and estimates that do not result in write-downs to net realizable value are accounted for on a prospective basis. The ultimate recovery of gold from a pad will not be known until the leaching process has been concluded.

The costs of materials currently contained on the leach pad are reported as a separate line item. As at December 31, 2011 and 2010, \$98 million and \$91 million, respectively, was classified as short-term as the Company expects the related gold to be recovered within twelve months. The short-term portion of materials on the leach pad is determined by multiplying the average cost per ounce in inventory by the expected production ounces for the next twelve months. Heap-leach pad inventory occurs in two forms: (1) gold recoverable but yet to be dissolved (i.e. gold still in the ore), and (2) gold recoverable from gold dissolved in solution within the leach pad (i.e. pore water). This estimate calculation was used in determining the short-term portion of materials on the leach pad as at December 31, 2011. As at December 31, 2011, \$393 million was classified as long-term compared with \$331 million as at December 31, 2010.

Table of Contents

5C. RESEARCH AND DEVELOPMENT, PATENTS AND LICENSES, ETC.

Research and development expenditure included in the income statement amounted to \$1 million, \$4 million and \$3 million during 2011, 2010 and 2009 respectively.

5D. TREND INFORMATION

For a discussion of trends affecting AngloGold Ashanti's business and operations, see Item 5A.: Operating Results Key factors affecting results .

5E. OFF-BALANCE SHEET ARRANGEMENTS

AngloGold Ashanti does not engage in off-balance sheet financing activities, and does not have any off-balance sheet debt obligations, special purpose entities or unconsolidated associates. The most significant off-balance sheet item is the unaccrued future rehabilitation obligations.

See note 19 to the consolidated financial statements Provision for environmental rehabilitation .

Table of Contents**5F. TABULAR DISCLOSURE OF CONTRACTUAL OBLIGATIONS**

As at December 31, 2011 AngloGold Ashanti had the following known contractual obligations:

Contractual obligations

	Total	Less than 1 year	1-3 years	3-5 years	More than 5 years
(in millions)	\$	\$	\$	\$	\$
Long-term debt obligations including interest ⁽¹⁾	3,631	152	1,721	126	1,632
Capital lease obligations	105	20	38	12	35
Operating lease obligations	25	23	2	-	-
Purchase obligations					
- Contracted capital expenditure ⁽²⁾	202	202	-	-	-
- Other purchase obligations ⁽³⁾	463	334	68	42	19
Environmental rehabilitation costs ⁽⁴⁾	2,542	57	113	72	2,300
Derivatives ⁽⁵⁾	(93)	-	(92)	-	(1)
Pensions and other post retirement medical obligations ⁽⁶⁾	178	14	31	32	101
Uncertain taxes ⁽⁷⁾	78	-	40	-	38
Total	7,131	802	1,921	284	4,124

(1) Interest calculations are at the rate existing at the year end. Actual rates are set at floating rates for some of the debt (Refer Note 18 of Item 18). Certain of these obligations will be settled by the issue of equity, refer to Item 5B.: Liquidity and capital resources .

(2) Represents contracted capital expenditure for which contractual obligations exist. Amounts stated include commitments of equity accounted joint ventures.

(3) Other purchase obligations represent contractual obligations for mining contract services, purchase of power, supplies, consumables, inventories, explosives and activated carbon. Amounts stated exclude purchase obligations of equity accounted joint ventures.

(4) Operations of gold mining companies are subject to extensive environmental regulations in the various jurisdictions in which they operate. These regulations establish certain conditions on the conduct of operations by AngloGold Ashanti. Pursuant to environmental regulations, AngloGold Ashanti is also obligated to close their operations and reclaim and rehabilitate the lands upon which it conducted its mining and gold recovery operations. The present estimated closure costs at existing operating mines and mines in various stages of closure are reflected in this table. For more information of environmental rehabilitation obligations, see "Item 4B.: Business overview - Mine site rehabilitation and closure" and "Item 4B.: Business overview - Environmental, health and safety matters" . Amounts stated include a total estimated liability of \$57 million in respect of equity accounted joint ventures.

(5) Estimated fair value of all derivatives. Also see Item 5B.: Liquidity and capital resources Derivatives accounted for at fair value . Amounts stated include derivatives of equity accounted joint ventures.

(6) Represents payments for unfunded plans or plans with insufficient funding.

(7) Certain of the uncertain tax positions will prescribe in 2013 and 2014.

Table of Contents**ITEM 6: DIRECTORS, SENIOR MANAGEMENT AND EMPLOYEES****6A. DIRECTORS AND SENIOR MANAGEMENT****Directors**

AngloGold Ashanti has a unitary board structure which comprises two executive directors and eight non-executive directors. Certain information with respect to AngloGold Ashanti's directors as at December 31, 2011 is set forth below:

Name	Age	Position	Year first appointed ⁽¹⁾
Mark Cutifani	53	Executive director and chief executive officer	2007
Srinivasan Venkatakrishnan	46	Executive director, and chief financial officer	2005
Tito T Mboweni ⁽³⁾	52	Independent non-executive director and chairman	2010
Frank B. Arisman ⁽²⁾	67	Independent non-executive director	1998
Rhidwaan Gasant ⁽²⁾	52	Independent non-executive director	2010
Nozipho January-Bardill ⁽²⁾	61	Independent non-executive director	2011
William (Bill) A Nairn	67	Independent non-executive director	2001
Lumkile W (Wiseman) Nkuhlu ⁽²⁾	67	Independent non-executive director	2006/2009
Ferdinand Ohene-Kena	75	Independent non-executive director	2010
Sipho M Pityana	52	Independent non-executive director	2007

(1) Directors who do not have a contract of employment with the company (non-executive directors) serve for a period of three years unless re-elected. At each annual general meeting, directors appointed since the previous annual general meeting are required to retire, but are eligible for re-election. In addition, one-third of the non-executive directors (rounded down to the next whole number), must retire according to seniority or by lot but may be re-elected.

(2) Member of the Audit and Corporate Governance committee.

(3) Appointed as chairman with effect from June 1, 2010.

NON-EXECUTIVE CHAIRMAN:**Mr TT Mboweni (52)****BA, MA (Development Economics)***Chairman and independent non-executive director*

Tito Mboweni was appointed to the board and as Chairman of AngloGold Ashanti on June 1, 2010. He has a long and outstanding record of public service. As Labor Minister from 1994 to 1998, Mr Mboweni was the architect of South Africa's post-apartheid labor legislation which today continues to provide the basis for the mutually respectful labor relationships central to AngloGold Ashanti's operational approach in South Africa. He was the eighth Governor of the South African Reserve Bank from 1999 to 2009, and Chancellor of the University of the North from 2002 to 2005. He is also non-executive chairman of Nampak Limited and an international adviser to Goldman Sachs. Mr Mboweni is a founder member of Mboweni Brothers Investment Holdings. He is also chairman of the fund raising committee of the Nelson Mandela Children's Hospital and a trustee and chairman of the finance committee of the Thabo Mbeki Foundation. He is chairman of AngloGold Ashanti's Nominations Committee and is a member of the Investment, Financial Analysis and Party Political Donations committees.

EXECUTIVE DIRECTORS:**Mr M Cutifani (53)****BE (Mining Engineering)***Chief Executive Officer*

Edgar Filing: ANGLOGOLD ASHANTI LTD - Form 20-F

Mark Cutifani was appointed to the board of AngloGold Ashanti on September 17, 2007 and as Chief Executive Officer on October 1, 2007. He is chairman of the Executive Committee and a member of the Transformation and Human Resources Development; Safety, Health and Sustainable Development; Risk and Information Integrity; Party Political Donations Committee; and Investment Committees. Mark has considerable experience in gold mining, having been associated with the industry since 1976. Prior to joining AngloGold Ashanti, he was Chief Operating Officer at CVRD Inco, a Toronto-based company, where he was responsible for Inco's global nickel business.

Table of Contents**Mr S Venkatakrisnan (Venkat) (46)****BCom, ACA (ICAI)***Chief Financial Officer*

Venkat joined AngloGold Ashanti on July 1, 2004, having been Chief Financial Officer at Ashanti Goldfields Company Limited (Ashanti) until that company's merger with AngloGold Limited in May 2004. He was appointed to the board on August 1, 2005, is a member of the Executive, Risk and Information Integrity and Investment Committees and is invited to attend meetings of the Audit and Corporate Governance Committee. Venkat has extensive financial experience, having been a director in the reorganization services division of Deloitte & Touche in London prior to joining Ashanti in 2000. Venkat is a member of the audit committee of the World Gold Council and has recently been appointed to the Financial Reporting Investigation Panel, an advisory panel of the JSE.

NON-EXECUTIVE DIRECTORS:**Mr FB Arisman (67)****BA (Finance), MSc (Finance)***Independent non-executive director*

Frank Arisman joined the board of AngloGold Ashanti on April 1, 1998. He is chairman of the Financial Analysis and Investment Committees, and a member of the Safety, Health and Sustainable Development; Audit and Corporate Governance; Nominations; Risk and Information Integrity; and Remuneration Committees. Frank, who resides in the United States, has a rich background in management and finance through his experiences at JP Morgan where he held various positions prior to his retirement.

Mr R Gasant (52)**CA (SA)***Independent non-executive director*

Rhidwaan Gasant was appointed to the board of AngloGold Ashanti on August 12, 2010. He is chairman of the Risk and Information Integrity Committee and a member of the Audit and Corporate Governance, Nominations and Financial Analysis Committees. He is the former Chief Executive Officer of Energy Africa Limited and sits on the board of international companies in the MTN Group.

Mrs NP January-Bardill (61)**BA (Education), MA (Applied Linguistics)***Independent non-executive director*

Nozipho January-Bardill was appointed to the board of AngloGold Ashanti on October 1, 2011 and is a member of the Audit and Corporate Governance and Nominations Committees. She recently retired from the MTN Group where she served as an Executive Director and spokesperson and on the boards of a number of operations in the MTN footprint. She is former South African Ambassador to Switzerland, and former Deputy Director General, Human Capital Management and Head of the Foreign Service Institute in the then Department of Foreign Affairs (now DIRCO). She was reappointed as member of the UN Expert Committee on the Elimination of Racism, Racial Discrimination, Xenophobia and Related Intolerances for a four-year period from 2012-2015 (previously from 2000-2008). She is currently the founder and executive director of Bardill & Associates, a consulting company focusing on strategic communications, high-level government relations and stakeholder management.

Mr WA Nairn (67)**BSc (Mining Engineering)**

Independent non-executive director

Bill Nairn has been a member of the board of AngloGold Ashanti since January 1, 2000 and chairs the Remuneration Committee and is a member of the Safety, Health and Sustainable Development; Transformation and Human Resources Development; Investment; Party Political Donations; Risk and Information Integrity; and Nominations Committees. Bill, a mining engineer, has considerable technical experience, having been the Group Technical Director of Anglo American plc until 2004 when he retired from the company. Having completed the three-year cooling period, Bill is now considered an Independent Non-executive Director of AngloGold Ashanti.

Table of Contents

Prof LW Nkuhlu (67)

BCom, CA (SA), MBA (New York University)

Independent non-executive director

Wiseman Nkuhlu was appointed to the board on August 4, 2006. He has been the chairman of the Audit and Corporate Governance Committee since May 5, 2007, having served as deputy chairman from August 4, 2006. He also serves as a member of the Financial Analysis; Risk and Information Integrity; Safety, Health and Sustainable Development; Nominations, Party Political Donations; and Remuneration Committees. Wiseman, a respected South African academic, educationist, professional and business leader, served as Economic Adviser to the former President of South Africa, Mr Thabo Mbeki, and as Chief Executive of the Secretariat of the New Partnership for Africa's Development (NEPAD) from 2000 to 2005. From 1989 to 2000, he served as a director on a number of major South African companies, including Standard Bank, South African Breweries, Old Mutual, Tongaat Hulett, BMW and JCI. Wiseman was President of the South African Institute of Chartered Accountants from 1998 to 2000 and Principal and Vice Chancellor of the University of Transkei from 1987 to 1991. He is also a member of the board of Datatec Limited. He was elected President of the Geneva-based International Organization of Employers (IOE) in May 2008 for a period of two years. He is a member of the Financial Crisis Advisory Group of the International Accounting Standards Board (IASB) and the Financial Accounting Standards Board (FASB).

Mr F Ohene-Kena (75)

MSc (Engineering), DIC and ACSM

Independent non-executive director

Ferdinand (Fred) Ohene-Kena was appointed to the board of AngloGold Ashanti on June 1, 2010. He is the former Ghanaian Minister of Mines and Energy and is currently a member of the Ghana Judicial Council. He is the chairman of the Ghana Minerals Commission and a member of the President's Economic Advisory Council. Mr Ohene-Kena is a member of the Safety, Health and Sustainable Development; Transformation and Human Resources Development; and Nominations Committees.

Mr SM Pityana (52)

BA (Hons) (Essex), MSc (London), Dtech (Honoris) (Vaal University of Technology)

Independent non-executive director

Sipho Pityana joined the board of AngloGold Ashanti on February 13, 2007. He is the chairman of the Safety, Health and Sustainable Development Committee and is a member of the Remuneration, Party Political Donations, Investment, Nominations, Financial Analysis, Risk and Information Integrity and the Transformation and Human Resources Development Committees. Sipho has extensive experience in management and finance, and has occupied strategic roles in both the public and private sectors, including that of Director General of the national departments of both labor and foreign affairs. He was formerly a senior executive of Nedbank Limited and is currently the Executive Chairman of Izingwe Holdings (Proprietary) Limited, a local empowerment group and a significant investor in mining, engineering, infrastructure and logistics, and AngloGold Ashanti's BEE partner. He serves as a Non-executive Director on the boards of several other South African companies.

Mr RJ Ruston (61)

MBA, Business, BE (Mining)

Independent non-executive director

Rodney Ruston was appointed to the board of AngloGold Ashanti on January 1, 2012. Rodney, a mining engineer, has over 35 years of experience in the resources industry. He is currently the President and CEO of North American Energy Partners, a large Canadian mining and construction contracting company listed on the NYSE and the TSX.

Board movements during 2011

Edgar Filing: ANGLOGOLD ASHANTI LTD - Form 20-F

Mrs N P January-Bardill was appointed as a member of the board and as a member of the Audit and Corporate Governance Committee with effect from October 1, 2011.

In terms of the company's memorandum and articles of association, there is no mandatory retirement age for non-executive directors. Non-executive directors do not hold service contracts with the company.

In accordance with the articles of association of AngloGold Ashanti, all non-executive directors must retire at least once every three years by rotation and may be re-elected by shareholders. At the annual general meeting held on May 11, 2011, Mr W A Nairn and Mr S M Pityana who retired by rotation made themselves available for re-election and were appointed by shareholders at the annual general meeting.

Table of Contents

At the annual general meeting held on May 11, 2011, Mr T T Mboweni, Mr F Ohene-Kena and Mr R Gasant who were all appointed to the board since the last annual general meeting, retired from the board in terms of the company's articles of association, and having made themselves available for election to the board, were appointed by the shareholders.

Board movements subsequent to year-end

On January 1, 2012, Mr R J Ruston joined the board.

EXECUTIVE COMMITTEE

Day-to-day management of the group's affairs is vested in the Executive Committee, which is chaired by the Chief Executive Officer and comprises 12 members, four of whom head the regional operations. The committee's work is supported by country and regional management teams. During the year under review, three new members, Mike O Hare, Ria Sanz and Italia Boninelli, were appointed to the committee.

The committee met monthly to discuss operational matters and review the programs and activities being implemented to advance the achievement of the set of strategic goals on safety, asset portfolio-, financial-, people- and environmental management as well as stakeholder engagement.

In addition to Mr M Cutifani and Mr S Venkatakrishnan, the two executive directors, the following make up the Executive Committee. The business experience and functions of the executive committee members of AngloGold Ashanti, as at December 31, 2011 are as follows.

AngloGold Ashanti has determined that all members of the Executive Committee are prescribed officers within the meaning of section 66(10) and regulation 38 of the Companies Act of 2008.

Ms I Boninelli (55)

M (Psychology), post-graduate diploma in Labor Relations

Executive Vice President People and Organizational Development

Italia Boninelli joined AngloGold Ashanti on October 15, 2010 as Senior Vice President: Human Resources, Strategy and Change Management and was appointed to the Executive Committee on December 1, 2011 where she is responsible for the company's people strategy, transformation and change management initiatives. Italia has more than 25 years' experience in human resources, marketing communications, customer relationship management and business transformation, in a variety of industries including mining, manufacturing, healthcare and banking. She is a registered industrial psychologist with the Health Professions Council of South Africa, holds a masters degree in psychology and a post-graduate diploma in labor relations.

Dr CE Carter (49)

BA (Hons), DPhil, EDP

Executive Vice President Business Strategy

Charles Carter has worked in the mining industry in South Africa and the United States since 1991, in a range of corporate roles with Anglo American Corporation, RFC Corporate Finance and AngloGold Ashanti. He was appointed Executive Vice President Business Strategy in December 2007 and is currently responsible for corporate strategy and business planning, risk management, investor relations and Project ONE implementation.

Mr RN Duffy (48)

BCom, MBA

Executive Vice President Continental Africa

Edgar Filing: ANGLOGOLD ASHANTI LTD - Form 20-F

Richard Duffy joined Anglo American in 1987 and in 1998 was appointed Executive Officer and Managing Secretary of AngloGold. In November 2000, he was appointed Head of Business Planning and in 2004 assumed responsibility for all new business opportunities globally. In April 2005, this role was expanded to include greenfields exploration. He was appointed to the Executive Committee in August 2005. Richard was appointed Executive Vice President Continental Africa in July 2008.

Table of Contents

Mr GJ Ehm (55)

BSc Hons, MAusIMM, MAICD

Executive Vice President Australasia

Graham Ehm has, since 1979, gained diverse experience in mine operations and project management, covering the nickel, phosphate, copper, uranium and gold sectors. He was appointed General Manager of Sunrise Dam gold mine in 2000, Regional Head Australia in 2006 and Executive Vice President Australasia in December 2007. He assumed the role of Executive Vice President Tanzania on June 1, 2009 and during August 2010, resumed the position of Executive Vice President Australasia.

Mr RW Largent (51)

BSc (Mining Engineering), MBA

Executive Vice President Americas

Ron Largent has been with AngloGold Ashanti since 1994. He has served on the board of directors for the Colorado Mining Association, California Mining Association and Nevada Mining Association. In 2001, he was appointed General Manager of the Cripple Creek & Victor gold mine and took up his current role as Executive Vice President Americas in December 2007.

Mr RL Lazare (55)

BA, HED, DPLR, SMP

Executive Vice President

Robbie Lazare joined Anglo American Gold and Uranium Division in 1982, working in a variety of management posts until 1999 when he was appointed General Manager of TauTona. In December 2004, he was appointed an Executive Officer with responsibility for South African operations and in July 2008, Executive Vice President Human Resources. From November 17, 2009, Robbie was assigned to lead a strategy review of the South African operations and is now responsible for the South Africa region.

Mr MP O Hare (52)

BSc Engineering (Mining)

Executive Vice President South Africa

Mike O Hare joined Anglo American in 1977, and has held a number of positions at various gold mining operations within the group. His roles have included General Manager of Kopanang (1993), Great Noligwa (2003), Head of Mining and Mineral Resource Management Underground (2006), Vice President: Technical Support (2008), Senior Vice President: Operations and Business Planning for South Africa (2010), and in 2011, he was appointed Executive Vice President South Africa.

Mr AM O Neill (54)

BSc Engineering (Mining), MBA

Executive Vice President Business and Technical Development

Tony O Neill joined AngloGold Ashanti in July 2008 as Executive Vice President Business and Technical Development, having consulted to the company prior to this on its asset portfolio strategy. His extensive career in mining since 1978 included the roles of Executive Operations at Newcrest Mining Limited and Executive General Manager for gold at Western Mining Corporation.

Ms ME Sanz (46)

BCom LLB, H Dip Tax, Admitted Attorney

Group General Counsel

Maria (Ria) Sanz joined AGA in June 2011 having worked in a number of industries and major corporate organizations. She has held legal roles at Investec Bank, Basil Read, Afrox and Sappi. She was also Group Head of Sustainability at Sappi. She is responsible for Group legal services as well as compliance and company secretarial functions.

Ms Y Simelane (46)

BA LLB, MAP, EMPM

Senior Vice President Corporate Affairs

Yedwa Simelane joined AngloGold in November 2000 from the Mineworkers Provident Fund where she was the Senior Manager of the fund. She was appointed an Executive Officer in May 2004 and Vice President Government Relations in July 2008. In November 2009, she was appointed Senior Vice President Corporate Affairs with responsibility for government relations, corporate communication and marketing.

Table of Contents

OFFICE OF THE COMPANY SECRETARY

Ms L Eatwell (57)

FCIS, FCIBM

Lynda Eatwell joined AngloGold Ashanti in 2000 as Assistant Company Secretary and was appointed Company Secretary in December 2006. She is responsible for ensuring statutory compliance and corporate governance requirements by AngloGold Ashanti and its subsidiaries. She also advises members of the board on their duties and responsibilities as directors.

COMPETENT PERSONS

As part of its suite of annual reports, AngloGold Ashanti produces a Mineral Resource and Ore Reserve statement and all the information in this report that relates to Exploration Results, Mineral Resources and Ore Reserve is based on information compiled by the Competent Persons.

During the past decade, the company has developed and implemented a rigorous system of internal and external reviews of Exploration Results, Mineral Resources and Ore Reserves. A documented chain of responsibility exists from the Competent Persons at the operations to the Company's Mineral Resource and Ore Reserve Steering Committee. Accordingly, the Chairman of the Mineral Resources and Ore Reserve Steering Committee, Mr V A Chamberlain, assumes responsibility for the Mineral Resource and Ore Reserve processes for AngloGold Ashanti and is satisfied that the Competent Persons have fulfilled their responsibility.

VA Chamberlain (49)

MSc (Mining Engineering), BSc (Hons) (Geology), MAusIMM

Vaughan has 26 years experience and holds a Bachelor of Science (Honors) degree in Geology from the University of Natal and a Masters degree in Mining Engineering from the University of the Witwatersrand. He started his career with Anglo American Corporation in 1987 as a geologist at Western Deep Levels East Mine (now TauTona mine). He joined AngloGold in 1998 and currently holds the position of Senior Vice President: Geology and Metallurgy and is chairman of the Mineral Resources and Ore Reserves Steering Committee.

Table of Contents

6B. COMPENSATION REMUNERATION COMMITTEE

Remuneration Committee

The Remuneration Committee comprises independent non-executive directors and is responsible for evaluating the performance of executive directors and executive management, and for setting appropriate remuneration for such officers of the company.

The performance of each executive director is assessed relative to the prevailing business climate and market conditions, as well as to annual evaluations of the achievement of key predetermined targets. Bonuses paid to executive directors are a reflection of the performance of each of the directors and the company as a whole.

The members of the remuneration committee during 2011 are reflected below:

Members

WA Nairn (Chairman)

FB Arisman

TT Mboweni

Prof LW Nkuhlu

SM Pityana

All meetings of the committee are attended by the chief executive officer and executive vice president – human resources, except when their own remuneration or benefits are being discussed. The services of PricewaterhouseCoopers were retained to act as independent, expert advisers on executive remuneration.

Remuneration principles

The Remuneration Committee sets and monitors executive remuneration for the company and ensures that pay practices meet all legislative and governance requirements and operates according to the following terms of reference:

- Aligning executive and management remuneration with the company's performance and shareholder interest;
- Setting remuneration standards which attract, retain and motivate a competent executive and management team;
- Linking individual pay with operational and the company's performance in relation to strategic objectives; and
- Evaluating compensation of executives including approval of salary, equity and incentive based awards.

To support them in the delivery of these objectives the remuneration policy is designed to address each of these objectives. The following principles remain in place to support this delivery:

- To align the behaviour and performance of the executives with the strategic goals, all incentive plans have performance criteria in place that align targets to shareholder interest;
- To attract, retain and motivate executives of the requisite caliber, executive remuneration is benchmarked against a comparator group of global and South African mining and multinational companies;
- A large portion of the executives' pay is linked to the performance of the company and the creation of shareholder value; and
- On-going evaluation of the executive pay elements led to the introduction of a cash-based retention scheme in 2008 with a three-year settlement period. This has not been renewed for the executives but rather the decision was taken to review the LTIP allocations in line with the outcomes of the market benchmarking exercises in 2011.

Edgar Filing: ANGLOGOLD ASHANTI LTD - Form 20-F

Through 2011 the following changes occurred to continue with the delivery of these principles:

Executive LTIP allocations were increased following the benchmarking review as follows:

Designation	Previous maximum grant of basic salary	Increased maximum grant of basic salary
Chief executive officer	120%	160%
Executive directors	100%	140%
Executive management	80%	100%

Table of Contents

The Remuneration Committee approved a revised Remuneration Policy that was communicated and ratified at the May 2011 annual general meeting; and

A review was done on the existing change of control conditions and although the decision has been made to leave them in place due to the current economic environment and on-going change in the market, the Remuneration Committee requested an alignment of executive vice president notice periods to six months and change of control practices now include payment triggers and aligned terms.

The Remuneration Committee is comfortable that these principles continue to support the delivery of its objectives.

Remuneration process

How we determine remuneration

Executive remuneration is structured to be competitive in a global market where growth and a scarcity in key talent and skills are an on-going dilemma, whilst still recognizing cost and shareholder value as key drivers in policy delivery. AngloGold Ashanti executives are benchmarked against an identified global group of competitors. AngloGold Ashanti's size and complexity as well as each executive individual role and personal performance are reviewed annually against the benchmark group from a base pay, guaranteed pay and variable pay perspective. The benchmark survey for 2011 was completed by PricewaterhouseCoopers, using both benchmark data as well as data provided in remuneration reports of the identified comparator group. To ensure that the correct amount of rigour is placed on the process the Remuneration Committee went to tender for a bespoke survey for the 2012 benchmarking process and selected Global Remuneration Solutions in collaboration with Mercer for the executive pay review comparison to market.

Our salary benchmarks are targeted at the market median, however, where there is a shortage of specialist and/or key technical skills, higher than the benchmark median is paid, targeting the 75th percentile.

Annual increases for executives are effective on January 1, of each year.

Executives are remunerated on a principle of base pay plus benefits; medical coverage, retirement/pension and risk cover do however differ based on nationality, country legislation and historic offerings. All executives are members of a retirement fund.

Executive directors do not receive payment of directors fees or committee fees.

Retirement benefits/pension

Retirement benefits are granted to all executives. All new executives and employees receive retirement benefits under defined contribution plans. Legacy defined benefit plans remain in place for some executives. Contributions vary from those prescribed by the USA 401(k) defined contribution fund, to the legacy defined benefit plan.

(1) Where directors' compensation is paid in South African rands, for the purposes of this annual report on Form 20-F, the rand values have been converted to US dollar using the following year-to-date average rate of exchange R7.2569:\$ (2010: R7.3028:\$).

(2) Salaries are disclosed only for the period from or to which office was held.

(3) In order to more accurately disclose remuneration received/receivable by executive directors and executive management, the tables above include the performance related payments calculated on the year's financial results.

(4) Includes health care, personal travel and retention payments.

Edgar Filing: ANGLOGOLD ASHANTI LTD - Form 20-F

- (5) Pursuant to AngloGold Ashanti's policy regarding the number of leave days that may be accrued, all surplus leave days accrued are compulsorily encashed.
 - (6) Pursuant to the Companies Act of 2008 (as amended), which came into effect on May 1, 2011, companies are required to identify and disclose the remuneration, including options/awards granted in terms of the share incentive scheme, for the prescribed officers of the company.
 - (7) Pursuant to King III, companies are required to disclose the remuneration of the top three earners in the company.
 - (8) Performance-related payments include cash payments in lieu of shares pending retirement.
 - (9) Other benefits and encashed leave includes an adjustment to performance bonus relating to the 2010 financial year.
- Rounding of figures may result in computational discrepancies.

Table of Contents**NON-EXECUTIVE DIRECTORS COMPENSATION**

The fees of non-executive directors are fixed by shareholders at the annual general meeting and, other than the fees they receive for their participation on board committees and allowance for travelling internationally to attend board meetings, non-executive directors receive no further payments from the company and are precluded from participation in the company's share incentive scheme.

At the annual general meeting of shareholders held on May 11, 2011, shareholders approved an increase to the fees payable to non-executive directors.

The increases as approved by shareholders are shown below:

1.1 Non-Executive Directors fees for six board meetings per annum

1.1	Board Meetings	Fees to May 31, 2011 per annum	Fees from June 1, 2011 per annum
1.1.1	South African resident Chairman	R1,520,300	R1,672,330
1.1.2	South African resident Deputy Chairman	R650,000	R747,500
1.1.3	South African resident directors	R270,000	R310,500
1.1.4	Non-South African resident directors who are resident in Africa	US\$33,750	US\$42,188
1.1.5	Non-South African resident directors who are resident in jurisdictions other than Africa	US\$60,000	US\$66,000

1.2 Allowance for attendance by non-executive directors at additional board meetings

Each non-executive director will be entitled to an allowance for each board meeting attended by such director, in addition to the six scheduled board meetings per annum, as follows:

1.2	Additional Board Meetings	Fees to May 31, 2011 per meeting	Fees from June 1, 2011 per meeting
1.2.1	South African resident Chairman	R78,000	R85,800
1.2.2	South African resident Deputy Chairman	R32,400	R37,260
1.2.3	South African resident directors	R16,000	R18,400
1.2.4	Non-South African resident directors who are resident in Africa	US\$2,000	US\$2,500
1.2.5	Non-South African resident directors who are resident in jurisdictions other than Africa	US\$3,000	US\$3,300

1.3 Travel allowance to be paid to non-executive directors who travel from outside South Africa to attend board meetings

Each non-executive director who is not in South Africa and who travels to attend board meetings will be entitled to receive a travel allowance on the basis set out below. In addition to the travel allowance payable, the company will cover all accommodation and sundry costs. The travel allowance for directors outside South Africa who attend board meetings is as follows:

1.3	Additional Board Meetings	Fees to May 31, 2011 per meeting	Fees from June 1, 2011 per meeting
1.3.1	South African resident directors	Rnil	Rnil
1.3.2	Non-South African resident who are resident in Africa	US\$6,000	US\$7,500

1.3.3	Non-South African resident directors who are resident in jurisdictions other than Africa	US\$8,000	US\$8,800
-------	--	-----------	-----------

Table of Contents**2.1 Board committee fees payable to non-executive directors**

The fee paid to each non-executive director in respect of such director's membership of a committee of the board is as follows:

2.1	Board Committee Meetings	Fees to May 31, 2011 per annum	Fees from June 1, 2011 per annum
<i>Audit and Corporate Governance Committee</i>			
2.1.1	Chairman - South African resident	R160,000	R184,000
2.1.2	Member - South African resident	R135,000	R155,250
2.1.3	Member - Non-South African resident who are resident in Africa	US\$16,875	US\$21,094
2.1.4	Member - Non-South African resident who are resident in jurisdictions other than Africa	US\$25,315	US\$27,847

Other Committees (being Investment, Remuneration, Safety, Health and Sustainable Development, Transformation and Human Resource Development, Risk and Information Integrity and such other committees of the board as may be established from time to time)

6C. BOARD PRACTICES

The Board of Directors

The strategic leadership of AngloGold Ashanti is the responsibility of a unitary board, comprising two executive directors and eight independent non-executive directors as at 31 December 2011. Post year-end, another independent non-executive director, Mr RJ Ruston, was appointed. The board has delegated some of its responsibilities to its subcommittees but reserves certain areas of responsibility solely for itself.

The following movements to the board of directors took place during the period from January 1, 2011 to December 31, 2011 and subsequent to year-end.

Executive directors

There were no changes to the executive directorate during the year under review.

Non-executive directors

Dr TJ Motlatsi retired from the board on February 17, 2011.

Ms NP January-Bardill was appointed as a member of the board with effect from October 1, 2011 and as a member of the Audit and Corporate Governance Committee with effect from November 2, 2011.

Mr RJ Ruston was appointed as a member of the board with effect from January 1, 2012.

The directors retiring by rotation at the forthcoming annual general meeting in terms of the articles of association are, Prof LW Nkuhlu and Mr WA Nairn. Both Prof Nkuhlu and Mr Nairn have made themselves available for re-election at the annual general meeting to be held on May 10, 2012.

Ms NP January-Bardill and Mr RJ Ruston, who were appointed as directors on October 1, 2011 and January 1, 2012 respectively, will retire at the annual general meeting but offer themselves for election.

In terms of the company's memorandum of incorporation, there is no mandatory retirement age for non-executive directors. Non-executive directors do not hold service contracts with the company.

Appointment of directors

The board is authorised by the company's Memorandum of Incorporation to appoint new directors based on recommendations by the Nominations Committee. Newly appointed directors are required to retire at the next annual general meeting following their appointment and stand for election by shareholders. Eligibility for appointment as a director is guided by the Director's Fit and Proper Standards Policy, requirements of the Companies Act of 2008, King III and best practice.

Non-executive directors receive fees for their services as directors which are approved by shareholders at annual general meetings. Non-executive directors do not participate in the company's share incentive scheme.

Executive directors have contracts of employment with the company.

Executive Committee

Day-to-day management of the group's affairs is vested in the Executive Committee, which is chaired by the Chief Executive Officer and comprises 12 members, four of whom head the regional operations. The committee's work is supported by country and regional management teams. During the year under review, three new members, Mike O'Hare, Ria Sanz and Italia Boninelli, were appointed to the committee.

The committee met monthly to discuss operational matters and review the programs and activities being implemented to advance the achievement of the set of strategic goals on safety, asset portfolio-, financial-, people- and environmental management as well as stakeholder engagement.

Prescribed officers

In terms of Section 66(10) together with regulation 38 of the Companies Act of 2008, AngloGold Ashanti has determined that all members of the Executive Committee are prescribed officers.

Table of Contents**Service contracts**

An annual review is done of executive director and executive management service contracts. The change of control payments and conditions are subject to the following triggers:

If AngloGold Ashanti becomes a subsidiary of another company; or substantially all of the businesses, assets and undertakings of AngloGold Ashanti become owned by any person, firm or company; or a number of shareholders holding less than 35 percent of the company's issued share capital act in concert to gain a majority of the board and force changes in the management of the company; and as a consequence of this the Executive Committee member's employment is terminated as a result of an involuntary termination or the committee member's role is significantly diminished and employment conditions are reduced.

In 2011, the notice periods and change of control clauses were aligned as per the table below:

Executive committee member	Payment in lieu of notice period	Change of control
Chief executive officer	12 months	12 months
Chief financial officer	9 months	9 months
Executive Committee members	6 months	6 months

Non-executive directors do not hold service contracts with the company. Executive directors do not receive payment of directors' fees or committee fees.

Board activities in 2011

Outside of meeting on a collective basis, individual board members, especially the chairman of the board, the chairman of the Audit and Corporate Governance Committee and the chairmen of the other board committees, actively and continuously engage with management and other stakeholders on important matters, thereby enabling the board to provide the required strategic leadership.

The following are some key actions and programs undertaken and implemented by the board in 2011 in fulfilling its functions and responsibilities regarding strategic oversight:

- Discussed and approved management's budget proposals for the 2012 financial year;
- Evaluated and approved management's five-year strategic proposals;
- Examined ways of improving long-term value to shareholders;
- Discussed and approved, capital expenditure proposals submitted by management on a quarterly basis;
- Reviewed and approved an enterprise resource planning (ERP) project for the group;
- Approved the Group Information Technology Strategic Plan;
- Visited various mines and exploration sites to observe and acquire a better understanding of the operations;
- Accessed the skills set of the board which resulted in the appointment of two new independent non-executive directors;
- Reviewed composition of and restructured committees to enhance skills set and improve effectiveness of discussions;
- Reviewed the independence of each non-executive director in accordance with policy and best practice guidelines;
- Approved a formal role description for the chairman of the board;
- Approved an Alternative Dispute Resolution Policy in accordance with recommendations of King III; and
- Considered the necessary information to provide an assessment of internal controls.

Board committees

The board has established and delegated specific roles and responsibilities to ten standing committees, including the Executive Committee, to assist it in discharging its duties and responsibilities. The terms of reference of each committee are approved by the board and reviewed annually or as necessary.

All committees, except the Executive Committee, are chaired by independent non-executive directors and the following committees comprise non-executive directors only – Audit and Corporate Governance, Nominations, Remuneration and Financial Analysis.

All committees meet quarterly in accordance with their terms of reference, except the Party Political Donations, Nominations and Financial Analysis committees which meet on a need-to basis. Members of the Executive Committee and other management attend meetings of the various committees as and when required. During 2011, all committees held the minimum number of meetings as required and discharged their

duties as prescribed by the respective terms of reference.

Table of Contents

The Party Political Donations Committee did not meet during 2011.

Audit and Corporate Governance Committee

In accordance with best practice recommendations of King III and the Sarbanes-Oxley Act of the United States, membership of this committee comprises four independent non-executive directors. Several members of the executive team and management, including the Chief Executive Officer, the Chief Financial Officer, the Chief Accounting Officer, the Group Internal Auditor, Financial Controllers at the regional operations as well as the external auditors attended the committee's quarterly meetings. Members of the committee regularly engage with key members of the financial management team for discussion on matters relevant to the committee's role.

Pursuant to the Companies Act of 2008, King III and best practice, the committee, amongst others:

- Reviewed and approved the external auditors' fees and the integrated audit plan for the 2011 financial year;
- Reviewed the performance of the external auditors and recommended their reappointment;
- Considered, and pre-approved, on a quarterly basis, non-audit services provided by all external auditors to the group;
- Reviewed the independence of the external audit team and audit partner and concluded that they were independent for the 2011 audit year;
- Reviewed the 2010 annual reports and 2011 quarterly reports on behalf of the board.
- Received and reviewed, on a quarterly basis, the use of the company's whistle-blowing facility and advised on ways to enhance its use;
- Reviewed, on a quarterly basis, submissions by management on the state of the group's financial affairs, internal control environment and auditing and reporting thereof to the board;
- Reviewed the expertise, resources and experience of the finance function and the Chief Financial Officer;
- Monitored implementation of recommendations on audit findings;
- Monitored the activities of the group's internal audit function and also ensured that it was sufficiently resourced to discharge its duties;

Edgar Filing: ANGLOGOLD ASHANTI LTD - Form 20-F

Reviewed and approved a combined assurance framework and an integrated audit process;
Monitored, on behalf of the board, application of the principles of King III and compliance with the requirements of the Companies Act of 2008;

Table of Contents

Received a briefing from a legal firm on the requirements of the Companies Act of 2008 so as to enable it to effectively advise on and monitor implementation of the Act by management;
Monitored developments in IFRS and US GAAP accounting standards through regular updates from management and a formal training session, with the main objective of ensuring that the company's accounting practices complied with relevant standards;
Received quarterly briefings and updates on the roll-out of the Code of Business Principles and Ethics and matters relating to compliance;
Received and reviewed on a quarterly basis, reports on major litigations and disputed cases so as to assess their likely outcome and their potential financial and other impact on the group; and
Assisted and advised management to develop a legal and regulatory framework to monitor compliance with relevant laws and regulations.

Risk and Information Integrity Committee

This committee which was established in August 2010, held its first meeting in November 2010 and became fully operational during 2011. The committee was established to not only comply with the recommendations of King III but also to improve the management of risk and information technology which are important tools for the achievement of business objectives.

Below are the salient matters deliberated on by the committee during 2011.

Risk management: The board has ultimate responsibility for the group's risk management and exercised its oversight responsibilities through the Risk and Information Integrity (R&II) Committee. Major risk management oversight responsibilities that took place during 2011 included the following:

The committee guided management in the implementation of its 2011 risk management plan. At its meeting held in November 2011, achievements under the plan were assessed against set objectives and a significant improvement in risk management as noted; and

The Risk Management Plan for 2012, developed in line with the recommendations of King III on risk management and the terms of reference of the committee and which set out the activities of the risk management team for 2012, was reviewed and approved.

Information technology: Information technology is core to AngloGold Ashanti's strategic business planning and execution. Information Technology matters have therefore become a strategic focus for the board as a business imperative as well as an application of best practice recommendations by King III.

A major development in Information Technology Management in 2011 was the approval of an enterprise resource planning project. The main objective of the project is to remove the unacceptable high level risk from obsolete information systems, improve the group's decision-making capability through a uniform information system throughout the organization and support ongoing organizational improvement initiatives. It will create a new information systems environment that is world class to support the vision of AngloGold Ashanti to be the leading mining company. Other major information technology improvement activities that took place in 2011 included the following:

A Chief Information Officer was employed in August 2011 to strengthen information technology management;

An information technology plan for the AngloGold Ashanti group was considered by the committee and, based on its recommendations, was approved by the board on November 7, 2011. The plan will guide the implementation of information technology programs; and

An international best practice information technology governance framework and the control objectives for information technology (CoBIT), which contain a comprehensive set of IT processes and a measurement framework for measuring the maturity of those processes within a company, were adopted by the group.

Business insurance: Business insurance is a critical component of risk management in AngloGold Ashanti. The R&II committee assumed oversight responsibility for insurance matters during 2011. It reviewed the group's insurance policies for 2011/2012 insurance year to ensure that adequate cover for the company's assets and employees was in place.

In order to ensure that its insurance is effectively and efficiently managed, AngloGold Ashanti established AGRe Insurance Company Limited, an in-house South African registered captive insurance company in 2002, with a branch in Switzerland.

Table of Contents

Safety, Health and Sustainable Development Committee

In accordance with its mandate, the Safety, Health and Sustainable Development (SHSD) committee played an active role in advising and monitoring the group's performance on safety, health, the environment, the nature and level of interactions with the communities in which the company operates and security issues around its operations, with due emphasis on practices that conform with the company's values on sustainable development.

Safety remains AngloGold Ashanti's first value and continues to form a key component of management's operational deliverables.

During 2011, the main focus of the committee's deliberations was the implementation of safety targets under the safety improvement initiative and safety transformation. The committee also reviewed strategies to improve the health and well-being of employees and their families especially in relation to HIV/AIDS and malaria. Illegal mining continued to raise concerns across the company's operations, especially in West Africa. The committee is addressing these concerns with a view to finding alternative and sustainable solutions to improve the socio-economic standards of the communities.

The issues deliberated on at the committee's meetings during 2011 are reported on in various sections of this report.

Transformation and Human Resources Development Committee

AngloGold Ashanti subscribes to the South African government's initiatives on social transformation and the labor localisation policies of other operational jurisdictions.

The Transformation and Human Resources Development (THRC) Committee has been mandated by the board to oversee compliance with these laws and to guide the development and implementation of policies to develop the skills and talents of employees groupwide, and to support the achievement of social transformation and localisation targets.

Remuneration Committee

In accordance with its mandate, the Remuneration Committee oversees matters relating to the remuneration of executive directors and the executive management and considered issues relating to competitive and equitable remuneration.

Nominations Committee

During the year under review, the Nominations Committee assessed the skills mix of the board as well as the outcomes of the 2010 annual self-performance evaluation of the board. It recommended a review of the structures of some of the board sub-committees and the appointment of two new independent non-executive directors.

Investment Committee

This committee deliberated on matters pertaining to the company's strategic plans as they relate to the management of its asset portfolio. It debated several investment proposals, made appropriate recommendations to the board and monitored the management of approved projects to ensure these complied with project specifications.

Financial Analysis Committee

In line with AngloGold Ashanti's policy of maintaining healthy stakeholder relationships at all times, the company responded to a request by the unions in South Africa to restructure the Black Economic Empowerment (BEE) transaction that was implemented in 2006 but which failed to deliver the expected value to employees. In April 2011, the Financial Analysis Committee examined the proposed restructured BEE transaction and, based on its recommendations, the board approved the transaction which was presented to, and approved by shareholders on May 11, 2011.

Organizational improvement projects

Embedding of the main organizational improvement initiative, Project ONE, which incorporates the Business Process Framework (BPF) and the Systems for People (SP), continued throughout the organization. Tangible and positive results are being recorded in several areas of the group's operations.

Table of Contents**6D. EMPLOYEES**

The average number of attributable employees (including contractors) in the AngloGold Ashanti group over the last 3 financial years was:

	2011	2010	2009
South Africa	32,082	35,660	37,425
Continental Africa	16,539	15,761	15,267
Australasia	509	494	1,776
Americas	7,389	6,582	5,884
Other, including corporate and non-gold producing subsidiaries	4,723	3,549	3,012
Total	61,242	62,046	63,364

Labor relations and collective bargaining

AngloGold Ashanti recognizes the fundamental right of freedom of association of all employees and contractors, and adheres to collective bargaining agreements with due regard to the relevant legislation in the countries in which it operates. Relations with organized labor are founded on mutual respect, and wage negotiations are conducted in line with the company's values.

Approximately 81 percent of AngloGold Ashanti's full-time employees are either members of a union or are catered for through collective bargaining agreements. Exceptions are the United States and Australia, where employees are not members of unions, but where a high degree of employee participation in wage discussions is encouraged. Wage settlements are specific to each jurisdiction in which AngloGold Ashanti operates and the company's approach is to ensure that agreements are fair but realistic, taking into account the local economic context and the impact of any settlement on the long-term viability of the business.

High levels of unionization occur at operations in South Africa, Brazil, Argentina and areas of West Africa. In Tanzania, although employees are free to join unions and management liaises regularly with unions represented, no single union has reached the minimum number of members required to be officially recognized as representative for purposes of collective bargaining.

In South Africa, a two-year wage settlement was reached in August 2011 effective July 1, 2011.

In Ghana and Guinea, settlements were reached without the loss of production. However, the negotiation processes were protracted and several months were required to reach agreement.

In response to the industrial relations environment and the sometimes volatile economic and political context in which the company operates in West Africa, an integrated strategy for collective bargaining is being implemented, with the aim of creating a framework within which the company and organized labor can improve their relationship and, through collective bargaining, agree on conditions of employment in an efficient and mutually beneficial manner. The approach is a holistic one, where issues relating to the political, economic and social environment are considered in the development of this strategy.

A pro-active approach to labor relations, integrated with other management initiatives, has been adopted at AngloGold Ashanti's operations in Argentina, where the uncertain political and economic climate has the potential to affect relations between the various labor groups and between management and employees. Frequent dialogue with union leaders at local, provincial and national level has taken place during the year. The climate among employees is also monitored, and management communicates proactively with employees to ensure that they are well informed about their conditions of employment.

Table of Contents

The collective bargaining agreement that applies to the company's employees at Cerro Vanguardia in Argentina is due to expire in May 2012. The trade unions have requested significant salary increases. The company and the unions have entered into a transitional agreement that provides for an average salary increase across all wage categories of approximately 17 percent and expect to negotiate a final salary increase in connection with the new collective bargaining agreement. The company may not be able to renegotiate this agreement on satisfactory terms when it expires. In particular, the new agreement may result in significantly higher labor costs for the company's Argentine operations. The unions may also resort to industrial action in connection with the renegotiation of the agreement.

The group is committed to upholding the basic labor rights as expressed in the International Labour Organization (ILO) instruments and as implemented through specific practices in the countries where AngloGold Ashanti operates.

In support of these rights, AngloGold Ashanti concluded the Agreement on the Promotion and Implementation of Good Human and Labour Relations in AngloGold Ashanti Operations Worldwide with the International Federation of Chemical, Energy, Mine and General Workers Unions (ICEM) in April 2009. The agreement reflects all the elements of AngloGold Ashanti's human resources and labor relations practice as well as the requirements for sound and fair labour practice in accordance with the South African Labour Relations Act. The principles of the agreement are integrated into regional human resources management policies and practices where appropriate.

Table of Contents**6E. SHARE OWNERSHIP****DIRECTORS AND PRESCRIBED OFFICERS INTERESTS IN ORDINARY SHARES**

The interests of directors and prescribed officers in the ordinary shares of the company at December 31, 2011 which did not individually exceed 1 percent of the company's issued ordinary share capital, were:

	Beneficial		Beneficial	
	Direct	Indirect	Direct	Indirect
	December 31, 2011		December 31, 2010	
Non-executive directors				
FB Arisman	-	4,984	-	4,984
LW Nkulu	-	800	-	800
Total	-	5,784	-	5,784
Executive directors				
M Cutifani	10,000	-	10,000	-
S Venkatakrishnan	10,351	-	10,351	-
Total	20,351	-	20,351	-
Prescribed officers				
AM O'Neill	-	7,000	-	7,000
CE Carter	7,037	-	7,000	-
	7,037	7,000	7,000	7,000
Grand total	27,388	12,784	27,351	12,784

Other than CE Carter who sold 1,231 shares during December 2011, which settled in January 2012, there has been no further change in the above interests since December 31, 2011. A register detailing directors and prescribed officers' interests in contracts is available for inspection at the company's registered and corporate office.

SHARE OWNERSHIP OF EXECUTIVE OFFICERS/EXECUTIVE MANAGEMENT

Under the Listings Requirements of the JSE, AngloGold Ashanti is not required to disclose, and it does not otherwise disclose or ascertain, share ownership of individual executive officers/executive management in the share capital of AngloGold Ashanti. However, to the best of its knowledge, AngloGold Ashanti believes that AngloGold Ashanti ordinary shares held by executive officers, in aggregate, do not exceed 1 percent of the company's issued ordinary share capital.

DIRECTORS INTERESTS IN ORDINARY SHARES

SM Pityana, an independent non-executive director of AngloGold Ashanti, has an indirect beneficial holding in the company given that he is a Trustee and beneficiary of a trust which holds a 44 percent interest in Izingwe Holdings, the company's BEE partner. SM Pityana is the Executive Chairman of Izingwe Holdings. As at December 31, 2011, Izingwe Holdings held 1,050,000 E ordinary shares in the issued capital of the company (December 31, 2010: 1,120,000 E ordinary shares). This holding is unchanged at the date of this report.

SHARE OWNERSHIP OF EMPLOYEES

Edgar Filing: ANGLOGOLD ASHANTI LTD - Form 20-F

At a general meeting of shareholders held on December 11, 2006, members approved the creation of 4,280,000 E ordinary shares of 25 South African cents pursuant to an employee share ownership plan for the benefit of certain AngloGold Ashanti employees, of which the majority are historically disadvantaged South Africans as defined in the Broad-Based Socio-Economic Empowerment Charter for the South African Mining Industry. For details on the E ordinary share capital, see Item 7: Shareholders and related party transactions E Ordinary shares .

At a general meeting held on May 11, 2011, shareholders approved an amendment to the BEE transaction authorising an additional issue of 48,923 ordinary shares to be made to the ESOP and the reinstatement of lapsed E ordinary shares to be made. The amendment also revised changes to the vesting criteria and duration of the scheme.

On June 9, 2011, a total of 1,329,164 E ordinary shares were reinstated.

Table of Contents

AngloGold Share Incentive Scheme

AngloGold Ashanti operates a share incentive scheme through which executive directors, executive vice presidents and management groups of the company and its subsidiaries are given the opportunity to acquire shares in the company. The objective is to incentivize such employees to identify themselves more closely with the fortunes of the group and its continued growth and to promote the retention of such employees.

Non-executive directors are not eligible for participation in the share incentive scheme.

At the annual general meeting held on May 7, 2010, shareholders authorized that 17,000,000 shares may be allocated for the purposes of the scheme. Prior to this authorization, the maximum number of shares attributable to the scheme was 2.75 percent of the total number of ordinary shares in issue from time to time. The maximum aggregate number of shares which may be acquired by any one participant in the scheme is 5 percent of the shares attributable to the scheme or 850,000 ordinary shares per employee could be issued in aggregate (2010: 850,000).

Employees participate in the share incentive scheme to the extent that they are granted options or rights to acquire shares and accept them. All options or rights which have not been exercised within ten years from the date on which they were granted, automatically expire.

The incentives offered by AngloGold Ashanti are reviewed periodically to ensure that they remain globally competitive, so as to attract, reward and retain managers of the highest caliber. As a result, several types of incentives, each with their own issue and vesting criteria have been granted to employees. These are collectively known as the AngloGold Share Incentive Scheme or share incentive scheme .

Although the Remuneration Committee has the discretion to incentivize employees through the issue of shares, only options or rights have so far been granted.

The type and vesting criteria of the options or rights granted are:

Time-related

The granting of time-related options was approved by shareholders at the general meeting held on June 4, 1998 and amended by shareholders at the annual general meeting held on April 30, 2002, when it was agreed that no further time-related options would be granted. All time-related options granted have vested and have been exercised in full.

Performance-related

The granting of performance-related options was approved by shareholders at the annual general meeting held on April 30, 2002 and amended at the annual general meeting held on April 29, 2005 when it was agreed that no further performance related options would be granted and all options granted hereunder will terminate on November 1, 2014, being the date on which the last options granted under this criteria may be exercised or they will expire.

Performance-related options granted vest in full, three years from the date of grant, provided that the conditions under which the options were granted are met. All options granted and outstanding vested in full on November 1, 2007.

Bonus Share Plan (BSP)

The granting of awards in terms of the BSP was approved by shareholders at the annual general meeting held on April 29, 2005 and amended at the general meeting held on May 6, 2008 when shareholders approved an increase in the maximum level of the bonus payable to eligible participants, as well as shortening the vesting period. Executive directors, executive vice presidents and other management groups are eligible for participation. Each award made in respect of the BSP entitles the holder to acquire one ordinary share at nil cost. In respect of all awards granted to and including 2007, these awards vest in full, three years from the date of grant, provided that the participant is still in the employ of the company at the date of vesting unless an event, such as death, occurs which may result in an earlier vesting date. In respect of awards granted in 2008 and onwards, the vesting period has been shortened to 40 percent in year one and 60 percent in year two from the date of grant or, in the event that the exercising of awards only takes place in year three, then 120 percent of awards granted will be available for exercising.

Long-Term Incentive Plan (LTIP)

Edgar Filing: ANGLOGOLD ASHANTI LTD - Form 20-F

The granting of awards in terms of the LTIP was approved by shareholders at the annual general meeting held on April 29, 2005. Executive directors, executive vice presidents and selected senior management are eligible for participation. Each award made in respect of the LTIP entitles the holder to acquire one ordinary share at nil cost. Awards granted vest three years from date of grant, to the extent that the stretched company performance targets, under which the rights were granted, are met and provided that the participant is still in the employ of the company, or unless an event, such as death, occurs which may result in an earlier vesting date.

Table of Contents**PARTICIPATION BY EXECUTIVE DIRECTORS, EXECUTIVE MANAGEMENT AND OTHER MANAGERS IN THE ANGLOGOLD SHARE INCENTIVE SCHEME**

Details of the options and rights to subscribe for ordinary shares in the company granted to, and exercised by, executive directors, executive management and other managers on an aggregate basis during the year to December 31, 2011 and subsequent to year-end are set out in the table below.

Number of options and awards granted

	Balance at January 1, 2011	Granted during 2011	Exercised during 2011	Pre-tax gains on share options exercised (R 000)	Lapsed during 2011	Balance as at December 31, 2011 ⁽³⁾

Other management	2,699,736	1,196,942	780,441	229,530	157,850	2,958,387
Total share incentive scheme	3,544,756	1,507,152	889,593	253,928	183,733	3,978,582⁽⁶⁾

(1) Pursuant to the Companies Act of 2008 (as amended), which came into effect on May 1, 2011, companies are required to identify and disclose the remuneration for the prescribed officers of the company.

(2) Cash in lieu of awards pending retirement.

(3) The latest expiry date of all options/awards granted and outstanding at December 31, 2011, is February 21, 2021.

(4) Mike O Hare was appointed to the Executive Committee with effect from June 1, 2011 and as a result of this change, 58,268 options/awards, which were previously reflected in the closing balance of Other management, are now reflected in the opening balance of Prescribed officers.

(5) No longer a prescribed officer with effect from August 31, 2011.

(6) Of the 3,978,582 options/awards granted and outstanding at December 31, 2011, 1,143,194 options/awards are fully vested.

Awards granted since 2005 have been granted at nil cost to participants.

No options/awards have been exercised by executive directors and prescribed officer subsequent to year-end.

Non-executive directors are not eligible to participate in the share incentive scheme.

⁽¹⁾ BSP and LTIP awards granted at nil cost to participants.

Table of Contents

Effective October 15, 2008, the JSE amended Schedule 14 (Requirements for share incentive schemes) of the Listings Requirements. AngloGold Ashanti is required to amend the terms of its Share Incentive Scheme by obtaining shareholder approval to amend the total number of shares attributable to the share incentive scheme, from 2.75 percent of issued share capital from time to time, to a fixed number of shares that may be issued to the scheme. Although the amendment only had to be in place by January 1, 2011, AngloGold Ashanti sought and obtained shareholder approval at the annual general meeting held on May 7, 2010 authorizing the directors to issue up to 17,000,000 shares, which was management's estimate of options/awards to be granted over a three-year period, including options/awards granted and outstanding as at December 31, 2010. The total number of options/awards that may be issued in aggregate to any one participant to the scheme will remain at 5 percent of the total number of shares attributable to the scheme.

Also effective October 15, 2008, the recycling of options/awards that have vested and which have been delivered and for which AngloGold Ashanti shares have been issued, is no longer allowed. The table below reflects the total number of options/awards that are unissued in terms of the share incentive scheme, as affected by this Listings Requirements rule change:

Details	Options/Awards
Total number of options/awards attributable to the scheme at December 31, 2011	17,000,000
Less:	
Total number of options/awards granted and outstanding at December 31, 2011	(3,978,582)
Total number of options/awards exercised:	
During the period October 15, to December 31, 2008	(101,013)
During the period January 1 to December 31, 2009	(1,131,916)
During the period January 1 to December 31, 2010	(823,411)
During the period January 1 to December 31, 2011	(889,593)
Total options/awards available but unissued at December 31, 2011	10,075,485

Table of Contents**ITEM 7: SHAREHOLDERS AND RELATED PARTY TRANSACTIONS****OVERVIEW****DESCRIPTION OF ANGLOGOLD ASHANTI S SHARE CAPITAL**

AngloGold Ashanti s share capital consists of four classes of stock:

- Ordinary shares, par value 25 South African cents each (the ordinary shares);
- E-Ordinary shares, par value 25 South African cents each (the E-ordinary shares);
- A redeemable preference shares, par value 50 South African cents each (the A preference shares); and
- B redeemable preference shares, par value 1 South African cent each (the B preference shares).

The authorized and issued share capital of AngloGold at December 31, 2011, is set out below:

Title of class	Authorized	Issued
Ordinary shares	600,000,000	382,242,343
E-Ordinary shares	4,280,000	2,582,962
A preference shares	2,000,000	2,000,000
B preference shares	5,000,000	778,896

All the issued ordinary shares, E ordinary shares, A redeemable preference shares and B redeemable preference shares are fully paid and are not subject to further calls or assessment by AngloGold Ashanti. For a discussion of rights attaching to the ordinary shares, E ordinary shares, the A redeemable preference shares and the B redeemable preference shares, see Item 10B.: Memorandum and articles of association .

The following are the movements in the ordinary issued share capital at December 31:

Ordinary shares

	Number of Shares 2011	Rand	Number of Shares 2010	Rand	Number of Shares 2009	Rand
At January 1	381,204,080	95,301,020	362,240,669	90,560,167	353,483,410	88,370,853
Issued during the year:						
- Equity offering to fund the initial 35 percent interest in the Kibali gold project					7,624,162	1,906,041
- Equity raising proceeds used to part fund the hedge elimination			18,140,000	4,535,000		
- Bokamoso ESOP on conversion of E ordinary shares	60,695	15,174			1,181	295
- Izingwe on conversion of E ordinary shares	39,052	9,763				
- BEE transaction (as approved by shareholders on May 11, 2011) Bokamoso ESOP	48,923	12,230				
- Exercise of options by participants in the AngloGold share Incentive Scheme	889,593	222,398	823,411	205,853	1,131,916	282,979
	382,242,343	95,560,585	381,204,080	95,301,020	362,240,669	90,560,167

During the period January 1, 2012 to and including April 16, 2012, 168,621 ordinary shares were issued at an average issue price of R330.84 per share, resulting in 382,410,964 ordinary shares being in issue at April 16, 2012. Of the 168,621 ordinary shares issued during the period January 1, 2012 to and including April 16, 2012, 2,269 ordinary shares were issued on conversion and cancellation of 19,190 E ordinary shares in accordance with the applicable conversion formula.

Table of Contents***E ordinary shares***

The following are the movements in the E ordinary issued share capital at December 31:

	Number of Shares 2011	Rand	Number of Shares 2010	Rand	Number of Shares 2009	Rand
At January 1	2,806,126	701,531	3,794,998	948,749	3,966,941	991,735
Reinstated	1,329,164	332,291				
Issued during the year:						
- Cancelled in exchange for ordinary shares in terms of the cancellation formula	(1,552,328)	(388,082)	(988,872)	(247,218)	(171,943)	(42,986)
	2,582,962	645,740	2,806,126	701,531	3,794,998	948,749

On December 11, 2006, shareholders in general meeting authorized the creation of a maximum of 4,280,000 E ordinary shares to be issued pursuant to an Employee Share Ownership Plan (ESOP) and a Black Economic Empowerment transaction with Izingwe Holdings (Pty) Limited (Izingwe) (collectively, the BEE transaction).

At a general meeting held on May 11, 2011, shareholders approved an amendment to the BEE transaction authorizing an additional issue of 48,923 ordinary shares to be made to the ESOP and the reinstatement of lapsed E ordinary shares to be made to the ESOP (to a maximum of 810,634 E ordinary shares) and to Izingwe (560,000 E ordinary shares). The amendment also revised the vesting criteria and duration of the scheme.

On June 9, 2011, a total of 1,329,164 E ordinary shares were reinstated, of which 769,164 E ordinary shares were reinstated in respect of the ESOP and 560,000 E ordinary shares were reinstated in respect of Izingwe.

In terms of the original authority granted by shareholders in 2006, on vesting, E ordinary shares were cancelled in exchange for ordinary shares in accordance with the cancellation formula.

E ordinary share capital amounting to R51,842,313 in respect of 688,332 vested, unconverted and cancelled E ordinary shares, was transferred to ordinary share premium during 2011. Prior to the amendment of the BEE transaction E ordinary shares did not convert to ordinary shares where the market price of an AngloGold Ashanti ordinary share was less than the strike price of the E ordinary share as calculated in accordance with the cancellation formula.

In addition to the reinstatement of cancelled E ordinary shares, shareholders approved an amendment to the cancellation formula through the resetting of the strike price. Participants to the ESOP and Izingwe are now guaranteed a minimum conversion price of R40 per E ordinary share with a maximum of R90 per E ordinary share for the ESOP and R70 per E ordinary share for Izingwe from a base price of R320 and R330 per share, respectively.

E ordinary shareholders are entitled to vote at all ordinary shareholder meetings. However, they do not hold a veto right.

Dividends are payable on E ordinary shares, in an amount equal to 50 percent of dividends payable to ordinary shareholders. The residual 50 percent of the dividend payable is taken into account in determining the cancellation formula.

E ordinary shares which vest and are exchanged for ordinary shares are cancelled and may not be re-issued. Therefore, they do not form part of the unissued share capital of the company.

Redeemable preference shares

The A and B redeemable preference shares, all of which are held by wholly owned subsidiary, Eastvaal Gold Holdings Limited, may not be transferred and are redeemable from the realization of the assets relating to the Moab lease area after the cessation of mining operations in the area. The shares carry the right to receive dividends equivalent to the profits (net of royalty, ongoing capital expenditure and taxation) from operations in the area. No further A and B redeemable preference shares will be issued.

Table of Contents**7A. MAJOR SHAREHOLDERS**

According to information available to the directors, the following are the only shareholders holding, directly or indirectly, in excess of 5 percent of the ordinary issued share capital of the company:

Ordinary shares held at Shareholder*	December 31, 2011		December 31, 2010		December 31, 2009	
	Number of Shares	% Voting Rights	Number of Shares	% Voting Rights	Number of Shares	% Voting Rights
Paulson & Co., Inc	32,570,668	8.52	41,000,000	10.76	42,849,864	11.83
Allan Gray Unit Trust Management Limited	24,710,806	6.46	31,668,339	8.31	36,689,809	10.13
Fidelity Management & Research			28,383,749	7.45		

*Shares may not necessarily reflect the beneficial shareholder

At December 31, 2011, a total of 164,886,294 shares (or 43.14 percent of issued ordinary share capital) were held by The Bank of New York Mellon, as Depository for the company's American Depositary Receipt program. Each American Depositary Share (ADS) is equivalent to one ordinary share. At December 31, 2011, the number of persons who were registered holders of ADSs was reported at 3,440. AngloGold Ashanti is aware that many ADSs are held of record by brokers and other nominees, and accordingly the above numbers are not necessarily representative of the actual number of persons who are beneficial holders of ADSs or the number of ADSs beneficially held by these persons.

All shareholders have the same voting rights.

As at December 31, 2011, there were 9,411 holders of record of AngloGold Ashanti ordinary shares. Of these holders 357 had registered addresses in the United States and held a total of 69,330 ordinary shares, approximately 0.018 percent of the total outstanding ordinary shares. In addition, certain accounts of record with registered addresses outside the United States, including The Bank of New York Mellon, hold AngloGold Ashanti ordinary shares, in whole or in part, beneficially for United States persons.

At April 16, 2012, 153,612,808 ADSs or approximately 40.17 percent of total issued ordinary share capital, were issued and outstanding and held of record by approximately 3,350 registered holders.

Insofar as is known to AngloGold Ashanti, there was no person who, directly or indirectly, jointly or severally, exercised or could exercise control over AngloGold Ashanti, nor is AngloGold Ashanti aware of any arrangements which might result in a change in control of AngloGold Ashanti.

Table of Contents**7B. RELATED PARTY TRANSACTIONS**

Related party transactions are concluded on an arm's length basis. The group had the following transactions with related parties during the years ended December 31, 2011, 2010 and 2009:

At December 31	2011	2010	2010	2009
(in millions)	Purchases (by)/from related party	Amounts owed to/(by) related party	Purchases (by)/from related party	Amounts owed to/ (by) related party
	\$	\$	\$	\$
Purchases of goods and services (by)/from equity accounted joint ventures and associates				
Margaret Water Company	6	-	3	-
Société d'Exploitation des Mines d'Or de Sadiola S.A.	(12)	(2)	(8)	(2)
Société d'Exploitation des Mines d'Or de Yatela S.A.	(2)	(1)	(3)	-
Société des Mines de Morila S.A.	(4)	-	(8)	(1)
Trans-Siberian Gold plc	-	-	1	-
	(12)	(3)	(15)	(3)

Amounts due by joint venture and associate related parties arising from purchases of goods and services are unsecured and non-interest bearing.

Loans due by equity accounted joint ventures and associates for the years ended December 31, 2011 and 2010:

	2011	2010
	\$	\$
Oro Group (Proprietary) Limited ⁽¹⁾	1	2
AuruMar (Proprietary) Limited (joint venture) ⁽²⁾	5	5
Orpheo (Proprietary) Limited ⁽²⁾	-	1
Trans-Siberian Gold plc ⁽³⁾	3	-
Thani-Ashanti Alliance Limited (joint venture) ⁽⁴⁾	20	-

(1) The loan bears interest at a rate determined by the Oro Group (Proprietary) Limited's board of directors and is repayable at their discretion.

(2) Loans are unsecured, interest free and there are no fixed terms of repayment.

(3) The loan is unsecured and bears interest at 8 percent per annum and is repayable in April 2012.

(4) The loan bears interest at a margin of 0.95 percent over the Johannesburg Interbank Agreed Rate (JIBAR) and is repayable in December 2012.

As at December 31, 2011 and 2010, there are no outstanding balances arising from loans owed to related parties.

Restructuring of the E ordinary shares:

For a discussion of the restructuring of the E ordinary shares insofar as it relates to Izingwe Holdings, see Overview Description of AngloGold Ashanti's share capital - E ordinary shares .

7C. INTERESTS OF EXPERTS AND COUNSEL

ITEM 8: FINANCIAL INFORMATION

8A. CONSOLIDATED FINANCIAL STATEMENTS AND OTHER INFORMATION

See Item 18: Financial statements .

LEGAL PROCEEDINGS

There is no material proceeding in which a director, officer or affiliate of AngloGold Ashanti is either a party adverse or has a material interest adverse to the company.

In addition to the proceedings described below, the company becomes involved, from time to time, in various claims, legal proceedings and complaints incidental to the ordinary course of business.

TAX PROCEEDINGS

The State of Goiás v. Mineração Serra Grande S.A. (MSG): In **Brazil**, in 2006, MSG received two tax assessments from the State of Goiás related to payments of state sales taxes at the rate of 12 percent on gold deliveries for export from one Brazilian state to another during the period from February 2004 to the end of May 2006. AngloGold Ashanti Córrego do Sítio Mineração S.A. manages the operation and its attributable share of the first assessment is approximately US\$54 million. The company's attributable share of the second assessment is approximately US\$34 million. In November 2006, the administrative council's second chamber ruled in favor of MSG and fully canceled the tax liability related to the first period. In July 2011, the administrative council's second chamber ruled in favor of MSG and fully canceled the tax liability related to the second period. The State of Goiás has appealed to the full board of the State of Goiás tax administrative council. In November 2011, the administrative council's second chamber approved the suspension of proceedings and the remittance of the matter to the Department of Supervision of Foreign Trade (Comex) for review and verification. The company believes both assessments are in violation of federal legislation on sales taxes.

Departamento Nacional de Produção Mineral (DNPM) v. AngloGold Ashanti Brazil Mineração (AABM): In **Brazil**, in November 2007, the DNPM, a federal mining authority, issued a tax assessment against AABM in the amount of approximately US\$21 million relating to the calculation and payment by AABM of the financial contribution on mining exploitation (CFEM) in the period from 1991 to 2006. AABM opposes the assessment.

SOUTH AFRICA

Mankayi v. AngloGold Ashanti Limited (AGA): In October 2006, a former employee, Mr Thembekile Mankayi, instituted a legal action in the Witwatersrand Local Division High Court of South Africa against AGA, claiming approximately R2.6 million (approximately US\$360,000) for damages allegedly suffered as a result of silicosis. Mr. Mankayi's case was heard in the High Court of South Africa in June 2008, and an appeal was heard in the Supreme Court of Appeal in 2010. In both instances judgment was awarded in favor of AngloGold Ashanti Limited on the basis that an employer is indemnified against such a claim for damages by virtue of the provisions of section 35 of the Compensation for Occupational Injuries and Diseases Act, 1993 (COIDA). A further appeal that was lodged by Mr Mankayi was heard in the Constitutional Court in 2010. Judgment in the Constitutional Court was handed down on 3 March 2011. The Constitutional Court held that section 35 of COIDA does not indemnify the employer against such claims.

Mr Mankayi passed away subsequent to the hearing in the Supreme Court of Appeal. Following the Constitutional Court judgment, Mr Mankayi's executor may proceed with his case in the High Court. This will comprise, amongst others, providing evidence showing that Mr Mankayi contracted silicosis as a result of negligent conduct on the part of AngloGold Ashanti Limited.

The company will defend the case and any subsequent claims on their merits. Should other individuals or groups lodge similar claims, these too will be defended by the company and adjudicated by the Courts on their merits. In view of the limited information currently available, no reliable estimate for any potential liability arising from such other similar claims, if and when filed, can be made at this time.

Table of Contents

AngloGold Ashanti Limited (AGA) v. Pamodzi Gold (Orkney) (Pty) Limited (in Provisional Liquidation) (Pamodzi): AGA is owed money for services rendered to Pamodzi. AGA sold Shafts 1-7 to another mining company in 1998 but continued to service them pursuant to the terms of a service contract. When Pamodzi later purchased the Shafts, AGA provided services to Pamodzi on the same basis that it had provided services to the previous owner, on the understanding that a new agreement would be entered into once all of the commercial terms of such an agreement were finalized. On March 10, 2009, prior to AGA and Pamodzi entering into a new services agreement, a creditor of Pamodzi applied to have Pamodzi placed under provisional liquidation. This application was granted by the North Gauteng High Court. At the time of being placed in provisional liquidation Pamodzi owed AGA approximately R59 million (approximately US\$6.5 million) for services rendered by AGA. Pamodzi also owes AGA approximately R54 million (approximately US\$5.9 million) for services rendered subsequent to the liquidation application being made. This R54 million is an administrative cost and will be a first charge against the estate. The date of the final liquidation order has not yet been set.

On March 16, 2012, Pamodzi (in provisional liquidation) and four others issued summons against AGA in the North Gauteng High Court, Pretoria, demanding the return of about R89.5 million (approximately US\$11.1 million) paid by Pamodzi to AGA less than six months prior to the winding-up of Pamodzi. Plaintiffs further allege that AGA took possession of some 26.9 kilograms of gold owned by Pamodzi in March 2009 and demand either that the gold be returned or that reimbursement be provided in the amount of R7.1 million (approximately US\$0.9 million).

Van der Post *et al.* v. AngloGold Ashanti Limited (AGA) (WLD 07/10014): In May 2007, a group of AGA pensioners (**van der Post and others**) instituted an action against the company in the Witwatersrand Local Division of the High Court (now called the South Gauteng High Court). At issue was the introduction of an inflation-related (CPIX) cap on post-retirement health care contributions by the company. The company maintains that its action is justifiable and fair given the circumstances, precedents and the contractual nature of the undertaking. Summons was issued by the plaintiffs demanding that AGA restore the level of contributions that prevailed before the introduction of the cap. In 2011, a private arbitration hearing was postponed to April 2012 pending settlement negotiations. As the claimants have not mentioned a specific quantum, no reasonable estimate of potential loss can be made.

COLOMBIA

La Colosa class action lawsuits: The following six class action lawsuits are currently pending before different Colombian state and federal courts in relation to AngloGold Ashanti Colombia S.A. (AGAC) s La Colosa project, which is currently in its pre-feasibility phase and consists of three core concession contracts:

Ivonne Prada v. Federal Department of the Environment, Housing and Territorial Development (October 2009);

Usocoello, Cortolima, Procuraduria Regional Tolima, Universidad de Ibagué, Estudiantes de la Universidad del Rosario, Federarroz v. AGAC, Federal Department of Mines, Federal Department of the Environment, Housing and Territorial Development and Ingeominas (September 2010);

Maria del Pilar Gonzalez v. Federal Department of Mines, Ingeominas and AGAC (May 2011);

Maria del Pilar Gonzalez v. Federal Department of Mines, Ingeominas and AGAC (July 2011);

Personero de Ibagué v. Federal Department of the Environment, Housing and Territorial Development, Ingeominas, AGAC, Continental Gold Ltda., Oro Barracuda Ltda., Fernando Montoya, Alberto Murillo and Eugenio Gomez (December 2011); and

Edgar Filing: ANGLOGOLD ASHANTI LTD - Form 20-F

Juan Ceballos v. Federal Department of the Environment, Housing and Territorial Development, Ingeominas, Cortolima and AGAC (February 2012).

All but one of these lawsuits name AGAC as a defendant. Each lawsuit aims to stop exploration and mining in certain restricted areas affected by the La Colosa project due to environmental concerns or alleged breaches of environmental laws. Under Colombian law, restricted areas are State-protected land on which economic activities are restricted. AGAC has opposed, and has sought the dismissal of most of, the class action lawsuits that have been filed against it.

Table of Contents

The class action lawsuit that has progressed the most was filed in the Third Administrative Court of the District of Ibagué on September 9, 2010. It named each of Ingeominas (the Colombian regulatory agency for mining activities), the Federal Department of the Environment, Housing and Territorial Development, as well as the Federal Department of Mines as defendants. AGAC was subsequently joined to the lawsuit as an additional defendant. The plaintiffs are the User Association of the Land Adequation District of Coello and Cucuana Rivers (Usocoello), which is a cooperative representing local farmers, the Autonomous Regional Corporation of Tolima (Cortolima), which is the government of the State of Tolima, the Office of the Attorney General of the State of Tolima (Procurador Judicial Ambiental y Agrario para el Tolima), the University of Ibagué, a student association of the University of El Rosario (Estudiantes de la Universidad del Rosario) and Fedearroz, which is the Colombian association of rice growers.

The plaintiffs have petitioned the court to order the defendant governmental entities not to declare the La Colosa mining project feasible on the grounds that the project threatens a healthy environment, public health and food safety for Usocoello members and local residents. Such order by the court would result in the revocation of AGAC's permit to temporarily use for its exploration activities 515.75 hectares of forest reserve that are otherwise designated as restricted areas.

In addition, as each of AGAC's three core mining concession contracts governing the La Colosa project provides that Ingeominas has the discretion to declare the underlying concession void if AGAC breaches applicable environmental laws or regulations, the plaintiffs have petitioned the court to direct Ingeominas to cancel such concession contracts on the ground that AGAC has violated the Code of Natural Resources. If plaintiffs prevail and Ingeominas is ordered to cancel AGAC's three core concession contracts, the company would be required to abandon the La Colosa project and all of AGAC's other existing mining concession contracts and pending proposals for new mining concession contracts would also be cancelled. In addition, AGAC would be banned from doing business with the Colombian government for a period of five years. As a result, AGAC would be unable to conduct any mining exploration or development activities during such period. However, this would not affect other AngloGold Ashanti subsidiaries operating in Colombia, which hold singularly or in concert with joint venture partners the majority of AngloGold Ashanti's concession contracts in Colombia.

As no settlement was reached at a special conciliation hearing (Pacto de Cumplimiento) held on April 27, 2011, the trial has continued and the court is gathering evidence from the parties in preparation for its ruling.

In addition, in connection with the class action lawsuit filed by the Ombudsman of Ibagué (Personero de Ibagué) in September 2011, the Superior Court of the District of Ibagué granted the plaintiff a preliminary injunction that resulted in the suspension of AGAC's mining concession contracts relating to certain greenfield exploration activities in the Toche Anaima Belt. These contracts do not include AGAC's core concession contracts relating to the La Colosa project. AGAC has appealed against this preliminary injunction and its appeal is still pending.

Department of the Environment, Housing and Territorial Development (DoE) v. AGAC: In Resolution No. 785 of April 29, 2009, the DoE opened an investigation against AGAC and brought a list of charges against it for carrying out exploratory activities at the La Colosa project without having obtained the applicable permit to partially or temporarily use the soil of a forest reserve that was designated as a restricted area. In particular, the DoE alleged that AGAC violated Article 210 of the Code of Natural Resources (Code), which requires a company to obtain such a permit when it plans on carrying out an economic activity that will involve the cutting down of trees. In 2010, while conducting its investigation the DoE also proceeded to update the existing mining terms of reference, which set forth the environmental studies and other environmental activities that each mining company is required to conduct in connection with the exploration phase of its respective mining project. As reflected in Article 34 of the Code, the new terms of reference specify that exploration may not be carried out in restricted areas without a permit sanctioning such exploration. The DoE then resolved that AGAC was in breach of the 2010 terms of reference and issued a fine against the company.

As the parties were unable to reach an agreement at a conciliation meeting held on May 30, 2011, on such same date AGAC filed an action against the DoE in the Administrative Superior Court of the Cundinamarca District to annul the penalties. Should the DoE's fine ultimately be upheld by the courts, Ingeominas would then have the discretion to terminate AGAC's three core mining concession contracts relating to the La Colosa project. In the event of such termination, the company would be required to abandon the La Colosa project and all of AGAC's other existing mining concession contracts and pending proposals for new mining concession contracts would also be canceled. In addition, AGAC would be banned from doing business with the Colombian government for a period of five years. As a result, AGAC would be unable to conduct any mining exploration or development activities during such period. However, this would not affect other AngloGold Ashanti subsidiaries operating in Colombia, which hold singularly or in concert with joint venture partners the majority of AngloGold Ashanti's concession contracts in Colombia.

GHANA

Westchester/Africore Limited (WAL) v. Ashanti Goldfields Company Limited (AGCL): In December 2001, WAL instituted an action against AGCL in the High Court in Accra claiming damages for breach of an existing exploration and option agreement between the parties. Although the matter was originally referred to arbitration, WAL eventually pulled out of the arbitration proceedings and filed a notice to maintain the action in the High Court. In the notice, WAL claimed US\$20 million in damages. The statement of claim was later amended to demand US\$9 million in special damages.

Trial began on February 13, 2009. The court decided in WAL's favor on March 31, 2011 and awarded damages of US\$17.4 million in general damages and GHS 30,000 (approximately \$19,726) in costs. AGCL has appealed and has been granted a stay of execution pending appeal.

National Labour Commission & 273 Others v. AngloGold Ashanti (Ghana) Limited (AAGL): In December 2006, Appiah Agyei Boateng and 272 others claiming to be the employees of AAGL petitioned the National Labour Commission (NLC) to compel AAGL to pay their gratuities. Plaintiffs claim that they were transferred to Mining and Building Contractors Limited (MBC), an independent construction firm, without their consent and allege that, as a result of their transferral, they suffered a diminution in their terms and conditions of service. Plaintiffs therefore seek redundancy payments from AAGL.

On August 20, 2009, the NLC found in favor of the petitioners and ordered AAGL to make redundancy payments totalling US\$4.7 million. AAGL applied to the High Court to have the NLC's decision set aside. On April 7, 2011, the High Court found against AAGL. A stay of execution was granted on January 13, 2012, on condition that an appeal be heard within three months. AAGL is working closely with the Registrar to have the records expedited and transmitted to the Court of Appeal.

National Labour Commission v. AngloGold Ashanti (Ghana) Limited (AAGL) (in re early retirees): In March 2008, complainants alleged to the NLC that AAGL had misrepresented to them that they could opt for an early retirement and receive enhanced benefits by way of their unpaid salaries and social security contributions. They claimed that, but for AAGL's misrepresentation, they would have elected to exit by way of redundancy. They demanded that AAGL pay them the difference between what would have been their redundancy packages and the actual payments made to them under the retirement package. The total amount of the claim is the cedi equivalent of US\$1.8 million.

On April 3, 2009, the NLC ordered AAGL to pay each petitioner the difference between the redundancy package and the early retirement benefit. The High Court upheld the order, but the Court of Appeal reversed the order on March 14, 2011 and allowed AAGL's application for a stay of execution pending appeal. A hearing date is expected to be fixed once the records have been transmitted to the Court of Appeal.

TANZANIA

Jackson Manyelo & others vs. Geita Gold Mining Limited (GGM) (Civil case no. 27/2007): In January 2007, the claimants filed a suit against GGM in the Mwanza High Court alleging that they were affected by blasting activities in the Katoma area carried out by GGM and had suffered damages in the amount of Tshs9.6 billion (approximately US\$6 million). The parties are waiting to receive notice of a mediation hearing from the Mwanza High Court.

GUINEA

Government of Guinea (National Claim Commission) v. Société AngloGold Ashanti Goldfields de Guinée SA (SAG): A national claim recovery commission put in place by the government has demanded that SAG pay US\$43 million in dividends and penalties that would allegedly have been owed to the government for the accounting years 2004-2007. SAG opposes the claim. The two parties have decided to submit their dispute to an independent audit firm to be appointed by a common accord.

Table of Contents

DIVIDENDS

Dividends are proposed and approved by the board of directors of AngloGold Ashanti, based on the company's financial performance. Dividends are recognized when declared by the board of directors of AngloGold Ashanti. During the third quarter of 2011, the Company changed its timing of dividend payments to quarterly, rather than half-yearly.

Dividends may be declared in any currency at the discretion of the AngloGold Ashanti board or AngloGold Ashanti shareholders at a general meeting. Currently, dividends are declared in South African rands and paid in Australian dollars, South African rands, British pounds and Ghanaian cedis. Dividends paid to registered holders of AngloGold Ashanti ADSs are paid in US dollars converted from South African rands by The Bank of New York Mellon, as depositary, in accordance with the deposit agreement. Exchange rate fluctuations may therefore affect the value of the dividends received by registered shareholders and distributions paid by the relevant depositary to investors holding AngloGold Ashanti securities. Moreover, fluctuations in the exchange rates of the US dollar may affect the US dollar price of the ADSs on the NYSE. For details on taxation and exchange controls applicable to holders of ordinary shares or ADSs, see Item 10D.: Exchange controls and Item 10E.: Taxation Taxation of dividends .

Dividends declared to foreign shareholders are not subject to the approval by the South African Reserve Bank (SARB) in terms of South African foreign exchange control regulations. Dividends are freely transferable to foreign shareholders from both trading and non-trading profits earned in South Africa by publicly listed companies.

AngloGold Ashanti expects to continue to pay dividends, although there can be no assurance that dividends will be paid in the future or as to the particular amounts that will be paid from year to year. The payment of future dividends will be dependent upon the board's ongoing assessment of AngloGold Ashanti's earnings, after providing for long term growth, cash/debt resources, compliance with the solvency and liquidity requirements the Companies Act of 2008, the amount of reserves available for a dividend based on the going concern assessment, and restrictions placed by the conditions of the convertible bond, other debt facilities, protection of the investment grade credit rating and other factors. AngloGold Ashanti will continue to manage capital expenditure in line with profitability and cash flow, and its approach to the dividend on the basis of prudent financial management.

Under South African law, the company may declare and pay dividends from any reserves included in total shareholder's equity (including share capital and share premium) calculated in accordance with International Financial Reporting Standards (IFRS), subject to the solvency and liquidity test.

Dividends are payable to shareholders registered at a record date that is after the date of declaration. Dematerialized shareholders on the South African share register will receive payment of their dividends electronically, as provided for by STRATE. Certificated shareholders, who have elected to receive their dividends electronically, will be paid via the company's electronic funds transmission service. Certificated shareholders who have not yet elected to receive dividend payments electronically are encouraged to mandate this method of payment for all future dividends.

Withholding tax

In the budget speech on February 22, 2012, the South African Minister of Finance announced that the withholding tax on dividends and other distributions payable to shareholders is 15 percent on all dividends declared after April 1, 2012.

This withholding tax replaces the Secondary Tax on Companies and although this may reduce the tax payable by AngloGold Ashanti's South African operations, thereby potentially increasing distributable earnings, the withholding tax on dividends and other distributions will generally reduce the amount of dividends or other distributions received by AngloGold Ashanti shareholders.

8B. SIGNIFICANT CHANGES

None.

Table of Contents**ITEM 10: ADDITIONAL INFORMATION****10A. SHARE CAPITAL****ANGLOGOLD ASHANTI S ORDINARY SHARES AND PREFERENCE SHARES**

At the annual general meeting of shareholders held on May 15, 2009, shareholders approved an increase in the company's authorized ordinary share capital. AngloGold Ashanti's authorized and issued share capital as of December 31, 2011 and April 16, 2012 (being the latest practicable date prior to the publication of this document) is set out below:

Title of Class	Authorized	Issued	
		April 16, 2012 ⁽¹⁾	December 31, 2011
Ordinary shares at par value of R0.25 each	600,000,000	382,410,964	382,242,343
E ordinary shares at par value of R0.25 each	4,280,000	2,563,772	2,582,962
A redeemable preference shares at par value of R0.50 each	2,000,000	2,000,000	2,000,000
B redeemable preference shares at par value of R0.01 each	5,000,000	778,896	778,896

(1) Does not include additional shares to be issued in respect of the BEE Transaction approved by shareholders on May 11, 2011 of 48,923 ordinary shares and 1,370,634 E ordinary shares.

All of the issued ordinary shares, E ordinary shares, A redeemable preference shares and B redeemable preference shares are fully paid and are not subject to further calls or assessment by AngloGold Ashanti.

All of the A redeemable preference shares and B redeemable preference shares are held by Eastvaal Gold Holdings Limited, AngloGold Ashanti's wholly-owned subsidiary. AngloGold Ashanti's Articles of Association provide that the A redeemable preference shares and B redeemable preference shares are not transferable.

The table below details changes in the ordinary issued share capital of AngloGold since December 31, 2008 through December 31, 2011.

Period to	Description	Number of Shares
December 31, 2008		353,483,410

December 31, 2011		382,242,343

Table of Contents

The table below details changes in the E-ordinary issued share capital of AngloGold Ashanti since December 31, 2008 through December 31, 2011.

Period to	Description	Number of Shares
December 31, 2008		3,966,941
2009 E-ordinary shares movement	Cancelled and exchanged for ordinary shares in accordance with the cancellation formula	(171,943)
December 31, 2009		3,794,998
2010 E-ordinary shares movement	Cancelled and exchanged for ordinary shares in accordance with the cancellation formula	(988,872)
December 31, 2010		2,806,126
2011 E-ordinary shares movement	Re-instated Cancelled and exchanged for ordinary shares in accordance with the cancellation formula	1,329,164 (1,552,328)
December 31, 2011		2,582,962

E ordinary shares

On December 11, 2006, shareholders in general meeting authorised the creation of a maximum of 4,280,000 E ordinary shares to be issued pursuant to an Employee Share Ownership Plan (ESOP) and a black economic empowerment transaction with Izingwe Holdings (Pty) Limited (Izingwe) (collectively, the BEE transaction).

At a general meeting held on May 11, 2011, shareholders approved an amendment to the BEE transaction authorizing an additional issue of 48,923 ordinary shares to be made to the ESOP and the reinstatement of lapsed E ordinary shares to be made to the ESOP (to a maximum of 810,634 E ordinary shares) and to Izingwe (560,000 E ordinary shares). The amendment also took cognizance of changes to the vesting criteria and duration of the scheme.

On June 9, 2011, a total of 1,329,164 E ordinary shares were reinstated, of which 769,164 E ordinary shares were reinstated in respect of the ESOP and 560,000 E ordinary shares were reinstated in respect of Izingwe.

In terms of the original authority granted by shareholders in 2006, on vesting, E ordinary shares were cancelled in exchange for ordinary shares in accordance with the cancellation formula.

E ordinary share capital amounting to R51,842,313 in respect of 688,332 vested, unconverted and cancelled E ordinary shares, was transferred to ordinary share premium during 2011. Prior to the amendment of the BEE transaction, E ordinary shares did not convert into ordinary shares where the market price of an AngloGold Ashanti ordinary share was less than the strike price of the E ordinary share as calculated in accordance with the cancellation formula.

In addition to the reinstatement of cancelled E ordinary shares, shareholders approved an amendment to the cancellation formula through the resetting of the strike price. Participants to the ESOP and Izingwe are now guaranteed a minimum conversion price of R40 per E ordinary share with a maximum of R90 per E ordinary share for the ESOP and R70 per E ordinary share for Izingwe from a base price of R320 and R330 per share, respectively.

E ordinary shareholders are entitled to vote at all ordinary shareholder meetings. However, they do not hold a veto right.

Dividends are payable on E ordinary shares, in an amount equal to 50 percent of dividends payable to ordinary shareholders. The residual 50 percent of the dividend payable is taken into account in determining the cancellation formula.

E ordinary shares which vest and are exchanged for ordinary shares are cancelled and may not be re-issued. Therefore, they do not form part of the unissued share capital of the company.

Table of Contents**Unissued shares**

The directors of the Company are authorized to allot and issue, for such purposes and on such terms as they may, in their discretion, determine, ordinary shares of 25 SA cents each (shares) in the authorized but unissued share capital of the Company up to a maximum of 5 percent of the number of shares in issue from time to time.

Shares under the control of the directors 5 percent of issued shares from time to time	19,112,707
Shares attributable to the share incentive scheme (17,000,000 of issued issued less shares issued from 15 October 2008)	14,054,067
Shares under specific authority for the convertible bonds (approved at the general meeting 30 July 2009)	15,384,615
Shares under specific authority for the mandatory convertible bonds (approved at the general meeting 26 October 2010)	18,140,000

Table of Contents

10B. MEMORANDUM AND ARTICLES OF ASSOCIATION

With effect from May 1, 2011, the South African Companies Act 71 of 2008 (as amended) (the Act) came into effect. In terms of the Act, companies have two years to amend their constitutional documents (previously referred to as the Memorandum and Articles of Association, but known under the Act as Memorandum of Incorporation (MoI)) or adopt a new (MoI) to comply with the Act. Until such time as the MoI of a company is amended or a new MoI is adopted by shareholders in general meeting, companies may rely on their current MoIs, to the extent that the Act does not apply. AngloGold Ashanti will be putting before its shareholders, a new MoI in compliance with the Act prior to the expiry of the two year period. A summary of the current MoI of AngloGold Ashanti under which the company currently operates is detailed below.

REGISTRATION

AngloGold Ashanti is incorporated under the laws of the Republic of South Africa and registered with the Companies and Intellectual Property Commission under registration number 1944/017354/06. AngloGold Ashanti's MoI provides that the company's main business is to carry on gold exploration, the mining and production of gold, the manufacturing, marketing and selling of gold products and the development of markets for gold.

AngloGold Ashanti is governed by its MoI which document is available for inspection as set out in Item 10H.: Documents on Display and a summary of pertinent provisions, including rights of the holders of shares in AngloGold Ashanti, are set out below.

This summary does not contain all the information concerning the rights of holders of AngloGold Ashanti's ordinary shares and is qualified in its entirety by reference to the law of South Africa and AngloGold Ashanti's governing corporate documents. As well as being governed by the provisions of the MoI, the rights of holders of AngloGold Ashanti's ordinary shares are governed by the Act, the Companies Regulations, 2011, promulgated under the Act (the Regulations), which include the Takeover Regulations, and the JSE Listings Requirements. Further, the rights of holders of AngloGold Ashanti ADSs are governed by the Deposit Agreement between AngloGold Ashanti and The Bank of New York Mellon. See Share Rights, Preferences and Restrictions The Deposit Agreement.

The Act provides that shares will no longer have a par or nominal value. However any shares which have a nominal or par value issued prior to the effective date continue to have that nominal or par value and can be issued as such for so long there are par value shares in the company's authorized share capital.

DIRECTORS

The management and control of any business of AngloGold Ashanti is vested in the directors who, in addition to their powers under the articles of association, may exercise all powers and do all such acts and things as may be exercised or done by AngloGold Ashanti which are not expressly required to be exercised or done by AngloGold Ashanti's shareholders in a general meeting.

Appointment, Retirement and Removal of Directors

The board of directors may appoint any person to be a director and any director so appointed will hold office only until the following annual general meeting and will then be eligible for re-election. The directors who retire at the annual general meeting in this manner will not be taken into account in determining the directors who are to retire by rotation at such meeting.

At every annual general meeting one-third of the directors, not subject to employment contract, will retire by rotation, or if their number is not a multiple of three, then the number will be rounded down to the nearest whole number. Directors retiring by rotation are eligible for re-election. The directors so to retire at such annual general meeting will, unless otherwise determined by the board, be those who have been the longest in office since their last election, but as between persons who become or were last elected directors on the same day, those to retire will (unless they otherwise agree amongst themselves) be determined by lot. Retiring directors are eligible for re-election.

A director will no longer act as a director of the company if he becomes insolvent or subject to insolvency procedures, is found to be of unsound mind, is requested to resign by at least three-quarters of the directors in writing, is removed by a board resolution of AngloGold Ashanti, is prohibited from acting as director by law or order of court, or is absent from board meetings without leave of the directors for six consecutive months. A director can resign with one month's written notice unless he obtains the permission of the directors to shorten his notice period.

Table of Contents

The MoI contains no provision for directors to hold qualification shares, nor stipulate an age limit requirement for the retirement or non-retirement of directors.

Under the Act, the MoI of a profit company must provide the company's shareholders the right to elect a minimum of 50 percent of the company's directors. The remaining directors may be appointed in accordance with the MoI of the company which may provide for a director to be elected *ex officio* (as a consequence of that person holding some other office, title, designation or similar status), by a person specified in the MoI or as an alternate director. In addition, a director may be removed by an ordinary resolution at a shareholders' meeting. The director concerned must be given notice of the meeting and be afforded a reasonable opportunity to make a presentation on the matter either personally or by representative before a vote is taken by the shareholders.

The Act provides that the authority of the board and its actions are not limited, negated or invalidated if the number of directors of a company falls below the minimum required by the Act or the MoI of such company. Instead, the board is obliged, within 40 business days, to convene a shareholders' meeting to elect additional directors to bring the number of directors into compliance with the Act and the MoI of such company. The MoI of AngloGold Ashanti provides that where the number of directors on the board is less than the minimum required by the MoI (being 4 directors), the remaining directors may only act for the purposes of filling vacancies on the board or for calling a general meeting.

Board Meetings

The directors may regulate board meetings and determine the quorum necessary for the transaction of business as they deem fit. Unless otherwise determined by the directors, two directors form a quorum. Issues arising at meetings are decided by majority vote with the chairman having a second or casting vote where there are more than two directors present at the meeting.

Under the Act, to the extent that the MoI does not provide otherwise, decisions can be adopted by the written consent of a majority of directors given in person or by electronic communication, provided that each director has received notice of the matter to be decided. The MoI of AngloGold Ashanti provides that resolutions may be adopted by the written consent of at least three quarters of the directors entitled to vote thereon.

Borrowing Powers

AngloGold Ashanti may create and issue secured or unsecured debentures and the directors may borrow or secure the payment of such sums as they deem fit (but subject to any regulations made by shareholders in general meeting) and may secure the repayment of any indebtedness by bond, mortgage or charge provided that no special privileges as to allotment of shares, attending and voting at meetings, appointment of directors or otherwise will be given to the holders of AngloGold Ashanti's debentures without the sanction of AngloGold Ashanti shareholders in a general meeting.

AngloGold Ashanti's borrowing powers are unlimited. These borrowing powers may be varied by AngloGold Ashanti shareholders by way of a special resolution in a general meeting.

Remuneration

The directors are entitled to such remuneration as AngloGold Ashanti shareholders may approve by special resolution in a general meeting. If a director performs services that, in the opinion of the board of directors, are outside the scope of the ordinary duties of a director, he may be paid such extra remuneration as the directors determine.

Under the Act, directors' remuneration for their service as directors is required to be approved, by a special resolution of shareholders within the previous two years of the date of such remuneration.

Interests of Directors and Restriction on Voting

A director who is in any way, whether directly or indirectly, interested in a contract or arrangement or proposed contract or arrangement with AngloGold Ashanti or any of AngloGold Ashanti's subsidiaries must declare the nature of his interest to AngloGold Ashanti in accordance with the Act.

Table of Contents

A director will not vote nor be counted in the quorum and if he will do so his vote will not be counted on any resolution for his own appointment to any other office or position under AngloGold Ashanti, or in respect of any contract or arrangement in which he is interested. This prohibition will not apply to:

- (i) any arrangement for giving to any director any security or indemnity in respect of money lent by him to, or obligations undertaken by him for the benefit of, AngloGold Ashanti;
- (ii) any arrangement for the giving by AngloGold Ashanti of any security to a third party in respect of a debt or obligation of AngloGold Ashanti which the director has himself guaranteed or secured;
- (iii) any contract by a director to subscribe for or underwrite securities; or
- (iv) any contract or arrangement with a company in which he is interested by reason only of being a director, officer, creditor or member of such company (and note that these prohibitions may at any time be suspended or relaxed to any extent either generally, or in respect of any particular contract or arrangement, by AngloGold Ashanti in general meeting).

Where proposals are under consideration concerning the appointment (including fixing or varying the terms of appointment) of two or more directors to offices or employments with AngloGold Ashanti or any company in which AngloGold Ashanti is interested, such proposals may be divided and considered in relation to each director separately and in such cases each of the directors concerned will be entitled to vote (and be counted in the quorum) in respect of each resolution except that concerning his own appointment.

If any question arises at any meeting as to the entitlement of any directors to vote and such question is not resolved by his voluntarily agreeing to abstain from voting, such question must be referred to the chairman of the meeting and his ruling in relation to any other director must be final and conclusive except in a case where the nature or extent of the interests of the director concerned have not been fairly disclosed.

The directors may exercise the voting powers conferred by the shares in any other company held or owned by AngloGold Ashanti in such manner and in all respects as they deem fit, including the exercise thereof in favor of any resolution appointing themselves or any of them to be directors or officers of such other company or voting or providing for the payment of remuneration to the directors or officers of such other company.

Under the Act, the procedures to deal with the personal financial interests of directors also apply to prescribed officers (persons who exercise general executive control over and management of the whole, or a significant portion, of the business and activities of the company or regularly participate to a material degree in the exercise of general executive control over and management of the whole, or a significant portion, of the business and activities of the company, irrespective of the office held or function performed by such persons) and any person who is a member of a committee of the board of the company, whether or not that person is also a member of the company's board. The Act provides that a director or prescribed officer with a personal financial interest must disclose this to the board and cannot vote at, and must leave, the meeting.

Share Rights, Preferences and Restrictions

Allotment and Issue of Ordinary Shares

Any unissued ordinary shares can be disposed of or dealt with in such manner as AngloGold Ashanti shareholders may direct in a general meeting. AngloGold Ashanti shareholders may resolve that all or any of such ordinary shares are at the disposal of the directors who may allot, grant options over or otherwise deal with or dispose of the ordinary shares to such persons at such times and on such terms and conditions and for such consideration as the directors may determine.

Any shares may be issued with such rights or restrictions as AngloGold Ashanti shareholders in a general meeting may from time to time determine, or the directors, if shareholders delegate this power to the board.

No ordinary shares may be issued at a discount except in accordance with the Act. The 1973 Companies Act dealt with the issue shares at a discount to the par value shares of such shares if such shares are of a class already in issue; and provided that such issue had to be authorized by

a special resolution. If shares are issued at a discount, every prospectus issued by the company thereafter relating to the issue of any shares, will contain particulars of the discount allowed on the issue of those shares, or so much of the discount as has not been written off at the date of the issue of such prospectus.

Table of Contents

Under the Act, although directors may generally issue shares without shareholder approval, shareholder approval by way of a special resolution will, subject to certain exceptions, be required for the issue of shares (including ordinary shares), convertible securities (including share options) to directors, prescribed officers or persons related or inter-related to the company or to a director or prescribed officer, or if there is an issue of shares (including ordinary shares), or convertible securities, including share options, with voting power on an as-converted basis equal to or exceeding 30 percent of the voting power of all shares of that class held by shareholders immediately prior to the transaction or series of transactions.

Under the Act, directors may only issue shares for adequate consideration as determined by the board. The board's determination of adequate consideration may not be challenged unless the directors have breached their standards of conduct as specified in the Act. In some cases, it may not be possible to indemnify the directors for their conduct and the company may have a claim against the directors for breach of their duties as set out in the Act. When a company has received the consideration for the issuance of shares (including in AngloGold Ashanti's case, its ordinary shares) as approved by the board, such shares will be fully paid and the company will be obliged to issue the shares and cause the name of the holder to be entered into the company's securities registers.

The Act also provides that shares can be issued for a consideration of future services, future benefits or future payment. Shares issued for such a consideration must be immediately issued and held in trust until the consideration is received in full by the company, thereafter they must be transferred to the subscriber.

Dividends, Rights and Distributions

The ordinary shares participate fully in all dividends, other distributions and entitlements as and when declared by AngloGold Ashanti in respect of fully paid ordinary shares. Under South African law, AngloGold Ashanti may declare and pay dividends from any reserves included in total shareholders' equity calculated in accordance with International Financial Reporting Standards, subject to its solvency and liquidity. No larger dividend will be declared by shareholders in general meeting than is recommended by the directors. Dividends are payable to shareholders registered at a record date that is after the date of declaration.

Dividends may be declared in any currency at the discretion of the board of directors or AGA shareholders in general meeting. Currently, dividends are declared in South African rands and paid in Australian dollars, South African rands, Ghanaian cedis or United Kingdom pounds. Dividends paid to registered holders of AngloGold Ashanti ADSs are paid in US dollars converted from South African rands by The Bank of New York Mellon, as depository, in accordance with the Deposit Agreement. See The Deposit Agreement.

As approved by shareholders in general meeting on December 11, 2006, the company's authorized share capital was increased through the creation of a maximum of 4,280,000 E ordinary shares, to be issued for cash, pursuant to an employee share ownership plan and black economic empowerment transaction. The E ordinary shares will not be listed. Holders of E ordinary shares are entitled to receive a dividend, equal to one-half of the dividend per ordinary share declared by AngloGold Ashanti from time to time. In addition 50 percent of the dividend declared by AngloGold Ashanti from time to time is offset against the loan value of the E ordinary shares.

The holder of B preference shares is entitled to an annual dividend amounting to the lesser of five percent of the issue price of the B preference shares, or an amount equivalent to the balance of the after-tax profits from income from mining the Moab Lease Area (which is part of the Vaal River operations in South Africa) as determined by the directors in each financial year. This annual dividend is a first charge on any profit available for distribution from the Moab Lease Area. The annual dividend is not payable from any of AngloGold Ashanti's other profits.

The holder of A preference shares is entitled to an annual dividend equivalent to the balance of the after-tax profits from income from mining the Moab Lease Area as determined by AngloGold Ashanti's directors in each financial year, only once the annual dividend on the B preference shares has been paid in full.

Any dividend may be paid and satisfied, either wholly or in part, by the distribution of specific assets, or in paid-up securities of AngloGold Ashanti or of any other company, or in cash, or in any one or more of such ways as the directors or AngloGold Ashanti in general meeting may at the time of declaring the dividend determine and direct.

All dividends remaining unclaimed for a period of not less than three years from the date on which they became payable, may be forfeited by resolution of the directors for the benefit of the company.

All of the issued ordinary shares, A redeemable preference shares and B redeemable preference shares are fully paid and are not subject to further calls or assessment by AngloGold Ashanti.

Under the Act, any dividend distributions must be approved by the board and satisfy certain solvency and liquidity tests as provided by the Act.

Table of Contents

Voting Rights

Each ordinary share confers the right to vote at all general meetings. Each holder present in person or, in the case of a corporate entity, represented, has one vote on a show of hands. If a poll is held, holders present or any duly appointed proxy will have one vote for each ordinary share held. A holder of ordinary shares is entitled to appoint a proxy to attend, speak and vote at any meeting on his or her behalf and the proxy need not be a shareholder. Holders of ADSs are not entitled to vote in person at meetings, but may vote by way of proxy through The Bank of New York Mellon as the ADS issuer. Holders of CDIs are not entitled to vote in person at meetings, but may vote by way of proxy.

There are no limitations on the right of non-South African shareholders to hold or exercise voting rights attaching to any of the ordinary shares.

Holders of E ordinary shares have the right to vote at all general meetings and are entitled to appoint a proxy to attend, speak and vote at any meeting on his or her behalf and the proxy need not be a shareholder, to the extent that holders of E ordinary shares will not be entitled to veto any resolution that would otherwise have been capable of being passed, or not, by the required majority of votes of holders of ordinary shares and subject to the Listings Requirements of the JSE, holders of E ordinary shares will not be counted for categorization purposes in terms of section 9 of the Listings Requirements. These limitations on the E ordinary shares are a function of shareholder approval and the JSE Listings Requirements.

The A redeemable preference shares have voting rights that are similar to those of ordinary shares. The B redeemable preference shares have limited voting rights, except in the event that a dividend on this class of share has not been paid and remains unpaid for six months, or in connection with issues directly affecting these preference shares or AngloGold Ashanti as a whole, such as disposal of substantially all of the company's assets, winding up AngloGold Ashanti or reducing the company's share capital.

At any meeting of AngloGold Ashanti at which the holders of the ordinary shares, A redeemable preference shares, and B redeemable preference shares are present and entitled to vote, on a poll, each holder of the A redeemable preference shares shall be entitled to 50 votes for every A redeemable preference share held, each holder of the ordinary shares is entitled to 50 votes for every ordinary share held and each holder of the B redeemable preference shares is entitled to one vote for every B redeemable preference share held.

The MoI specifies that if new classes of ordinary or preference shares are issued, the rights relating to any class of shares may be modified or abrogated either with the consent in writing of the holders of at least three-fourths of the issued shares of that class, or with the sanction of a resolution passed as if it were a special resolution of the company at a separate general meeting of the holders of the shares of that class.

Transfer of Ordinary Shares

Dematerialized shares which have been traded on the JSE are transferred on the STRATE (Share Transactions Totally Electronic) settlement system and delivered within five business days after each trade.

The dematerialization of shares is not mandatory and holders of ordinary shares in AngloGold Ashanti may elect to retain their certificated securities. Subject to any statutory restrictions on transfers, any shareholder may transfer all or part of his certificated securities, to the extent it is not prevented by the Act. Every transfer must be in writing in the usual common form or in such other form as the directors may approve and must be left at the transfer office where the register of transfers is kept or at such other place as the directors prescribe and must be accompanied by the share certificate and such other evidence as the directors or registrar may require to prove title and capacity of the intending transferor or transferee.

The directors may refuse to register any transfer of certificated securities unless the instrument of transfer, duly stamped, is lodged with AngloGold Ashanti accompanied by the share certificate, the transfer is in respect of only one class of securities or the transfer is permitted within any of AngloGold Ashanti's incentive schemes.

Conversion of Ordinary Shares into Stock

In terms of the MoI AngloGold Ashanti may, by special resolution, convert any paid-up shares into stock and may reconvert any stock into paid-up shares of any denomination. The holders of stock may transfer their respective interests but the directors may fix the minimum amount of stock transferable. The holders of stock have the same rights, privileges and advantages as regards participation in profits and voting at general meetings of AngloGold Ashanti as if they held the shares from which the stock arose. All of the provisions of the MoI apply equally to stock as to shares.

Table of Contents

Increase and Reduction of Capital

In terms of the MoI AngloGold Ashanti shareholders may by way of special resolution in a general meeting and in accordance with the provisions of the Companies Act resolve to:

- increase its capital by any sum divided into shares of any amount;
- consolidate and divide all or any part of its share capital into shares of larger amounts or consolidate and reduce the number of any issued no par value shares;
- increase the number of any issued no par value shares without increasing its stated capital;
- cancel any shares which have not been subscribed for;
- sub-divide its shares or any of them into shares of smaller amounts than fixed by the memorandum of association;
- vary, modify or amend any rights attached to any shares whether issued or not, including the conversion of any shares into preference shares; and
- convert any of its shares whether issued or not into shares of another class.

In addition, AngloGold Ashanti shareholders may by ordinary resolution in a general meeting and subject to the requirements of the Act and the rules and requirements of the stock exchange on which the securities are listed, reduce, dispose of, distribute or otherwise deal with in any manner its share capital, share premium, stated capital, reserves and capital redemption reserve fund.

Under the Act, the authorization and classification of shares, the numbers of authorized shares of each class, and the preference, rights, limitations and other terms associated with each class of shares, as set out in a company's MoI, may be changed by amending the company's MoI by special resolution of shareholders or, unless the MoI provides otherwise, the directors of the company may increase or decrease the number of authorized shares of any class of shares, reclassify any classified shares that have been authorized but not issued, classify any unclassified shares that have been authorized but not issued, or determine the preferences, rights, limitations or other terms of shares which are subject to the directors' determination.

Share Premium Account and Capital Redemption Reserve Fund

AngloGold Ashanti shareholders may by ordinary resolution in a general meeting authorize the directors to distribute or deal with, in any way recommended by the directors, all or any part of the amount outstanding to the credit of any share premium account or capital redemption reserve fund of AngloGold Ashanti.

Rights Upon Liquidation

In the event of the winding up of AngloGold Ashanti:

- the B redeemable preference shares confer the right, in priority to any payment in respect of the ordinary shares or the A preference shares in the capital of AngloGold Ashanti, to receive only so much of the net proceeds from the disposal of the assets relating to the Moab Lease Area as is available for distribution, but not exceeding a return for each B redeemable preference share of the capital paid up on that share and any share premium paid on the issue of the B redeemable preference shares outstanding at that time;
- the A redeemable preference shares confer the right, in priority to any payment in respect of the ordinary shares but after any payment in respect of the B preference shares, to receive only so much of the net proceeds from the disposal of the assets relating to the Moab Lease Area as is then available for distribution. The A redeemable preference and B redeemable preference shares do not confer the right to participation in the surplus funds of AngloGold Ashanti arising in any other manner; and
- the ordinary shares and E ordinary shares confer the equal rights to any surplus arising from the liquidation of all other assets of AngloGold Ashanti.

Redemption Provisions

The A redeemable preference shares may be redeemed for their nominal value, plus a premium per share of an amount equal to the net proceeds available from the disposal of the assets relating to the Moab Lease Area, after redemption in full of the B preference shares and payment of the nominal value of the A preference shares, divided by 2,000,000.

The B redeemable preference shares may be redeemed for their nominal value, plus a premium of up to R249.99 per share, but limited to an amount equal to the net proceeds available from the disposal of the assets relating to the Moab Lease Area after payment of the nominal value of the B preference shares.

The ordinary shares are not redeemable.

Table of Contents

Description of AngloGold Ashanti ADSs

The Bank of New York Mellon issues AngloGold Ashanti's American Depositary Shares, or ADSs. One ADS represents the ownership interest of one ordinary share of AngloGold Ashanti.

The Deposit Agreement

This section provides a summary description of AngloGold Ashanti's ADSs.

AngloGold Ashanti has entered into an Amended and Restated Deposit Agreement dated as of June 3, 2008 with The Bank of New York Mellon as depositary and the owners and beneficial owners of American Depositary Receipts (the "Deposit Agreement").

The following is a summary of the material provisions of the Deposit Agreement. For more complete information, read the entire Deposit Agreement and the form of American Depositary Receipt, which AngloGold Ashanti has filed with the SEC as an exhibit to AngloGold Ashanti's registration statement on Form F-6/A (File No. 333-133049) on May 27, 2008. See Item 10.H.: Documents On Display. Copies of the Deposit Agreement are also available for inspection at the Corporate Trust Office of The Bank of New York Mellon currently located at 101 Barclay Street, New York, New York, 10286.

Description of the ADSs

The Bank of New York Mellon, as depositary, will register and deliver ADSs. Each ADS will represent one ordinary share (or a right to receive one share) deposited with The Standard Bank of South Africa Limited, Société Générale South Africa Limited, FirstRand Bank Limited, National Australia Bank Limited of Australia and New Zealand Banking Group Limited, each as a custodian for The Bank of New York Mellon, and all of which are referred to collectively as the custodian. Each ADS will also represent any other securities, cash or other property which may be held by The Bank of New York Mellon. The Bank of New York Mellon's Corporate Trust Office at which the ADSs will be administered is located at 101 Barclay Street, New York, New York 10286. The Bank of New York Mellon's principal executive office is located at One Wall Street, New York, New York 10286.

ADSs may be held either (A) directly (i) by having an American Depositary Receipt, also referred to as an ADR, which is a certificate evidencing a specific number of ADSs, registered in the holder's name, or (ii) by having ADSs registered in a holder's name in the Direct Registration System, or (B) indirectly by holding a security entitlement in ADSs through a broker or other financial institution. If ADSs are held directly, such holders are ADS holders. This description applies to ADS holders. If ADSs are held indirectly, such holders must rely on the procedures of their broker or other financial institution to assert the rights of ADS registered holders described in this section. Such holders should consult with their broker or financial institution to find out what those procedures are.

The Direct Registration System, or DRS, is a system administered by DTC pursuant to which the depositary may register the ownership of uncertificated ADSs, which ownership will be evidenced by periodic statements sent by the depositary to the registered holders of uncertificated ADSs.

AngloGold Ashanti will not treat ADS holders as its shareholders and ADS holders do not have shareholder rights. South African law governs shareholder rights. The Bank of New York Mellon is the holder of the shares underlying the ADSs. Registered holders of ADSs have ADS holder rights. The Deposit Agreement sets out ADS holder rights as well as the rights and obligations of The Bank of New York Mellon. New York law governs the Deposit Agreement and the ADSs.

Dividends and Other Distributions

The Bank of New York Mellon has agreed to pay to holders of ADSs the cash dividends or other distributions it or a custodian receives on AngloGold Ashanti ordinary shares or other deposited securities after deducting any fees and expenses and any applicable withholding taxes. Holders of ADSs will receive these distributions in proportion to the number of AngloGold Ashanti's ordinary shares that their ADSs represent.

Table of Contents

Cash

The Bank of New York Mellon will convert any cash dividend or other cash distribution AngloGold Ashanti pays on AngloGold Ashanti's ordinary shares into US dollars (unless AngloGold Ashanti pays it in US dollars), if it can do so on a reasonable basis and can transfer the US dollars to the United States. Currently, AngloGold Ashanti pays dividends on ordinary shares in South African rand. AngloGold Ashanti may declare dividends and distributions on ordinary shares in any currency that the board of directors or shareholders at a general meeting approve.

The Bank of New York Mellon will convert the South African rand it receives from AngloGold Ashanti to US dollars and distribute dividends in US dollars to registered holders of ADSs. If that is no longer possible or if any approval from any government is needed and cannot be obtained, The Bank of New York Mellon may distribute non-US currency only to those ADS holders to whom it is possible to make this type of distribution.

The Bank of New York Mellon may hold the non-US currency it cannot convert for the account of holders of ADSs who have not been paid. It will not invest the non-US currency, and it will not be liable for the interest. Before making a distribution, any withholding taxes that must be paid will be deducted. See *Payment of Taxes* below. The Bank of New York Mellon will distribute only whole US dollars and cents and will round fractional cents to the nearest whole cent. If the exchange rates fluctuate during a time when The Bank of New York Mellon cannot convert the non-US currency, holders of ADSs may lose some or all of the value of the distribution.

Ordinary Shares

The Bank of New York Mellon may distribute to holders of ADSs additional ADSs representing ordinary shares that AngloGold Ashanti distributes as a dividend or free distribution, if AngloGold Ashanti provides it promptly with satisfactory evidence that it is legal to do so. If The Bank of New York Mellon does not distribute additional ADSs, the outstanding ADSs will also represent the newly distributed AngloGold Ashanti ordinary shares. The Bank of New York Mellon will only distribute whole ADSs. It will sell AngloGold Ashanti ordinary shares that would require it to deliver a fraction of an ADS and distribute the net proceeds in the same way as it distributes cash. The Bank of New York Mellon may sell a portion of the distributed shares sufficient to pay its fees and expenses in connection with that distribution.

Rights to Subscribe for Additional Ordinary Shares

If AngloGold Ashanti offers holders of its ordinary shares any rights to subscribe for additional AngloGold Ashanti ordinary shares or any other rights, The Bank of New York Mellon, after consultation with AngloGold Ashanti, may make these rights available to holders of ADSs or sell the rights and distribute the proceeds in the same way as it distributes cash. If The Bank of New York Mellon cannot do either of these things for any reason, it may allow these rights to lapse. In that case, holders of ADSs will receive no value for them.

If The Bank of New York Mellon makes these types of subscription rights available to holders of ADSs, upon instruction from holders of ADSs, it will exercise the rights and purchase AngloGold Ashanti's ordinary shares on their behalf. The Bank of New York Mellon will then deposit the AngloGold Ashanti ordinary shares and deliver ADSs to the holders of ADSs. It will only exercise these rights if holders of ADSs pay the exercise price and any other charges the rights require them to pay.

US securities laws may restrict the sale, deposit, cancellation and transfer of the ADSs issued after the exercise of rights. For example, holders of ADSs may not be able to trade the ADSs freely in the United States. In this case, The Bank of New York Mellon may deliver ADSs which are restricted securities within the meaning of Rule 144 which will have the same provisions as the ADSs described here, except for the changes needed to put the restrictions in place.

Other Distributions

The Bank of New York Mellon will send to holders of ADSs any other distributions that AngloGold Ashanti makes on deposited securities by any means it thinks is legal, fair and practical. If it cannot make the distribution in that way, The Bank of New York Mellon may decide to sell what AngloGold Ashanti distributes, and then distribute the net proceeds in the same way as it distributes cash, or it may decide to hold what AngloGold Ashanti distributes, in which case the outstanding ADSs will also represent the newly distributed property. However, The Bank of New York Mellon is not required to distribute any securities (other than ADSs) to ADS holders unless it receives satisfactory evidence from AngloGold Ashanti that it is legal to make that distribution. The Bank of New York Mellon may sell a portion of the distributed securities or property sufficient to pay its fees and expenses in connection with that distribution.

Table of Contents

The Bank of New York Mellon is not responsible if it decides that it is unlawful or impractical to make a distribution available to any ADS holders. AngloGold Ashanti has no obligation to register ADSs, AngloGold Ashanti ordinary shares, rights or other securities under the US Securities Act of 1933. AngloGold Ashanti also has no obligation to take any other action to permit the distribution of ADSs, AngloGold Ashanti ordinary shares, rights or anything else to ADS holders. This means that the holders of ADSs may not receive the distribution AngloGold Ashanti makes on its ordinary shares or any value for them if it is illegal or impractical for AngloGold Ashanti to make them available to the holders of ADSs.

Deposit, Withdrawal and Cancellation

The Bank of New York Mellon will deliver ADSs if a holder of AngloGold Ashanti's ordinary shares or their broker deposits AngloGold Ashanti's ordinary shares or evidence of rights to receive ordinary shares with the custodian. Upon payment of its fees and expenses and of any taxes or charges, such as stamp taxes or stock transfer taxes or fees, The Bank of New York Mellon will register the appropriate number of ADSs in the names such holder of AngloGold Ashanti ordinary shares requests and will deliver the ADSs at its Corporate Trust office to the persons such holders request.

Holders of ADSs may turn in their ADSs at The Bank of New York Mellon's Corporate Trust Office. Upon payment of its fees and expenses and of any taxes or charges, such as stamp taxes or stock transfer taxes or fees, The Bank of New York Mellon will deliver (1) the underlying ordinary shares to an account designated by the relevant holder of ADSs and (2) any other deposited securities underlying the ADSs at the office of the Custodian. Or, at the request, risk and expense of ADS holders, The Bank of New York Mellon will deliver the deposited securities at its Corporate Trust Office.

Interchange Between Certificated ADSs and Uncertificated ADSs

ADS registered holders may surrender their ADR to The Bank of New York Mellon for the purpose of exchanging such ADR for uncertificated ADSs. The Bank of New York Mellon will cancel that ADR and will send to the ADS registered holder a statement confirming that the ADS registered holder is the registered holder of uncertificated ADSs. Alternatively, upon receipt by The Bank of New York Mellon of a proper instruction from a registered holder of uncertificated ADSs requesting the exchange of uncertificated ADSs for certificated ADSs, The Bank of New York Mellon will execute and deliver to the ADS registered holder an ADR evidencing those ADSs.

Voting Rights

ADS registered holders may instruct The Bank of New York Mellon to vote the number of deposited shares their ADSs represent. The Bank of New York Mellon will notify ADS registered holders of shareholders' meetings and arrange to deliver AngloGold Ashanti's voting materials to them if AngloGold Ashanti asks it to. Those materials will describe the matters to be voted on and explain how ADS registered holders may instruct The Bank of New York Mellon how to vote. For instructions to be valid, they must reach The Bank of New York Mellon by a date set by The Bank of New York Mellon.

Otherwise, ADS registered holders will not be able to exercise their right to vote unless they withdraw the shares. However, ADS registered holders may not know about the meeting sufficiently in advance to withdraw the shares.

The Bank of New York Mellon will try, as far as practical, to vote or to have its agents vote the ordinary shares or other deposited securities as holders of ADSs instruct, but this is subject to South African law, the provisions of AngloGold Ashanti's Memorandum and Articles of Association and of the deposited securities and any applicable rule of the JSE. The Bank of New York Mellon will only vote or attempt to vote as such holders of ADSs instruct.

AngloGold Ashanti cannot assure the holders of ADSs that they will receive the voting materials in time for them to instruct The Bank of New York Mellon to vote their ordinary shares. In addition, The Bank of New York Mellon and its agents are not responsible for failing to carry out voting instructions or for the manner of carrying out voting instructions. This means that holders of ADSs may not be able to exercise their right to vote and there may be nothing they can do if their ordinary shares are not voted as they requested.

Table of Contents

Fees and expenses

ADS holders must pay:

\$5.00 (or less) per 100 ADSs

For:

Each issuance of an ADS, including as a result of a distribution of AngloGold Ashanti ordinary shares or rights or other property

\$0.02 (or less) per ADS

Each cancellation of an ADS, including if the Deposit Agreement terminates
Any cash payment

Registration or transfer fees

Transfer and registration of AngloGold Ashanti ordinary shares on the AngloGold Ashanti share register to or from the name of The Bank of New York Mellon or its agent when AngloGold Ashanti ordinary shares are deposited or withdrawn
Depository services

\$0.02 (or less) per ADS per year

Expenses of The Bank of New York Mellon

Conversion of non-US currency to US dollars

Cable, telex and facsimile transmission expenses

Taxes and other governmental charges that The Bank of New York Mellon or any custodian has to pay on any ADS or AngloGold Ashanti ordinary share underlying an ADS, for example, stock transfer taxes, stamp duty or withholding taxes

Servicing the deposited securities
As necessary

A fee equivalent to the fee that would have been payable if the securities distributed had been ordinary shares deposited for issuance of ADSs

Distribution of securities distributed to holders of deposited securities that are distributed by The Bank of New York Mellon to ADS holders

Payment of Taxes

Holders of ADSs will be responsible for any taxes or other governmental charges payable on their ADSs or on the deposited securities underlying their ADSs. The Bank of New York Mellon may refuse to transfer their ADSs or allow them to withdraw the deposited securities underlying their ADSs until such taxes or other charges are paid. It may apply payments owed to holders of ADSs or sell deposited securities underlying their ADSs to pay any taxes they owe, and they will remain liable for any deficiency. If it sells deposited securities, it will, if appropriate, reduce the number of ADSs to reflect the sale and pay to holders of ADSs any proceeds, or send to them any property, remaining after it has paid the taxes.

Table of Contents

Reclassifications

If AngloGold Ashanti:

Changes the nominal or par value of the ordinary shares;

Reclassifies, splits up or consolidates any of the deposited securities;

Distributes securities on the ordinary shares that are not distributed to holders of ADSs; or

Recapitalizes, reorganizes, merges, liquidates, sells all or substantially all of AngloGold Ashanti's assets, or takes any similar action.

Then:

The cash, ordinary shares or other securities received by The Bank of New York Mellon will become deposited securities. Each ADS will automatically represent its equal share of the new deposited securities.

The Bank of New York Mellon may, and will if AngloGold Ashanti asks it to, distribute some or all of the cash, AngloGold Ashanti ordinary shares or other securities it receives. It may also issue new ADSs or ask holders of ADSs to surrender their outstanding ADSs in exchange for new ADSs identifying the new deposited securities.

Amendment and Termination

AngloGold Ashanti may agree with The Bank of New York Mellon to amend the Deposit Agreement and the ADSs without the consent of holders for any reason. If the amendment adds or increases fees or charges (except for taxes and other governmental charges or registration fees, cable, telex or facsimile transmission costs, delivery costs or other such expenses) or if the amendment prejudices an important right of ADS holders, it will only become effective 30 days after The Bank of New York Mellon notifies holders of ADSs of the amendment. At the time an amendment becomes effective, holders of ADSs are considered, by continuing to hold their ADSs, to agree to the amendment and to be bound by the ADSs and the agreement as amended.

The Bank of New York Mellon may terminate the Deposit Agreement by mailing notice of termination to ADS holders at least 30 days prior to the date fixed in the notice if AngloGold Ashanti asks it to do so. The Bank of New York Mellon may also terminate the Deposit Agreement if The Bank of New York Mellon has told AngloGold Ashanti that it would like to resign and AngloGold Ashanti has not appointed a new depository bank within 90 days. In both cases, The Bank of New York Mellon must notify holders of AngloGold Ashanti ADSs at least 30 days before termination.

After termination, The Bank of New York Mellon and its agents will be required to do only the following under the Deposit Agreement: collect distributions on the deposited securities, sell rights, and, upon surrender of ADSs, deliver AngloGold Ashanti ordinary shares and other deposited securities. Four months after the date of termination or later, The Bank of New York Mellon may sell any remaining deposited securities by public or private sale and will hold the proceeds of the sale, as well as any other cash it is holding under the Deposit Agreement, for the pro rata benefit of the ADS holders who have not surrendered their ADSs. It will not invest the money and will have no liability for interest. The Bank of New York Mellon's only obligations will be to account for the proceeds of the sale and other cash. After termination, AngloGold Ashanti's only obligations will be with respect to indemnification of, and payment of certain amounts to, The Bank of New York Mellon.

Limitations on Obligations and Liability to ADS Holders

The Deposit Agreement expressly limits AngloGold Ashanti's obligations and the obligations of The Bank of New York Mellon, and limits AngloGold Ashanti's liability and the liability of The Bank of New York Mellon. AngloGold Ashanti and The Bank of New York Mellon:

- are only obligated to take the actions specifically set forth in the Deposit Agreement without negligence or bad faith;
- are not liable if either of AngloGold Ashanti or The Bank of New York Mellon is prevented or delayed by law or circumstances beyond their control from performing their obligations under the Deposit Agreement;
- are not liable if either of AngloGold Ashanti or The Bank of New York Mellon exercises discretion permitted under the Deposit Agreement;

Edgar Filing: ANGLOGOLD ASHANTI LTD - Form 20-F

are not liable for the inability of any holder of ADSs to benefit from any distribution on deposited securities that is not made available to holders of ADSs under the terms of the Deposit Agreement, or for any special, consequential or punitive damages for any breach of the terms of the Deposit Agreement;

have no obligation to become involved in a lawsuit or other proceeding related to the ADSs or the Deposit Agreement on behalf of the holders of ADSs or on behalf of any other party;

may rely on advice of or information from legal counsel, accountants, and any persons presenting AngloGold Ashanti's ordinary shares for deposit, any registered holder or any other person believed by AngloGold Ashanti in good faith to be competent to give such advice or information; and

pursuant to the Deposit Agreement, AngloGold Ashanti and The Bank of New York Mellon agree to indemnify each other under certain circumstances.

Table of Contents

Requirements for Depositary Action

Before The Bank of New York Mellon will issue, transfer or register the transfer of an ADS, make a distribution on an ADS, or allow withdrawal of AngloGold Ashanti ordinary shares, The Bank of New York Mellon may require:

- payment of stock transfer or other taxes or other governmental charges and transfer or registration fees charged by third parties for the transfer of any ordinary shares or other deposited securities;
- production of satisfactory proof of the identity and genuineness of any signature or other information it deems necessary; and
- compliance with regulations it may establish, from time to time, consistent with the Deposit Agreement, including presentation of transfer documents.

The Bank of New York Mellon may refuse to deliver, transfer or register transfers of ADSs generally when the books of The Bank of New York Mellon or AngloGold Ashanti's books are closed, or at any time if either AngloGold Ashanti or The Bank of New York Mellon thinks it advisable to do so.

Holders of ADSs have the right to cancel their ADSs and withdraw the underlying ordinary shares at any time except:

- when temporary delays arise because: (1) either AngloGold Ashanti or The Bank of New York Mellon have closed AngloGold Ashanti's transfer books; (2) the transfer of the ordinary shares is blocked in connection with voting at a general meeting of shareholders; or (3) AngloGold Ashanti is paying a dividend on the ordinary shares;
- when ADS holders seeking to withdraw the ordinary shares owe money to pay fees, taxes and similar charges; or
- when it is necessary to prohibit withdrawals in order to comply with any laws or governmental regulations that apply to ADSs or to the withdrawal of the ordinary shares or other deposited securities.

This right of withdrawal may not be limited by any other provision of the Deposit Agreement.

Pre-release of ADSs

In certain circumstances, subject to the provisions of the Deposit Agreement, The Bank of New York Mellon may deliver ADSs before deposit of the underlying ordinary shares. This is called a pre-release of the ADS.

The Bank of New York Mellon may also deliver AngloGold Ashanti ordinary shares upon cancellation of pre-released ADSs (even if the ADSs are cancelled before the pre-release transaction has been closed out). A pre-release is closed out as soon as the underlying AngloGold Ashanti ordinary shares are delivered to The Bank of New York Mellon. The Bank of New York Mellon may receive ADSs instead of ordinary shares to close out a pre-release.

The Bank of New York Mellon may pre-release ADSs only under the following conditions:

- before or at the time of the pre-release, the person to whom the pre-release is being made must represent to The Bank of New York Mellon in writing that it or its customer: (a) owns the ordinary shares or ADSs to be remitted, (b) assigns all beneficial rights, title and interest in such ADSs or ordinary shares, as the case may be, to The Bank of New York Mellon in its capacity as the depository and for the benefit of the ADS holders, and (c) will not take any action with respect to such ADSs or ordinary shares, as the case may be, that is consistent with the transfer of beneficial ownership (including, without the consent of The Bank of New York Mellon, disposing of such ADSs or ordinary shares, as the case may be) other than satisfaction of such pre-release;

the pre-release must be fully collateralized with cash, US government securities, or other collateral that The Bank of New York Mellon considers appropriate; and

the Bank of New York Mellon must be able to close out the pre-release on not more than five business days' notice. Each pre-release will be subject to any further indemnities and credit regulations that The Bank of New York Mellon deems appropriate. The Bank of New York Mellon will normally limit the number of AngloGold Ashanti ordinary shares not deposited but represented by ADSs outstanding at any time as a result of pre-release so that they do not exceed 30 percent of the ordinary shares deposited, although The Bank of New York Mellon may disregard this limit from time to time, if it thinks it is appropriate to do so.

Table of Contents

Direct Registration System

In the Deposit Agreement, all parties to the Deposit Agreement acknowledge that the DRS and Profile Modification System, or Profile, will apply to uncertificated ADSs upon acceptance thereof to DRS by The Depository Trust Company, also referred to as DTC. DRS is the system administered by DTC pursuant to which the depository may register the ownership of uncertificated ADSs, which ownership will be evidenced by periodic statements sent by the depository to the registered holders of uncertificated ADSs. Profile is a required feature of DRS which allows a DTC participant, claiming to act on behalf of a registered holder of ADSs, to direct the depository to register a transfer of those ADSs to DTC or its nominee and to deliver those ADSs to the DTC account of that DTC participant without receipt by the depository of prior authorization from the ADS registered holder to register that transfer.

In connection with and in accordance with the arrangements and procedures relating to DRS/Profile, the parties to the Deposit Agreement understand that The Bank of New York Mellon will not verify, determine or otherwise ascertain that the DTC participant which is claiming to be acting on behalf of an ADS holder in requesting registration of transfer and delivery described in the paragraph above has the actual authority to act on behalf of the ADS holder (notwithstanding any requirements under the Uniform Commercial Code). In the Deposit Agreement, the parties agree that The Bank of New York Mellon's reliance on and compliance with instructions received by The Bank of New York Mellon through the DRS/Profile System and in accordance with the Deposit Agreement will not constitute negligence or bad faith on the part of The Bank of New York Mellon.

Shareholder Communications: Inspection of Register of Holders of ADSs

The Bank of New York Mellon will make available for inspection at its office all communications that it receives from AngloGold Ashanti as a holder of deposited securities that AngloGold Ashanti makes generally available to holders of deposited securities. The Bank of New York Mellon sends copies of those communications if requested by AngloGold Ashanti. ADS holders have a right to inspect the register of holders of ADSs, but not for the purpose of contacting those holders about a matter unrelated to AngloGold Ashanti's business or the ADSs.

Shareholders' meetings

The directors may convene general meetings of AngloGold Ashanti shareholders. Subject to the provisions of the Companies Act, the shareholders may requisition for the convening of a general meeting.

An AngloGold Ashanti annual general meeting and a meeting of AngloGold Ashanti shareholders for the purpose of passing a special resolution may be called by giving 21 clear days' notice in writing of that shareholders' meeting. For any other meeting of AngloGold Ashanti shareholders, 14 clear days' notice must be given. Clear days' means calendar days excluding the day on which the notice is given and the date of the meeting. All shareholders are entitled to attend.

AngloGold Ashanti's MoI provides that a quorum for a general meeting (other than a meeting at which a special resolution will be passed) consists of three shareholders present personally, or if the shareholders are a corporate entity, represented and entitled to vote. If a general meeting is not quorate, the meeting is dissolved and a new meeting will have to be called following the relevant notice provision.

The quorum of a shareholders' meeting is sufficient persons present at the meeting to exercise, in aggregate, at least 25 percent of all of the voting rights that are entitled to be exercised in respect of at least one matter to be decided at the meeting. In addition at least three shareholders must be present at the meeting. If the meeting is not quorate, it will be adjourned to a date between seven and 21 days after the adjourned meeting, and the shareholders present at the second meeting will constitute a quorum as long as there are at least three of them at the second meeting. For an ordinary resolution to be approved by shareholders, it must be supported by more than 50 percent of the voting rights exercised on the resolution. For a special resolution to be approved by shareholders, it must be supported by at least 75 percent of the voting rights exercised on the resolution.

If the meeting is not quorate and is convened upon the requisition of shareholders, the meeting is dissolved.

Table of Contents

Disclosure of Interest in Shares

Under South African law, a person must notify AngloGold Ashanti within three business days after that person acquires a beneficial interest in sufficient securities of a class issued by AngloGold Ashanti such that, as a result of the acquisition, the person holds a beneficial interest in securities amounting to 5 percent, 10 percent, 15 percent or any further multiple of 5 percent of the issued securities of that class or disposes of any beneficial interest in sufficient securities of a class issued by AngloGold Ashanti such that the result of the disposition the person no longer holds a beneficial interest in securities amounting to a particular multiple of 5 percent of issued securities of that class. When AngloGold Ashanti has received the notice referred to above it must file a copy with the Takeover Regulation Panel and report the information to holders of the relevant class of security unless the notice concerned a disposition of less than 1 percent of the class of securities.

If the securities of AngloGold Ashanti is registered in the name of a person who is not the holder of the beneficial interest then all of the securities in AngloGold Ashanti held by that person, that registered holder of the securities must disclose the identity of the person on whose behalf that security is held and the identity of each person with a beneficial interest in securities so held, the number and the class of securities held for each such person with a beneficial interest and the extent of each such beneficial interest. This information must be disclosed in writing to the company within five business days after the end of every month during which a change has occurred in the information or more promptly or frequently to the extent so provided by the requirements of a Central Securities Depository. A company that knows or has reasonable cause to believe that any of its securities are held by one person for the beneficial interest of another may by notice in writing require either of those persons to confirm or deny that fact, provide particulars of the extent of the beneficial interest held during the three years preceding the date of the notice and disclose the identity of each person with a beneficial interest in the securities held by that person.

AngloGold Ashanti is obligated to establish and maintain a register of the disclosures described above and to publish in its annual financial statements a list of the persons who hold beneficial interest equal to or in excess of 5 percent of the total number of ordinary shares issued by AngloGold Ashanti together with the extent of those beneficial interests.

Rights of Minority Shareholders

Majority shareholders of South African companies have no fiduciary obligations under South African common law to minority shareholders. However, under the Companies Act, a shareholder may, under certain circumstances, seek relief from the court if he has been unfairly prejudiced by the company. There may also be common law personal actions available to a shareholder of a company.

Pursuant to the Act, a shareholder may petition a South African court for relief from the actions or omissions or, business conduct of the company or the actions of the company's directors or officers that is oppressive or unfairly prejudicial to, or unfairly disregards the interest of the shareholder. In addition, a shareholder who voted against a resolution to amend the company's MoI, or to approve a fundamental transaction, (and complied with other requirements set out in the Act) may exercise its appraisal right to demand that the company pay to it the fair value for all the shares of the company held by that shareholder.

Golden Share

Under the Stability Agreement, the Government of Ghana (Government) has confirmed and agreed that the Government's rights with respect to the Golden Share apply only in respect of AngloGold Ashanti's assets and operations in Ghana. The rights do not extend to any other assets or operations of AngloGold Ashanti outside Ghana, nor to any assets or operations of AngloGold Ashanti.

The Government has also agreed to waive any right it may have under Section 60(I) of the Minerals and Mining Law, 1986, as amended to acquire a special share in AngloGold Ashanti or any of its direct or indirect subsidiaries or joint ventures.

The Golden Share may only be held by or transferred to a Minister of the Government or any person acting on behalf of such Government and authorized in writing by such Minister.

Table of Contents

The following matters require, and will not be effective without, the written consent of the holder of the Golden Share:

- (i) any amendment to or removal of the relevant provisions of the AngloGold Ashanti (Ghana) Limited Regulations setting out the rights and restrictions attaching to the Golden Share;
- (ii) the voluntary winding-up or voluntary liquidation of AngloGold Ashanti (Ghana) Limited;
- (iii) the redemption of or purchase by AngloGold Ashanti of the Golden Share;
- (iv) the disposal of any mining lease held by AngloGold Ashanti (Ghana) Limited or any subsidiary of AngloGold Ashanti (Ghana) Limited;
- (v) any disposal by AngloGold Ashanti (Ghana) Limited (other than any disposal in the ordinary course of business of AngloGold Ashanti) which, alone or when aggregated with any disposal or disposals forming part of, or connected with, the same or a connected transaction, constitutes a disposal of the whole or a material part of the assets of the AngloGold Ashanti group taken as a whole. For this purpose, a part of the AngloGold Ashanti group's assets will be considered material if either (a) its book value (calculated by reference to the then latest audited consolidated accounts), or the total consideration to be received on its disposal, is not less than 25 percent of the book value of the net assets of the AngloGold Ashanti group or (b) the average profits attributable to it represent at least 25 percent of the average profits of the AngloGold Ashanti group for the last three years for which audited accounts are available (before deducting all charges, except taxation and extraordinary items).

Upon a return of assets in a winding-up or liquidation of AngloGold Ashanti (Ghana) Limited, the holder of the Golden Share is entitled to the sum of 0.10 cedis (approximately 7 US cents) in priority to any payment to other members, but the Golden Share confers no further right to participate in the profits or assets of AngloGold Ashanti. The Golden Share carries no right to any dividend or any right to participate in any offer of securities to existing shareholders or in any capitalization issue.

The holder of the Golden Share may require AngloGold Ashanti (Ghana) Limited to redeem the Golden Share at any time in consideration of the payment to such holder of 0.10 cedis (approximately 7 US cents).

10C. MATERIAL CONTRACTS

Not applicable.

10D. EXCHANGE CONTROLS

Exchange controls and other limitations affecting security holders

The following is a general outline of South African exchange controls and such outline may not apply to former residents of South Africa. Investors should consult a professional advisor as to the exchange control implications of their particular investments.

South African law provides for exchange control regulations, which restrict the export of capital from the Common Monetary Area, which comprises South Africa, the Kingdoms of Lesotho and Swaziland and the Republic of Namibia. The exchange control regulations, which are administered by the Exchange Control Department of the South African Reserve Bank (SARB), are applied throughout the Common Monetary Area and regulate transactions involving South African residents, including natural persons and legal entities. Government officials have from time to time stated their intentions to relax South Africa's exchange control regulations when economic conditions permit such action. In his budget speech in March 1998, the then Minister of Finance announced that restrictions relating to offshore investments by South African companies and individuals subject to South African exchange control would, to a limited extent, be lifted.

Since then, the government has incrementally relaxed aspects of exchange control for financial institutions and individuals. However, it is impossible to predict with any certainty if and when the government will remove exchange controls in their entirety.

The comments below relate to exchange controls in place at the date of this annual report.

Table of Contents

Investments in South African companies

A foreign investor may invest freely in ordinary shares in a South African company. Any foreign investor may also sell shares in a South African company and transfer the proceeds out of South Africa without restriction. Acquisitions of shares or assets of South African companies by non-South African purchasers are not generally subject to review by the SARB when the consideration is in cash, but may require SARB review in certain circumstances, including when the consideration is equity in a non-South African company or when the acquisition is financed by a loan from a South African lender.

Dividends

Dividends declared to foreign stockholders are not subject to the approval by the (SARB). Dividends are freely transferable to foreign stockholders from both trading and non-trading profits earned in South Africa by publicly listed companies.

Interest

Interest on foreign loans is freely remittable abroad, provided that the loans have received prior SARB approval.

Voting rights

There are no limitations imposed by South African law or by the memorandum and articles of association of AngloGold Ashanti on the rights of non-South African shareholders to vote the ordinary shares.

Overseas financing and investments

AngloGold Ashanti and its South African subsidiaries require SARB approval to raise debt from and repay debt to non-residents of the Common Monetary Area, mainly in respect of the interest rate and terms of repayment applicable to the loan.

Debt raised outside the Common Monetary Area by AngloGold Ashanti's non-South African subsidiaries is not restricted under South African exchange control regulations and can be used for overseas investment, subject to any conditions imposed by the SARB in connection with establishing such a subsidiary. AngloGold Ashanti and its South African subsidiaries would, however, require SARB approval in order to provide guarantees for the obligations of any of its subsidiaries with regard to funds obtained from non-residents of the Common Monetary Area.

Debt raised outside the Common Monetary Area by AngloGold Ashanti's non-South African subsidiaries must be repaid or serviced by AngloGold Ashanti's foreign subsidiaries.

A listing by a South African company on any stock exchange other than the JSE in connection with raising capital requires permission from the SARB.

Under current exchange control regulations, offshore investments by AngloGold Ashanti and its South African subsidiaries require the approval of the SARB. Subject to approval, there is no limit on the amount of capital that may be invested offshore.

10E. TAXATION

SOUTH AFRICAN TAXATION

The following discussion summarizes South African tax consequences of the ownership and disposition of shares or ADSs by a US holder (as defined below). This summary is based upon current South African tax law and South African Revenue Service (SARS) practice, the Convention Between the Government of the United States of America and the Republic of South Africa for the Avoidance of Double Taxation and the Prevention of Fiscal Evasion with Respect to Taxes on Income and Capital Gains, signed February 17, 1997 (the "Treaty"), and in part upon representations of the depositary, and assumes that each obligation provided for in, or otherwise contemplated by, a Deposit Agreement and any related agreement will be performed in accordance with its respective terms.

Table of Contents

The following summary of South African tax considerations does not address the tax consequences to a US holder that is resident in South Africa for South African tax purposes, whose holding of shares or ADSs is effectively connected with a permanent establishment in South Africa through which such US holder carries on business activities or, in the case of an individual who performs independent personal services, with a fixed base situated therein, or who is otherwise not entitled to full benefits under the Treaty.

The statements of law set forth below are subject to any changes (which may be applied retroactively) in South African law or in the interpretation thereof by SARS, or in the Treaty, occurring after the date hereof. It should be expressly noted that South African tax law does not specifically address the treatment of ADSs. However, it is reasonable to assume (although no assurance can be made) that the tax treatment of US holders of shares is also applicable to US holders of ADSs.

Holders are strongly urged to consult their own tax advisors as to the consequences under South African, US federal, state and local, and other applicable laws, of the ownership and disposition of shares or ADSs.

Taxation of dividends

South Africa currently imposes Secondary Tax on Companies (STC) at a rate of 10 percent on the net amount of the dividend declared by a resident company, other than a headquarter company. Under the terms of an option granted to gold mining corporations (Gold Mining Election), AngloGold Ashanti has elected not to be subject to the payment of STC on dividends it declares. This election results in AngloGold Ashanti paying corporate income tax at a slightly higher corporate income tax rate than would otherwise have been the case. However, this election resulted in the overall effective tax paid by AngloGold Ashanti being lower than the tax payable using the standard corporate tax rate together with STC.

Effective April 1, 2012, South Africa will replace its current STC regime with a dividends tax. The dividends tax was originally set to be introduced at 10 percent, but the South African Minister of Finance announced in his 2012/13 Budget Speech on February 22, 2012, that the dividends tax will increase to 15 percent. Other than STC, the dividends tax is generally imposed on the beneficial owner. The dividends tax could be reduced to a lower rate under an applicable double tax treaty, if all requirements are met. In the case of dividends paid to a US holder with respect to shares, the Treaty would generally limit the dividends tax rate to 5 percent of the gross amount of the dividends if a US holder (it must be a corporate) holds directly at least 10 percent of the voting stock of AngloGold Ashanti. In all other cases, the maximum tax rate under the Treaty is 15 percent of the gross amount of the dividend. There are different rules to consider if the beneficial owner of the dividends is a US resident who carries on business in South Africa through a permanent establishment situated in South Africa, or performs in South Africa independent personal services from a fixed base situated in South Africa, and the dividends are attributable to such permanent establishment or fixed base. Moreover, if the dividends tax rate is reduced under the auspices of an applicable double tax treaty, there are certain South African compliance requirements that must be met in order to access the double tax treaty relief.

The abolishment of STC will also result in the deletion of the option to elect the Gold Mining Exemption. This means that the taxable income derived by any company from mining for gold on any gold mine will be determined using the remaining formula. The new change will be applicable in respect of any year of assessment ending during the period of 12 months ending on March 31, 2013 reducing the tax rate applicable to AngloGold Ashanti's South African operations, thereby increasing distributable earnings, but the effect of the withholding tax will, over a period of time, generally reduce the amount of dividends or other distributions received by AngloGold Ashanti shareholders.

Taxation of capital gains on sale or other disposition

South African residents are (subject to certain exemptions) taxed on their worldwide income, while non-residents are only taxed on South African sourced income (subject to the provisions of any relevant double taxation agreement).

Capital gains tax is not a separate tax to income tax; instead, a percentile of the taxpayer's net capital gain (that is the taxable capital gain) is included in its taxable income on which it is taxed at the income tax rate.

Non-residents are only subject to the South African capital gains tax provisions in respect of the disposal of any immovable property (such as land or mining rights) or any interest or right of whatever nature to or in immovable property situated in South Africa, or any asset of a permanent establishment through which that non-resident is carrying on a trade in South Africa. In the instance of a shareholder holding shares in a South African company, the interest in immovable property requirements are met if 80 percent or more of the market value of is directly or indirectly attributable to South African immovable property held on capital account, and that shareholder (whether alone or together with any connected person in relation to that person), directly or indirectly, holds at least 20 percent of the equity shares of that South African company.

Table of Contents

If South Africa has such a right to taxation under its domestic law, the provisions of the Treaty must be analyzed when determining the right of taxation of the source state (South Africa) compared to the country of residence (the US).

UNITED STATES TAXATION

The following is a general summary of the material US federal income tax consequences of the ownership and disposition of shares or ADSs to a US holder (as defined below) that holds its shares or ADSs as a capital asset. This summary is based on US tax laws including the Internal Revenue Code of 1986, as amended (the Code), Treasury regulations promulgated thereunder, rulings, judicial decisions, administrative pronouncements, and the Treaty, all as currently in effect as of the date of this annual report, and all of which are subject to change or changes in interpretation, possibly with retroactive effect. In addition, this summary is based in part upon the representations of the depositary and the assumption that each obligation in the Deposit Agreement relating to the ADSs and any related agreement will be performed in accordance with its terms.

This summary does not address all aspects of US federal income taxation that may apply to holders that are subject to special tax rules, including US expatriates, insurance companies, tax-exempt entities, banks, certain financial institutions, persons subject to the alternative minimum tax, regulated investment companies, securities broker-dealers, traders in securities who elect to apply a mark-to-market method of accounting, investors that own (directly, indirectly or by attribution) 10 percent or more of the outstanding share capital or voting stock of AngloGold Ashanti, partnerships, persons holding their shares or ADSs as part of a straddle, hedging or conversion transaction, persons who acquired their shares or ADSs pursuant to the exercise of employee stock options or otherwise as compensation, or persons whose functional currency is not the US dollar. Such holders may be subject to US federal income tax consequences different from those set forth below.

As used herein, the term "US holder" means a beneficial owner of shares or ADSs that is (a) a citizen or individual resident of the United States for US federal income tax purposes; (b) a corporation (or other entity taxable as a corporation for US federal income tax purposes) created or organized in or under the laws of the United States or any state thereof (including the District of Columbia); (c) an estate the income of which is subject to US federal income taxation regardless of its source; or (d) a trust if a court within the United States can exercise primary supervision over the administration of the trust and one or more US persons are authorized to control all substantial decisions of the trust. If a partnership (including for this purpose any entity treated as a partnership for US federal income tax purposes) holds shares or ADSs, the tax treatment of a partner generally will depend upon the status of the partner and the activities of the partnership. If a US holder is a partner in a partnership that holds shares or ADSs, the holder is urged to consult its own tax advisor regarding the specific tax consequences of the ownership and disposition of the shares or ADSs.

US holders should consult their own tax advisors regarding the specific South African and US federal, state and local tax consequences of owning and disposing of shares or ADSs in light of their particular circumstances as well as any consequences arising under the laws of any other taxing jurisdiction. In particular, US holders are urged to consult their own tax advisors regarding whether they are eligible for benefits under the Treaty.

For South African and US federal income tax purposes, a US holder of ADSs should be treated as owning the underlying shares represented by those ADSs. Therefore, deposits or withdrawals by a US holder of shares for ADSs or of ADSs for shares will not be subject to US federal income tax. The following discussion (except where otherwise expressly noted) applies equally to US holders of shares and US holders of ADSs.

Taxation of dividends

The gross amount of any distribution (including the amount of any South African withholding tax thereon) paid to a US holder by AngloGold Ashanti generally will be taxable as dividend income to the US holder for US federal income tax purposes on the date the distribution is actually or constructively received by the US holder, in the case of shares, or by the depositary, in the case of ADSs. Corporate US holders will not be eligible for the dividends received deduction in respect of dividends paid by AngloGold Ashanti. For foreign tax credit limitation purposes, dividends paid by AngloGold Ashanti will be income from sources outside the United States. At present, South Africa does not impose a withholding tax or any other form of tax on dividends paid to US holders with respect to shares. The South African government, however, has recently announced its intent to enact a dividend withholding tax, which and the necessary government notice has now been issued and it will be implemented on April 1, 2012. See "Taxation - South African Taxation - Taxation of dividends." Once the dividend withholding tax becomes effective, US holders who are eligible for benefits under the current Treaty will be subject to a maximum withholding tax of 15 percent on the gross amount of dividend distributions paid by AngloGold Ashanti.

Table of Contents

The amount of any distribution paid in foreign currency (including the amount of any South African withholding tax thereon) generally will be includible in the gross income of a US holder of shares in an amount equal to the US dollar value of the foreign currency calculated by reference to the spot rate in effect on the date of receipt by the US holder, in the case of shares, or by the depository, in the case of ADSs, regardless of whether the foreign currency is converted into US dollars on such date. If the foreign currency is converted into US dollars on the date of receipt, a US holder of shares generally should not be required to recognize foreign currency gain or loss in respect of the dividend. If the foreign currency received in the distribution is not converted into US dollars on the date of receipt, a US holder of shares generally will have a tax basis in the foreign currency equal to its US dollar value on the date of receipt. Any gain or loss recognized upon a subsequent conversion or other disposition of the foreign currency generally will be treated as US source ordinary income or loss. In the case of a US holder of ADSs, the amount of any distribution paid in a foreign currency generally will be converted into US dollars by the depository upon its receipt. Accordingly, a US holder of ADSs generally will not be required to recognize foreign currency gain or loss in respect of the distribution. Special rules govern and specific elections are available to accrual method taxpayers to determine the US dollar amount includible in income in the case of taxes withheld in a foreign currency. Accrual basis taxpayers are therefore urged to consult their own tax advisors regarding the requirements and elections applicable in this regard.

Subject to certain limitations, South African withholding taxes will be treated as foreign taxes eligible for credit against a US holder's US federal income tax liability. The limitation on foreign taxes eligible for credit is calculated separately with respect to specific classes of income. Dividend income generally will constitute passive category income, or in the case of certain US holders, general category income. The use of foreign tax credits is subject to complex conditions and limitations. In lieu of a credit, a US holder who itemizes deductions may elect to deduct all of such holder's foreign taxes in the taxable year. A deduction does not reduce US tax on a dollar-for-dollar basis like a tax credit, but the deduction for foreign taxes is not subject to the same limitations applicable to foreign tax credits. US holders are urged to consult their own tax advisors regarding the availability of foreign tax credits.

Certain US holders (including individuals) are eligible for reduced rates of US federal income tax (currently at a maximum rate of 15 percent) in respect of qualified dividend income received in taxable years beginning before January 1, 2013. For this purpose, qualified dividend income generally includes dividends paid by a non-US corporation if, among other things, the US holders meet a certain minimum holding period and other requirements and the non-US corporation satisfies certain requirements, including that either (i) the ordinary shares (or ADSs) with respect to which the dividend has been paid are readily tradable on an established securities market in the United States, or (ii) the non-US corporation is eligible for the benefits of a comprehensive US income tax treaty (such as the Treaty) which provides for the exchange of information. AngloGold Ashanti currently believes that dividends paid with respect to its shares and ADSs should constitute qualified dividend income for US federal income tax purposes. AngloGold Ashanti anticipates that its dividends will be reported as qualified dividends on Forms 1099-DIV delivered to US holders. Each individual US holder of AngloGold Ashanti shares or ADSs is urged to consult his own tax advisor regarding the availability to him of the reduced dividend tax rate in light of his own particular situation.

The US Treasury has expressed concern that parties to whom ADSs are pre-released may be taking actions that are inconsistent with the claiming of foreign tax credits for US holders of ADSs. Such actions would also be inconsistent with the claiming of the reduced rate of tax described above, applicable to dividends received by certain non-corporate holders. Accordingly, the analysis of the creditability of South African withholding taxes or the availability of qualified dividend treatment could be affected by future actions that may be taken by the US Treasury with respect to ADSs.

Taxation of capital gains

If a US holder is a resident of the United States for purposes of the Treaty, such holder will not be subject to South African tax on any capital gain if it sells or disposes of its shares or ADSs. Special rules apply to individuals who are residents of more than one country.

In general, upon a sale, exchange or other disposition of shares or ADSs, a US holder will recognize capital gain or loss for US federal income tax purposes in an amount equal to the difference between the US dollar value of the amount realized on the disposition and the holder's tax basis, determined in US dollars, in the shares or ADSs. Such gain or loss generally will be US source gain or loss, and will be treated as a long-term capital gain or loss if the holder's holding period in the shares exceeds one year at the time of disposition. If the US holder is an individual, any capital gain generally will be subject to US federal income tax at preferential rates if specified minimum holding periods are met. The deductibility of capital losses is subject to significant limitations.

Table of Contents

A US holder's tax basis in a share will generally be its US dollar cost. The US dollar cost of a share purchased with foreign currency will generally be the US dollar value of the purchase price on the date of purchase, or the settlement date for the purchase in the case of shares traded on an established securities market that are purchased by a cash basis US holder or an electing accrual basis US holder. The amount realized on a sale or other disposition of shares for an amount in foreign currency will be the US dollar value of this amount on the date of sale or disposition. On the settlement date, the US holder will recognize US source foreign currency gain or loss (taxable as ordinary income or loss) equal to the difference (if any) between the US dollar value of the amount received based on the exchange rates in effect on the date of sale or other disposition and the settlement date. However, in the case of shares traded on an established securities market that are sold by a cash US holder (or an accrual basis US holder that so elects), the amount realized will be based on the exchange rate in effect between the settlement date for the sale, and no exchange gain or loss will be recognized at that time. If an accrual basis US holder makes either of the elections described above, it must be applied consistently from year to year and cannot be revoked without the consideration of the IRS.

Foreign currency received on the sale or other disposition of a share will have a tax basis equal to its US dollar value on the settlement date. Any gain or loss recognized on a sale or other disposition of foreign currency (including its use to purchase shares or upon exchange for US dollars) will be US source ordinary income or loss.

Passive foreign investment company considerations

A non-US corporation will be classified a Passive Foreign Investment Company (a PFIC) for any taxable year if at least 75 percent of its gross income consists of passive income (such as dividends, interest, rents or royalties (other than rents or royalties derived in the active conduct of a trade or business and received from an unrelated person), or gains on the disposition of certain minority interests), or at least 50 percent of the average value of its assets consists of assets that produce, or are held for the production of, passive income. AngloGold Ashanti believes that it was not treated as a PFIC for the taxable year ended December 31, 2011 and does not expect to become a PFIC in the foreseeable future. If AngloGold Ashanti were characterized as a PFIC for any taxable year, a US holder would suffer adverse tax consequences.

These consequences may include having gains realized on the disposition of shares treated as ordinary income rather than capital gains and being subject to punitive interest charges on the receipt of certain dividends and on the proceeds of the sale or other disposition of the shares. Furthermore, dividends paid by AngloGold Ashanti would not be qualified dividend income and would be taxed at the higher rates applicable to other items of ordinary income. US holders should consult their own tax advisors regarding the potential application of the PFIC rules to their ownership of the shares.

US information reporting and backup withholding

Dividend payments made to a holder and proceeds paid from the sale, exchange, or other disposition of shares may be subject to information reporting to the Internal Revenue Service (the IRS). US federal backup withholding generally is imposed at a current rate of 28 percent on specified payments to persons who fail to furnish required information. Backup withholding will not apply to a holder who furnishes a correct taxpayer identification number or certificate of foreign status and makes any other required certification, or who is otherwise exempt from backup withholding. US persons who are required to establish their exempt status generally must provide IRS Form W-9 (Request for Taxpayer Identification Number and Certification). Non-US holders generally will not be subject to US information reporting or backup withholding. However, these holders may be required to provide certification of non-US status (generally on IRS Form W-8BEN) in connection with payments received in the United States or through certain US-related financial intermediaries. Backup withholding is not an additional tax. Amounts withheld as backup withholding may be credited against a holder's US federal income tax liability. A holder may obtain a refund of any excess amounts withheld under the backup withholding rules by filing the appropriate claim for refund with the IRS and furnishing any required information.

Table of Contents

Information with respect to foreign financial assets

Individuals that own specified foreign financial assets with an aggregate value in excess of \$50,000 are generally required to file information reports with respect to such assets with their U.S. federal income tax returns. Depending on the individual's circumstances, higher threshold amounts may apply. Specified foreign financial assets include any financial accounts maintained by foreign financial institutions, as well as any of the following, but only if they are not held in accounts maintained by financial institutions: (i) stocks and securities issued by non-United States persons, (ii) financial instruments and contracts held for investment that have non-United States issuers or counterparties and (iii) interests in non-United States entities. The shares may be treated as specified foreign financial assets. You may be subject to this information reporting regime and be required to file IRS form 8938 listing these assets with your U.S. federal income tax return. Failure to file information reports may subject you to penalties. You are urged to consult your own tax advisor regarding your obligations to file information reports with respect to the shares.

ITEM 11: QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

TREASURY POLICY

Risk management activities within the group are the ultimate responsibility of the board of directors. The chief executive officer is responsible to the board of directors for the design, implementation and monitoring of the risk management plan. The Risk and Information Integrity Committee is responsible for overseeing risk management plans and systems, and the Audit and Corporate Governance Committee oversees financial risks which include a review of treasury activities and exposure to the group's counterparties.

Under the treasury and risk management policy, hedges may be put in place using approved instruments over the group's planned gold production and resultant gold sales currency exposures. The tenor of the hedges may extend out to ten years. The treasury and risk management policy sets limits on the extent to which the hedge position may change for the various levels of treasury management from dealer, through treasurer, executive management and board.

The financial risk management activities objectives of the group are as follows:

- Safeguarding the group's core earnings stream through the effective control and management of gold and other commodity price risk, foreign exchange risk and interest rate risk;
- Effective and efficient usage of credit facilities through the adoption of reliable liquidity planning and procedures;
- Ensuring that investment and hedging transactions are undertaken with creditworthy counterparties; and
- Ensuring that all contracts and agreements related to financial risk management activities are co-ordinated and consistent throughout the group and comply where necessary with all relevant regulatory and statutory requirements.

Under the treasury and risk management policy, treasury reports that are produced at the following minimum intervals for review by management and the board of directors.

Daily	Treasurer
Monthly	Executive Committee
Quarterly	Audit and Corporate Governance Committee, Board of Directors and shareholder reports

The Treasury Risk Analyst is responsible for monitoring all reports for completeness and accuracy which are reviewed by the Treasurer.

At AngloGold Ashanti, all front office (dealing), middle office (risk reporting), back office (deal confirmations) and payment (treasury settlements) activities are segregated. All treasury transactions are captured on a third party developed treasury and risk management system that is widely used in corporate treasuries. The group internal audit function conducts regular and ad-hoc reviews of the activities of treasury and the group's treasury system.

GOLD PRICE RISK MANAGEMENT ACTIVITIES

In the normal course of its operations, the group is exposed to gold price, other commodity price, foreign exchange, interest rate, liquidity, equity price and credit risks. The Company is also exposed to certain by-product commodity price risk. In order to manage these risks, the Company may enter into transactions which make use of derivatives. AngloGold Ashanti does not acquire, hold or issue derivative instruments for economic trading purposes. The group has developed a comprehensive risk management process to facilitate, control and monitor these risks.

Gold price risk arises from the risk of an adverse effect of current or future earnings resulting from fluctuations in the price of gold. The Company historically utilized derivatives as part of its hedging of the risk. In order to provide financial exposure to the rising spot price of gold and the potential for enhanced cash-flow generation the Company completed its final tranche of the hedge buy-back program during 2010 and settled all forward gold and foreign exchange contracts that had been used by the Company in the past to manage those risks. At year end there were no net forward sales contracts (2010: nil kg; 2009: 571kg), net call options sold (2010: nil kg; 2009: 120,594kg) and net put options sold (2010: nil kg; 2009: 27,071kg).

Table of Contents

FASB ASC guidance on derivatives and hedging requires that derivative instruments be accounted for as follows:

Contracts that meet the criteria for hedge accounting are designated as the hedging instruments hedging the variability of forecasted cash flows from the sale of production into the spot market and from capital expenditure denominated in a foreign currency and are classified as cash flow hedges under the FASB ASC guidance. The ineffective portion of matured and existing cash flow hedges recognized in loss on non-hedge derivatives in the income statement during the year was \$nil million (2010: \$nil million; 2009: \$5 million). The Company does not have any open cash flow hedge contracts relating to product sales or forecasted capital expenditure as at December 31, 2011 (2010: \$nil million; 2009: \$37 million). Cash flow hedge losses pertaining to capital expenditure of \$3 million as at December 31, 2011 (2010: \$3 million; 2009: \$4 million) are expected to be reclassified from accumulated other comprehensive income and recognized as an adjustment to depreciation expense until 2017.

All other derivatives are measured at their estimated fair value, with the changes in estimated fair value at each reporting date reported as gains or losses on derivatives in earnings in the period in which they occur.

Cash flows from derivative instruments accounted for as cash flow hedges are included in net cash provided by operating activities in the statements of consolidated cash flows. All current and future cash flows associated with such instruments are classified within the investing activities of the consolidated cash flow statement.

As at December 31, 2011 and 2010 the Company had no outstanding commitments against future production as a result of the elimination of the hedge book during 2010.

Foreign exchange price risk protection agreements

The Company, from time to time, may enter into currency forward exchange and currency option contracts to hedge certain anticipated transactions denominated in foreign currencies. The objective of the Company's foreign currency hedging activities is to protect the Company from the risk that the eventual cash flows resulting from transactions denominated in US dollars will be adversely affected by changes in exchange rates.

As at December 31, 2011 and 2010, the Company had no open forward exchange or currency option contracts in its currency hedge position.

Interest rate and liquidity risk

Fluctuations in interest rates impacts interest paid and received on the short-term cash investments and financing activities, giving rise to interest rate risk.

In the ordinary course of business, the Company receives cash from the proceeds of its gold sales and is required to fund working capital requirements. This cash is managed to ensure surplus funds are invested in a manner to achieve market related returns while minimizing risks.

The Company is able to actively source financing at competitive rates. The counterparts are financial and banking institutions and their credit ratings are regularly monitored by the Company.

Table of Contents**Cash and loans advanced maturity profile**

Non-performance risk

Edgar Filing: ANGLOGOLD ASHANTI LTD - Form 20-F

Realization of contracts is dependent upon counterpart performance. The Company has not obtained collateral or other security to support the financial instruments subject to non-performance risk, but the credit standing of counterpart was monitored on a regular basis throughout the year. The Company spreads its business over a number of financial and banking institutions to minimize the risk of potential non-performance risk. Furthermore, the approval process of counterpart and the limits applied to each counterpart were monitored by the board of directors. Where possible, ISDA netting agreements were put into place by management.

The combined maximum credit risk exposure at balance sheet date amounts to \$198 million (2010: \$177 million). Credit risk exposure netted by open derivative positions with counterpart was \$nil million (2010: \$1 million). No set-off is applied to balance sheet amounts due to the different maturity profiles of assets and liabilities.

The fair value of derivative assets and liabilities reflects non-performance risk relating to the counterpart and the Company, respectively, as at December 31, 2011 and 2010.

Table of Contents**Fair value of financial instruments**

The estimated fair values of financial instruments are determined at discrete points in time based on relevant market information. The estimated fair values of the Company's financial instruments, as measured at December 31, 2011 and 2010, are as follows (assets (liabilities)):

	December 31, 2011		December 31, 2010	
	Carrying amount	Fair value	Carrying amount	Fair value
	\$	\$	\$	\$
Cash and cash equivalents	1,112	1,112	575	575
Restricted cash	58	58	43	43
Short-term debt	(30)	(30)	(133)	(133)
Short-term debt at fair value	(2)	(2)	(2)	(2)
Long-term debt	(1,715)	(1,857)	(1,730)	(2,059)
Long-term debt at fair value	(758)	(758)	(872)	(872)
Derivatives	(93)	(93)	(175)	(175)
Marketable equity securities - available for sale	82	82	124	124
Marketable debt securities - held to maturity	8	11	13	14
Non-marketable assets - held to maturity	2	2	2	2
Non-marketable debt securities - held to maturity	85	85	89	89

The following methods and assumptions were used to estimate the fair value of each class of financial instrument:

Cash restricted for use, cash and cash equivalents and short-term debt

The carrying amounts approximate fair value because of the short-term duration of these instruments.

Long-term debt

The mandatory convertible bonds are carried at fair value. The fair value of the convertible and rated bonds are shown at their quoted market value. Other long-term debt re-prices on a short-term floating rate basis, and accordingly the carrying amount approximates fair value.

Derivatives

The fair value of volatility-based instruments (i.e. options) are estimated based on market prices, volatilities, credit risk and interest rates for the periods under review.

Investments

Marketable equity securities classified as available-for-sale are carried at fair value. Marketable debt securities classified as held to maturity are measured at amortized cost. Non-marketable assets classified as held to maturity are measured at amortized cost. The fair value of marketable debt securities and non-marketable assets has been calculated using market interest rates. Investments in non-marketable debt securities classified as held to maturity are measured at amortized cost. The cost method investment is carried at cost. There is no active market for the investment and the fair value cannot be reliably measured.
