Investment description

Linked to the SPDR® S&P 500® ETF Trust

Unlike ordinary debt securities, the securities do not pay interest or repay a fixed amount of principal at maturity. Instead, the securities provide for a payment at maturity that may be greater than, equal to or less than the original offering price of the securities, depending on the performance of the Fund from its starting price to its ending price.

The payment at maturity will reflect the following terms:

o If the value of the Fund increases:

You will receive the original offering price plus 140% participation in the upside performance of the Fund, subject to a maximum total return at maturity of 22% to 25% (to be determined on the pricing date) of the original offering price

o If the value of the Fund decreases but the decrease is not more than 10%:

You will be repaid the original offering price

o If the value of the Fund decreases by more than 10%:

You will receive less than the original offering price and will have 1-to-1 downside exposure to the decrease in the value of the Fund in excess of 10%

Investors may lose up to 90% of the original offering price

All payments on the securities are subject to the credit risk of Wells Fargo & Company, and you will have no ability to pursue the shares of the Fund or any securities held by the Fund for payment; if Wells Fargo & Company defaults on its obligations, you could lose some or all of your investment

No periodic interest payments or dividends

No exchange listing; designed to be held to maturity

On the date of the accompanying preliminary pricing supplement, the estimated value of the securities is approximately \$959.63 per security. While the estimated value of the securities on the pricing date may differ from the estimated value set forth above, the issuer does not expect it to differ significantly absent a material change in market conditions or other relevant factors. In no event will the estimated value of the securities on the pricing date be less than \$944.63 per security. The estimated value of the securities was determined for the issuer by Wells Fargo Securities, LLC using its proprietary pricing models. It is not an indication of actual profit to the issuer or to Wells Fargo Securities, LLC or any of the issuer's other affiliates, nor is it an indication of the price, if any, at which Wells Fargo Securities, LLC or any other person may be willing to buy the securities from you at any time after issuance. See "Investment Description" in the accompanying preliminary pricing supplement.

**On November 11, 2016, WFA is expected to merge with another one of our affiliates, First Clearing, LLC. The resulting entity's branding for its retail brokerage business will remain Wells Fargo Advisors and its legal name is expected to change to Wells Fargo Clearing Services, LLC.

The securities have complex features and investing in the securities involves risks not associated with an investment in conventional debt securities. See "Selected Risk Considerations" in this term sheet, "Selected Risk Considerations" in the accompanying preliminary pricing supplement and "Risk Factors" in the accompanying product supplement.

This introductory term sheet does not provide all of the information that an investor should consider prior to making an investment decision.

This graph has been prepared for purposes of illustration only. Your actual return will depend on the actual ending price, the actual capped value, and whether you hold your securities to maturity.

Assumes a hypothetical capped value of 123.50%, or \$1,235.00 per security (the midpoint of the specified range of the capped value). Each security has an original offering price of \$1,000.

(1) The annualized rates of return are calculated on a semi-annual bond equivalent basis with compounding.

(2) The hypothetical starting price. The actual starting price will be determined on the pricing date.

The above figures are for purposes of illustration only and may have been rounded for ease of analysis. The actual amount you receive at stated maturity and the resulting pre-tax rates of return will depend on the actual starting price, ending price and capped value.

How the redemption amount is calculated

The redemption amount payable at maturity will be determined as follows:

If the ending price is greater than the starting price, the redemption amount will be equal to the lesser of:

(i) \$1,000 *plus*

$$\$1,000 \times \frac{\text{ending price} - \text{starting price}}{\text{starting price}} \times \text{participation rate} \quad ; \text{ and}$$

(ii) the capped value

If the ending price is less than or equal to the starting price, but greater than or equal to the threshold price, the redemption amount will be equal to \$1,000

If the ending price is less than the threshold price, the redemption amount will be equal to \$1,000 *minus*

$$\$1,000 \times \frac{\text{threshold price} - \text{ending price}}{\text{starting price}}$$

If the ending price is less than the threshold price, you will receive less, and possibly 90% less, than the original offering price of your securities at maturity.
