

ADMA BIOLOGICS, INC.
Form 424B4
October 17, 2013

Filed Pursuant to Rule 424(b)(4)

Registration No. 333-186579

3,352,941 Shares

Common Stock
\$8.50 per share

ADMA Biologics, Inc. is offering 3,352,941 shares of common stock for \$8.50 per share.

There is not currently, and there has never been, any public market for our common stock. Our common stock is not currently eligible for trading on any national securities exchange. In connection with this offering, we have applied to have our common stock quoted on the OTCQB Marketplace, operated by OTC Markets Group and the OTC Bulletin Board under the symbol "ADMA". We cannot assure you that our common stock will continue to be quoted on the OTCQB or the OTC Bulletin Board after this offering.

We are an "emerging growth company" as that term is used in the Jumpstart Our Business Startups Act of 2012 and, as such, have elected to comply with certain reduced public company reporting requirements for future filings. See "Prospectus Summary—Implications of Being an Emerging Growth Company."

Investing in our common stock involves risks. See "Risk Factors" beginning on page 8.

	Per Share	Total
Public offering price	\$8.50	\$28,499,998
Underwriting discount and commission (1)	\$0.68	\$2,000,000
Proceeds to us, before expenses	\$7.82	\$26,499,998

(1) In addition, we have agreed to reimburse the underwriters for certain out-of-pocket expenses. See the section captioned "Underwriting" in this prospectus for additional information.

Certain of our existing stockholders, including Aisling Capital II, LP, Burrill Capital Fund IV, LP and certain other affiliates, have agreed to purchase an aggregate of 823,530 shares of our common stock in this offering at the initial public offering price. In addition, the underwriters have reserved an aggregate of 58,823 shares of our common stock in this offering for purchase by our directors, executive officers, certain of their affiliates and others associated with us through a directed share program. The underwriters will not receive any underwriting discount with respect to an aggregate of 411,764 shares sold to such stockholders.

We have granted an over-allotment option to the underwriters. Under this option, the underwriters may elect to purchase a maximum of 502,941 additional shares from us within 30 days following the date of this prospectus to cover over-allotments.

Each of Aisling Capital II, LP, Burrill Capital Fund IV, LP, Hariden, LLC and Maggro, LLC, have agreed to a 180 day "lock up" with respect to shares of common stock that they beneficially own and Ayer Capital Partners and their affiliates and subsidiaries have agreed to a 90 day "lock up" with respect to shares of common stock that they beneficially own. See "Underwriting".

Investors will be required to satisfy the suitability requirements described in the prospectus in order to invest in the offering. Kentucky, New Jersey, Oregon and Virginia residents will be required to represent that they have (i) a minimum net worth of at least \$250,000 (subject to certain limitations) or (ii) an annual gross income of at least \$70,000 and a minimum net worth of at least \$70,000 (subject to certain limitations), and in addition, in either case, that their investment does not exceed 10% of their net worth. For details relating to the specific investor suitability standards for investors residing in New Jersey, please see "Underwriting".

Neither the Securities and Exchange Commission nor any state securities commission has approved or disapproved of these securities or determined if this prospectus is truthful or complete. Any representation to the contrary is a criminal offense.

The shares will be ready for delivery on or about October 22, 2013.

You should rely only on the information contained in this prospectus. We have not authorized anyone to provide any information or to make any representations other than those contained in this prospectus we have prepared. We take no responsibility for, and can provide no assurance as to the reliability of, any other information that others may give you. This prospectus is an offer to sell only the shares offered hereby, but only under circumstances and in jurisdictions where it is lawful to do so. The information contained in this prospectus is current only as of its date.

Persons who come into possession of this prospectus in jurisdictions outside the United States are required to inform themselves about and to observe any restrictions as to this offering and the distribution of this prospectus applicable to that jurisdiction.

We obtained statistical data and certain other industry forecasts used throughout this prospectus from market research, publicly available information and industry publications. Industry publications generally state that they obtain their information from sources that they believe to be reliable. While we believe that the statistical and industry data and forecasts and market research used herein are reliable, we have not independently verified such data. We have not sought the consent of the sources to refer to their reports in this prospectus.

Prospectus Summary

This summary highlights information contained in other parts of this prospectus. Because it is a summary, it does not contain all of the information that you should consider before investing in our securities. You should read the entire prospectus carefully.

As used in this prospectus, unless the context otherwise requires, “ADMA,” “ADMA Biologics,” the “Company,” “we,” “us” and “our” refer to ADMA Biologics, Inc., a Delaware corporation, as well as its subsidiary, ADMA Plasma Biologics, Inc., a Delaware corporation, taken as a whole, and also refer to the operations of ADMA Plasma Biologics, Inc. prior to the merger on February 13, 2012, as discussed in this prospectus, which resulted in ADMA Plasma Biologics, Inc. becoming our wholly-owned subsidiary. In each case, references to ADMA Plasma Biologics, Inc. also include its subsidiary ADMA BioCenters Georgia Inc., or ADMA BioCenters, a Delaware corporation. All shares and per share information included in this prospectus and relating to the shares of our common stock, par value \$0.0001 per share, gives effect to a 1.27-for-1 stock split effected by means of a 0.27-for-1 stock dividend on April 4, 2013.

The Company

Overview

ADMA Biologics is a late stage biopharmaceutical company that develops, manufactures, and intends to market specialty plasma-based biologics for the treatment and prevention of certain infectious diseases. Our targeted patient populations include immune-compromised individuals who suffer from an underlying immune deficiency disorder or who may be immune-suppressed for medical reasons. Our product candidates are intended to be used by physician specialists focused on caring for immune-compromised patients with infectious diseases. RI-002, our lead product candidate for which we have enrolled over 50% of the patients expected in our pivotal Phase III clinical trial, is intended for the treatment of primary immune deficiency disease, or PIDD. RI-002 is an injectable immune globulin derived from human plasma enriched with high levels of naturally occurring polyclonal antibodies (e.g. streptococcus pneumoniae, H. influenza type B, CMV, measles, tetanus, etc.) as well as high levels of antibodies targeted to respiratory syncytial virus, or RSV. RSV is a common virus that ordinarily leads to mild, cold-like symptoms in healthy adults and children. In high-risk groups, such as the immune-compromised, RSV can lead to a more serious infection and may even cause death. Our proprietary microneutralization assay allows us to effectively identify and isolate donor plasma with high-titer RSV antibodies, to standardize RI-002’s potency and thereby potentially garner a premium price.

PIDD, a genetic disorder that causes a deficient or absent immune system, is caused by hereditary or genetic defects and can affect anyone regardless of age or gender. PIDD patients are more vulnerable to infections and more likely to suffer complications from these infections. Intravenous immune globulin, or IGIV, is a plasma derived product that is used to prevent serious infections in patients with PIDD. It is comprised of polyclonal antibodies, which are proteins produced by B-cells that are used by the body’s immune system to neutralize foreign objects such as bacteria and viruses. RI-002, a specialty IGIV with standardized levels of high-titer RSV antibodies, is intended to prevent infections in PIDD patients. The polyclonal antibodies which are present in RI-002 are expected to prevent infections in immune-compromised patients. It is estimated that there are about 250,000 diagnosed PIDD patients in the United States approximately half of whom are treated with IGIV regularly. In the United States, sales of immune globulin products for all its uses were reported to be approximately \$3.5 billion in 2011. Since the introduction of IGIV therapy, the incidence of infections in IGIV-treated patients has dropped significantly.

Patient enrollment in our pivotal Phase III clinical trial of RI-002 for the treatment of patients with PIDD began in February 2013. We expect to complete patient recruitment during the fourth quarter of 2013. We expect to provide preliminary data from the pivotal Phase III clinical trial during the fourth quarter of 2014. Once data are available, we

expect to file a Biologics License Application, or BLA, with the U.S. Food and Drug Administration, or FDA, during the first half of 2015. The FDA could approve our BLA within approximately one year of filing, and potential first commercial sales could occur as early as the first half of 2016. The trial is a single arm study in which patients will be treated approximately once per month for a period of 12 months of treatment plus 90 days for follow up. We intend to treat an aggregate of approximately 60 patients in approximately 10 to 12 treatment centers in the United States. The pivotal Phase III primary endpoint follows the published FDA industry guidance, which provides for a reduction in the incidence of serious infections to less than one per year in those receiving IGIV. The secondary endpoint is safety and includes other data collection points including antibody titers for certain agents, including RSV antibody levels at various time points after infusion. Following the FDA's guidance for our protocol should provide that a successful single Phase III trial and Biological License Application, or BLA, submission should lead to FDA approval. RI-001 was the subject of a Phase II randomized, double-blind, placebo-controlled human clinical trial in RSV-infected, immune-compromised patients. In that trial, RI-001 treated patients demonstrated a statistically significant rise in anti-RSV titers compared to patients receiving placebo. RI-002 is an improved formulation of our prior product candidate RI-001. RI-002 is manufactured using the same FDA-approved contract manufacturing facility as its predecessor. RI-002 has demonstrated improved production yields, an improved stability profile and comparable anti-RSV antibody titer potency relative to the prior formulation.

We have established, qualified and validated a proprietary microneutralization assay for plasma collection and donor screening as well as for determining the appropriate anti-RSV antibody potency for the manufacture of RI-002. Our assay provides for measurement of RSV antibody titer levels of RI-002 that are consistent and reproducible, which we believe is a competitive advantage and a barrier to the entry of competitive products. Our microneutralization assay could serve as a platform for identifying next generation virus-specific plasma-based therapeutics.

We operate an FDA-licensed, German Health Authority, or GHA-certified source plasma collection facility, ADMA BioCenters, which provides us with a portion of our blood plasma for the manufacture of RI-002. In June 2013, ADMA BioCenters, received a two-year certification from the GHA. GHA certification allows plasma collected at ADMA BioCenters to be imported into the European Union (EU) and to be purchased and processed by European Plasma Fractionators. A typical plasma collection center, such as ADMA BioCenters, can collect 30,000 to 50,000 liters of source plasma annually, which may be sold for different prices depending upon the type of plasma, quantity of purchase, and market conditions at the time of sale. Plasma collected from ADMA BioCenters that is not used for making RI-002 is sold to customers in the U.S. and Europe under supply agreements or in the open “spot” market. We have entered into long term manufacturing and licensing agreements with Biotest AG and their U.S. subsidiary, Biotest Pharmaceuticals, Inc., together referred to as Biotest, that provide for the exclusive manufacture of RI-002. At the same time, we granted Biotest an exclusive, royalty-bearing license to market and sell RSV antibody-enriched IGIV in Europe and in other selected territories in North Africa and the Middle East.

The founders of ADMA have a combined 60 years of experience marketing and distributing blood plasma products and devices. With the appointment of the executive team and the board of directors, we added over 150 years of deep medical, technical and development experience in the biologics and pharmaceutical industry.

Our mission is to develop and commercialize plasma-derived, human immune globulins targeted to niche immune-compromised patient populations. We intend to accomplish our mission by achieving the following:

- Complete our pivotal Phase III trial and obtain FDA approval to manufacture and market RI-002 for the treatment of patients with PIDD;
 - Establish a specialty sales force to commercialize RI-002;
 - Explore other possible indications for RI-002;
- Develop additional plasma-derived products for the treatment of infectious diseases in immune-compromised patient populations; and
- Expand our network of ADMA BioCenters facilities, both to maintain control of a portion of our raw material supply and to generate additional revenue through the collection and sale of source plasma to third party customers.

Risks Associated with Our Business

We are a clinical-stage company with no approved products and limited historical revenues, which makes it difficult to assess our future viability. As of June 30, 2013, we had an accumulated deficit of approximately \$45.2 million. In addition to our history of operating losses, our business, financial condition, results of operations and prospects are subject to a number of risks and uncertainties. These risks and uncertainties are discussed more fully in the “Risk Factors” and “Special Note Regarding Forward-Looking Statements” sections of this prospectus. You should carefully consider all of the information set forth in this prospectus and, in particular, should evaluate the specific factors set forth under “Risk Factors” and “Special Note Regarding Forward-Looking Statements” in deciding whether to invest in our common stock. Among these important risks and uncertainties that could adversely affect our business, financial

condition, results of operations and prospects are the following:

- To date, we have generated limited product revenues. We are not currently profitable and may never become profitable. We have a limited operating history upon which to base an investment decision.

- 2 -

- Our current product candidate, RI-002, requires extensive additional clinical testing. Clinical trials are very expensive, time-consuming and difficult to design and implement. If we are unsuccessful in obtaining regulatory approval for RI-002 or if our trials do not provide positive results, we will be required to delay or abandon development of such product, which would have a material adverse impact on our business.
- We depend on a third-party manufacturer for the production of RI-002, and such party is outside of our control.
- We do not own any issued patents and we do not have any patent applications in process relating to RI-002. If we are unable to protect our trade secrets or other proprietary rights, our competitiveness and business prospects may be materially damaged.
- We expect our securities will be quoted on the OTCQB quotation system, which will limit the liquidity and price of our securities more than if we were quoted on a national securities exchange.

Corporate History

ADMA Biologics, Inc. was incorporated in New Jersey on June 24, 2004 and re-incorporated in Delaware on July 16, 2007. On February 13, 2012, ADMA Biologics, Inc., merged into a subsidiary of R&R Acquisition VI, Inc., a Delaware "blank check" company, which had been incorporated in 2006 and which then changed its name to ADMA Biologics, Inc.

Corporate Information

Our primary executive offices are located at 465 State Route 17, Ramsey, New Jersey, 07446, and our telephone number is (201) 478-5552. Our website address is <http://www.admabiologics.com>. The information contained in, or that can be accessed through, our website is not part of this prospectus.

Common Stock Market Data

We have been a public reporting company since February 13, 2012. However, there is not currently, and there has never been, any public market for our common stock. Our common stock is not currently eligible for trading on any national securities exchange. In connection with this offering, we have applied to have our common stock quoted on the OTCQB Marketplace, operated by OTC Markets Group and the OTC Bulletin Board under the symbol "ADMA". We cannot assure you that our common stock will continue to be quoted on the OTCQB or the OTC Bulletin Board after this offering.

Implications of Being an Emerging Growth Company

As a company with less than \$1 billion in revenue during our last fiscal year, we qualify as an "emerging growth company" as defined in the Jumpstart Our Business Startups Act, or JOBS Act, enacted in April 2012. The JOBS Act contains provisions that, among other things, reduce certain reporting requirements for qualifying public companies. As an "emerging growth company," we may, under Section 7(a)(2)(B) of the Securities Act of 1933, as amended, or the Securities Act, delay adoption of new or revised accounting standards applicable to public companies until such standards would otherwise apply to private companies. We may take advantage of this extended transition period until the first to occur of the date that we (i) are no longer an "emerging growth company" or (ii) affirmatively and irrevocably opt out of this extended transition period.

We have elected to take advantage of the benefits of this extended transition period. Our financial statements may therefore not be comparable to those of companies that comply with such new or revised accounting standards. Until

the date that we are no longer an “emerging growth company” or affirmatively and irrevocably opt out of the exemption provided by Securities Act Section 7(a)(2)(B), upon issuance of a new or revised accounting standard that applies to our financial statements and that has a different effective date for public and private companies, we will disclose the date on which adoption is required for non-emerging growth companies and the date on which we will adopt the recently issued accounting standard. As an emerging growth company, we are also exempt from the requirement to have our independent auditors provide an attestation report on our internal control over financial reporting.

We could be an emerging growth company for up to five years after the first sale of our common equity securities pursuant to an effective registration statement under the Securities Act, which such fifth anniversary will occur in 2018. However, if certain events occur prior to the end of such five-year period, including if we become a “large accelerated filer,” our annual gross revenues exceed \$1 billion or we issue more than \$1 billion of non-convertible debt in any three-year period, we would cease to be an emerging growth company prior to the end of such five-year period.

We are also a “smaller reporting company” as defined in Rule 12b-2 of the Securities Exchange Act of 1934, as amended, or the Exchange Act, and have elected to take advantage of certain of the scaled disclosure available to smaller reporting companies.

The Offering

Common stock offered by us	3,352,941 shares
Common stock to be outstanding after the offering	9,223,943 shares (9,726,884 shares if the underwriters exercise their overallotment option in full)
Option to purchase additional shares	The underwriters have a 30-day option to purchase up to an additional 502,941 shares of our common stock at the public offering price less the underwriting discount and commission.
Use of proceeds	We estimate that the net proceeds from this offering, after deducting the underwriting discount and commission and estimated offering expenses payable by us, will be approximately \$25.2 million. We intend to use the proceeds of this offering to continue clinical development and testing of RI-002 and for working capital and other general corporate purposes.
Risk factors	See "Risk Factors" beginning on page 8 for a discussion of risks you should consider before purchasing shares of our common stock.
OTCQB and OTC Bulletin Board symbol	"ADMA"

Unless otherwise noted, the number of shares of our common stock to be outstanding after this offering is based on 5,871,002 shares outstanding as of June 30, 2013, and excludes:

- 774,798 shares of common stock issuable upon the exercise of options outstanding as of June 30, 2013 at a weighted average exercise price of \$6.89 per share;
- 143,337 shares of common stock issuable upon the exercise of warrants outstanding as of June 30, 2013 at a weighted average exercise price of \$7.56 per share; and
- 128,426 shares of common stock reserved for future issuance under our stock option plans.

Unless we specifically state otherwise, all information in this prospectus assumes no exercise of the underwriters' option to purchase additional shares of common stock.

Certain of our existing stockholders, including Aisling Capital II, LP, Burrill Capital Fund IV, LP and certain other affiliates, have agreed to purchase an aggregate of 823,530 shares of our common stock in this offering at the initial public offering price. In addition, the underwriters have reserved an aggregate of 58,823 shares of our common stock in this offering for purchase by our directors, executive officers, certain of their affiliates and others associated with us through a directed share program. The underwriters will not receive any underwriting discount with respect to an aggregate of 411,764 shares sold to such stockholders.

Suitability Standards

Different suitability standards apply to the offer and sale of securities in certain states. Kentucky, Oregon and Virginia residents will be required to represent that they have (i) a minimum net worth of at least \$250,000 (subject to certain limitations) or (ii) an annual gross income of at least \$70,000 and a minimum net worth of at least \$70,000 (subject to certain limitations), and in addition, in either case, that their investment does not exceed 10% of their net worth.

New Jersey investors must have either, (a) a minimum liquid net worth of at least \$70,000 and a minimum annual gross income of at least \$70,000, or (b) a minimum liquid net worth of at least \$250,000. For these purposes, "liquid net worth" is defined as that portion of net worth (total assets exclusive of home, home furnishings, and automobiles, minus total liabilities) that consists of cash, cash equivalents and readily marketable securities. In addition, a New Jersey investor's investment in us and shares of our affiliates may not exceed ten percent (10%) of his or her liquid net worth.

Summary Consolidated Financial Information

This section presents our summary historical consolidated financial data. You should read carefully the consolidated financial statements included in this prospectus, including the notes to the consolidated financial statements. The summary consolidated data in this section are not intended to replace the consolidated financial statements.

We derived the statement of operations data for the years ended December 31, 2011 and 2012 and the balance sheet data as of December 31, 2011 and 2012 from the audited consolidated financial statements included in this prospectus. We derived the statement of operations data for the six months ended June 30, 2012 and 2013 and balance sheet data as of June 30, 2013 from the unaudited consolidated financial statements included in this prospectus. Our management believes that the unaudited historical consolidated financial statements contain all adjustments needed to state fairly the information contained in those statements, and that the adjustments made consist only of normal recurring adjustments.

Risk Factors

There are numerous and varied risks that may prevent us from achieving our goals. We believe that the following are the material risks that we face. If any of the following risks actually occurs, our business, financial condition or results of operation may be materially adversely affected. In such case, the trading price of our common stock could decline and investors in our common stock could lose all or part of their investment.

Risks Relating to our Business

To date, we have generated limited product revenues and will need to raise additional capital to operate our business, which may not be available on favorable terms, if at all.

To date, we have generated limited revenues. All of our revenues to date have been derived from the sale of plasma collected by ADMA BioCenters, as well as our other plasma inventory sales. Unless and until we receive approval from the FDA and other regulatory authorities for our RI-002 product candidate, we will be unable to sell and generate revenues from that product. Therefore, for the foreseeable future, we will have to fund all of our operations and capital expenditures from the revenues that may be generated by the sale of plasma collected by ADMA BioCenters, as well as cash on hand and potential future capital raises. While ADMA BioCenters is committed to maintain compliance with all applicable regulations, we cannot assure you that we will be able to retain the FDA-license and GHA certification for our plasma collection center, which we need in order to sell plasma collected by ADMA BioCenters. We also cannot assure you that the net proceeds from this offering will be sufficient to enable us to complete the FDA approval process for our RI-002 product candidate.

If we are unable to successfully raise sufficient additional capital, we will likely not have sufficient cash flow and liquidity to fund our business operations, forcing us to curtail our activities and, ultimately, potentially cease operations. Even if we are able to raise additional capital, such financings may only be available on unattractive terms, resulting in significant dilution of stockholders' interests and, in such event, the value and potential future market price of our common stock may decline.

We anticipate that, based upon our projected revenue and expenditures, our current cash and cash equivalents and a backstop financing agreement with the lead investors from the 2012 Financing (as defined under "2012 Financing" below) will be sufficient to fund our operations into the second quarter of 2014. If we complete this offering, the expected net proceeds from the sale of the shares offered hereby, if added to our current cash and cash equivalents is anticipated to be sufficient to fund our operations into the first half of 2016. If our assumptions underlying our estimated expenses prove to be wrong, we may have to raise additional capital sooner than anticipated, and we currently do not have arrangements to obtain additional financing. Any such financing could be difficult to obtain or only available on unattractive terms and could result in significant dilution of stockholders' interests. Failure to secure any necessary financing in a timely manner and on favorable terms could have a material adverse effect on our business plan and financial performance and could delay, discontinue or prevent product development and clinical trial activities or the approval of any of our potential products. In addition, we could be forced to reduce or forego sales and marketing efforts and forego attractive business opportunities.

Our shares have never traded and even after the completion of this offering, trading volume in our shares could be limited.

We have been a public reporting company since February 13, 2012. However, we have fewer than ten stockholders and there is not currently, nor has there ever been, any public market for our common stock. We have applied to have our common stock quoted on the OTCQB and the OTC Bulletin Board after this offering. However, to the extent that we will not be eligible for listing on the NASDAQ or any other national securities exchange for 12 months, our

trading volume and the liquidity of our shares could be limited. In addition, even after the completion of this offering, we may not have a widespread retail distribution of our shares and our trading volume and liquidity could be limited. Accordingly, we cannot assure you that after the completion of the offering there will be significant trading in our shares, that there will be support for the trading thereof, that trading prices will not be volatile or that you will be able to dispose of your shares, if you so choose, at prices that are reflective of the value of the shares.

We are not currently profitable and may never become profitable.

We have a history of losses and expect to incur substantial losses and negative operating cash flow for the foreseeable future, and we may never achieve or maintain profitability. For the years ended December 31, 2011 and December 31, 2012 and for the six months ended June 30, 2013, we had a net loss of \$5.9 million, \$7.3 million and \$8.1 million, respectively, and from our inception in 2004 through June 30, 2013, we have incurred a net loss of \$45.2 million. Even if we succeed in developing and commercializing one or more product candidates, we expect to incur substantial losses for the foreseeable future and may never become profitable. We also expect to continue to incur significant operating and capital expenditures and anticipate that our expenses will increase substantially in the foreseeable future as we:

- continue to undertake development and clinical trials for RI-002;
- seek regulatory approval(s);

- implement additional internal systems, controls and infrastructure; and
- hire additional personnel.

We also expect to experience negative cash flow for the foreseeable future as we fund our operating losses and capital expenditures. As a result, we will need to generate significant revenues in order to achieve and maintain profitability. We may not be able to generate these revenues or achieve profitability in the future. Our failure to achieve or maintain profitability could negatively impact the value of our securities.

We have a limited operating history upon which to base an investment decision.

We have not demonstrated an ability to perform the functions necessary for the successful commercialization of RI-002. The successful development and commercialization of any product candidate will require us or our collaborators to perform a variety of functions, including:

- undertaking product development and clinical trials;
- participating in regulatory approval processes;
- formulating and manufacturing products; and
- conducting sales and marketing activities once authorized.

Our operations thus far provide a limited basis for you to assess our ability to commercialize our product candidates and the advisability of investing in our securities.

Our current product candidate, RI-002, requires extensive additional clinical testing. Clinical trials are very expensive, time-consuming and difficult to design and implement. If we are unsuccessful in obtaining regulatory approval for RI-002 or any of our product candidates don't provide positive results, we may be required to delay or abandon development of such product, which would have a material adverse impact on our business.

Continuing product development requires additional and extensive clinical testing. Human clinical trials are very expensive and difficult to design and implement, in part because they are subject to rigorous regulatory requirements. The clinical trial process is also time consuming. We cannot provide any assurance or certainty regarding when we might complete the clinical trial process or submit a Biological License Application, or BLA, for regulatory approval for RI-002 or whether any such BLA will be accepted or approved. We estimate that clinical trials of our product candidate will take between 12 to 18 months to several years to complete. Furthermore, failure can occur at any stage of the trials, and we could encounter problems that cause us to abandon or repeat clinical trials. The commencement and completion of clinical trials may be delayed by several factors, including:

- unforeseen safety issues;
- determination of dosing issues;
- lack of effectiveness during clinical trials;
- slower than expected rates of patient recruitment;
- inability to monitor patients adequately during or after treatment; and

- inability or unwillingness of medical investigators to follow our clinical protocols.

In addition, we or the FDA or an Institutional Review Board, or IRB, may suspend our clinical trials at any time if it appears that we are exposing participants to unacceptable health risks or if the FDA finds deficiencies in our Investigational New Drug Application, or IND, submissions or the conduct of these trials. Therefore, we cannot provide any assurance or predict with certainty the schedule for future clinical trials. No assurance can be given that we will be able to enroll sufficient patients to complete a successful Phase III clinical trial.

In the event we do not ultimately receive regulatory approval for RI-002, we may be required to terminate development of our only product candidate. Unless we acquire or develop other product candidates that are saleable, our business will be limited to plasma collection and sales.

If the results of our clinical trials do not support our product candidate claims, completing the development of such product candidate may be significantly delayed or we may be forced to abandon development of such product candidate altogether.

Even if our clinical trials are completed as planned, we cannot be certain that their results will support our product candidate claims. Success in preclinical testing and early clinical trials does not ensure that later clinical trials will be successful, and we cannot be sure that the results of later clinical trials will replicate the results of prior clinical trials and preclinical testing. The clinical trial process may fail to demonstrate that our product candidates are safe for humans and effective for indicated uses. This failure would cause us to abandon a product candidate and may delay development of other product candidates. Any delay in, or termination of, our clinical trials will delay the filing of a BLA with the FDA and, ultimately, our ability to commercialize our product candidates and generate product revenues. In addition, our clinical trials involve a relatively small patient population. Because of the small sample size, the results of these clinical trials may not be indicative of future results. In addition, certain portions of the clinical trial for RI-002 were performed outside of the United States, and therefore, may not have been performed in accordance with standards normally required by the FDA and other regulatory agencies.

Currently, our only viable product candidate is RI-002. If we do not obtain the necessary U.S. or worldwide regulatory approvals to commercialize RI-002, or any other product candidate, we will not be able to sell RI-002.

At the present time, our entire focus is obtaining regulatory approval for RI-002, our only product candidate. If we cannot obtain regulatory approval for RI-002, our only source of revenue will be plasma collection and sales. We cannot assure you that we will receive the approvals necessary to commercialize RI-002 or any other product candidate we may acquire or develop in the future. In order to obtain FDA approval of RI-002 or any other product candidate requiring FDA approval, our clinical development must demonstrate that the product candidate is safe for humans and effective for its intended use, and we must submit a BLA. To attain required FDA approval of any other product candidate generally requires significant research and testing, referred to as preclinical studies, as well as human tests, referred to as clinical trials. Satisfaction of the FDA's regulatory requirements typically takes many years, depends upon the type, complexity and novelty of the product candidate and requires substantial resources for research, development and testing. We cannot predict whether our research and clinical approaches will result in products that the FDA considers safe for humans and effective for indicated uses. The FDA has substantial discretion in the product approval process and may require us to conduct additional preclinical and clinical testing or to perform post-marketing studies. The approval process may also be delayed by changes in government regulation, future legislation or administrative action or changes in FDA policy that occur prior to or during our regulatory review. Delays in obtaining regulatory approvals may:

- delay commercialization of, and our ability to derive product revenues from, our product candidate;
- impose costly procedures on us; and
- diminish any competitive advantages that we may otherwise enjoy.

Even if we comply with all FDA requests, the FDA may ultimately reject our BLA. We may never obtain regulatory approval for RI-002 or any other potential product candidate. Failure to obtain FDA approval of any of our product candidates will severely undermine our business by leaving us without a saleable product beyond the plasma collected by ADMA BioCenters, and therefore without any source of additional revenues if and until another product candidate

can be developed and commercialized. There is no guarantee that we will ever be able to develop or acquire another product candidate.

In foreign jurisdictions, we must receive approval from the appropriate regulatory authorities before we can commercialize any products. Foreign regulatory approval processes generally include all of the risks associated with the FDA approval procedures described above. We cannot assure you that we will receive the approvals necessary to commercialize any product candidate for sale outside the United States.

We depend on third-party researchers and developers to develop RI-002, and such parties are, to some extent, outside of our control.

We depend on independent investigators and collaborators, such as universities and medical institutions, to conduct our preclinical and clinical trials under agreements with us. These collaborators are not our employees and we cannot control the amount or timing of resources that they devote to our programs. These investigators may not assign as great a priority to our programs or pursue them as diligently as we would if we were undertaking such programs ourselves. If outside collaborators fail to devote sufficient time and resources to our product-development programs, or if their performance is substandard, the approval of our FDA application(s), if any, and our introduction of new products, if any, will be delayed. These collaborators may also have relationships with other commercial entities, some of whom may compete with us. If our collaborators assist our competitors at our expense, our competitive position would be harmed.

A single customer accounts for substantially all of our revenues and, therefore, the loss of such customer could have a material adverse effect on our business, results of operations and financial condition.

Substantially all of our revenues are attributed to Biotest. Our relationship with Biotest is an arm's length commercial relationship. The loss of Biotest as a customer or a material change in the revenue generated by Biotest could have a material adverse effect on our business, results of operations and financial condition. Factors that could influence our relationships with our customers include, among other things:

- our ability to sell our products at prices that are competitive with our competitors;
- our ability to maintain features and quality standards for our products sufficient to meet the expectations of our customers; and
- our ability to produce and deliver a sufficient quantity of our products in a timely manner to meet our customers' requirements.

Additionally, an adverse change in the financial condition of Biotest could have a material adverse effect on our business and results of operations.

Relying exclusively on third parties to manufacture our product candidates exposes us to risks that may delay testing, development, regulatory approval and commercialization of our product candidates.

We have limited experience in manufacturing and do not intend to establish our own manufacturing facilities. We lack the resources to manufacture RI-002. Although we have agreements pertaining to the manufacture, supply, storage and distribution of product supplies of RI-002, upon commercialization, it is possible that our manufacturing requirements may exceed the available supply allotments under our existing agreements. We will rely on one or more third-party contractors to manufacture our products. Our anticipated future reliance on a limited number of third-party manufacturers exposes us to the following risks:

we may be unable to identify manufacturers on acceptable terms or at all because the number of potential manufacturers is limited and the FDA must approve any replacement contractor. This approval would require new testing and compliance inspections. In addition, a new manufacturer would have to be educated in, or develop substantially equivalent processes for, production of our products after receipt of FDA approval, if any;

- third-party manufacturers might be unable to manufacture our products in the volume and of the quality required to meet our clinical and commercial needs, if any;
- contract manufacturers may not perform as agreed or may not remain in the contract manufacturing business for the time required to supply our clinical trials or to successfully produce, store and distribute our products;
- product manufacturers are subject to ongoing periodic unannounced inspection by the FDA, the Drug Enforcement Administration, and corresponding state agencies to ensure strict compliance with good manufacturing practice and other government regulations and corresponding foreign standards. We do not have control over third-party manufacturers' compliance with these regulations and standards; and
- if any third-party manufacturer makes improvements in the manufacturing process for our products, we may not own, or may have to share, the intellectual property rights to the innovation. We may be required to pay fees or other costs for access to such improvements.

Each of these risks could delay our clinical trials, the approval, if any, of our product candidates by the FDA or the commercialization of our product candidates or result in higher costs or deprive us of potential product revenues.

If physicians and patients do not accept and use our product, our ability to generate revenue from sales will be materially impaired.

Even if the FDA approves RI-002, physicians and patients may not accept and use it. Acceptance and use of our product will depend on a number of factors including:

- perceptions by members of the health care community, including physicians, about the safety and effectiveness of our product;
- cost-effectiveness of our product relative to competing products;
- availability of reimbursement for our product from government or other healthcare payers; and
- effectiveness of marketing and distribution efforts by us and our licensees and distributors, if any.

Because we expect sales of RI-002, if approved, to generate substantially all of our product revenues other than the revenue attainable from the sale of plasma collected by ADMA BioCenters, the failure of this product to find market acceptance would harm our business and could require us to seek additional financing or make such financing difficult to obtain on favorable terms, if at all.

Our long-term success may depend on our ability to supplement our existing RI-002 product candidate through new product development or the in-license or acquisition of other new products, and if our business development efforts are not successful, our ability to achieve profitability may be negatively impacted.

Our current product development portfolio consists primarily of RI-002. We intend to seek to expand our current portfolio through new product development efforts or to in-license or acquire additional products. If we are not successful in developing or acquiring additional products, we will have to depend on our ability to raise capital for, and the successful development and commercialization of, RI-002 and the revenue we may generate from the sale of plasma attributable to the operations of ADMA BioCenters.

Our loan and security agreement with Hercules is subject to acceleration in specified circumstances, which may result in Hercules taking possession and disposing of any collateral.

On December 21, 2012, we entered into a Loan and Security Agreement, or the Loan Agreement, with Hercules Technology Growth Capital, Inc., or Hercules. Under the Loan Agreement for up to \$6 million, we borrowed \$4 million on the closing date and have recently borrowed an additional \$1 million upon reaching our first milestone under the Loan Agreement. Our obligations under the Loan Agreement are secured by a security interest in all of our assets, except for our intellectual property (which is subject to a negative pledge). The Loan Agreement contains customary representations, warranties and covenants, including limitations on acquisitions, dispositions, incurrence of indebtedness and the granting of security interests. Upon the occurrence and during the continuance of any event of default, including upon the occurrence of any event deemed to result in a material adverse event, Hercules may, and at the written request of the requisite lenders shall, terminate the commitments under the facilities and declare any or all of the obligations to be immediately due and payable, without demand or notice to us. However, any event of default relating to timely payment of debts, insolvency, liquidation, bankruptcy or similar events will result in automatic acceleration. Among the remedies available to Hercules in case of an event of default are the taking possession and disposition of any collateral under the Loan Agreement.

Developments by competitors may render our products or technologies obsolete or non-competitive.

The biotechnology and pharmaceutical industries are intensely competitive and subject to rapid and significant technological change. Should we obtain regulatory approval for RI-002 or any future product we may develop, we will have to compete with existing therapies. In addition, other companies may pursue the development of pharmaceuticals that target the same diseases and conditions that we are targeting. We face competition from pharmaceutical and biotechnology companies in the United States and abroad. In addition, companies pursuing different but related fields represent substantial competition. Many of these organizations competing with us have substantially greater capital resources, larger research and development staffs and facilities, longer product development history in obtaining regulatory approvals and greater manufacturing and marketing capabilities than we do. These organizations also compete with us to attract qualified personnel and parties for acquisitions, joint ventures or other collaborations.

We do not own any issued patents and we do not have any patent applications currently pending relating to our primary product candidate. If we are unable to protect our trade secrets or other proprietary rights, our competitiveness and business prospects may be materially damaged.

We do not own any issued patents and we do not have any patent applications currently pending relating to our primary product candidate. Rather, we rely exclusively on a combination of trade secrets and nondisclosure and non-competition agreements to protect our proprietary intellectual property, and we will continue to do so. There can be no assurance that our trade secret policies and practices or other agreements will adequately protect our intellectual property. The processes, systems, and/or security measures we use to preserve the integrity and confidentiality of our data and trade secrets may be breached, and we may not have adequate remedies as a result of any such breaches. In addition, our trade secrets may otherwise become known or be independently discovered by competitors. There can be no assurance that the confidentiality, nondisclosure and non-competition agreements with employees, consultants and other parties with access to our proprietary information to protect our trade secrets, proprietary technology, processes and other proprietary rights, or any other security measures relating to such trade secrets, proprietary technology, processes and proprietary rights, will be adequate, will not be breached, that we will have adequate remedies for any breach, that others will not independently develop substantially equivalent proprietary information or that third parties will not otherwise gain access to our trade secrets or proprietary knowledge. To the extent that our consultants, contractors or collaborators use intellectual property owned by others in their work for us, disputes may arise as to the rights in related or resulting know-how and inventions.

Third parties could obtain patents that may require us to negotiate licenses to conduct our business, and there can be no assurance that the required licenses would be available on reasonable terms or at all.

We may not be able to operate our business without infringing third-party patents. Numerous U.S. and foreign patents and pending patent applications owned by third parties exist in fields that relate to the development and commercialization of immune globulins. In addition, many companies have employed intellectual property litigation as a way to gain a competitive advantage. It is possible that infringement claims may occur as the number of products and competitors in our market increases. In addition, to the extent that we gain greater visibility and market exposure as a public company, we face a greater risk of being the subject of intellectual property infringement claims. We cannot be certain that the conduct of our business does not and will not infringe intellectual property or other proprietary rights of others in the United States and in foreign jurisdictions. If our products, methods, processes and other technologies are found to infringe third party patent rights, we could be prohibited from manufacturing and commercializing the infringing technology, process or product unless we obtain a license under the applicable third party patent and pay royalties or are able to design around such patent. We may be unable to obtain a license on terms acceptable to us, or at all, and we may not be able to redesign our products or processes to avoid infringement. Even if we are able to redesign our products or processes to avoid an infringement claim, our efforts to design around the

patent could require significant time, effort and expense and ultimately may lead to an inferior or more costly product and/or process. Any claim of infringement by a third party, even those without merit, could cause us to incur substantial costs defending against the claim and could distract our management from our business. Furthermore, if any such claim is successful, a court could order us to pay substantial damages, including compensatory damages for any infringement, plus prejudgment interest and could, in certain circumstances, treble the compensatory damages and award attorney fees. These damages could be substantial and could harm our reputation, business, financial condition and operating results. A court also could enter orders that temporarily, preliminarily or permanently prohibit us, our licensees, if any, and our customers from making, using, selling, offering to sell or importing one or more of our products or practicing our proprietary technologies or processes, or could enter an order mandating that we undertake certain remedial activities. Any of these events could seriously harm our business, operating results and financial condition.

Continued instability in the credit and financial markets may negatively impact our business, results of operations, and financial condition.

Financial markets in the United States, Canada, Europe and Asia continue to experience disruption, including, among other things, significant volatility in security prices, declining valuations of certain investments, as well as severely diminished liquidity and credit availability. Business activity across a wide range of industries and regions continues to be greatly reduced and local governments and many businesses are still suffering from the lack of consumer spending and the lack of liquidity in the credit markets. As a clinical-stage biotechnology company, we rely on third parties for several important aspects of our business, including contract manufacturing of drug product, plasma collection supplies, transportation and storage of plasma, and conduct of our clinical trials. These third parties may be unable to satisfy their commitments to us due to tightening of global credit from time to time, which would adversely affect our business. The continued instability in the credit and financial market conditions may also negatively impact our ability to access capital and credit markets and our ability to manage our cash balance. While we are unable to predict the continued duration and severity of the adverse conditions in the United States and other countries, any of the circumstances mentioned above could adversely affect our business, financial condition, operating results and cash flow or cash position.

If we are unable to successfully manage our growth, our business may be harmed.

Our success will depend on the expansion of our operations and the effective management of our growth, which will place a significant strain on our management and on our administrative, operational and financial resources. To manage this growth, we must expand our facilities, augment our operational, financial and management systems and hire and train additional qualified personnel. If we are unable to manage our growth effectively, our business could be harmed.

The loss of one or more key members of our management team could adversely affect our business.

Our performance is substantially dependent on the continued service and performance of our management team, who have extensive experience and specialized expertise in our business. In particular, the loss of Adam S. Grossman, our president and chief executive officer, could adversely affect our business and operating results. We do not have “key person” life insurance policies for any members of our management team. We have employment agreements with each of our executive officers, however, the existence of an employment agreement does not guarantee retention of members of our management team and we may not be able to retain those individuals for the duration of or beyond the end of their respective terms.

If we are unable to hire additional qualified personnel, our ability to grow our business may be harmed.

We will need to hire additional qualified personnel with expertise in finance and accounting, clinical research and testing, government regulation, formulation and manufacturing and sales and marketing. In particular, over the next 12 months, we expect to hire up to 8 new employees devoted to medical and scientific affairs, regulatory affairs, quality control, financial services, and general and operational management. We expect that the hiring of such additional personnel will increase our annual expenditures by approximately \$1.5 million or more. We compete for qualified individuals with numerous biopharmaceutical companies, universities and other research institutions. Competition for such individuals is intense, and we cannot assure you that our search for such personnel will be successful. Attracting and retaining qualified personnel will be critical to our success, and any failure to do so successfully may have a material adverse effect on us.

We may incur substantial liabilities and may be required to limit commercialization of our products in response to product liability lawsuits.

The testing and marketing of medical products entail an inherent risk of product liability. If we cannot successfully defend ourselves against product liability claims, we may incur substantial liabilities or be required to limit commercialization of our products. Our inability to obtain sufficient product liability insurance at an acceptable cost to protect against potential product liability claims could prevent or inhibit the commercialization of pharmaceutical products we develop, alone or with collaborators.

Many of our business practices are subject to scrutiny by regulatory authorities, as well as to lawsuits brought by private citizens under federal and state laws. Failure to comply with applicable law or an adverse decision in lawsuits may result in adverse consequences to us.

The laws governing our conduct in the United States are enforceable by criminal, civil and administrative penalties. Violations of laws such as the Federal Food, Drug, and Cosmetic Act, the False Claims Act and the Anti-Kickback Law and the Public Health Service Act, and any regulations promulgated under their authority, may result in jail sentences, fines or exclusion from federal and state programs, as may be determined by Medicare, Medicaid and the Department of Health and Human Services and other regulatory authorities as well as by the courts. There can be no assurance that our activities will not come under the scrutiny of regulators and other government authorities or that our practices will not be found to violate applicable laws, rules and regulations or prompt lawsuits by private citizen “relators” under federal or state false claims laws.

For example, under the Anti-Kickback Law, and similar state laws and regulations, even common business arrangements, such as discounted terms and volume incentives for customers in a position to recommend or choose products for patients, such as physicians and hospitals, can result in substantial legal penalties, including, among others, exclusion from the Medicare and Medicaid programs, and arrangements with referral sources must be structured with care to comply with applicable requirements. Also, certain business practices, such as consulting fees to healthcare providers, sponsorship of educational or research grants, charitable donations, interactions with healthcare providers that prescribe products for uses not approved by the FDA and financial support for continuing medical education programs, must be conducted within narrowly prescribed and controlled limits to avoid any possibility of wrongfully influencing healthcare providers to prescribe or purchase particular products or as a reward for past prescribing. Under the Patient Protection and Affordable Care Act and the companion Health Care and Education Reconciliation Act, which together are referred to as the healthcare reform law, such payments by pharmaceutical manufacturers to United States healthcare practitioners and academic medical centers must be publicly disclosed. A number of states have similar laws in place. Additional and stricter prohibitions could be implemented by federal and state authorities. Where such practices have been found to be improper incentives to use such products, government investigations and assessments of penalties against manufacturers have resulted in substantial damages and fines. Many manufacturers have been required to enter into consent decrees or orders that prescribe allowable corporate conduct.

Failure to satisfy requirements under the Federal Food, Drug, and Cosmetic Act can also result in penalties, as well as requirements to enter into consent decrees or orders that prescribe allowable corporate conduct.

In addition, while regulatory authorities generally do not regulate physicians’ discretion in their choice of treatments for their patients, they do restrict communications by manufacturers on unapproved uses of approved products or on the potential safety and efficacy of unapproved products in development. Companies in the United States, Canada and the European Union cannot promote approved products for other indications that are not specifically approved by the competent regulatory authorities (e.g., FDA in the United States), nor can companies promote unapproved products. In limited circumstances, companies may disseminate to physicians information regarding unapproved uses

of approved products or results of studies involving investigational products. If such activities fail to comply with applicable regulations and guidelines of the various regulatory authorities, we may be subject to warnings from, or enforcement action by, these authorities. Furthermore, if such activities are prohibited, it may harm demand for our products.

Promotion of unapproved drugs or devices or unapproved indications for a drug or device is a violation of the Federal Food, Drug, and Cosmetic Act and subjects us to civil and criminal sanctions. Furthermore, sanctions under the Federal False Claims Act have recently been brought against companies accused of promoting off-label uses of drugs, because such promotion induces the use and subsequent claims for reimbursement under Medicare and other federal programs. Similar actions for off-label promotion have been initiated by several states for Medicaid fraud. The healthcare reform law significantly strengthened provisions of the Federal False Claims Act, Medicare and Medicaid Anti-Kickback provisions, and other health care fraud provisions, leading to the possibility of greatly increased qui tam suits by relators for perceived violations. Violations or allegations of violations of the foregoing restrictions could materially and adversely affect our business.

We may be required to report detailed pricing information, net of included discounts, rebates and other concessions, to the Centers for Medicare & Medicaid Services, or CMS, for the purpose of calculating national reimbursement levels, certain federal prices and certain federal and state rebate obligations. We will need to establish systems for collecting and reporting this data accurately to CMS and institute a compliance program to assure that the information collected is complete in all respects. If we report pricing information that is not accurate to the federal government, we could be subject to fines and other sanctions that could adversely affect our business.

If we choose to pursue clinical development and commercialization in the European Union or otherwise market and sell our products outside of the United States, we must obtain and maintain regulatory approvals and comply with regulatory requirements in such jurisdictions. The approval procedures vary among countries in complexity and timing. We may not obtain approvals from regulatory authorities outside the United States on a timely basis, if at all, which would preclude us from commercializing products in those markets. In addition, some countries, particularly the countries of the European Union, regulate the pricing of prescription pharmaceuticals. In these countries, pricing discussions with governmental authorities can take considerable time after the receipt of marketing approval for a product. To obtain reimbursement or pricing approval in some countries, we may be required to conduct a clinical trial that compares the cost-effectiveness of their product candidate to other available therapies. Such trials may be time-consuming and expensive, and may not show an advantage in efficacy for our products. If reimbursement of our products is unavailable or limited in scope or amount, or if pricing is set at unsatisfactory levels, in either the United States or the European Union, we could be adversely affected. Also, under the United States Foreign Corrupt Practices Act, or FCPA, the United States has increasingly focused on regulating the conduct by United States businesses occurring outside of the United States, generally prohibiting remuneration to foreign officials for the purpose of obtaining or retaining business.

To enhance compliance with applicable health care laws, and mitigate potential liability in the event of noncompliance, regulatory authorities, such as the United States Health and Human Services Department Office of Inspector General, or OIG, have recommended the adoption and implementation of a comprehensive health care compliance program that generally contains the elements of an effective compliance and ethics program described in Section 8B2.1 of the United States Sentencing Commission Guidelines Manual. Increasing numbers of United States-based pharmaceutical companies have such programs. In the future, we may need to adopt healthcare compliance and ethics programs that would incorporate the OIG's recommendations, and train our applicable employees in such compliance. Such a program may be expensive and may not assure that we will avoid compliance issues.

Our manufacturing processes are complex and involve biological intermediates that are susceptible to contamination.

Plasma is a raw material that is susceptible to damage and contamination and may contain human pathogens, any of which would render the plasma unsuitable as raw material for further manufacturing. For instance, improper storage of plasma, by us or third-party suppliers, may require us to destroy some of our raw material. If unsuitable plasma is not identified and discarded prior to the release of the plasma to the manufacturing process, it may be necessary to

discard intermediate or finished product made from that plasma or to recall any finished product released to the market, resulting in a charge to cost of goods sold.

The manufacture of our plasma products is an extremely complex process of fractionation, purification, filling and finishing. Our products can become non-releasable or otherwise fail to meet our stringent specifications through a failure in one or more of these process steps. We may detect instances in which an unreleased product was produced without adherence to our manufacturing procedures or plasma used in our production process was not collected or stored in a compliant manner consistent with our current Good Manufacturing Practices, or cGMP, or other regulations. Such an event of noncompliance would likely result in our determination that the implicated products should not be released and therefore should be destroyed.

Once manufactured, our plasma-derived products must be handled carefully and kept at appropriate temperatures. Our failure, or the failure of third parties that supply, ship or distribute our products, to properly care for our products may require that those products be destroyed. Even if handled properly, biologics may form or contain particulates or have other issues or problems after storage which may require products to be destroyed or recalled.

While we expect to write off small amounts of work-in-progress in the ordinary course of business due to the complex nature of plasma, our processes and our products, unanticipated events may lead to write-offs and other costs materially in excess of our expectations and the reserves we have established for these purposes. Such write-offs and other costs could cause material fluctuations in our profitability. Furthermore, contamination of our products could cause investors, consumers, or other third parties with whom we conduct business to lose confidence in the reliability of our manufacturing procedures, which could adversely affect our sales and profits. In addition, faulty or contaminated products that are unknowingly distributed could result in patient harm, threaten the reputation of our products and expose us to product liability damages and claims from companies for whom we do contract manufacturing.

Our ability to continue to produce safe and effective products depends on the safety of our plasma supply against transmittable diseases.

Despite overlapping safeguards, including the screening of donors and other steps to remove or inactivate viruses and other infectious disease causing agents, the risk of transmissible disease through blood plasma products cannot be entirely eliminated. For example, since plasma-derived therapeutics involve the use and purification of human plasma, there has been concern raised about the risk of transmitting human immunodeficiency virus, or HIV, prions, West Nile virus, H1N1 virus or “swine flu” and other blood-borne pathogens through plasma-derived products. There are also concerns about the future transmission of H5N1 virus, or “bird flu.” In the 1980s, thousands of hemophiliacs worldwide were infected with HIV through the use of contaminated Factor VIII. Other producers of Factor VIII, though not us, were defendants in numerous lawsuits resulting from these infections.

New infectious diseases emerge in the human population from time to time. If a new infectious disease has a period during which time the causative agent is present in the bloodstream but symptoms are not present, it is possible that plasma donations could be contaminated by that infectious agent. Typically, early in an outbreak of a new disease, tests for the causative agent do not exist. During this early phase, we must rely on screening of donors (e.g., for behavioral risk factors or physical symptoms) to reduce the risk of plasma contamination. Screening methods are generally less sensitive and specific than a direct test as a means of identifying potentially contaminated plasma units.

During the early phase of an outbreak of a new infectious disease, our ability to manufacture safe products would depend on the manufacturing process’ capacity to inactivate or remove the infectious agent. To the extent that a product’s manufacturing process is inadequate to inactivate or remove an infectious agent, our ability to manufacture and distribute that product would be impaired.

If a new infectious disease were to emerge in the human population, the regulatory and public health authorities could impose precautions to limit the transmission of the disease that would impair our ability to procure plasma, manufacture our products or both. Such precautionary measures could be taken before there is conclusive medical or scientific evidence that a disease poses a risk for plasma-derived products.

In recent years, new testing and viral inactivation methods have been developed that more effectively detect and inactivate infectious viruses in collected plasma. There can be no assurance, however, that such new testing and inactivation methods will adequately screen for, and inactivate, infectious agents in the plasma used in the production of our products.

We could become supply-constrained and our financial performance would suffer if we cannot obtain adequate quantities of FDA-approved source plasma.

In order for plasma to be used in the manufacturing of our products, the individual centers at which the plasma is collected must be licensed by the FDA, and approved by the regulatory authorities of any country in which we may wish to commercialize our products. When we open a new plasma center, and on an ongoing basis after licensure, it must be inspected by the FDA for compliance with cGMP and other regulatory requirements. An unsatisfactory inspection could prevent a new center from being licensed or risk the suspension or revocation of an existing license. We do not and will not have adequate source plasma to manufacture RI-002. Therefore, we are reliant on purchasing normal source plasma to manufacture RI-002. We can give no assurances that normal source plasma will be available to us on commercially reasonable terms or at all.

In order to maintain a plasma center's license, its operations must continue to conform to cGMP and other regulatory requirements. In the event that we determine that plasma was not collected in compliance with cGMP, we may be unable to use and may ultimately destroy plasma collected from that center, which would be recorded as a charge to cost of goods. Additionally, if non-compliance in the plasma collection process is identified after the impacted plasma has been pooled with compliant plasma from other sources, entire plasma pools, in-process intermediate materials and final products could be impacted. Consequently, we could experience significant inventory impairment provisions and write-offs which could adversely affect our business and financial results.

We plan to increase our supplies of plasma for use in the manufacturing processes through increased collections at our existing and possible future plasma collection centers. This strategy is dependent upon our ability to successfully integrate and develop new centers, to obtain FDA approval for any unlicensed plasma centers, to maintain a cGMP compliant environment in all plasma centers and to expand production and attract donors to our centers.

There is no assurance that the FDA will inspect and license our unlicensed plasma collection centers in a timely manner consistent with our production plans. If we misjudge the readiness of a center for an FDA inspection, we may lose credibility with the FDA and cause the FDA to more closely examine all of our operations. Such additional scrutiny could materially hamper our operations and our ability to increase plasma collections.

Our ability to expand production and increase our plasma collection centers to more efficient production levels may be affected by changes in the economic environment and population in selected regions where ADMA BioCenters operates its current or future plasma centers, by the entry of competitive plasma centers into regions where ADMA BioCenters operates such centers, by misjudging the demographic potential of individual regions where ADMA BioCenters expects to expand production and attract new donors, by unexpected facility related challenges, or by unexpected management challenges at selected plasma centers.

Our ability to commercialize our products, alone or with collaborators, will depend in part on the extent to which reimbursement will be available from government and health administration authorities, private health maintenance organizations and health insurers and other healthcare payers.

Our ability to generate product revenues will be diminished if our products sell for inadequate prices or patients are unable to obtain adequate levels of reimbursement. Significant uncertainty exists as to the reimbursement status of newly approved healthcare products. Healthcare payers, including Medicare, are challenging the prices charged for medical products and services. Government and other healthcare payers increasingly attempt to contain healthcare costs by limiting both coverage and the level of reimbursement for products. Even if one of our product candidates is approved by the FDA, insurance coverage may not be available, and reimbursement levels may be inadequate, to cover such product. If government and other healthcare payers do not provide adequate coverage and reimbursement levels for one of our products, once approved, market acceptance of such product could be reduced.

Prices in many countries, including many in Europe, are subject to local regulation and certain pharmaceutical products, such as plasma-derived products, are subject to price controls in several of the world's principal markets, including many countries within the European Union. In the United States, where pricing levels for our products are substantially established by third-party payors, if payors reduce the amount of reimbursement for a product, it may cause groups or individuals dispensing the product to discontinue administration of the product, to administer lower doses, to substitute lower cost products or to seek additional price-related concessions. These actions could have a negative effect on financial results, particularly in cases where our products command a premium price in the marketplace, or where changes in reimbursement induce a shift in the site of treatment. The existence of direct and indirect price controls and pressures over our products could materially adversely affect our financial prospects and performance.

The implementation of the healthcare reform law in the United States may adversely affect our business.

Through the March 2010 adoption of the healthcare reform law in the United States, substantial changes are being made to the current system for paying for healthcare in the United States, including programs to extend medical benefits to millions of individuals who currently lack insurance coverage. The changes contemplated by the healthcare reform law are subject to rule-making and implementation timelines that extend for several years, and this uncertainty limits our ability to forecast changes that may occur in the future. However, implementation has already begun with respect to certain significant cost-saving measures under the healthcare reform law, for example with respect to several government healthcare programs that may cover the cost of our future products, including Medicaid, Medicare Parts B and D, and these efforts could have a materially adverse impact on our future financial prospects and performance.

For example, with respect to Medicaid, in order for a manufacturer's products to be reimbursed by federal funding under Medicaid, the manufacturer must enter into a Medicaid rebate agreement with the Secretary of the United States Department of Health and Human Services, and pay certain rebates to the states based on utilization data provided by each state to the manufacturer and to CMS, and pricing data provided by the manufacturer to the federal government. The states share this savings with the federal government, and sometimes implement their own additional supplemental rebate programs. Under the Medicaid drug rebate program, the rebate amount for most branded drug products was previously equal to a minimum of 15.1% of the Average Manufacturer Price, or AMP, or the AMP less Best Price, whichever is greater. Effective January 1, 2010, the healthcare reform law generally increases the size of the Medicaid rebates paid by manufacturers for single source and innovator multiple source (brand name) drug product from a minimum of 15.1% to a minimum of 23.1% of the AMP, subject to certain exceptions, for example, for certain clotting factors, the increase is limited to a minimum of 17.1% of the AMP. For non-innovator multiple source (generic) products, the rebate percentage is increased from a minimum of 11.0% to a minimum of 13.0% of AMP. In 2010, the healthcare reform law also newly extended this rebate obligation to prescription drugs covered by Medicaid managed care organizations. These increases in required rebates may adversely affect our future financial prospects and performance.

The healthcare reform law also creates new rebate obligations for our products under Medicare Part D, a partial, voluntary prescription drug benefit created by the United States federal government primarily for persons 65 years old and over. The Part D drug program is administered through private insurers that contract with CMS. Beginning in 2011, the healthcare reform law generally requires that in order for a drug manufacturer's products to be reimbursed under Medicare Part D, the manufacturer must enter into a Medicare Coverage Gap Discount Program agreement with the Secretary of the United States Department of Health and Human Services, and reimburse each Medicare Part D plan sponsor an amount equal to 50% savings for the manufacturer's brand name drugs and biologics which the Part D plan sponsor has provided to its Medicare Part D beneficiaries who are in the "donut hole" (or a gap in Medicare Part D coverage for beneficiaries who have expended certain amounts for drugs). The Part D plan sponsor is responsible for calculating and providing the discount directly to its beneficiaries and for reporting these amounts paid to CMS's

contractor, which notifies drug manufacturers of the rebate amounts it must pay to each Part D plan sponsor. The rebate requirement could adversely affect our future financial performance, particularly if contracts with Part D plans cannot be favorably renegotiated or the Part D plan sponsors fail to accurately calculate payments due in a manner that overstates our rebate obligation.

The healthcare reform law also introduced a biosimilar pathway that will permit companies to obtain FDA approval of generic versions of existing biologics based upon reduced documentation and data requirements deemed sufficient to demonstrate safety and efficacy than are required for the pioneer biologics. The new law provides that a biosimilar application may be submitted as soon as 4 years after the reference product is first licensed, and that the FDA may not make approval of an application effective until 12 years after the reference product was first licensed. With the likely introduction of biosimilars in the United States, we expect in the future to face greater competition from biosimilar products, including a possible increase in patent challenges. The FDA has reported meeting with sponsors who are interested in developing biosimilar products, and is developing regulations to implement the abbreviated regulatory review pathway.

Regarding access to our products, the healthcare reform law established and provided significant funding for a Patient-Centered Outcomes Research Institute to coordinate and fund Comparative Effectiveness Research, or CER. While the stated intent of CER is to develop information to guide providers to the most efficacious therapies, outcomes of CER could influence the reimbursement or coverage for therapies that are determined to be less cost-effective than others. Should any of our products be determined to be less cost-effective than alternative therapies, the levels of reimbursement for these products, or the willingness to reimburse at all, could be impacted, which could materially impact our future financial prospects and results.

Developments in the economy may adversely impact our business.

The difficult economic environment may adversely affect demand for our products. RI-002, our current product candidate, is expected to be sold to hospitals, specialty pharmacies and clinicians in the U.S. As a result of loss of jobs, patients may lose medical insurance and be unable to purchase supply or may be unable to pay their share of deductibles or co-payments. Hospitals adversely affected by the economy may steer patients to less costly therapies, resulting in a reduction in demand, or demand may shift to public health hospitals, which may purchase at a lower government price. While to date we cannot directly trace any material reduction in demand to the recession, if economic conditions do not improve, the impact may become material.

Risks Relating to our Finances, Capital Requirements and Other Financial Matters

We are a clinical stage company with a history of operating losses that are expected to continue and we are unable to predict the extent of future losses, whether we will generate significant revenues or whether we will achieve or sustain profitability.

We are a clinical stage company and our prospects must be considered in light of the uncertainties, risks, expenses and difficulties frequently encountered by similarly situated companies. We have generated net losses in all periods since our inception in June 2004 including losses of approximately \$5.9 million and \$7.3 million for the years ended December 31, 2011 and 2012, respectively and \$8.1 million for the six months ended June 30, 2013. At June 30, 2013, we had an accumulated deficit of approximately \$45.2 million. We expect to make substantial expenditures and incur increasing operating costs in the future and our accumulated deficit will increase significantly as we expand development and clinical trial activities for our product candidates. Our losses have had, and are expected to continue to have, an adverse impact on our working capital, total assets and stockholders' equity. Because of the risks and uncertainties associated with product development, we are unable to predict the extent of any future losses, whether we will ever generate significant revenues or if we will ever achieve or sustain profitability.

We will need substantial additional funding and may be unable to raise capital when needed, which would force us to delay, curtail or eliminate one or more of our research and development programs or commercialization efforts.

Our operations have consumed substantial amounts of cash since inception. During the years ended December 31, 2011 and 2012, we incurred research and development expenses of approximately \$0.6 million and \$3.5 million, respectively and \$4.9 million for the six months ended June 30, 2013. We expect to continue to spend substantial amounts on product development, including conducting clinical trials for our product candidates and purchasing clinical trial materials from our suppliers. We anticipate that, based upon our projected revenue and expenditures, our current cash and cash equivalents, and a backstop financing agreement with the lead investors from the 2012 Financing will be sufficient to fund our operations into the second quarter of 2014. If we complete this offering, the expected net proceeds from the sale of the shares offered hereby, if added to our current cash and cash equivalents is anticipated to be sufficient to fund our operations into the first half of 2016. We have based this estimate, however, on assumptions that may prove to be wrong, and we could spend our available financial resources much faster than we currently expect.

Until such time, if ever, as we can generate a sufficient amount of product revenue and achieve profitability, we expect to seek to finance future cash needs through equity or debt financings or corporate collaboration and licensing arrangements. Other than the Loan Agreement with Hercules and this offering, we currently have no agreements relating to any of these types of transactions and we cannot be certain that additional funding will be available on acceptable terms, or at all. If we are unable to raise additional capital, we will have to delay, curtail or eliminate one or more of our research and development programs.

Raising additional funds by issuing securities or through licensing or lending arrangements may cause dilution to our existing stockholders, restrict our operations or require us to relinquish proprietary rights.

To the extent that we raise additional capital by issuing equity securities, the share ownership of existing stockholders will be diluted. Any future debt financing may involve covenants that restrict our operations, including limitations on our ability to incur liens or additional debt, pay dividends, redeem our stock, make certain investments and engage in certain merger, consolidation or asset sale transactions, among other restrictions. In addition, if we raise additional funds through licensing arrangements, it may be necessary to relinquish potentially valuable rights to our product candidates, or grant licenses on terms that are not favorable to us.

If we fail to maintain proper and effective internal controls over financial reporting in the future, our ability to produce accurate and timely financial statements could be impaired, which could harm our operating results, investors' views of us and, as a result, the value of our common stock.

Pursuant to Section 404 of the Sarbanes-Oxley Act of 2002 and related rules, or SOX, beginning with the annual report for the year ended December 31, 2012, our management is required to report on the effectiveness of our internal control over financial reporting. The rules governing the standards that must be met for management to assess our internal control over financial reporting are complex and require significant documentation, testing and possible remediation. To comply with the requirements of being a reporting company under the Securities Exchange Act of 1934, or the Exchange Act, we may need to further upgrade our systems, including information technology, implement additional financial and management controls, reporting systems and procedures and hire additional accounting and finance staff.

Risks Associated with our Capital Stock

The market price of our common stock may be volatile and may fluctuate in a way that is disproportionate to our operating performance.

Our stock price may experience substantial volatility as a result of a number of factors, including:

- sales or potential sales of substantial amounts of our common stock;
- delay or failure in initiating or completing preclinical or clinical trials or unsatisfactory results of these trials;
- announcements about us or about our competitors, including clinical trial results, regulatory approvals or new product introductions;
 - developments concerning our licensors or product manufacturers;
- litigation and other developments relating to our patents or other proprietary rights or those of our competitors;
 - conditions in the pharmaceutical or biotechnology industries;
 - governmental regulation and legislation;
 - variations in our anticipated or actual operating results; and
- change in securities analysts' estimates of our performance, or our failure to meet analysts' expectations.

Many of these factors are beyond our control. The stock markets in general, and the market for pharmaceutical and biotechnological companies in particular, have historically experienced extreme price and volume fluctuations. These fluctuations often have been unrelated or disproportionate to the operating performance of these companies. These broad market and industry factors could reduce the market price of our common stock, regardless of our actual operating performance.

Sales of a substantial number of shares of our common stock, or the perception that such sales may occur, may adversely impact the price of our common stock.

Almost all of our 5,871,002 outstanding shares of common stock, as well as a substantial number of shares of our common stock underlying outstanding warrants, are available for sale in the public market, either pursuant to Rule 144 under the Securities Act or an effective registration statement. Sales of a substantial number of shares of our common stock, or the perception that such sales may occur, may adversely impact the price of our common stock.

We have never paid and do not intend to pay cash dividends. As a result, capital appreciation, if any, will be your sole source of gain.

We have never paid cash dividends on any of our capital stock and we currently intend to retain future earnings, if any, to fund the development and growth of our business. In addition, the terms of existing and future debt agreements may preclude us from paying dividends. As a result, capital appreciation, if any, of our common stock will be your sole source of gain for the foreseeable future.

Our affiliates control the majority of our shares of common stock. Provisions in our certificate of incorporation, our by-laws and Delaware law might discourage, delay or prevent a change in control of our company or changes in our management and, therefore, depress the trading price of our common stock.

Provisions of our certificate of incorporation, our by-laws and Delaware law may have the effect of deterring unsolicited takeovers or delaying or preventing a change in control of our company or changes in our management, including transactions in which our stockholders might otherwise receive a premium for their shares over then current market prices. In addition, these provisions may limit the ability of stockholders to approve transactions that they may deem to be in their best interests. These provisions include:

- the inability of stockholders to call special meetings; and
- the ability of our Board of Directors to designate the terms of and issue new series of preferred stock without stockholder approval, which could include the right to approve an acquisition or other change in our control or could be used to institute a rights plan, also known as a poison pill, that would work to dilute the stock ownership of a potential hostile acquirer, likely preventing acquisitions that have not been approved by our Board of Directors.

The classification of our board of directors and limitation on filling of vacancies could make it more difficult for a third party to acquire, or discourage a third party from seeking to acquire, control of our company.

In addition, Section 203 of the Delaware General Corporation Law prohibits a publicly-held Delaware corporation from engaging in a business combination with an interested stockholder, generally a person which together with its affiliates owns, or within the last three years, has owned 15% of our voting stock, for a period of three years after the date of the transaction in which the person became an interested stockholder, unless the business combination is approved in a prescribed manner.

The existence of the forgoing provisions and anti-takeover measures could limit the price that investors might be willing to pay in the future for shares of our common stock. They could also deter potential acquirers of our company, thereby reducing the likelihood that you could receive a premium for your common stock in an acquisition.

Our directors and executive officers and their affiliates beneficially own approximately 92% of the outstanding shares of common stock prior to this offering. See “Principal Stockholders.” Certain of our existing stockholders, including Aisling Capital II, LP, Burrill Capital Fund IV, LP and certain other affiliates, have indicated an interest in purchasing an aggregate of up to approximately \$7.0 million of our common stock in this offering at the initial public offering price. In addition, the underwriters have reserved \$0.5 million for purchase by our directors, executive officers, certain of their affiliates and others associated with us through a directed share program. However, because indications of interest are not binding agreements or commitments to purchase, the underwriters may sell more, less or no shares in this offering to any of these persons, or any of these persons may determine to purchase more, less or no shares in this offering. If the above referenced existing stockholders purchase all of the shares, they will continue to control the majority of our shares of common stock.

Risks Associated with the Offering

You will experience immediate and substantial dilution in the net tangible book value per share of the common stock you purchase.

Because the public offering price per share of our common stock is substantially higher than the net tangible book value per share of our common stock, you will suffer substantial dilution in the net tangible book value of the common stock you purchase in this offering. At the public offering price of \$8.50 per share, purchases of our common stock

will suffer immediate and substantial dilution of approximately \$5.59 per share in the net tangible book value of the common stock. See the section entitled "Dilution" in this prospectus for a more detailed discussion of the dilution you will incur if you purchase common stock in this offering.

We have broad discretion in the use of the net proceeds of this offering and may not use them effectively.

We intend to use the net proceeds from this offering to continue clinical testing and commercialization of RI-002 and for working capital and other general corporate purposes. Please refer to "Use of Proceeds" for a table listing our anticipated use of proceeds. However, our management will have broad discretion in the application of the net proceeds from this offering and could spend the proceeds in ways that do not improve our results of operations or enhance the value of our common stock. The failure by management to apply these funds effectively could result in financial losses that could have a material adverse effect on our business, cause the price of our common stock to decline and delay the development of our product candidates. Pending their use, we may invest the net proceeds from this offering in a manner that does not produce income or that loses value.

We expect our common stock will be quoted on the OTCQB quotation system, which will limit the liquidity and price of our common stock more than if we were quoted on The NASDAQ Stock Market or another national securities exchange and result in our stockholders not receiving the benefit of our being subject to the listing standards of a national securities exchange.

We expect that our common stock will be traded over-the-counter on the OTCQB Marketplace quotation system operated by OTC Markets Group and the OTC Bulletin Board, inter-dealer automated quotation systems for equity securities not included in a national exchange. Quotation of our common stock on the OTCQB will limit the liquidity and price of our common stock more than if our common stock were quoted or listed on The NASDAQ Stock Market, which is a national securities exchange. In light of the size of the offering, moreover, there may only be a relatively small number of purchasers in the offering, and this would limit the liquidity of the common stock. Lack of liquidity will limit the price at which you may be able to sell our common stock or your ability to sell our common stock at all.

Since our common stock will be quoted on the OTCQB, our common stockholders may face significant restrictions on the resale of our common stock due to state "blue sky" laws.

Each state has its own securities laws, often called "blue sky" laws, which (i) limit sales of securities to a state's residents unless the securities are registered in that state or qualify for an exemption from registration, and (ii) govern the reporting requirements for broker-dealers doing business directly or indirectly in the state. Before a security is sold in a state, there must be a registration in place to cover the transaction, or the transaction must be exempt from registration. The applicable broker must be registered in that state. We do not know whether our common stock will be registered or exempt from registration under the laws of any state. Since our common stock will be quoted on the OTCQB, a determination regarding registration will be made by those broker-dealers, if any, who agree to serve as the market-makers for our common stock. There may be significant state blue sky law restrictions on the ability of investors to sell, and on purchasers to buy, our common stock. You should therefore consider the resale market for our common stock to be limited, as you may be unable to resell your common stock without the significant expense of state registration or qualification.

If our common stock becomes subject to the penny stock rules, this may make it more difficult to sell our shares.

The Securities and Exchange Commission has adopted rules that regulate broker-dealer practices in connection with transactions in penny stocks. Penny stocks are generally equity securities with a price of less than \$5.00 (other than securities registered on certain national securities exchanges or authorized for quotation on certain automated quotation systems, provided that current price and volume information with respect to transactions in such securities is provided by the exchange or system). The OTCQB does not meet such requirements and if the price of our common stock is less than \$5.00, our securities will be deemed penny stocks. The penny stock rules require a broker-dealer, prior to a transaction in a penny stock not otherwise exempt from those rules, to deliver a standardized risk disclosure document containing specified information. In addition, the penny stock rules require that prior to effecting any transaction in a penny stock not otherwise exempt from those rules, a broker-dealer must make a special written determination that the penny stock is a suitable investment for the purchaser and receive (i) the purchaser's written acknowledgment of the receipt of a risk disclosure statement; (ii) a written agreement to transactions involving penny stocks; and (iii) a signed and dated copy of a written suitability statement. These disclosure requirements may have the effect of reducing the trading activity in the secondary market for our common stock, and therefore security holders may have difficulty selling their shares.

We are an "emerging growth company," and may elect to comply with reduced public company reporting requirements applicable to emerging growth companies, which could make our common stock less attractive to investors.

We are an “emerging growth company,” as defined by the JOBS Act. The JOBS Act contains provisions that, among other things, reduce certain reporting requirements for qualifying public companies. As an “emerging growth company,” we may, under Section 7(a)(2)(B) of the Securities Act, delay adoption of new or revised accounting standards applicable to public companies until such standards would otherwise apply to private companies. We may take advantage of this extended transition period until the first to occur of the date that we (i) are no longer an “emerging growth company” or (ii) affirmatively and irrevocably opt out of this extended transition period.

We could be an emerging growth company for up to five years after the first sale of our common equity securities pursuant to an effective registration statement under the Securities Act, with such fifth anniversary occurring in 2018. However, if certain events occur prior to the end of such five-year period, including if we become a “large accelerated filer,” our annual gross revenues exceed \$1 billion or we issue more than \$1 billion of non-convertible debt in any three-year period, we would cease to be an emerging growth company prior to the end of such five-year period.

We have elected to take advantage of the benefits of this extended transition period. Our financial statements may therefore not be comparable to those of companies that comply with such new or revised accounting standards. Until the date that we are no longer an “emerging growth company” or affirmatively and irrevocably opt out of the exemption provided by Securities Act Section 7(a)(2)(B), upon issuance of a new or revised accounting standard that applies to our financial statements and that has a different effective date for public and private companies, we will disclose the date on which adoption is required for non-emerging growth companies and the date on which we will adopt the recently issued accounting standard. As an emerging growth company, we are also exempt from the requirement to have our independent auditors provide an attestation report on our internal control over financial reporting.

We cannot predict if investors will find our common stock less attractive as a result of our reliance on these exemptions. If some investors find our common stock less attractive as a result of any choice we make to reduce disclosure, there may be a less active trading market for our common stock and our stock price may be more volatile.

Special Note Regarding Forward-Looking Statements

Some of the information in this prospectus contains forward-looking statements within the meaning of the federal securities laws. These statements involve known and unknown risks that relate to our future events or future financial performance and the actual results could differ materially from those expressed or implied by such statements. These statements include, among others, statements about:

- our plans to develop RI-002, including ongoing and planned clinical trials of RI-002, particularly the timing for initiation, enrollment and outcome;
- the expected timing of and our ability to obtain and maintain regulatory approvals for our product candidates;
 - the potential indications for our product candidates;
 - our intellectual property position;
 - our manufacturing capabilities and strategy;
 - our plans relating to manufacturing, supply and other collaborative agreements; and
- our estimates regarding expenses, capital requirements and needs for additional financing.

These statements may be found under “Prospectus Summary,” “Risk Factors,” “Management’s Discussion and Analysis of Financial Condition and Results of Operations” and “Business.” Forward-looking statements typically are identified by the use of terms such as “anticipates,” “believes,” “can,” “continue,” “could,” “estimates,” “expects,” “intends,” “may,” “plans,” “predicts,” “should,” or “will”, or other, similar terms, or the negative of these terms, although some forward-looking statements are expressed differently.

You should consider carefully the risks under “Risk Factors” and other sections of this prospectus, which address the factors that could cause our actual results to differ materially from those expressed or implied by the forward-looking statements. The forward-looking statements contained in this prospectus represent our estimates and assumptions only as of the date of the prospectus and we expressly disclaim any obligation or undertaking to release publicly any updates or revisions to any forward-looking statements contained herein to reflect any change in our expectations or any changes in events, conditions or circumstances on which any such statement is based, except as required by law.

Common Stock Market Data

We have been a public reporting company since February 13, 2012. However, there is not currently, and there has never been, any public market for our common stock. Our common stock is not currently eligible for trading on any national securities. In connection with this offering, we have applied to have our common stock quoted on the OTCQB Marketplace, operated by the OTC Market Groups and the OTC Bulletin Board under the symbol "ADMA". We cannot assure you that our common stock will continue to be quoted on the OTCQB or the OTC Bulletin Board after this offering.

Use of Proceeds

We estimate that the net proceeds from the sale of the shares of common stock we are offering will be approximately \$25.2 million based on an offering price of \$8.50 per share. If the underwriters fully exercise the over-allotment option, the net proceeds of the shares we sell will be approximately \$29.1 million. “Net proceeds” is what we expect to receive after deducting the underwriting discount and commission and estimated offering expenses payable by us.

We intend to use the net proceeds of this offering primarily to continue clinical testing and commercialization of RI-002 and for working capital and other general corporate purposes.

We anticipate an approximate allocation of the use of proceeds as follows:

Use of Proceeds	\$ (in millions) *	%
Completion of clinical trials and BLA submission for RI-002	12.5	49.6
Preliminary development expenses for commercial organization in anticipation of FDA approval of RI-002	1.0	4.0
Expansion of approved uses of RI-002 and development of additional plasma-derived products	2.0	7.9
Expansion of plasma collection program including development of additional plasma facilities	4.0	15.9
Working capital and other general corporate purposes	5.7	22.6
Total	25.2	100

* Assuming the over-allotment option is not exercised.

While we expect to use the net proceeds for the purposes described above, the amounts and timing of our actual expenditures will depend upon numerous factors, including the ongoing status and results of the RI-002 clinical trials. The expected net proceeds from the sale of the shares offered hereby, if added to our current cash and cash equivalents is anticipated to be sufficient to fund our operations into the first half of 2016. In the event that our plans change, our assumptions change or prove to be inaccurate, or the net proceeds of this offering are less than as set forth herein or otherwise prove to be insufficient, it may be necessary or advisable to reallocate proceeds, curtail expansion activities, reduce our planned expansion of our plasma collection program by developing fewer or no additional plasma facilities or to use proceeds for other purposes, or we may be required to seek additional financing or curtail our operations. As a result of the foregoing, our success will be affected by our discretion and judgment with respect to the application and allocation of the net proceeds of this offering.

Pending their use, we plan to invest the net proceeds from this offering in short- and intermediate-term, interest-bearing obligations, investment-grade instruments, certificates of deposit or direct or guaranteed obligations of the United States government.

Dividend Policy

Although we have recently declared and paid a stock dividend on our common stock, we have never paid any cash dividends on our capital stock. We anticipate that we will retain earnings, if any, to support operations and to finance the growth and development of our business. In addition, the terms of existing and future debt agreements may preclude us from paying dividends. Therefore, we do not expect to pay cash or stock dividends in the foreseeable future.

Any future determination relating to dividend policy will be made at the discretion of our board of directors and will depend on our future earnings, capital requirements, financial condition, prospects, applicable Delaware law, which provides that dividends are only payable out of surplus or current net profits, and other factors that our board of directors deems relevant.

Capitalization

The following table shows:

- Our cash and cash equivalents and capitalization on June 30, 2013; and
- Our cash and cash equivalents and capitalization on June 30, 2013, at the public offering price of \$8.50 per share and the use of the net proceeds as described under “Use of Proceeds.”

	June 30, 2013	
	Actual	As Adjusted (Unaudited)
Cash and cash equivalents	\$ 7,653,479	\$ 32,808,477
Long-term debt (excluding debt discount)	\$ 5,000,000	\$ 5,000,000
Stockholders' equity:		
Common stock, \$0.0001 par value, 75,000,000 shares authorized, 5,871,002 shares issued and outstanding, actual; 9,223,943 shares issued and outstanding, as adjusted	587	922
Additional paid-in capital	46,973,802	72,128,465
Accumulated deficit	(45,246,419)	(45,246,419)
Total stockholders' equity	1,727,970	26,882,968
Total capitalization	\$ 6,727,970	\$ 31,882,968

Dilution

Our net tangible book value on June 30, 2013 was \$1,727,970, or \$0.29 per share. “Net tangible book value” is total assets minus the sum of liabilities and intangible assets. “Net tangible book value per share” is net tangible book value divided by the total number of shares outstanding on June 30, 2013.

After giving effect to adjustments relating to the offering, our pro forma net tangible book value on June 30, 2013, would have been \$26,882,968, or \$2.91 per share. The adjustments made to determine pro forma net tangible book value per share are the following:

- An increase in total assets to reflect the net proceeds of the offering as described under “Use of Proceeds”;
- The addition of the number of shares offered by this prospectus to the number of shares outstanding.

The following table illustrates the pro forma increase in net tangible book value of \$2.62 per share and the dilution (the difference between the offering price per share and net tangible book value per share) to new investors:

Public offering price per share	\$8.50
Net tangible book value per share as of June 30, 2013	\$0.29
Increase in net tangible book value per share attributable to the offering	\$2.62
Pro forma net tangible book value per share as of June 30, 2013 after giving effect to the offering	\$2.91
Dilution per share to new investors in the offering	\$5.59

If the underwriters exercise their over-allotment option to purchase up to 502,941 additional shares of common stock from us in full in this offering at the public offering price of \$8.50 per share, the adjusted net tangible book value as of June 30, 2013 after giving effect to this offering would increase to \$3.17 per share, and dilution per share to new investors in this offering would be \$5.33 per share.

The number of shares of our common stock to be outstanding immediately after this offering is based on 5,871,002 shares of our common stock outstanding as of June 30, 2013. The number of shares outstanding as of June 30, 2013 excludes:

- 774,798 shares issuable upon exercise of outstanding options with a weighted average exercise price of \$6.89;
- 143,337 shares issuable upon exercise of outstanding warrants with a weighted average exercise price of \$7.56; and
- 128,426 shares of common stock reserved for future issuance under our stock option plans.

The foregoing table does not give effect to the exercise of any outstanding options or warrants. To the extent options and warrants are exercised, there may be further dilution to new investors.

Management's Discussion and Analysis of Financial Condition and Results of Operations

This discussion, which refers to the historical results of ADMA and its predecessor business, should be read in conjunction with the other sections of this prospectus, including "Risk Factors," "Business" and the consolidated financial statements and other consolidated financial information included in this prospectus. The various sections of this discussion contain a number of forward-looking statements, all of which are based on our current expectations and could be affected by the uncertainties and risk factors described throughout this prospectus. See "Special Note Regarding Forward-Looking Statements." Our actual results may differ materially.

Overview

Revenues

As of June 30, 2013, we have generated \$3.4 million of revenue since inception. Revenue is comprised of \$3.4 million from the product sale of normal source human plasma collected at our plasma collection center and plasma-derived medicinal products and \$6,296 of license revenues attributed to the out-licensing of RI-002 to Biotest AG, to market and sell in Europe and selected countries in North Africa and the Middle East. In exchange, Biotest Pharmaceuticals Corporation, or Biotest, a subsidiary of Biotest AG, has provided us with certain services in accordance with the related license agreement and is obligated to pay us certain milestone payments in the future if such milestones are achieved. Revenue is recognized at the time of transfer of title and risk of loss to the customer, which usually occurs at the time of shipment; however, revenue is recognized at the time of delivery if we retain the risk of loss during shipment. Our revenues are substantially attributed to one customer. Revenue from license fees and research and development services rendered are recognized as revenue when we have completed the performance obligations under the terms of the License Agreement. Deferred revenue of \$1.7 million was recorded as a result of certain research and development services provided in accordance with a license agreement and recognized over the term of the license.

Research and Development Expense

Research and development, or R&D, expense consists of clinical research organization and clinical trial costs related to our clinical trial, consulting expenses relating to regulatory affairs, quality control and manufacturing, assay development and ongoing testing costs, drug product manufacturing including the cost of plasma, plasma storage and transportation costs, as well as wages and benefits for employees directly related to the research and development of RI-002. All R&D is expensed as incurred.

The process of conducting pre-clinical studies and clinical trials necessary to obtain FDA approval is costly and time consuming. The probability of success for each product candidate and clinical trial may be affected by a variety of factors, including, among others, the quality of the product candidate's early clinical data, investment in the program, competition, manufacturing capabilities and commercial viability. As a result of the uncertainties discussed above, the uncertainty associated with clinical trial enrollments and the risks inherent in the development process, we are unable to determine the duration and completion costs of current or future clinical stages of our product candidates or when, or to what extent, we will generate revenues from the commercialization and sale of any of our product candidates. Development timelines, probability of success and development costs vary widely. R&D expenses for the current reporting period increased significantly due to manufacturing services for our Phase III clinical study of RI-002 as provided by Biotest under our license agreement with them. We expect that our R&D expenses will increase throughout 2013, primarily attributable to the development of RI-002 and our related clinical Phase III program.

General and Administrative Expense

General and administrative, or G&A expenses, consists of rent, maintenance and utilities, insurance, wages, stock-based compensation and benefits for senior management and staff, unrelated to R&D, legal fees, accounting and auditing fees, information technology, travel and other expenses related to the general operations of the business. G&A expenses for the current year, includes a write-off of deferred financing fees related to a proposed financing. We expect that our G&A expenses will increase throughout 2013 as a result of hiring additional staff after becoming a publicly reporting company in February 2012.

Other Income (Expense)

Interest income consists of interest earned on our cash and cash equivalents. Interest expense consists of interest incurred on our notes payable, previously outstanding convertible notes (until their automatic conversion into our common stock upon the completion of our private placement in February 2012), as well as the amortization and write-off of deferred financing costs and debt discounts and a charge for the beneficial conversion feature relating to our convertible notes.

Results of Operations

Six Months Ended June 30, 2012 Compared to Six Months Ended June 30, 2013

Summary table

The following table presents a summary of the changes in our results of operations for the six months ended June 30, 2012 compared to the six months ended June 30, 2013:

	Six Months Ended June 30,		Percentage
	2012	2013	Increase/ (Decrease)
Revenues	\$ 234,496	\$ 1,536,205	>100%
Cost of product revenue	\$ 144,070	\$ 1,014,807	>100%
Research and development expenses	\$ 260,494	\$ 4,937,934	>100%
Plasma center operating expenses	\$ 838,461	\$ 1,055,282	26%
General and administrative expenses	\$ 1,411,513	\$ 2,521,398	79%
Total operating expenses	\$ 2,654,538	\$ 9,529,421	>100%
Other expense, net	\$ (1,602)	\$ (143,875)	>100%
Loss before income taxes	\$ (2,421,644)	\$ (8,137,091)	>100%
Income tax benefit	\$ 617,615	\$ -	-100%
Loss before income taxes in plasma collection segment	\$ (752,405)	\$ (544,101)	-28%
Loss before income taxes attributable to research and development	\$ (260,494)	\$ (4,937,934)	>100%
Net loss	\$ (1,804,029)	\$ (8,137,091)	>100%

Revenues

We recorded total revenue of \$234,496 during the six months ended June 30, 2012 compared to \$1,536,205 for the six months ended June 30, 2013. Product revenue was \$234,496 and \$1,529,909 for the six months ended June 30, 2012 and 2013, respectively, from the sale of blood plasma collected in its FDA-licensed, GHA-certified Georgia-based blood plasma collection center. The product revenue for the six months ended June 30, 2012 and 2013 was primarily attributed to sales made pursuant to a plasma supply agreement entered into with Biotest during June 2012, under which Biotest purchases normal source plasma from our Georgia facility to be used in their manufacturing. For the six months ended June 30, 2013 license revenue was \$6,296, which relates to Biotest license agreement services. There was no license revenue for the same period in 2012. We have not generated any revenue from our therapeutics/research and development business.

Cost of Product Revenue

Cost of product revenue was \$144,070 for the six months ended June 30, 2012 compared to \$1,014,807 for the six months ended June 30, 2013. The increase was related to the costs associated with the sale of normal source plasma.

Research and Development Expenses

R&D expenses were \$260,494 for the six months ended June 30, 2012, and \$4,937,934 for the six months ended June 30, 2013. R&D expenses increased primarily as a result of services provided by Biotest in accordance with our license agreement, in addition to ongoing Phase III clinical study and related manufacturing, testing, and regulatory costs and related wages and stock-based compensation expenses during the year ended June 30, 2013.

Plasma Center Operating Expenses

Plasma center operating expenses were \$838,461 for the six months ended June 30, 2012, and \$1,055,282 for the six months ended June 30, 2013. Plasma center operating expenses consist of general and administrative overhead, including rent, maintenance and utilities, wages and benefits for center staff, plasma collection supplies, plasma transportation and storage (off-site) and computer software fees directly related to donor collections. Plasma center expenses increased as a result of increased donor collections attributed to FDA approval of our plasma center in August 2011. We expect that as plasma collection increases, our plasma center operating expenses will also increase accordingly.

General and Administrative Expenses

G&A expenses were \$1,411,513 for the six months ended June 30, 2012, and \$2,521,398 for the six months ended June 30, 2013. G&A expenses primarily increased as a result of a write off of deferred financing fees of \$750,893 related to a proposed financing in 2013, increases in wages due to new hires and increases in compensation and stock-based compensation costs related to option grants to our President and Chief Executive Officer, Chief Financial Officer, and Board members.

Total Operating Expenses

Total operating expenses were \$2,654,538 for the six months ended June 30, 2012, and \$9,529,421 for the six months ended June 30, 2013.

Other Income (Expense); Interest Income/ Expense

Interest income was \$9,990 for the six months ended June 30, 2012, and \$3,513 for the six months ended June 30, 2013. The decrease was attributed to having lower cash reserves during the six months ended June 30, 2013 compared to the six months ended June 30, 2012 as a result of the 2012 Private Placement. Interest expense was \$11,592 for the six months ended June 30, 2012, and \$287,640 for the six months ended June 30, 2013. Interest expense increased as a result of interest expense, amortization of debt discount and deferred financing fees related to the Hercules notes outstanding on June 30, 2013. In connection with the Hercules notes, as of December 31, 2012, we recorded \$229,345 as the fair value of the warrant issued to Hercules, as warrant liability and as a debt discount to the carrying value of the loan. As of June 30, 2013, we recorded \$171,590 as the fair value of the warrant, as a warrant liability. As a result of the decrease in warrant liability during the six months ended June 30, 2013, we recorded a \$57,755 change in the fair value of warrant liability. This warrant liability will be adjusted to fair value each reporting period using a lattice-based option model and the debt discount will be amortized to interest expense over the term of the loan. In addition, we recorded \$82,497 of insurance proceeds as other income during the second quarter of 2013. There was no other income for the six months ended June 30, 2012.

Loss Before Income Taxes

Loss before income taxes was \$2,421,644 for the six months ended June 30, 2012, and \$8,137,091 for the six months ended June 30, 2013. The increase was primarily a result of increased R&D expenses related to the clinical trial and increased G&A expenses related to the financing charges from a proposed financing, as well as additional staffing costs.

State Income Tax Benefit

In January 2011 and January 2012, we received \$320,765 and \$617,615, respectively, from the sale of our State of New Jersey net operating losses. These losses were sold through the New Jersey Economic Development Authority Technology Business Tax Certificate Transfer Program. Under the terms of this program, if we do not use the proceeds from these sales for costs incurred with operating our biotechnology business in New Jersey, we have to refund the face value of the proceeds. If we do not maintain our headquarters or a base of operations in New Jersey during the five years following receipt of these proceeds (other than due to liquidation), we have to refund the face value of the proceeds less 20% for each year completed of the five year period.

Net Loss

Net loss was \$1,804,029 for the six months ended June 30, 2012 compared to \$8,137,091 for the six months ended June 30, 2013, for the reasons stated above.

Cash Flows

Net Cash Used in Operating Activities

Net cash used in operating activities was \$2,995,557 for the six months ended June 30, 2012. The net loss for this period is lower than net cash used in operating activities by \$1,191,528, which was primarily attributable to decreases in accounts payable and accrued expenses of \$512,545 and \$347,331, respectively, related to cash disbursements to vendors, an increase in prepaid expenses of \$248,920, primarily related to our director's and officer's insurance policy premiums for 2012 and an increase in accounts receivable of \$220,096 related to sales of our normal source plasma during the six months ended June 30, 2012. The difference in net loss and cash used in operating activities was offset by depreciation and amortization of \$91,847 and stock-based compensation of \$200,349.

Net cash used in operating activities was \$5,701,729 for the six months ended June 30, 2013. The net loss for this period was higher than net cash used in operating activities by \$2,435,361, which was primarily attributable to increases in prepaid expenses of \$259,199 mostly related to our Phase III vendor payments for manufacturing and clinical research organization services, accounts receivable of \$197,806 related to sales of our normal source plasma, deferred revenue of \$1,700,000 related to license revenue, accounts payable of \$100,155 related to vendors and service providers, and a decrease in inventories of \$350,437 related to the sales of our normal source plasma, offset by depreciation and amortization of \$193,078 and stock-based compensation of \$441,315.

Net Cash Used in Investing Activities

Net cash used in investing activities was \$56,151 for the six months ended June 30, 2012, which was attributable to computer hardware and software purchases, which were related to the expansion and upgrade of our information technology systems.

Net cash used in investing activities was \$174,809 for the six months ended June 30, 2013, which pertained to purchases of office equipment and licensing software.

Net Cash Provided by Financing Activities

Net cash provided by financing activities for the six months ended June 30, 2012 was \$15,851,725, which was attributable to proceeds of \$17,287,288 received from the private placement of our common stock on February 13, 2012, offset by equity issuance costs of \$1,230,355 and the repayment of our notes payable of \$200,000.

Net cash provided by financing activities totaled \$994,345 for the six months ended June 30, 2013, which primarily pertained to proceeds from a \$1,000,000 loan from Hercules.

Results of Operations

Year Ended December 31, 2011 Compared to Year Ended December 31, 2012

Summary Table

The following table presents a summary of our results of operations for the year ended December 31, 2011 compared to the year ended December 31, 2012.

	Year ended December 31, 2011	Year ended December 31, 2012
Product revenue	\$ 761,042	\$ 1,118,118
Cost of product revenue	207,570	669,056
Research and development expenses	646,756	3,469,078
Loss on sale of inventory	1,934,630	-
Plasma center operating expenses	1,163,148	1,746,864
General and administrative expenses	1,431,894	3,142,289
Total operating expenses	5,383,998	9,027,287
Interest income	1,689	20,924
Interest expense	(1,602,958)	(30,683)
Loss before income taxes	(6,224,225)	(7,918,928)
Income tax benefit	320,765	617,615
Net loss	\$ (5,903,460)	\$ (7,301,313)
Loss before income taxes in plasma collection segment	\$ (609,676)	\$ (1,297,802)
Loss before income taxes in research and development	\$ (2,581,386)	\$ (3,469,078)

Product Revenue

We recorded revenue of \$761,042 during the year ended December 31, 2011 compared to \$1,118,118 during the year ended December 31, 2012. We began collecting blood plasma in February 2009 and received FDA approval for ADMA BioCenters in August 2011. Our revenue is primarily derived from sales under a plasma supply agreement entered into with Biotest Pharmaceuticals Corporation, or Biotest, during June 2012, under which Biotest purchases normal source plasma from our Georgia facility to be used in their product manufacturing. We have not generated any revenue from our therapeutics/research and development segment.

Cost of Product Revenue

Cost of product revenue was \$207,570 for the year ended December 31, 2011, compared to \$669,056 for the year ended December 31, 2012. The increase in cost of sales was related to increased costs associated to increased normal source plasma revenues attributed to the plasma supply agreement entered into with Biotest in June 2012.

Research and Development Expenses

Research and development expenses were \$646,756 for the year ended December 31, 2011, compared to \$3,469,078 for the year ended December 31, 2012.

Research and development expenses increased primarily as a result of higher manufacturing, testing, and regulatory costs in preparation for our Phase III clinical study as well as the recent appointment of our Chief Scientific Officer/Chief Medical Officer and related wages and stock-based compensation expense during the year ended December 31, 2012. Our regulatory and clinical trial expenses in 2011 were extremely limited.

During the year ended December 31, 2011, there was a loss of \$1,934,630 on the disposal of certain of our inventory that we previously acquired to conduct research and development for a different product, compared to no loss on the sale of inventory during the year ended December 31, 2012. The total amount of inventory sold at book value was \$2,439,487, of which we received \$504,857 in total net proceeds from the inventory sales, thus resulting in a loss on the sale of research and development inventory of \$1,934,630 for the year ended December 31, 2011. This plasma, which was sold on a non-recurring basis, had not been collected at our plasma collection facility, but had been purchased from third parties.

Plasma Center Operating Expenses

Plasma center operating expenses were \$1,163,148 for the year ended December 31, 2011, compared to \$1,746,864 for the year ended December 31, 2012. Plasma center operating expenses consist of general and administrative overhead including rent, maintenance and utilities, wages and benefits for center staff, plasma transportation and storage (off-site) and computer software fees directly related to donor collections. Plasma center expenses increased following FDA approval of our plasma center in August 2011 as a result of increased donor collections, increased expenses related to donor collections such as additional facility expenses, supplies, and increased headcount during 2012. We expect that as plasma collection increases, our plasma center operating expenses will also increase accordingly.

General and Administrative Expenses

General and administrative expenses were \$1,431,894 for the year ended December 31, 2011, compared to \$3,142,289 for the year ended December 31, 2012. General and administrative expenses increased as a result of increases in stock-based compensation costs of \$525,181 for the year ended December 31, 2012 compared to \$22,056 for the year ended December 31, 2011, resulting from 2012 option grants to our President and Chief Executive Officer, members of our Board of Directors, our Chief Financial Officer who was appointed in May 2012, and new hires during 2012 in addition to higher professional services fees and SEC filing fees as a result of becoming a public reporting company in February 2012.

Total Operating Expenses

Total operating expenses were \$5,383,998 for the year ended December 31, 2011, compared to \$9,027,287 during the year ended December 31, 2012, for the reasons stated above.

Interest Income (Expense)

We had interest income of \$1,689 and \$20,924 during the years ended December 31, 2011 and 2012, respectively, and interest expense of \$1,602,958 and \$30,683 during the years ended December 31, 2011 and 2012, respectively. The increase in interest income of \$19,235 for the year ended December 31, 2012 was attributed to higher cash balances during the year ended December 31, 2012 compared to the year ended December 31, 2011 as a result of the private placement of 1,800,000 shares of our common stock with gross proceeds in cash of \$17,287,288 in February 2012. The decrease of interest expense of \$1,572,275 for the year ended December 31, 2012 compared to the prior year was attributed to the conversion of our outstanding notes in December 2011 and February 2012. All but \$450,000 in principal amount of those loans was converted or repaid prior to December 31, 2011, with \$250,000 (plus

\$12,740 in accrued interest) of the remaining amount invested in the private placement of securities completed in 2012 and \$200,000 repaid in 2012.

- 37 -

Loss Before Income Taxes

Loss before income taxes was \$6,224,225 for the year ended December 31, 2011, compared to \$7,918,928 for the year ended December 31, 2012, for reasons stated above.

State Income Tax Benefit

In January 2011 and 2012, we received \$320,765 and \$617,615, respectively, from the sale of our State of New Jersey net operating losses. These losses were sold through the New Jersey Economic Development Authority Technology Business Tax Certificate Transfer Program. Under the terms of this program, if we do not use the proceeds from these sales for costs incurred with operating our biotechnology business in New Jersey, we have to refund the face value of the proceeds. If we do not maintain our headquarters or a base of operations in New Jersey during the five years following receipt of these proceeds (other than due to liquidation), we have to refund the face value of the proceeds less 20% for each year completed of the five year period. We cannot make assurances that we will qualify under this program in future years or even that the program will exist in future years.

Net Loss

Net loss was \$5,903,460 for the year ended December 31, 2011, compared to \$7,301,313 for the year ended December 31, 2012, for reasons stated above.

Net Cash Used in Operating Activities

Net cash used in operating activities was \$1,431,188 for the year ended December 31, 2011. The net loss for this period is higher than net cash used in operating activities by \$4,472,272, which was primarily due to the loss on sale of inventory, an increase in non-cash interest expense and a decrease in inventories, offset by depreciation and amortization of \$219,552 and amortization of debt discount and beneficial conversion charges of \$740,603 related to the notes payable during 2011 and 2012, of which all notes converted during February 2012.

Net cash used in operating activities was \$6,903,795 for the year ended December 31, 2012. The net loss for the year ended December 31, 2012 is higher than cash used in operating activities by \$397,518, as a result of increases in restricted cash related to our letter of credit for our Georgia facility, inventories of finished goods normal source plasma available for sale and accrued expenses primarily relating to accrued compensation, offset by a decrease in accounts payable and non-cash expenses of stock-based compensation of \$626,787 and depreciation and amortization of \$182,089.

Net Cash Used in Investing Activities

Minimal cash was used in investing activities for the year ended December 31, 2011.

Net cash used in investing activities for the year ended December 31, 2012 was \$118,853 related to equipment purchases.

Net Cash Provided by Financing Activities

Net cash provided by financing activities for the year ended December 31, 2011 was \$1,290,258, principally attributable to proceeds from the issuance of convertible notes of \$1,500,000, net of repayment of notes payable of \$200,000.

Net cash provided by financing activities of \$19,470,549 for the year ended December 31, 2012, was attributable to the proceeds of \$17,287,288 received from the private placement of our common stock on February 13, 2012, net of equity issuance costs of \$1,338,009 consisting of professional services fees related to the private placement and the proposed upcoming financing, proceeds from a note payable of \$3,906,000 and related debt issuance costs of \$25,000 along with a repurchase of our common stock for \$150,000 and the repayment of our notes payable of \$200,000.

- 38 -

Liquidity and Capital Resources

Overview

We have had limited revenue from operations and we have incurred cumulative losses of \$45.3 million since inception. We have funded our operations to date primarily from equity investments, loans from a venture debt lender and loans from our primary stockholders. We received net cash proceeds of approximately \$15.3 million in the 2012 Financing, after the payment of all related expenses, including legal, printing, and travel expenses, the placement agent's commissions and expense reimbursements, which amount does not include the secured promissory notes that were satisfied in exchange for shares of Former ADMA's common stock in the 2012 Financing.

Based upon our projected revenue and expenditures for 2013, management currently believes that current cash and cash equivalents, in addition to a backstop financing agreement with the lead investors from the February 2012 Financing, will be sufficient to enable us to fund our operating expenses, research and development expenses and capital expenditures into the second quarter of 2014. If we complete this offering, the expected net proceeds from the sales of the shares offered hereby, if added to our current cash and cash equivalents is anticipated to be sufficient to fund our operations into the first half of 2016. Because we do not anticipate receiving FDA approval for RI-002, until at the earliest, the second half of 2015, if at all, and would, therefore, not be able to generate revenues from the commercialization of RI-002 until after that date, we will have to raise additional capital prior to the second quarter of 2014 to continue product development and operations. We are unable to predict with reasonable certainty when, if ever, we will generate revenues from the commercialization of RI-002 and, therefore, how much additional capital we will need to raise prior to the second quarter of 2014. Furthermore, if our assumptions underlying our estimated revenues and expenses prove to be wrong, we may have to raise additional capital sooner than anticipated. Because of numerous risks and uncertainties associated with the research, development and future commercialization of our product candidate, we are unable to estimate with certainty the amounts of increased capital outlays and operating expenditures associated with our anticipated clinical trials and development activities. Our current estimates may be subject to change as circumstances regarding requirements further develop. We may decide to raise capital through public or private equity offerings, debt financings or corporate collaboration and licensing arrangements. We do not have any existing commitments for future external funding. We may seek to sell additional equity or debt securities or obtain a bank credit facility. The sale of additional equity or debt securities, if convertible, could result in dilution to our stockholders. The incurrence of indebtedness would result in increased fixed obligations and could also result in covenants that would restrict our operations or other financing alternatives.

Additional equity or debt financing, grants, or corporate collaboration and potential licensing arrangements may not be available on acceptable terms, if at all. If adequate funds are not available, we may be required to delay, reduce the scope of or eliminate our research and development programs, reduce our planned clinical trials and delay or abandon potential commercialization efforts of our lead product candidate. See also "Future Financing Needs" below.

As of June 30, 2013, we had working capital of \$7,143,769, consisting primarily of \$7,653,479 of cash and cash equivalents and \$915,156 of inventories, prepaid expenses of \$366,960 and accounts receivable of \$236,918, offset primarily by \$1,158,826 of accounts payable and \$753,143 of accrued expenses.

During January 2012, we received \$617,615 from the sale of our State of New Jersey net operating losses through the New Jersey Economic Development Authority program. We cannot make assurances that funding will be available for us in the future under this program.

Hercules Loan and Security Agreement

On December 21, 2012, we and our subsidiaries entered into a Loan and Security Agreement, or the Loan Agreement, with Hercules Technology Growth Capital, Inc., or Hercules. Under the Loan Agreement for up to \$6 million, we borrowed \$4 million on the closing date and have recently borrowed an additional \$1 million upon reaching our first milestone, i.e., enrolling at least one patient in a pivotal Phase III clinical study of our lead product candidate RI-002. The loan bears interest at a rate per annum equal to the greater of (i) 8.5% and (ii) the sum of (a) 8.5% plus (b) the Prime Rate (as reported in The Wall Street Journal) minus 5.75%. The loan is secured by our assets, except for our intellectual property (which is subject to a negative pledge). The principal will be repaid over 27 months beginning no later than May 1, 2014, unless accelerated as a result of certain events of default. Interest is due and payable on the first of every month and at the termination date, unless accelerated as a result of an event of default. In addition, a backend fee equal to 2.65% of the amount funded under the facility is due on the maturity or prepayment date or the date that the secured obligations become due and payable and a 1% facility fee in the amount of \$60,000 and a commitment fee in the amount of \$25,000 were both due at closing. The loan matures no later than August 2016.

In the event we elect to prepay the loan, we are obligated to pay a prepayment charge corresponding to a percentage of the principal amount of the loan, with such percentage being: 3.0% if prepayment occurs in the first year, 2.0% if prepayment occurs in the second year and 0.5% if prepayment occurs after the second year but prior to the last day of the term.

The Loan Agreement contains customary representations, warranties and covenants, including limitations on incurring indebtedness, engaging in mergers or acquisitions and making investments, distributions or transfers. The representations, warranties and covenants contained in the Loan Agreement were made only for purposes of such agreement and as of a specific date or specific dates, were solely for the benefit of the parties to such agreement, and may be subject to limitations agreed upon by the contracting parties, including being qualified by confidential disclosures exchanged between the parties in connection with the execution of the Loan Agreement.

Events of default under the agreement include, but are not limited to: (i) insolvency, liquidation, bankruptcy or similar events; (ii) failure to pay any debts due under the Loan Agreement or other loan documents on a timely basis; (iii) failure to observe any covenant or secured obligation under the Loan Agreement or other loan documents, which failure, in most cases, is not cured within 10 days of written notice by lender; (iv) occurrence of any default under any other agreement between us and the lender, which is not cured within 10 days; (v) occurrence of an event that could reasonably be expected to have a material adverse effect; (vi) material misrepresentations; (vii) occurrence of any default under any other agreement involving indebtedness in excess of \$50,000 or the occurrence of a default under any agreement that could reasonably be expected to have a material adverse effect; and (viii) certain money judgments are entered against us or a certain portion of our assets are attached or seized. Remedies for events of default include acceleration of amounts owing under the Loan Agreement and taking immediate possession of, and selling, any collateral securing the loan.

In connection with the Loan Agreement, we issued to Hercules a warrant to purchase 31,750 shares of common stock with an exercise price set at the lower of (i) \$7.56 or (ii) the price per share of the next round of financing, subject to customary anti-dilution adjustments. The warrant expires after 10 years and has piggyback registration rights with respect to the shares of common stock underlying the warrant. In addition, we have also granted Hercules the option to invest (until the loan maturity date) up to \$1 million in future equity financings at the same terms as the other investors.

The Loan Agreement contains certain provisions that require the warrants issued to Hercules to be accounted for as a liability and “marked-to-market” each reporting period. Changes in the valuation of this liability at the end of each reporting period will be included in our reported operating results, and may create volatility in our reported operating

results.

- 40 -

Future Financing Needs

The net proceeds from the 2012 Financing and the \$5 million borrowed under the Hercules Loan Agreement have been used to test plasma donors for RSV titers, collect and procure plasma, manufacture drug product, conduct clinical trial(s), and the remainder for payment of existing accounts payable, general and administrative expenses as well as other business activities and general corporate purposes, including for the payment of accrued expenses and premiums for directors' and officers' insurance. We currently believe that based on our projected revenue and expenditures for 2013, our current cash and cash equivalents in addition to a backstop financing agreement with the lead investors from the February 2012 Financing will be sufficient to enable us to fund our operating expenses, research and development expenses and capital expenditures into the second quarter of 2014. If we complete this offering, the expected net proceeds from the sale of the shares offered hereby, if added to our current cash and cash equivalents is anticipated to be sufficient to fund our operations into the first half of 2016.

Our ability to continue as a going concern will be dependent on our ability to raise additional capital, to fund our research and development and commercial programs and meet our obligations on a timely basis. If we are unable to successfully raise sufficient additional capital we will likely not have sufficient cash flow and liquidity to fund our business operations, forcing us to delay, discontinue or prevent product development and clinical trial activities or the approval of any of our potential products or curtail our activities and, ultimately, potentially cease operations. Even if we are able to raise additional capital, such financings may only be available on unattractive terms, or could result in significant dilution of stockholders' interests and, in such event, the value and potential future market price of our common stock may decline. In addition, the incurrence of indebtedness would result in increased fixed obligations and could result in covenants that would restrict our operations or other financing alternatives.

Public Offering Price

In consultation with Oppenheimer & Co. Inc., the representative of the several underwriters for this offering, we determined the offering price for this offering to be \$8.50 per share, as set forth on the cover page of this prospectus. We note that the price for this offering was not derived using a formal determination of fair value, but was determined by negotiation between us and the representative. Among the factors that were considered in setting this price were the following:

- an analysis of the typical valuation ranges seen in recent IPOs for companies in our industry;
- the general condition of the securities markets and the recent market prices of, and the demand for, publicly traded common stock of generally comparable companies;
- an assumption that there would be a receptive public trading market for late stage biopharmaceutical companies such as us; and
- an assumption that there would be sufficient demand for our common stock to support an offering of the size contemplated by this prospectus.

Investors are cautioned not to place undue reliance on the valuation methodologies discussed above as an indicator of future stock prices.

Recent Accounting Pronouncements

The Financial Accounting Standards Board has issued certain accounting pronouncements as of June 30, 2013 that will become effective in subsequent periods; however, we do not believe that any of those pronouncements would have significantly affected our financial accounting measurements or disclosures had they been in effect during 2013 or that they will have a significant impact at the time they become effective.

Critical Accounting Policies and Estimates

On April 5, 2012, the JOBS Act was signed into law. The JOBS Act contains provisions that, among other things, reduce certain reporting requirements for qualifying public companies. As an “emerging growth company,” we may, under Section 7(a)(2)(B) of the Securities Act, delay adoption of new or revised accounting standards applicable to public companies until such standards would otherwise apply to private companies. We may take advantage of this extended transition period until the first to occur of the date that we (i) are no longer an “emerging growth company” or (ii) affirmatively and irrevocably opt out of this extended transition period. We have elected to take advantage of the benefits of this extended transition period. Our financial statements may therefore not be comparable to those of companies that comply with such new or revised accounting standards. Until the date that we are no longer an “emerging growth company” or affirmatively and irrevocably opt out of the exemption provided by Securities Act Section 7(a)(2)(B), upon issuance of a new or revised accounting standard that applies to our financial statements and that has a different effective date for public and private companies, we will disclose the date on which adoption is required for non-emerging growth companies and the date on which we will adopt the recently issued accounting standard.

Our management’s discussion and analysis of our financial condition and results of operations is based on our financial statements, which have been prepared in accordance with accounting principles generally accepted in the United States, or GAAP. The preparation of these financial statements requires us to make estimates and judgments that affect the reported amounts of assets, liabilities and expenses. On an ongoing basis, we evaluate these estimates and judgments, including those described below. We base our estimates on our historical experience and on various other assumptions that we believe to be reasonable under the circumstances. These estimates and assumptions form the basis for making judgments about the carrying values of assets and liabilities that are not readily apparent from other sources. Actual results and experiences may differ materially from these estimates.

Stock-Based Compensation

Stock-based compensation cost is measured at grant date, based on the estimated fair value of the award, and is recognized as expense over the employee's requisite service period on a straight-line basis.

We account for stock options granted to non-employees on a fair value basis using the Black-Scholes option pricing method. The non-cash charge to operations for non-employee options with vesting are revalued at the end of each reporting period based upon the change in the fair value of the options and amortized to consulting expense over the related contract service period.

For the purpose of valuing options and warrants granted to our employees, non-employees and directors and officers during the six months ended June 30, 2013, we used the Black-Scholes option pricing model. We granted options to purchase an aggregate of 25,587 shares of common stock to non-executive employees during the six months ended June 30, 2013. To determine the risk-free interest rate, we utilized the U.S. Treasury yield curve in effect at the time of grant with a term consistent with the expected term of our awards. The expected term of the options granted is in accordance with Staff Accounting Bulletin 107 which is based on the average between vesting terms and contractual terms. The expected dividend yield reflects our current and expected future policy for dividends on our common stock. The expected stock price volatility for our stock options was calculated by examining historical volatilities for similar publicly traded industry peers, since we do not have any trading history for our common stock. We will continue to analyze the expected stock price volatility and expected term assumptions as historical data for our common stock becomes available. We have not experienced forfeitures of stock options and, as such, have not established a forfeiture rate. Since the stock options currently outstanding are primarily held by our senior management and directors, we will continue to evaluate the effects of such future potential forfeitures, as they may arise, to evaluate our estimated forfeiture rate.

Research and Development Costs

Our expenses include all research and development costs as incurred including on the disposition plasma and equipment for which there is no alternative future use. Such expenses include costs associated with planning and conducting clinical trials.

Our agreement with Biotest AG includes the in-license of certain rights to incomplete, in-process technology, the terms of which we expect to finalize by the end of the fourth quarter of 2013. As such, we expect to account for the value of this license as a charge to operations once the terms of the in-license agreement are finalized.

Revenue Recognition

Revenue from the sale of human plasma collected by ADMA BioCenters and plasma-derived medicinal products is recognized at the time of transfer of title and risk of loss to the customer, which usually occurs at the time of shipment. Revenue is recognized at the time of delivery if we retain the risk of loss during shipment. Our revenues are substantially attributed to one customer. Revenue from license fees and research and development services rendered are recognized as revenue when we have completed the performance obligations under the terms of the license agreement. Deferred revenue of \$1.7 million was recorded as a result of certain research and development services provided in accordance with a license agreement and recognized over the term of the license.

Accounting for Hercules Loan and Security Agreement

In connection with the Hercules Loan and Security Agreement, we issued to Hercules a warrant to purchase 31,750 shares of common stock with an exercise price set at the lower of (i) \$7.56 or (ii) the price per share of the next round

of financing, subject to customary anti-dilution adjustments. The warrant expires after 10 years and has piggyback registration rights. In addition, we also granted Hercules the option to invest (until the loan maturity date) up to \$1 million in future equity financings (other than under an effective registration statement) at the same terms as the other investors.

The fair value of the warrant was calculated using a lattice-based option model in order to account for features in the warrant that could cause the exercise price to reset (“downround protection”) in the next issuance of our common stock (the next round of equity financing). The key assumptions used to value the warrants included the expected date of the next round of equity financing, volatility of 73% on our common stock based upon similar public companies’ volatilities for comparison, an expected dividend yield of 0.0%, and a term of 10 years. As of December 31, 2012 and June 30, 2013, we recorded \$229,345 and \$171,590, respectively, as the fair value of the warrant, as warrant liability and as a debt discount to the carrying value of the loan. As a result of the decrease in warrant liability during the six months ended June 30, 2013, we recorded a \$57,755 charge in the fair value of warrant liability. This warrant liability will be adjusted to fair value each reporting period using a lattice-based option model and the debt discount will be amortized to interest expense over the term of the loan. Also, upon full repayment or maturity of the loan, Hercules is due a payment of 2.65% of the loan, or \$132,500, which is recorded as deferred financing costs and as a long-term liability.

Off-Balance Sheet Arrangements

We do not have any off-balance sheet arrangements except that we are currently obligated under a ten-year lease agreement for our ADMA BioCenters plasma collection facility. There is a total minimum rent due under the lease of \$874,522 through the end of the lease term in September 2018.

Business

Unless the context otherwise requires, references in this section to “ADMA,” “ADMA Biologics,” the “Company,” “we,” “us” and “our” refer to ADMA Biologics, Inc., a Delaware corporation, as well as its subsidiary, ADMA Plasma Biologics, Inc., a Delaware corporation, taken as a whole, and also refer to the operations of ADMA Plasma Biologics, Inc. prior to the merger on February 13, 2012, as discussed in “Certain Relationships and Related Transactions - The Merger”, which resulted in ADMA Plasma Biologics, Inc. becoming our wholly-owned subsidiary. In each case, references to ADMA Plasma Biologics, Inc. also include its subsidiary ADMA BioCenters Georgia Inc., or ADMA BioCenters, a Delaware corporation. All shares and per share information included in this prospectus and relating to the shares of our common stock, par value \$0.0001 per share, gives effect to a 1.27-for-1 stock split effected by means of a 0.27-for-1 stock dividend on April 4, 2013.

Business of ADMA

Overview

ADMA Biologics is a late stage biopharmaceutical company that develops, manufactures, and intends to market specialty plasma-based biologics for the treatment and prevention of certain infectious diseases. Our targeted patient populations include immune-compromised individuals who suffer from an underlying immune deficiency disorder or who may be immune-suppressed for medical reasons. Our product candidates are intended to be used by physician specialists focused on caring for immune-compromised patients with infectious diseases. RI-002, our lead product candidate for which we have enrolled over 50% of the patients expected in our pivotal Phase III clinical trial, is for the treatment of primary immune deficiency disease, or PIDD. RI-002 is an injectable immune globulin derived from human plasma enriched with high levels of naturally occurring polyclonal antibodies (e.g. streptococcus pneumoniae, H. influenza type B, CMV, measles, tetanus, etc.) as well as high levels of antibodies targeted to respiratory syncytial virus, or RSV. RSV is a common virus that ordinarily leads to mild, cold-like symptoms in healthy adults and children. In high-risk groups, such as the immune-compromised, RSV can lead to a more serious infection and may even cause death. Our proprietary microneutralization assay allows us to effectively identify and isolate donor plasma with high titer RSV antibodies, to standardize RI-002’s potency and thereby potentially garner a premium price.

PIDD, a genetic disorder that causes a deficient or absent immune system, is caused by hereditary or genetic defects and can affect anyone regardless of age or gender. PIDD patients are more vulnerable to infections and more likely to suffer complications from these infections. Intravenous immune globulin, or IGIV, is a plasma derived product that is used to prevent serious infections in patients with PIDD. It is comprised of polyclonal antibodies, which are proteins produced by B-cells that are used by the body’s immune system to neutralize foreign objects such as bacteria and viruses. RI-002, a specialty IGIV with standardized levels of high-titer RSV antibodies, is intended to prevent infections in PIDD patients. The polyclonal antibodies which are present in RI-002 are expected to prevent infections in immune-compromised patients. It is estimated that there are about 250,000 diagnosed PIDD patients in the United States approximately half of whom are treated with IGIV regularly. Since the introduction of IGIV therapy, the incidence of infections in IGIV-treated patients has dropped significantly. In the United States, sales of immune globulin products for all its uses were reported to be approximately \$3.5 billion in 2011.

Patient enrollment in our pivotal Phase III clinical trial of RI-002 for the treatment of patients with PIDD began in February of 2013. We expect to complete patient recruitment during the fourth quarter of 2013. We expect to provide preliminary data from the pivotal Phase III clinical trial during the fourth quarter of 2014. Once data are available, we expect to file a Biologics License Application or BLA, with the U.S. Food and Drug Administration, or FDA, during the first half of 2015. The FDA could approve our BLA within approximately one year of filing and potential first commercial sales could occur as early as the first half of 2016. The trial is a single arm study in which patients will be treated approximately once per month for a period of 12 months of treatment plus up to 90 days for

safety monitoring and follow up. We intend to treat an aggregate of approximately 60 patients in approximately 10 to 12 treatment centers in the United States. The pivotal Phase III primary endpoint follows the published FDA industry guidance, which provides for a reduction in the incidence of serious infections to less than one per year in those receiving IGIV. The secondary endpoint is safety and includes other data collection points including antibody titers for certain agents, including RSV antibody levels at various time points after infusion. Following the FDA's guidance for our protocol should provide that a successful single Phase III trial and Biological License Application, or BLA, submission should lead to FDA approval. RI-001 was the subject of a Phase II randomized, double-blind, placebo-controlled human clinical trial in RSV-infected, immune-compromised patients. In that trial, RI-001 treated patients demonstrated a statistically significant rise in anti-RSV titers compared to patients receiving placebo. RI-002 is an improved formulation of our prior product candidate RI-001. RI-002 is manufactured using the same FDA-approved contract manufacturing facility as its predecessor. RI-002 has demonstrated improved production yields, an improved stability profile and comparable anti-RSV antibody titer potency relative to the prior formulation.

We have established, qualified and validated a proprietary microneutralization assay for plasma collection and donor screening as well as for determining the appropriate anti-RSV antibody potency for the manufacture of RI-002. Our assay provides for measurement of RSV antibody titer levels of RI-002 that are consistent and reproducible, which we believe is a competitive advantage and a barrier to the entry of competitive products. Our microneutralization assay could serve as a platform for identifying next generation virus-specific plasma-based therapeutics.

We operate an FDA-licensed, GHA-certified source plasma collection facility, ADMA BioCenters, which provides us with a portion of our blood plasma for the manufacture of RI-002. In June 2013, ADMA BioCenters, received a two-year certification from the GHA. GHA certification allows plasma collected at ADMA BioCenters to be imported into the European Union (EU) and to be purchased and processed by European Manufacturers. A typical plasma collection center, such as ADMA BioCenters, can collect 30,000 to 50,000 liters of source plasma annually, which may be sold for different prices depending upon the type of plasma, quantity of purchase, and market conditions at the time of sale. Plasma collected from ADMA BioCenters that is not used for making RI-002 is sold to customers in the U.S. and Europe under supply agreements or in the open “spot” market. We have entered into long term manufacturing and licensing agreements with Biotest AG and their United States subsidiary, Biotest Pharmaceuticals, Inc., together referred to as Biotest, that provide for the exclusive manufacture of RI-002. At the same time, we granted Biotest an exclusive, royalty-bearing license to market and sell RSV antibody-enriched IGIV in Europe and in other selected territories in North Africa and the Middle East.

The founders of ADMA have a combined 60 years of experience marketing and distributing blood plasma products and devices. With the appointment of the executive team and the board of directors, we added over 150 years of deep medical, technical and development experience in the biologics and pharmaceutical industry.

Our mission is to develop and commercialize plasma-derived, human immune globulins targeted to niche immune-compromised patient populations. We intend to accomplish our mission by achieving the following:

- Complete our pivotal Phase III trial and obtain FDA approval to manufacture and market RI-002 for the treatment of patients with PIDD,
 - Establish a specialty sales force to commercialize RI-002,
 - Explore other possible indications for RI-002,
- Develop additional plasma-derived products for the treatment of infectious diseases in immune-compromised patient populations, and
- Grow our network of ADMA BioCenters facilities both to maintain control of a portion of our raw material supply and to generate additional revenue through the collection and sale of source plasma to third party customers.

Our Strategy

Our goal is to be a leader in developing and commercializing specialized, targeted, plasma-derived therapeutics to extend and enhance the lives of individuals who are naturally or medically immune-compromised.

The key elements of our strategy for achieving this goal are as follows:

- Obtain FDA approval of RI-002 as a treatment for PIDD. We have enrolled over 50% of the patients expected in our pivotal Phase III clinical trial for RI-002 for the treatment of PIDD in accordance with the FDA Guidance for Industry. If the pivotal Phase III clinical trial produces the anticipated safety and efficacy results expected in the fourth quarter of 2014, we would expect to file a BLA with the FDA during the first half of 2015. The FDA could approve our BLA within approximately one year of filing and potential first commercial sales could occur as early as the first half of 2016.
- Commercialize RI-002 as a treatment for PIDD. We plan to hire a small, specialty sales force to market RI-002 to hospitals, physician offices/clinics, and other specialty treatment organizations. We anticipate staffing our company

with additional personnel for patient support, medical affairs, quality assurance, regulatory affairs, scientific affairs, reimbursement, inventory and logistics, human resources, and financial and operational management. We may also use a network of national distributors to fulfill orders for RI-002.

- Expand RI-002's FDA-approved uses. If RI-002 is approved by the FDA as a treatment for PIDD, we plan to evaluate the clinical and regulatory paths to grow the RI-002 franchise through expanded FDA-approved uses. We believe that there may be patient populations beyond PIDD that would derive clinical benefit from RI-002. Previously marketed RSV IGIV product and RI-001 have historically been used in immune-compromised patient populations, including patients with cystic fibrosis, prematurely born infants, stem cell and solid organ transplant patients, oncology patients and other patients at risk for or requiring treatment for RSV. Currently, there are no approved treatments specifically for RSV infections in PIDD.
- Develop additional plasma-derived products. Our core competency is in the development and commercialization of plasma-derived therapeutics. We believe there are a number of under addressed medical conditions for which plasma-derived therapeutics may be beneficial. Utilizing our proprietary assays and other technologies, we have identified potential new product candidates that we may advance into preclinical activities.
 - Develop and expand ADMA BioCenters. In order to generate revenues in advance of RI-002's commercialization and to control a portion of our raw material plasma supply for RI-002, we formed ADMA BioCenters, a subsidiary, that operates a plasma collection facility in Norcross, Georgia. The facility received its FDA license in August 2011. Under FDA license, ADMA BioCenters can collect normal source plasma and high-titer RSV plasma. We sell a portion of our normal source plasma to buyers in the open "spot" market. We also plan to use the high-titer RSV plasma collected by ADMA BioCenters in the manufacturing of RI-002. We may initiate other hyperimmune plasma collection programs at the Norcross facility. These programs will be initiated during the normal course of business and are expected to cost less than \$1.0 million to implement. We may also consider growth through the creation and licensing of additional ADMA BioCenters facilities in various regions of the United States. Additional ADMA BioCenters may allow us to cost-effectively secure additional high-titer RSV plasma for RI-002, and potentially increase revenues through the collection and sale of normal source plasma and other hyperimmune plasma to third parties.

The Plasma Industry

Primary Immunodeficiency Disease

PIDD is a class of hereditary disorder characterized by defects in the immune system, due to either a lack of necessary antibodies or a failure of these antibodies to function properly. According to the World Health Organization, there are over 150 different presentations of PIDD. As patients suffering from PIDD lack a properly functioning immune system, they typically receive monthly, outpatient infusions of IGIV therapy. Without this exogenous antibody immune support, these patients would be susceptible to a wide variety of infectious diseases. PIDD has an estimated prevalence of 1:1,200 in the United States, or approximately 250,000 people. Of these 250,000 people diagnosed with PIDD in the United States, approximately 125,000 receive monthly infusions of IGIV and it is estimated that over 300,000 patients worldwide receive monthly IGIV infusions for PIDD.

As most patients with PIDD present with infections, the differential diagnosis and initial investigations for an underlying immune defect are typically guided by the clinical presentation. In subjects with PIDD, individual infections are not necessarily more severe than those that occur in a normal host. Rather, the clinical features suggestive of an immune defect may be the recurring and/or chronic nature of infections with common pathogens that may result in end organ damage, such as bronchiectasis. In addition, subjects with PIDD will often respond poorly to standard antimicrobial therapy or they may have repeated infections with the same pathogen. The virulence of the infecting organism should also be considered, and a subject's immunocompetence should be questioned when invasive infections are caused by low virulence or opportunistic pathogens. For example, infection with the opportunistic pathogens *Pneumocystis jiroveci* (previously *Pneumocystis carinii*) or atypical mycobacteria should prompt an

investigation for underlying immunodeficiency.

- 45 -

Typical clinical presentations for patients with PIDD are:

- Antibody deficiency and recurrent bacterial infections;
- T-lymphocyte deficiency and opportunistic infections;
- Other lymphocyte defects causing opportunistic infections;
- Neutrophil defects causing immunodeficiency; and
- Complement deficiencies.

PIDD can present at any age from birth to adulthood, posing a considerable challenge for the practicing physician to know when and how to evaluate a subject for a possible immune defect. Subjects with marked antibody deficiencies are generally dependent on IGIV therapy for survival. Benefits of adequate IGIV therapy in subjects not able to produce antibodies normally include: a reduction of the severity and frequency of infections, prevention of chronic lung disease and prevention of enteroviral meningoencephalitis. Several immune globulin products have already been approved by the FDA.

RI-002, our IGIV product contains polyclonal antibodies against various infectious agents, including antibodies against RSV. RSV is a common respiratory virus that often presents during the winter months. Nearly all children will have been infected with RSV by three years of age, however, the immune systems of most healthy children prevent significant morbidity and mortality. Conversely, in patients that are immune-compromised, such as those with PIDD or who have undergone a hematopoietic stem cell or solid organ transplant and may be on immunosuppressive drugs or chemotherapy, RSV infection can be associated with significant morbidity and mortality. Immune-compromised patients historically have a 5% to 15% rate of RSV infection, and, if left untreated, lower respiratory tract RSV infections in immune-compromised patients can result in a mortality rate of up to 40% of infected patients. In hematopoietic stem cell transplant, or HSCT, patients, a subset of the immune-compromised patient population with approximately 25,000 transplants being performed annually in the United States, it is estimated that about 25% of patients treated with the current standard of care (aerosolized Ribavirin) will progress to lower respiratory tract infection, or LRTI, while 41% of patients untreated with the current standard of care will progress to LRTI. The typical RSV patient would see an infectious disease doctor or consultant/specialist to a specific medical department.

The United States RSV season may last approximately 21 weeks. The map below, derived by us from a third party source, illustrates the duration of the 2011-2012 RSV season in the United States.

The Plasma Industry

Human blood contains a number of components including:
