Enclosure: Press release: **QUARTERLY REPORT: 31 MARCH 2013**

**Quarter 1 2013
Report
for the quarter ended 31 March 2013**

Group results for the quarter....

- New CEO appointed to lead a strong and cohesive management team.
- AHE posted six-fold increase quarter-on-quarter despite \$82/oz drop in gold price.
- Production of 899,000oz, up from 859,000oz the previous quarter.
- Total cash cost of \$894/oz, better than guidance on improved cost controls.
- Tropicana, CC&V and Kibali projects on schedule and on budget.
- Balance sheet remains robust with significant liquidity headroom.
- Dividend maintained at 50 SA cents per share.

Certain statements contained in this document, other than statements of historical fact, including, without limitation, those concerning the economic outlook for the gold mining industry, expectations regarding gold prices, production, cash costs and other operating results, return on equity, productivity improvements, growth prospects and outlook of AngloGold Ashanti's operations, individually or in the aggregate, including the achievement of project milestones, commencement and completion of commercial operations of certain of AngloGold Ashanti's exploration and production projects and the completion of acquisitions and dispositions, AngloGold Ashanti's liquidity and capital resources and capital expenditures and the outcome and consequence of any potential or pending litigation or regulatory proceedings or environmental issues, are forward-looking statements regarding AngloGold Ashanti's operations, economic performance and financial condition. These forward-looking statements or forecasts involve known and unknown risks, uncertainties and other factors that may cause AngloGold Ashanti's actual results, performance or achievements to differ materially from the anticipated results, performance or achievements expressed or implied in these forward-looking statements. Although AngloGold Ashanti believes that the expectations reflected in such forward-looking statements and forecasts are reasonable, no assurance can be given that such expectations will prove to have been correct. Accordingly, results could differ materially from those set out in the forward-looking statements as a result of, among other factors, changes in economic, social and political and market conditions, the success of business and operating initiatives, changes in the regulatory environment and other government actions, including environmental approvals, fluctuations in gold prices and exchange rates, the outcome of pending or future litigation proceedings, and

business and operational risk management. For a discussion of such risk factors, refer to the document entitled “Risk factors related to AngloGold Ashanti’s suite of 2012 reports” on the AngloGold Ashanti online corporate report website at www.aga-reports.com. These factors are not necessarily all of the important factors that could cause AngloGold Ashanti’s actual results to differ materially from those expressed in any forward-looking statements. Other unknown or unpredictable factors could also have material adverse effects on future results. Consequently, readers are cautioned not to place undue reliance on forward-looking statements. AngloGold Ashanti undertakes no obligation to update publicly or release any revisions to these forward-looking statements to reflect events or circumstances after the date hereof or to reflect the occurrence of unanticipated events, except to the extent required by applicable law. All subsequent written or oral forward-looking statements attributable to AngloGold Ashanti or any person acting on its behalf are qualified by the cautionary statements herein.

This communication may contain certain “Non-GAAP” financial measures. AngloGold Ashanti utilises certain Non-GAAP performance measures and ratios in managing its business. Non-GAAP financial measures should be viewed in addition to, and not as an alternative for, the reported operating results or cash flow from operations or any other measures of performance prepared in accordance with IFRS. In addition, the presentation of these measures may not be comparable to similarly titled measures other companies may use. AngloGold Ashanti posts information that is important to investors on the main page of its website at www.anglogoldashanti.com and under the “Investors” tab on the main page. This information is updated regularly. Investors should visit this website to obtain important information about AngloGold Ashanti.

Financial and Operating Report
OVERVIEW FOR THE QUARTER
FINANCIAL AND CORPORATE REVIEW

First-quarter adjusted headline earnings (AHE) were \$113m, or 29 US cents per share in the three months to 31 March 2013, compared with \$19m, or 5 US cents per share the previous quarter, and \$447m, or 116 US cents per share a year earlier, in the first quarter of 2012.

“Our major projects remain on budget and on schedule to pour gold by year-end, improving the quality of the portfolio,” newly appointed Chief Executive Officer, Srinivasan Venkatakrishnan, known as Venkat, said. “Prudent capital allocation and tighter cost control will drive our strategy to deliver profitable ounces and sustainable free cash flow, whilst maintaining a strong balance sheet.”

The stronger performance relative to the previous quarter reflects the recovery from the strike action at the South Africa operations which hampered production towards the end of last year. The decline in AHE relative to the same period a year earlier reflects lower production and gold price along with higher cash operating costs during the quarter under review, as well as a once-off tax credit that boosted AHE a year earlier.

Net profit attributable to equity shareholders for the first quarter of 2013 was \$239m, compared to a net attributable loss of \$174m the previous quarter and net profit of \$581m in the first quarter of 2012.

Cash flow from operating activities declined 30% from \$494m the previous quarter to \$346m and compared to \$625m in the first quarter of 2012. Total capital expenditure during the first quarter was \$512m (including equity accounted joint ventures), compared with \$844m the previous quarter and \$398m in the first quarter of last year. Of the total capital spent, project capital expenditure during the quarter amounted to \$269m. Free cash flow was negative at \$237m mainly as a result of relatively high project capital levels, as the two most advanced projects –Tropicana and Kibali – moved towards completion anticipated in the fourth quarter of 2013. Work is well advanced to realise corporate cost savings of \$50m by the second half of 2013 and a project team has been created to realise savings of ~\$100/oz in direct operating costs. Exploration and evaluation activities during the quarter saw a much tighter focus with further opportunities discovered to lower costs without compromising the safety of employees or the long term optionality in the company’s portfolio.

Production was 899,000oz at a total cash cost of \$894/oz, compared to 859,000oz at \$967/oz the previous quarter and 981,000oz at \$764/oz in the first quarter of 2012. Total cash costs were better than market guidance of \$900/oz to \$910/oz,

despite production being adversely affected by roughly 20,000oz lost due to a lightning strike which interrupted power to the West Wits operations for three days and caused rationing for several weeks while repairs to a damaged Eskom substation were completed.

Net debt at 31 March 2013 was \$2.32bn, compared with \$2.06bn at the end of the previous quarter. This net debt level is expected to increase over the next two quarters as investments in the new projects peak, whereafter their cash flow contribution is expected to reduce debt levels.

The principal factors that accounted for the increase in net debt level during the quarter were:

- **Capital expenditure on projects of \$269m**, the majority of which was spent on key projects at Tropicana, due to start production in the fourth quarter of 2013; Kibali, due to start production by year-end; and the expansion of Cripple Creek & Victor, which is scheduled to contribute additional production from 2015.
- **Sustaining capital, including ore-reserve development expenditure, of \$243m.**

AngloGold Ashanti's statement of financial position (Balance Sheet) remains robust with diverse funding sources and well-spaced maturities. It comprises the following principle facilities:

- **Rated bonds aggregating \$1.75bn**, comprising of \$750m, 10-year notes maturing in 2022; \$700m, 10-year notes maturing in 2020, \$300m, 30-year notes maturing in 2040.
- **Convertible bond of \$733m**, at a strike price of \$47.61, which matures in May 2014.
- **\$750m undrawn bridge loan facility** from a group of financial institutions, is earmarked solely for the redemption of the abovementioned convertible bond due in May of 2014, if needed. This facility matures in May 2014 and can be extended for an additional 12 months, to May 2015.
- **\$1bn undrawn revolving credit facility**, from a syndicate of 17 global financial institutions, due in 2017.
- **A\$600m revolving credit facility, of which A\$360m is drawn**, from a syndicate of Australian and global financial institutions, due in December 2015. This facility is earmarked principally for the investment required to bring the Tropicana project to completion.
- **R1bn DMTN paper** currently issued, which comprises of R300m, 3 month commercial paper maturing in July 2013 and R700m, 1 year commercial paper maturing in October 2013. (Another R9bn of headroom remains available under this programme).
- **R750m on-demand facility** of which R500m is drawn.

With effect from 1 January 2013, AngloGold Ashanti adopted IFRIC 20 in relation to capitalisation of qualified deferred stripping costs and amortising the same with adequate componentisation. IFRIC 20 provides for a transition adjustment in respect of

certain brought forward balances and such balances have been written off against reserves.

CORPORATE UPDATE

CEO appointment: On 8 May AngloGold Ashanti announced the appointment of Mr. Srinivasan Venkatakrishnan (Venkat) as Chief Executive Officer effective immediately. Venkat has been with AngloGold Ashanti for nine years, most recently serving as the company's Chief Financial Officer and joint interim CEO, alongside Mr. Tony O'Neill following the departure of the former CEO at the beginning of April 2013. Mr. O'Neill will remain an executive director on the board and revert to his role as Executive Vice President: Business and Technical Development. Venkat will also remain CFO of AngloGold Ashanti until further notice. A global search for a new CFO has been initiated.

Venkat has an extensive knowledge of the Company and its international portfolio of assets, as well as significant financial and capital markets expertise. In his role as CFO he has overseen funding for all of AngloGold Ashanti's operating activities, giving him a detailed knowledge of all of the company's mines and operating jurisdictions. He was the executive responsible for eliminating a 12Moz hedge book, generating significant value for the company, and was the key executive behind rebuilding the balance sheet through a series of successful debt financings that introduced long-term tenor and more favourable funding terms to the company's credit profile. Venkat's extensive experience will complement the impressive depth of AngloGold Ashanti's existing operating and strategic talent.

Cost optimisation and portfolio review: As indicated in February, the company is tackling costs on several fronts. Capital has been rationed, exploration focused and operating and corporate costs coming under close scrutiny. Corporate costs declined by 24% to \$65m, a decline which includes an element of seasonality. There remain more opportunities to further improve in this area, with annual corporate cost savings of \$50m identified across all regions. Exploration and study costs also showed a marked decline of 36% to \$79m.

Furthermore, a cost optimisation project led by Ron Largent, Executive Vice President: Americas, is well underway with an aim to deliver a sustainable annual reduction in AngloGold Ashanti's operating cost base of about \$100/oz over an 18 month period. The project charter and governance structures are in place and will focus primarily on direct operating costs. Work is currently underway to leverage teams of cross-functional experts across the group to identify and prioritise key cost reduction opportunities. Geita, Sigui, Moab Khotsong and Cuiaba are the pilot sites and will be followed by a rollout of the project across all operations. All reductions will be integrated into existing operating models and structures of Project ONE, and tracked and reconciled with financial systems to ensure delivery. Cost savings will be weighed against the impact on future production.

Capital expenditure update: AngloGold Ashanti's main capital projects remain on track and on budget. These include Tropicana in Australia, which is expected to pour gold in the fourth quarter of 2013, and Kibali, expected to pour gold by the end of the year. Furthermore, at CC&V, the high grade mill is expected to be commissioned in September 2014 and to deliver a gradual ramp up in production in 2015. Combined, Tropicana and Kibali are expected to deliver roughly 500,000 of new, higher quality ounces, improving the quality of production in the portfolio.

As indicated in November 2012, project capital expenditure has been suspended at Mongbwalu in the DRC (target exploration continues) and has been significantly slowed at Sadiola, in Mali. Additionally, the timing of the deepening projects at Mponeng and Moab Khotsong in South Africa are being assessed, while technological initiatives in the region are being fast-tracked to bring forward production from hard-to-access, higher margin areas.

Evolving labour union landscape in the South Africa Region: The emergence of the Association of Mineworkers and Construction Union, a relative newcomer to the Group's South African operations and the gold sector as a whole, may have impacted productivity as employees changed union affiliations and rivalry with the established National Union of Mineworkers increased. This was evidenced during the quarter by sporadic, unprotected work interruptions at some operations and some incidents of violence and intimidation. AngloGold Ashanti has demonstrated consistently that it rejects violence and intimidation and is committed to safety, the rule of law, freedom of association for all employees, and structured collective bargaining relationships with all representative unions and worker associations. While the company remains committed to a constructive dialogue with bona fide labour unions, it will not tolerate illegal behaviour or intimidation of any kind by any employees or organisations forcing others to abrogate their responsibilities and discharge their duties to the organisation.

DIVIDEND

The Board has maintained a dividend of 50 South African cents per share (approximately 6 US cents per share) for the first quarter.

SAFETY

Tragically, there were three fatalities in the quarter ended 31 March. The AIFR (All Injury Frequency Rate) for AngloGold Ashanti has improved to 7.92 from 8.17 per million hours worked year-on-year. During the quarter, Project ONE safety transformation initiatives continued to yield benefits. Advanced Incident Investigation Programme training sessions have taken

place throughout 2011 and 2012. Going forward, training will focus on sustaining this competence and broadening it to other disciplines. Delivery of Incident Investigation Programme training continues to be a focus with South Africa having conducted four sessions this quarter and CAR completing two sessions and having scheduled a further two in the second quarter of 2013. To date 583 individuals have participated in incident investigation training.

OPERATING REVIEW

The **South African** operations produced 327,000oz at a total unit cash cost of \$896/oz in the three months to 31 March 2013, compared with 171,000oz at a total cash cost of \$1,166/oz the previous quarter and 306,000oz at a total cash cost of \$849/oz in the first quarter of 2012. The region continued its recovery from the unprotected strike of the second half of last year, as well as from the annual holiday shutdown and resultant ramp-up, which makes the first quarter seasonally weak for these operations. Safety-related stoppages continued to weigh on production, as did a decline in grades across the region. Output at the West Wits mines was also impacted by a lightning strike at a major Eskom regional substation which cut power supplies to Mponeng, TauTona and surrounding mines for three days, resulting in a production loss of about 20,000oz. Electricity supply to these mines was rationed in the weeks that followed, while repairs to Eskom's electricity transmission structure were completed.

At the West Wits operations, quarterly performance was also adversely affected by increased seismic activity and the ongoing safety stoppages. Production for the region was 150,000oz at \$845/oz compared with 175,000oz at \$698/oz in same quarter last year. TauTona faced increased costs related to improved safety measures in case of fall of ground incidents, including additional netting and bolting support and the installation of a full metal support prop in certain areas. At Mponeng, yield fell by 36% to 7.16g/t due to the higher intake of marginal surface ore throughput during safety stoppages, as plants remained operational during this period.

The Vaal River operations experienced a more positive quarter as gold output increased year-on-year by 27% to 114,000oz, from 90,000oz in the first quarter of 2012. Cash costs decreased 15%, from \$1,189/oz to \$1,014/oz when compared to the first quarter of 2012. The successful implementation of a work management system and recovery plan at Great Nologwa resulted in increased vamping tonnage, following a drive to increase gold throughput from old areas. Fewer safety stoppages occurred at Kopanang and Moab Khotsong in the current quarter compared to a year ago.

Surface operations, including the recently acquired Mine Waste Solutions, experienced a 55% year-on-year rise in production to 62,000oz. Total cash costs increased by 9% to \$805/oz. There remained significant price pressure on reagents and also increased expenditure related to dust-control initiatives to improve environmental conditions. The Mine Waste Solutions operations contributed 24,000oz at a total cash cost of \$825/oz during the quarter as the AngloGold Ashanti teams continued implementing management controls and systems and conducted work to enhance the infrastructure of these operations. This work is aimed at improving efficiencies and regulatory compliance.

The **Continental Africa Region** produced 276,000oz at a total cash cost of \$994/oz in the first quarter of 2013, compared to 382,000oz at a total cash cost of \$745/oz in the same period last year and 376,000oz at a total cash cost of \$986/oz in the fourth quarter of 2012.

In Ghana, Iduapriem's production decreased by 9% year-on-year to 41,000oz as a result of lower tonnage throughput following planned plant maintenance. Total cash costs consequently increased by 10% to \$1,052/oz year-on-year. Production from Obuasi decreased year-on-year by 20% to 49,000oz due to numerous operational challenges including ventilation difficulties and restricted availability of developed reserves. This was partly offset by improved efficiency due to scheduled maintenance. Total cash costs consequently increased year-on-year by 57% to \$1,742/oz from \$1,112/oz.

At Obuasi, work continued on the mine transition plan with the board approving the new decline extension from

surface to 26 Level.

This decline allows the legacy mine infrastructure to be supplemented and by-passed, fundamentally de-bottlenecking the operation

and providing access to additional, new ore bodies. As the decline heading moves through the old mine, these areas will initially be

taken offline, re-equipped and the workforce retrained in modern, highly productive and safe work methods. The project funding is

contingent on meeting regular, short-term milestones and detailed execution plans. This is a thoroughly considered, incremental

and relatively low-risk strategy utilising equipment and techniques commonly used throughout the world. Work on this decline

commenced toward the end of 2012, enabled by the separation with the historical mining contract arrangement.

Another major challenge faced at Obuasi was the presence of significant numbers of illegal miners operating in the old workings in

shallower parts of the mine and others who had penetrated active working areas. A successful national intervention against illegal

mining was conducted by Ghanaian authorities in February and March 2013. It is estimated that the vast majority of the illegal

activity has stopped and most of the access points to the underground operations have been identified and closed.

While this early

stage success of this initiative is welcomed and encouraging, ultimately it is crucial maintained over the long-term.

Siguiri's production was 11% higher at 62,000oz, from 56,000oz in the same period last year, but 3% lower when compared to the

previous quarter. The site had a 10% decrease in tonnage throughput, due to fewer operating days compared to the previous

quarter. This was partly offset by an 8% increase in recovered grade due to sourcing ore from new higher grade areas.

Total cash

cost improved 6% from the previous quarter to \$998/oz due to lower fuel cost and improvements in power and reagent usage

efficiency.

At Morila in Mali, production decreased year-on-year by 32% and 25% from the previous quarter to 15,000oz reflecting a planned

decrease in grade realised from the marginal stockpiles and a decrease in tonnage throughput. Total cash costs consequently

increased by 8% from the previous quarter to \$772/oz. At Sadiola, production decreased by 24% year-on-year to 19,000oz as a

result of a decrease in tonnage throughput following a scheduled plant maintenance shutdown, fewer production shifts and a drop

in recovered grade due to limited availability of oxide ore sources. Total cash costs improved from the previous quarter but were 3%

higher than a year earlier at \$1,103/oz. Yatela's production was 10,000oz. Total cash costs decreased year-on year by 19% to

\$1,316/oz as a result of higher recovered grade and a lower mining cost due to shorter hauling distances.

In Namibia, Navachab's production decreased by 30% year-on-year to 14,000oz as a result of lower recovered grade due to mining

of lower grade areas. Total cash costs decreased 12% year-on-year to \$896/oz.

In Tanzania, Geita's production decreased by 55% year-on-year to 66,000oz, a 44% decrease compared to the previous quarter

due to the planned replacement of the SAG mill. This was partly offset by feeding higher grade materials stockpiled in the previous quarter in anticipation of the mill replacement. Total cash costs increased by 17% to \$389/oz year-on-year, a 27% decrease when compared to the previous quarter.

In the **Americas** Region, first quarter production was 234,000oz at a total cash cost of \$668/oz compared to the corresponding period last year when the region produced 225,000oz at a total cash cost of \$523/oz and 258,000oz at a total cash cost of \$705/oz in the fourth quarter of 2012.

At Cripple Creek & Victor gold production declined by 21% year-on-year to 55,000oz, a 4% increase when compared to the previous quarter. Total cash costs rose 11% year-on-year to \$643/oz, but down 4% compared to the previous quarter. While the grade and placed tonnage were virtually the same between the two periods, the depth at which the ore was placed on the VLF (Valley Leach Facility) is significantly different. In 2012, tonnes were placed much closer to the liner resulting in much faster turnaround on ounces produced. In 2013, much of the ore placed is further from the liner resulting in a longer lag time before ounces were realized. Total cash costs rose 11% year-on-year to \$643/oz, reflecting greater haul distances and higher unit costs for inputs.

At AngloGold Ashanti Mineração, production increased by 5% year-on-year to 92,000oz at a total cash cost of \$689/oz which was 18% higher due to lower recovered grade and by-product credits. Production was also partially affected by lower-than-planned sulphide feed grades as well as the impact of the rainy season on oxide feed. At Cuiaba, grades declined as narrow veins left behind previously were reclaimed. At Serra Grande, production increased year-on-year to 32,000oz (due to the acquisition of the other 50%), while total cash costs declined by 9% to \$789/oz. The mine continued to see promising exploration results.

Cerro Vanguardia production increased 8% year-on-year to 55,000oz, flat from the previous quarter, with silver production at 722,000oz. The total cash cost was \$583/oz, 23% compared to the previous quarter lower mainly reflecting higher by-product credit as a result of higher volume of silver sold and favourable stockpile movements as a consequence of lower treated tonnes and also higher stockpile value. Nevertheless, costs remain under pressure from higher inflation reflected in the payroll expense, as well as higher royalty payments linked to higher sales.

In **Australia**, production at Sunrise Dam for the quarter was 61,000oz at a total cash cost of \$1,247/oz, compared to 55,000oz at total cash costs of \$1,309/oz in the last quarter of 2012 and 68,000oz production at total cash costs of \$1,218/oz a year ago.

Good progress was made on stabilising the Watu slip in the pit, which occurred in 2011 following the major rain event. Stabilising this area will enable access to the high grade crown pillar at the base of the pit. During the quarter, the underground mine achieved a record annualised ore mining rate of more than 2 million tonnes per annum. Mill throughput was impacted by bearing failure on the mill motor and a higher proportion of harder underground ore.

UPDATE ON MAJOR CAPITAL PROJECTS

AngloGold Ashanti incurred capital expenditure of \$512m (including equity-accounted joint ventures) during the quarter, of which \$269m was spent on projects. Expenditure on project capital was \$44m in the Americas, \$110m in Continental Africa, \$82m in Australasia and \$32m in South Africa.

The **Tropicana Gold Project** (AngloGold Ashanti 70% and manager, Independence Group NL 30%) remains on track to begin production in the fourth quarter of 2013. There were no lost time injuries for the quarter, the LTIFR for the project to date is 1.15 with no fatalities. All engineering and procurement activities are complete. Infrastructure construction is complete. Plant concrete has been completed, and structural, mechanical and electrical installations are well advanced. Mining is on schedule with first ore mining occurring during the quarter. The maintenance and plant operating teams have been assembled and are on

track with their preparations for commissioning and operations. The estimated capital expenditure for Tropicana remains unchanged at between A\$820-A\$845m on 100% basis.

The Kibali project, a joint venture between state-owned Sokimo (10%), AngloGold Ashanti (45%) and operator Randgold Resources (45%), has budgeted project capital expenditure of \$982m on a 100% basis (including contingencies and escalation), to fund the development of the open pit and underground mines, as well as associated infrastructure, with first production of gold from the open pit targeted by year-end. By the end of March 2013, AngloGold Ashanti spent \$343m towards Kibali's development. Significant progress has been recorded in following key schedule areas during the first quarter: diesel storage, conveyor tunnel and structures, crusher steelwork, mill installation, and CIL tanks. Open-pit mining rates have exceeded both planned tonnage and grade, and notable progress has been made on the sinking of the vertical shaft.

The **CC&V MLE 2**, currently at implementation stage is progressing well. The project expected to extend the mine life has now commissioned contractors for majority of the work. The piping in the manhole at the water pumping facility tank site has been completed and the piping has been tested. Construction of the water pumping facility necessary to deliver the required water for the mill is on-going and purchasing of the mill's major equipment packages is nearly complete. During the quarter, significant work was performed in the areas of clearing, grubbing and mediation of underground workings under the construction of the Valley Leach Facility (VLF2). The design for the re-routing of Highway 67 is complete. Construction of the toe berm started in March. The budget and schedule continue to be well within the plans.

TECHNOLOGY UPDATE

The Technology Innovation Consortium has made significant progress during the quarter in the prototype development of key technologies that will establish the base for an automated mining method intended for use at AngloGold Ashanti's deep-level underground mining operations. On the three key technologies:

Orebody Knowledge & Exploration (RC Drilling):

During the first quarter of 2013, modified drill bits and rods were tested, which resulted in increased advance rates and reduced mechanical issues. During the second quarter, further modifications are intended to improve the length of hole, or distance at which drilling can be extended optimally.

Reef Boring (Stoping):

In addition to the single hole that was completed in the strike-affected fourth quarter of 2012, another four holes were completed successfully in the first quarter of 2013. The drilling time for a 30m hole has been reduced by approximately 25%, due to

improvements in machine efficiencies and application method. During the second quarter the intention is to further enhance drilling effectiveness by applying altered reamer (cutting) geometries. The design process for the first production machine, to be deployed in 2014, will commence in the second quarter and will incorporate lessons learned from the testing of the prototype machine.

Ultra High Strength Backfill (UHSB):

A significant milestone has been achieved with the placement of the first UHSB underground at TauTona Mine. During the first quarter of 2013, two holes have been successfully filled. Encouraging advancements in the mixing process have been achieved leading to reduced times and increased flexibility in application of the product. Going forward, testing will continue to verify the confidence of the new mixing process.

EXPLORATION

Total exploration expenditure during the first quarter, inclusive of expenditure at equity accounted joint ventures, was \$108m (\$52m on brownfield, \$26m on greenfield and \$30m on pre-feasibility studies), compared with \$99m during the same quarter the previous year (\$32m on brownfield, \$33m on greenfield and \$34m on pre-feasibility studies).

Brownfields exploration activities were heavily focused on key targets in the Continental Africa region during the first quarter in Tanzania, Guinea, and the Democratic Republic of the Congo.

In Tanzania at Geita, a total of 74 diamond holes and 115 RC holes were drilled. Significant assay results were received during the quarter from Nyankanga (Cut 7 OP, Cut 8, Cut 10, Block 1, Block 2 and Block 4), Geita Hill West, Geita Hill East, Ridge 8, Matandani and Kukuluma. Regional scale mapping by the exploration team continued in the Nyamulilima Terrain and along the southern edge of the Geita Greenstone Belt, while pit mapping at the Star & Comet, Ridge 8, Roberts, Kukuluma, Geita Hill and Nyankanga deposits is continuing, with associated development of 3D models. The work to develop and refine the geological models for these areas continues, with improved understanding on the controls of mineralisation.

At Siguri in Guinea, a total of 393 holes, totalling 37,134m, were completed. Infill drilling focused mainly on upgrading the oxide Mineral Resources at Seguelen, Sokunu, Komatiguiya, Soloni and Silakoro. As anticipated, the drilling at Seguelen returned several good intersections.

At Kibali, two areas were identified in the KCD deposit as having a high potential for Mineral Resource conversion. The first was tested by a four-hole programme (2,237m) designed to test the continuity of grade and thickness of 9,000 lode mineralisation up plunge from existing stope positions. Gold assay results from the first three holes have been received and flag a continuation of thinner high grade mineralisation associated with the development of a broader low grade mineralised halo. For the second, three holes were drilled to test an area between the end of the current mineralisation wireframes for the 3,000 and 5,000 lodes, and drill hole DDD532, a step out hole that intersected significant values. The first hole commenced and was completed during the quarter at 801m and a second hole is in progress. Results are still pending but geological and structural interpretation indicates similarities with mineralised neighbouring holes.

Greenfield exploration activities were undertaken in five regions (Australia, Americas, Pacific, Sub-Saharan Africa and the Middle East & North Africa) during the quarter. A total of 29,820 metres of diamond and RC drilling was completed on existing priority targets and used to delineate new targets in Colombia, Guinea, the Solomon Islands and the DRC.

Expenditure this quarter was US\$23.81m compared to US\$40.86m in the last quarter of 2012.

In Colombia, exploration continued at the Nuevo Chaquiro and Tenedor targets at the Quebradona project, in joint venture with B2Gold (AGA 80.5%). At Nuevo Chaquiro, a total of 3,888m of diamond drilling was completed and further long (>400m) continuous intersections of copper-gold porphyry-style mineralisation were received. On the adjacent Tenedor target, diamond drilling commenced with 1,501m completed.

More than half of the metres drilled during the quarter were completed in Guinea, where exploration work continued on the Kounkoun trend, within 35km of the Siguiro Mine, in Block 3, with infill and delineation drilling at KK1, KK3 and KK4 targets with a total of 16,412m completed. Diamond drilling, totalling 856m, and geophysical IP/ground magnetics also commenced in Block 4. Highlights for the quarter include two mineralisation structures intersected with a combined length of >7kms and mineralisation intersected from surface to over 200m depth with oxidation from 60 to 100m deep.

Detailed information on the exploration activities and studies both for brownfields and greenfields is available on the AngloGold Ashanti website (www.anglogoldashanti.com).

OUTLOOK

Gold production for the second quarter of 2013 is estimated at 900,000oz to 950,000oz. Total cash costs are estimated at between \$900/oz-\$950/oz at an average exchange rate of R9.16/\$, BRL2.00/\$, A\$1.03/\$ and AP5.19/\$ and fuel at \$102/barrel.

This includes the impact of public holidays over the period, as well as annual power tariff increases and winter power tariffs in South Africa. Both cost and production estimates are subject to unfavourable revisions in light of recent labour related challenges experienced in South Africa.

Other known or unpredictable factors could also have material adverse effects on our future results. Please refer to the Risk Factors section in AngloGold Ashanti's 2012 Form 20-F, filed with the United States Securities and Exchange Commission ("SEC") on 26 April 2013 and available on the SEC's homepage at <http://www.sec.gov>.

The reviewed financial statements for the quarter ended 31 March 2013 have been prepared by the corporate accounting staff of

AngloGold Ashanti Limited headed by Mr John Edwin Staples, the Group's Chief Accounting Officer. This process was supervised

by Mr Srinivasan Venkatakrishnan, the Group's Chief Executive Officer. The financial statements for the quarter ended 31 March

2013 were reviewed, but not audited, by the Group's statutory auditors, Ernst & Young Inc. A copy of their unmodified review report

is available for inspection at the company's head office.

Orders placed and outstanding on capital contracts at the prevailing rate of exchange

(1)

1,210 1,075 370

(1)

Includes capital commitments relating to equity-accounted joint ventures.

Liquidity and capital resources

To service the above capital commitments and other operational requirements, the group is dependent on existing cash resources, cash generated from operations and borrowing facilities.

Cash generated from operations is subject to operational, market and other risks. Distributions from operations may be subject to foreign investment, exchange control laws and regulations and the quantity of foreign exchange available in offshore countries. In addition, distributions from joint ventures are subject to the relevant board approval.

The credit facilities and other finance arrangements contain financial covenants and other similar undertakings. To the extent that external borrowings are required, the group's covenant performance indicates that existing financing facilities

will be available to meet the above commitments. To the extent that any of the financing facilities mature in the near future,

the group believes that sufficient measures are in place to ensure that these facilities can be refinanced.

13. Change in accounting policies

The following accounting standards, amendments to standards and new interpretations have been adopted with effect from

1 January 2013:

IFRS 7

Amendment – Disclosures – Offsetting Financial Assets and Financial Liabilities

IFRS 10

Consolidated Financial Statements

IFRS 11

Joint Arrangements

IFRS 12

Disclosure of Interests in Other Entities

IFRS 13

IFRSs

Annual Improvements 2009 - 2011

IAS 1

Amendment – Presentation of Items of Other Comprehensive Income

IAS 19R

Employee Benefits (revised)

IAS 27

Separate Financial Statements (Revised 2011)

IAS 28

Investments in Associates and Joint Ventures (Revised 2011)

IFRIC 20

Stripping Costs in the Production Phase of a Surface Mine

New standards and amendments which have an impact on the interim consolidated financial statements of the group are

described below:

IAS 1 Presentation of Financial Statements. The group adopted the amendments to IAS 1 which required it to group other

comprehensive income items by those that will be reclassified and those that will not be subsequently reclassified to profit and

loss. The amendment affected presentation and had no impact on the group's financial position or performance.

The accounting policies adopted are significantly consistent with those of the previous financial year, except for the changes arising due to the adoption of IFRIC 20 "Stripping Costs in the Production Phase of a Surface Mine" and the adoption of IAS 19 "Employee Benefits" (revised) which became effective for annual reporting periods beginning on or after 1 January 2013. IFRIC 20 clarifies when an entity should recognise waste removal costs that are incurred in surface

mining activity during the production phase of the mine ("production stripping costs") as an asset. The interpretation impacts the way in which the group accounts for production stripping costs.

IAS 19 (revised) includes a number of amendments to the accounting for defined benefit plans, including actuarial gains and

losses that are now recognised in other comprehensive income (OCI) and permanently excluded from profit and loss; expected returns on plan assets that are no longer recognised in profit or loss, instead, there is a requirement to recognise

interest on the net defined benefit liability (asset) in profit or loss, calculated using the discount rate used to measure the

defined benefit obligation, and; unvested past service costs are now recognised in profit or loss at the earlier of when the

amendment occurs or when the related restructuring or termination costs are recognised. Other amendments include new

disclosures.

In case of the Group, the transition to IAS 19R had no impact on the net defined benefit plan obligations due to the difference

in accounting for interest on plan assets. The effect of the adoption of IAS 19R is explained in Note 13.2.

13.1 IFRIC 20 “Stripping Costs in the Production Phase of a Surface Mine”

Prior to the issuance of IFRIC 20, the accounting for production stripping costs have been based on general IFRS principles and the Framework, as IFRS had no specific guidance.

Previously for group accounting purposes stripping costs incurred in open-pit operations during the production phase to remove additional waste were either capitalised to mine development costs or charged to operating costs on the basis of the average life of mine stripping ratio and the average life of mine costs per tonne. The cost of stripping in any period reflected the average stripping rates for the orebody as a whole.

IFRIC 20 provides specific guidance for accounting of production stripping costs in the production phase of a surface mine. IFRIC 20 differs from the life of mine average strip ratio approach as follows:

- The level at which production stripping costs are to be assessed, i.e. at a component level rather than a life of mine level; and
- The way in which any stripping activity assets are to be depreciated.

In addition, specific transitional rules are provided to deal with any opening deferred stripping balances the group may have recognised under its previous accounting policy. The impact as a consequence of moving from a life-of-mine strip ratio to a strip ratio applicable to a component of an orebody is as follows:

Transition

IFRIC 20 has been applied prospectively to production stripping costs incurred on or after the beginning of the earliest period presented, which for the group, for the year ending 31 December 2013, is 1 January 2011. Any previously recognised asset balance(s) that resulted from stripping activity is to be reclassified as part of an existing asset to which the stripping activity related, to the extent that there remains an identifiable component of the ore body with which the predecessor stripping asset can be associated.

If there is no identifiable component of the orebody to which the predecessor asset relates, the asset is written off via opening accumulated losses at the beginning of the earliest periods presented, i.e. 1 January 2011.

Impact of IFRIC 20

For purposes of the quarterly results, the adoption of IFRIC 20 at the transition date of 1 January 2011; the adjustments required for the financial reporting period from the transition date until the beginning of the preceding period presented, i.e.

1 January 2011 to 31 December 2011; and the adjustments required for the financial reporting period 1 January 2012 to

31 December 2012, had the following cumulative impact on accumulated losses as at 1 January 2012 and 31 December

2012:

1 January 2012

31 December 2012

13.2 Employee benefits

The Group operates defined benefit pension plans, which require contributions to be made to separately administered funds.

IAS 19 (revised) has been applied retrospectively from 1 January 2011. As a result, expected returns on plan assets of defined benefit plans are not recognised in profit or loss. Instead, interest on net defined benefit obligation is recognised in profit or loss, calculated using the discount rate used to measure the net pension obligation or asset.

Impact of transition to IAS 19R:

No impact was recorded in the statement of financial position on the defined benefit plan obligations nor on total shareholders' equity as the impact only affected the pension cost recorded in the income statement and the consequential effect on actuarial gains and losses recognised in OCI.

The impact on the adjusted opening accumulated losses, the statement of comprehensive income and the statement of changes in equity (Note 13.1) are set out below:

 The December 2012 quarter ended diluted loss per ordinary share has been corrected to take into account the earnings effect of the option component of the mandatory convertible bonds issued in September 2010. The impact of this correction increased diluted loss per ordinary share by 11 cents. The year ended 31 December 2012 diluted earnings per ordinary share is not impacted by this correction and thus not restated.

14. Financial risk management activities

Borrowings

The mandatory convertible bonds are carried at fair value. The convertible and rated bonds are carried at amortised cost and their fair values are their closing market values at the reporting date. The interest rate on the remaining borrowings is reset on a short-term floating rate basis, and accordingly the carrying amount is considered to approximately fair value.

Quarter ended Mar 2013
Quarter ended Dec 2012
Quarter ended Mar 2012

Carrying amount
3,506
3,583
2,435
Fair value
3,648
3,730
2,607

Derivatives

The fair value of derivatives is estimated based on ruling market prices, volatilities, interest rates and credit risk includes all

derivatives carried in the statement of financial position.

Embedded derivatives and the conversion features of convertible bonds are included as derivatives on the statement of financial position.

The following inputs were used in the valuation of the conversion features of convertible bonds:

Quarter

The group uses the following hierarchy for determining and disclosing the fair value of financial instruments:

Level 1:

quote prices (unadjusted) in active markets for identical assets or liabilities;

Level 2:

inputs other than quoted prices included in level 1 that are observable for the asset or liability, either directly (as prices) or indirectly (derived from prices); and

Level 3:

inputs for the asset or liability that are not based on observable market data (unobservable inputs).

Edgar Filing: ANGLOGOLD ASHANTI LTD - Form 6-K

The following tables set out the group's financial assets and liabilities measured at fair value by level within the fair value hierarchy:

Type of instrument

Level 1	Level 2	Level 3	Total	Level 1	Level 2	Level 3	Total	Level 1	Level 2	Level 3	Total

(1) Groundwater pollution – AngloGold Ashanti has identified groundwater contamination plumes at certain of its operations, which have occurred primarily as a result of seepage. Numerous scientific, technical and legal studies have been undertaken to assist in determining the magnitude of the contamination and to find sustainable remediation solutions. The group has instituted processes to reduce future potential seepage and it has been demonstrated that Monitored Natural Attenuation (MNA) by the existing environment will contribute to improvements in some instances. Furthermore, literature reviews, field trials and base line modelling techniques suggest, but have not yet proven, that the use of phyto-technologies can address the soil and groundwater contamination. Subject to the completion of trials and the technology being a proven

remediation

technique, no reasonable estimate can be made for the obligation.

(2) Deep groundwater pollution – The group has identified a flooding and future pollution risk posed by deep groundwater in certain underground mines in Africa. Various studies have been undertaken by AngloGold Ashanti since 1999. Due to the interconnected nature of mining operations, any proposed solution needs to be a combined one supported by all the mines located in these gold fields. As a result, in South Africa, the Department of Mineral Resources and affected mining companies are now involved in the development of a “Regional Mine Closure Strategy”. In view of the limitation of current information for the accurate estimation of a liability, no reasonable estimate can be made for the obligation.

(3) Indirect taxes – AngloGold Ashanti (Ghana) Limited received a tax assessment for the 2006 to 2008 and 2009 to 2011 tax years following audits by the tax authorities which related to various indirect taxes amounting to \$25m (2012: \$14m). Management is of the opinion that the indirect taxes are not payable and the company has lodged an objection.

(4) ODMWA litigation – On 3 March 2011, in Mankayi vs. AngloGold Ashanti, the Constitutional Court of South Africa held that section 35(1) of the Compensation for Occupational Injuries and Diseases Act, 1993 does not cover an “employee” who qualifies for compensation in respect of “compensable diseases” under the Occupational Diseases in Mines and Works Act,

1973 (ODMWA). This judgement allows such qualifying employee to pursue a civil claim for damages against the employer.

Following the Constitutional Court decision, AngloGold Ashanti has become subject to numerous claims relating to silicosis

and other Occupational Lung Diseases (OLD), including several potential class actions and individual claims.

For example, on or about 21 August 2012, AngloGold Ashanti was served with an application instituted by Bangumzi Bennet

Balakazi and others in which the applicants seek an order declaring that all mine workers (former or current) who previously

worked or continue to work in specified South African gold mines for the period owned by AngloGold Ashanti and who have

silicosis or other OLD constitute members of a class for the purpose of proceedings for declaratory relief and claims for

damages. In the event the class is certified, such class of workers would be permitted to institute actions by way of a summons against AngloGold Ashanti for amounts as yet unspecified. On 4 September 2012, AngloGold Ashanti delivered its

notice of intention to defend this application. AngloGold Ashanti has also delivered a formal request for additional information

that it requires to prepare its affidavits in respect to the allegations and the request for certification of a class.

In addition, on or about 8 January 2013, AngloGold Ashanti and its subsidiary Free State Consolidated Gold Mines (Operations) Limited, alongside other mining companies operating in South Africa, were served with another application to

certify a class. The applicants in the case seek to have the court certify two classes namely: (i) current and former mineworkers who have silicosis (whether or not accompanied by any other disease) and who work or have worked on certain

specified gold mines at any time from 1 January 1965 to date; and (ii) the dependants of mineworkers who died as a result of

silicosis (whether or not accompanied by any other disease) and who worked on these gold mines at any time after 1 January

1965. AngloGold Ashanti has filed a notice of intention to oppose the application.

In October 2012, a further 31 individual summonses and particulars of claim have been received relating to silicosis and/or

other OLD. The total amount being claimed in the 31 summonses is approximately \$9m. On 22 October 2012, AngloGold

Ashanti filed a notice of intention to oppose these claims. AngloGold Ashanti has also served a notice of exception to the

summonses which, if successful, is expected to require the plaintiffs to redraft the particulars of claim to correct certain errors.

It is possible that additional class actions and/or individual claims relating to silicosis and/or other OLD will be filed against

AngloGold Ashanti in the future. AngloGold Ashanti will defend all current and subsequently filed claims on their merits.

Should AngloGold Ashanti be unsuccessful in defending any such claims, or in otherwise favourably resolving perceived

deficiencies in the national occupational disease compensation framework that were identified in the earlier decision by the

Constitutional Court, such matters would have an adverse effect on its financial position, which could be material. The group

is unable to estimate its share of the amounts claimed.

(5) Other tax disputes - In November 2007, the Departamento Nacional de Produção Mineral (DNPM), a Brazilian federal mining

authority, issued a tax assessment against AngloGold Ashanti Brazil Mineração (AABM) in the amount of \$21m (2012: \$22m)

relating to the calculation and payment by AABM of the financial contribution on mining exploitation (CFEM) in the period from

1991 to 2006. AngloGold Ashanti Limited's subsidiaries in Brazil are involved in various other disputes with tax

authorities.

These disputes involve federal tax assessments including income tax, royalties, social contributions and annual property tax.

The amount involved is approximately \$19m (2012: \$9m). Management is of the opinion that these taxes are not payable.

(6) Sales tax on gold deliveries – In 2006, Mineração Serra Grande S.A. (MSG), received two tax assessments from the State of

Goiás related to payments of state sales taxes at the rate of 12% on gold deliveries for export from one Brazilian state to

another during the period from February 2004 to the end of May 2006. The first and second assessments are approximately

\$99m (2012: attributable share \$56m) and \$62m (2012: attributable share \$35m) respectively. In November 2006, the administrative council's second chamber ruled in favour of MSG and fully cancelled the tax liability related to the first period.

In July 2011, the administrative council's second chamber ruled in favour of MSG and fully cancelled the tax liability related to

the second period. The State of Goiás has appealed to the full board of the State of Goiás tax administrative council.

In November 2011 (first case) and June 2012 (second case), the administrative council's full board approved the suspension

of proceedings and the remittance of the matter to the Department of Supervision of Foreign Trade (COMEX) for review and

verification. The company believes both assessments are in violation of federal legislation on sales taxes. A final hearing

before the COMEX has been scheduled for 28 May 2013.

(7) Other tax disputes - MSG received a tax assessment in October 2003 from the State of Minas Gerais related to sales taxes

on gold. The tax administrators rejected the company's appeal against the assessment. The company is now appealing the

dismissal of the case. The assessment is approximately \$19m (2012: attributable share \$9m).

(8) Tax dispute – AngloGold Ashanti Colombia S.A. (AGAC) received notice from the Colombian Tax Office (DIAN) that it

disagreed with the company's tax treatment of certain items in the 2011 and 2010 income tax returns. The company believes

that it has applied the tax legislation correctly. The company is considering defending AGAC's position. An estimated additional tax of \$25m will be payable if the tax returns are amended. Penalties and interest for the additional tax are expected to be \$131m, based on Colombian tax law.

(9) Indemnity - As part of the acquisition by AngloGold Ashanti of the remaining 50% interest in MSG during June 2012, Kinross

Gold Corporation (Kinross) has provided an indemnity to a maximum amount of BRL255m (\$127m at 31 March 2013 exchange rates) against the specific exposures discussed in items 6 and 7 above. At 31 March 2013, the company has estimated that the maximum contingent asset is \$93m.

(10) Royalty – As a result of the sale of the interest in the Boddington Gold Mine during 2009, the group is entitled to receive a

royalty on any gold recovered or produced by the Boddington Gold Mine, where the gold price is in excess of Boddington

Gold Mine's cash cost plus \$600/oz. The royalty commenced on 1 July 2010 and is capped at a total amount of \$100m, of

which \$68m (2012: \$45m) have been recorded to date. Royalties of \$8m (2012: \$11m) were receivable during the quarter.

(11) Royalty – As a result of the sale of the interest in the Tau Lekoa Gold Mine during 2010, the group is entitled to receive a

royalty on the production of a total of 1.5Moz by the Tau Lekoa Gold Mine and in the event that the average monthly rand price of gold exceeds R180,000/kg (subject to an inflation adjustment). Where the average monthly rand price of gold does not exceed R180,000/kg (subject to an inflation adjustment), the ounces produced in that quarter do not count towards the total 1.5Moz upon which the royalty is payable.

The royalty will be determined at 3% of the net revenue (being gross revenue less state royalties) generated by the Tau Lekoa assets. Royalties on 331,558oz produced have been received to date. Royalties of \$1m (2012: \$1m) were received during the quarter.

(12) Provision of surety – The company has provided surety in favour of a lender on a gold loan facility with its associate Oro Group (Pty) Limited and one of its subsidiaries to a maximum value of \$11m (2012: \$13m). The probability of the non-performance under the suretyships is considered minimal. The suretyship agreements have a termination notice period of 90 days.

16. Concentration of risk

There is a concentration of risk in respect of recoverable value added tax, fuel duties and appeal deposits from the Tanzanian government. The outstanding amounts have been discounted to their present value at a rate of 7.82%. The recoverable value added tax, fuel duties and appeal deposits are summarised as follows:

2013

US Dollar millions

Recoverable value added tax

27

Recoverable fuel duties

(1)

34

Appeal deposits

4

(1)

Fuel duty claims are required to be submitted after consumption of the related fuel and are subject to authorisation by the Customs and Excise authorities.

17. Borrowings

AngloGold Ashanti's borrowings are interest bearing.

18. Announcements

On 8 January 2013, the Board of AngloGold Ashanti announced the resignation of Chief Executive Officer, Mark Cutifani with

effect from 1 April 2013. The Board further announced the appointment of the current Chief Financial Officer, Mr Srinivasan Venkatakrisnan and Executive Vice President Business and Technical Development, Mr Anthony O'Neill as joint

Chief Executives, with Mr Venkatakrisnan responsible for all Finance and Corporate functions and Mr O'Neill responsible for all

Operations, Projects (including the company's Enterprise Resource Planning programme and procurement) and Technical functions.

On 20 February 2013, AngloGold Ashanti released notice in terms of Section 45(5)(a) of the Companies Act No. 71 of 2008, that

the Board of the Company has, on 14 February 2013, authorised the Company to provide financial assistance in terms of Section

45 of the Act and pursuant to the authority granted to the Board by the shareholders in general meeting on 16 November 2011.

On 21 February 2013, AngloGold Ashanti announced the appointment of Mr Anthony Martin O'Neill (Tony) as an executive

director to its Board of Directors with effect from 20 February 2013.

On 11 March 2013, AngloGold Ashanti announced that, shareholders of the company approved all ordinary resolutions relating to

amendments to the rules of the Bonus Share Plan and the Long Term Incentive Plan.

On 27 March 2013, AngloGold Ashanti announced that at the general meeting held on 27 March 2013, the shareholders approved

the new Memorandum of Incorporation.

On 8 May 2013, AngloGold Ashanti announced the appointment of Mr Srinivasan Venkatakrishnan as Chief Executive Officer with immediate effect.

19. Subsequent events

AngloGold Ashanti to sell Navachab mine

On 30 April 2013, AngloGold Ashanti announced its plan to sell the Navachab mine in Namibia.

The Navachab gold mine is situated close to Karibib, about 170 kilometres northwest of the Namibian capital, Windhoek. It is included in the Continental Africa reporting segment. The open-pit mine, which began operations in 1989, has a processing plant that handles 120,000 metric tons a month. The mine produced 74,000 ounces of gold in 2012.

Management has selected a number of potential bidders who meet management's qualifying criteria and asked them to submit binding bids by no later than 10 June 2013.

20. Dividend

The salient details of Dividend No. 116 for the quarter and year-ended 31 December 2012 paid by AngloGold Ashanti Limited

(Registration Number 1944/017354/06) is shown below:

8 April 2013

Each CDI represents one-fifth of an ordinary share, and 100 GhDSs represents one ordinary share. Each ADS represents one ordinary share.

Year and quarter ended 31 December 2012 Dividend No. E16 of 25 South African cents (gross), or 21.25 South African cents

(net) was paid to holders of E ordinary shares on 28 March 2013, being those employees participating in the Bokamoso ESOP

and 25 South African cents (gross) was paid to Izingwe Holdings (Proprietary) Limited on the same day.

The directors of AngloGold Ashanti Limited (Registration Number 1944/017354/06) declared Interim Dividend No. 117 for the first quarter ended 31 March 2013 as detailed below. In terms of the withholding tax on dividends which became effective on 1 April

2012, the following additional information is disclosed:

Dividends have been declared out of total reserves

Rate of dividend declared per ordinary share in South African cents (Gross)

50

Dividends tax rate applicable to shareholders liable to pay the dividend tax

15%

STC credits utilised in South African cents

Nil

Rate in South African cents (Net) where dividend tax at 15% is payable

42.5

The ordinary shares of AngloGold Ashanti Limited in issue at the date of declaration is

383 719 517

The E-ordinary shares of AngloGold Ashanti Limited in issue at the date of declaration is

1 597 250

AngloGold Ashanti Limited's tax reference number

9640006608

In compliance with the requirements of Strate, given the company's primary listing on the JSE, the salient dates for payment of the dividend are as follows:

To holders of ordinary shares and to holders of CHESS Depository Interests (CDIs)

Each CDI represents one-fifth of an ordinary share.

2013

Currency conversion date for UK pounds, Australian dollars and Ghanaian cedis

Thursday, 23 May

Last date to trade ordinary shares cum dividend

Friday, 24 May

Last date to register transfers of certificated securities cum dividend

Friday, 24 May

Ordinary shares trade ex-dividend

Monday, 27 May

Record date

Friday, 31 May

Payment date

Friday, 14 June

On the payment date, dividends due to holders of certificated securities on the South African and United Kingdom share registers will be electronically transferred to shareholders' bank accounts.

Dividends in respect of dematerialised shareholdings will be credited to shareholders' accounts with the relevant CSDP or broker.

To comply with further requirements of Strate, between Monday, 27 May 2013 and Friday, 31 May 2013, both days inclusive, no

transfers between the South African, United Kingdom, Australian and Ghana share registers will be permitted and no ordinary

shares pertaining to the South African share register may be dematerialised or rematerialised.

To holders of American Depositary Shares
Each American Depositary Share (ADS) represents one ordinary share.

2013

Ex-dividend on New York Stock Exchange
Wednesday, 29 May

Record date

Friday, 31 May

Approximate date for currency conversion

Friday, 7 June

Approximate payment date of dividend

Monday, 24 June

Assuming an exchange rate of R9.0745/\$, the gross dividend payable per ADS, which is subject to a 15% South African

withholding tax, is equivalent to 6 US cents. However the actual rate of payment will depend on the exchange rate on the date for currency conversion.

To holders of Ghanaian Depositary Shares (GhDSs)

100 GhDSs represent one ordinary share.

2013

Last date to trade and to register GhDSs cum dividend

Friday, 24 May

GhDSs trade ex-dividend

Monday, 27 May

Record date

Friday, 31 May

Approximate payment date of dividend

Monday, 17 June

Assuming an exchange rate of R1/0.21903¢, which is subject to a 15% South African withholding tax, the dividend payable per

share is equivalent to 0.1095 cedis. However, the actual rate of payment will depend on the exchange rate on the date for

currency conversion. In Ghana, the authorities have determined that dividends payable to residents on the Ghana share register

be subject to a final withholding tax at a rate of 8%.

In addition, directors declared Interim Dividend No. E17, for the quarter ended 31 March 2013 of 25 South African cents per E

ordinary share, payable to employees participating in the Bokamoso ESOP and Izingwe Holdings (Proprietary) Limited. These

dividends will be paid on Friday, 14 June 2013.

Withholding tax: Shareholders are reminded that a 15% withholding tax on dividends and other distributions to shareholders became

effective on 1 April 2012. This withholding tax, which was announced by the South African Government on 21 February 2007,

replaces the Secondary Tax on Companies. The company's share registrars have communicated the process to all shareholders. If

you have not had any correspondence, please contact the company secretary on companysecretary@anglogoldashanti.com.

Rounding of figures may result in computational discrepancies.

From time to time AngloGold Ashanti Limited may publicly disclose certain "Non-GAAP" financial measures in the course of its financial

presentations, earnings releases, earnings conference calls and otherwise.

The group uses certain Non-GAAP performance measures and ratios in managing the business and may provide users of this financial

information with additional meaningful comparisons between current results and results in prior operating periods.

Non-GAAP financial

measures should be viewed in addition to, and not as an alternative to, the reported operating results or any other measure of performance

prepared in accordance with IFRS. In addition, the presentation of these measures may not be comparable to similarly titled measures that

other companies use.
