Ternium further develops its industrial system with plans to build new facilities in Mexico and Colombia

- New hot rolling mill at Ternium's Pesquería industrial center in Mexico to be operational by the second half of 2020
- New steel bar production facility in Colombia to be completed by the second half of 2019

Luxembourg, September 28, 2017 – Ternium S.A. (NYSE: TX) today announced two new investment programs that will further develop its industrial system to better serve its customers. The company plans to install a new hot rolling mill at its Pesquería industrial center in Mexico, and to build a new steel reinforcing bar manufacturing facility in northern Colombia.

The new state-of-the-art hot rolling mill in Mexico will target the growing industrial and commercial markets, improving customer service and reducing lead-times. The investment will constitute a significant technological upgrade to the country's steel production capacity, enabling the expansion of Ternium's product range to encompass a broader dimensional offering and the most advanced steel grades, with the aim at replacing high-value-added steel imports. Ternium's new hot rolling mill will have an annual production capacity of 3.7 million metric tons. With a total investment of USD1.1 billion, the new line would be operational by the second half of 2020. The current plan includes the option to increase in the future the line's production capacity by an additional 1.1 million metric tons with a small additional investment.

“A new high-end hot rolling mill in Mexico is a logical next step after the addition of our new facility in Brazil, formerly known as CSA, to Ternium's industrial system,” said Daniel Novegil, CEO of Ternium. “This new equipment, once operational, will integrate upstream with Ternium's high-end steelmaking capacity in Brazil and downstream with the company's state-of-the-art Pesquería facility. This will allow us to produce in Mexico technologically advanced products for the demanding and innovative automotive industry, as well as for a wide range of other industries like the home appliance, machinery, energy and construction sectors.”

Edgar Filing: Ternium S.A. - Form 6-K

Mr. Novegil continued: “We are also proud to announce a new steel bar production facility in northern Colombia to integrate upstream our operations in the country. The Colombian steel market has been gaining relevance in the region in the last years, with significant growth in steel consumption. This investment will enable us to expand our market share in the dynamic construction sector by offering an alternative to imports. The new facility will enlarge Ternium’s footprint in the country and at the same time contribute to Colombia’s industrial development.”

With annual production capacity of 520,000 metric tons and total investment of approximately USD90 million, the new steel bar and coil mill will expand Ternium's reinforcing bar production capacity in Colombia to 720,000 metric tons. The new mill would be completed by the second half of 2019.

Forward Looking Statements

Some of the statements contained in this press release are "forward-looking statements". Forward-looking statements are based on management's current views and assumptions and involve known and unknown risks that could cause actual results, performance or events to differ materially from those expressed or implied by those statements. These risks include but are not limited to risks arising from uncertainties as to gross domestic product, related market demand, global production capacity, tariffs, cyclicalities in the industries that purchase steel products and other factors beyond Ternium's control.

About Ternium

Ternium is Latin America's leading flat steel producer, with operating facilities in Mexico, Brazil, Argentina, Colombia, the southern United States and Central America. The company offers a broad range of high value-added steel products for customers active in the automotive, home appliances, construction, capital goods, container, food and energy industries through its manufacturing and service center network and advanced customer integration systems.
