NOTE 1 – BASIS OF PRESENTATION

Independent Bank Corp. (the "Company") is a state chartered, federally registered bank holding company, incorporated in 1985. The Company is the sole stockholder of Rockland Trust Company ("Rockland Trust" or the "Bank"), a Massachusetts trust company chartered in 1907.

All material intercompany balances and transactions have been eliminated in consolidation. Certain previously reported amounts may have been reclassified to conform to the current year's presentation.

The accompanying unaudited consolidated financial statements have been prepared in accordance with accounting principles generally accepted in the United States of America for interim financial information and with the instructions to Form 10-Q and Article 10 of Regulation S-X. Accordingly, they do not include all of the information and footnotes required by accounting principles generally accepted in the United States of America for complete financial statements. In the opinion of management, all adjustments considered necessary for a fair presentation of the financial statements, primarily consisting of normal recurring adjustments, have been included. Operating results for the quarter ended June 30, 2013 are not necessarily indicative of the results that may be expected for the year ending December 31, 2013 or any other interim period.

For further information, refer to the consolidated financial statements and footnotes thereto included in the Company's Annual Report on Form 10-K for the year ended December 31, 2012, filed with the Securities and Exchange Commission.

NOTE 2 – RECENT ACCOUNTING STANDARDS UPDATES

FASB ASC Topic No. 815 "Derivatives and Hedging" Update No. 2013-10. Update No. 2013-10 was issued in July 2013 to provide guidance on the risks that are permitted to be hedged in a fair value or cash flow hedge. Among those risks for financial assets and financial liabilities is the risk of changes in a hedged item's fair value or a hedged transaction's cash flows attributable to changes in the designated benchmark interest rate (referred to as interest rate risk). In the United States, currently only the interest rates on direct Treasury obligations of the U.S. government (UST) and, for practical reasons, the London Interbank Offered Rate (LIBOR) swap rate are considered benchmark interest rates. The amendments in this update permit the Fed Funds Effective Swap Rate (OIS) to now be used as a U.S. benchmark interest rate for hedge accounting purposes under Topic 815, in addition to UST and LIBOR. The amendments also remove the restriction on using benchmark rates for similar hedges. The amendments are effective prospectively for qualifying new or redesignated hedging relationships entered into on or after July 17, 2013. The adoption of this standard is not expected to have a material impact on the Company's consolidated financial position.

FASB ASC Topic No. 220 "Comprehensive Income" Update No. 2013-02. Update No. 2013-02 was issued in February 2013, stating that the amendments do not change the current requirements for reporting net income or other comprehensive income in financial statements. However, the amendments require an entity to provide information about the amounts reclassified out of accumulated other comprehensive income by component. In addition, an entity is required to present, either on the face of the statement where net income is presented or in the notes, significant amounts reclassified out of accumulated other comprehensive income by the respective line items of net income, but only if the amount reclassified is required under U.S. GAAP to be reclassified in their entirety in the same reporting period. For other amounts that are not required under U.S. GAAP to be reclassified in their entirety to net income, an entity is required to cross-reference to other disclosures required under U.S. GAAP that provide additional detail about those amounts. The amendments are effective prospectively for reporting periods beginning after December 15, 2012. The adoption of this standard did not have a material impact on the Company's consolidated financial position.

FASB ASC Topic No. 210 "Balance Sheet" Update No. 2013-01. Update No. 2013-01 was issued in January of 2013, the amendments in this update affect entities that have derivatives accounted for in accordance with Topic 815 "Derivatives and Hedges," including bifurcated embedded derivatives, repurchase agreements and reverse repurchase

agreements, and securities borrowing and securities lending transactions that are either offset or subject to an enforceable master netting arrangement or similar agreement. As a result of these amendments, entities with other types of financial assets and financial liabilities subject to a master netting arrangement or similar agreement are no longer subject to the disclosure requirements in Update No. 2011-11. An entity is required to apply the amendments for fiscal years beginning on or after January 1, 2013, and interim periods within those annual periods. An entity should provide the required disclosures retrospectively for all comparative periods presented. The amendments are effective for annual reporting periods beginning on or after January 1, 2013 and interim periods within those periods. The adoption of this standard did not have a material impact on the Company's consolidated financial position.

Table of Contents

NOTE 3 – SECURITIES

The following table presents a summary of the amortized cost, gross unrealized holding gains and losses, other-than-temporary impairment recorded in other comprehensive income and fair value of securities available for sale and securities held to maturity for the periods below:

When securities are sold, the adjusted cost of the specific security sold is used to compute the gain or loss on the sale. The Company realized a gain of \$4,000 and a net loss of \$4,000 of marketable securities classified as available for sale during the three and six month periods ended June 30, 2013.

The actual maturities of certain securities may differ from the contractual maturities because borrowers may have the right to call or prepay obligations with or without call or prepayment penalties. A schedule of the contractual maturities of securities available for sale and securities held to maturity as of June 30, 2013 is presented below:

Table of Contents

	Available for	Sale	Held to Matu	rity
	Amortized	Fair	Amortized	Fair
	Cost	Value	Cost	Value
	(Dollars in th	ousands)		
Due in one year or less	\$63	\$65	\$240	\$241

Due after ten years	201,237	201,407	217,708	217,939
Total debt securities	\$293,089	\$292,887	\$225,278	\$225,851
Marketable securities	\$10,771	\$10,968	\$—	\$ —
Total	\$303,860	\$303,855	\$225,278	\$225,851

The securities portfolio includes \$8.0 million and \$7.7 million, respectively, of callable securities in the Company's investment portfolio at June 30, 2013 and December 31, 2012.

At June 30, 2013 and December 31, 2012, investment securities carried at \$353.4 million and \$365.8 million, respectively, were pledged to secure public deposits, assets sold under repurchase agreements, letters of credit, and for other purposes.

At June 30, 2013 and December 31, 2012, the Company had no investments in obligations of individual states, counties, or municipalities, which exceeded 10% of Stockholders' Equity.

Other-Than-Temporary Impairment ("OTTI")

The Company continually reviews investment securities for the existence of OTTI, taking into consideration current market conditions, the extent and nature of changes in fair value, issuer rating changes and trends, the credit worthiness of the obligor of the security, volatility of earnings, current analysts' evaluations, the Company's intent to sell the security, or whether it is more likely than not that the Company will be required to sell the debt security before its anticipated recovery, as well as other qualitative factors. The term "other-than-temporary" is not intended to indicate that the decline is permanent, but indicates that the prospects for a near-term recovery of value is not necessarily favorable, or that there is a lack of evidence to support a realizable value equal to or greater than the carrying value of the investment.

The following tables show the gross unrealized losses and fair value of the Company's investments in an unrealized loss position, which the Company has not deemed to be OTTI, aggregated by investment category and length of time that individual securities have been in a continuous unrealized loss position:

	June 30, 20	13

The Company does not intend to sell these investments and has determined based upon available evidence that it is more likely than not that the Company will not be required to sell the security before the recovery of its amortized cost basis. As a result, the Company does not consider these investments to be OTTI. The Company made this determination by reviewing various qualitative and quantitative factors regarding each investment category, such as current market conditions, extent and nature of changes in fair value, issuer rating changes and trends, volatility of earnings, and current analysts' evaluations.

As a result of the Company's review of these qualitative and quantitative factors, the causes of the impairments listed in the table above by category are as follows at June 30, 2013:

U.S. Government Agency Securities: Government Agency bonds have historically been considered to be of high credit quality. The bonds in the bank's portfolio consist of debt obligations of the Federal Home Loan Bank and the Federal Farm Credit Banks. Because these firms are owned by shareholders and not part of the federal government, these bonds are not backed by the government's "full faith and credit" guarantee and are therefore subject to credit and default risk. The risk of default on these entities are considered low and the credit quality is currently well above investment grade. As such, the decline in market value of these securities is attributable to changes in interest rates and not credit quality.

Agency Mortgage-Backed Securities and Collateralized Mortgage Obligations: This portfolio has contractual terms that generally do not permit the issuer to settle the securities at a price less than the current par value of the investment. The decline in market value of these securities is attributable to changes in interest rates and not credit quality. Additionally, these securities are implicitly guaranteed by the U.S. Government or one of its agencies. Single Issuer Trust Preferred Securities: This portfolio consist of two securities, both of which are below investment grade. The unrealized loss on these securities is attributable to the illiquid nature of the trust preferred market in the current economic environment. Management evaluates various financial metrics for each of the issuers, including regulatory capital ratios of issuers.

Pooled Trust Preferred Securities: This portfolio consists of two securities, both of which are below investment grade. The unrealized loss on these securities is attributable to the illiquid nature of the trust preferred market and the significant risk premiums required in the current economic environment. Management evaluates collateral credit and instrument structure, including current and expected deferral and default rates and timing. In addition, discount rates are determined by evaluating comparable spreads observed currently in the market for similar instruments. Marketable Securities: This portfolio consists of mutual funds and other equity investments. During some periods, the mutual funds in the Company's investment portfolio may have unrealized losses resulting from market fluctuations as well as the risk premium associated with that particular asset class. For example, emerging market equities tend to trade at a higher risk premium than U.S. government bonds and thus, will fluctuate to a greater degree on both the

upside and the downside. In the context of a well-diversified portfolio, however, the correlation amongst the various asset classes represented by the funds serves to minimize downside risk. The Company evaluates each mutual fund in the portfolio regularly and measures performance on both an absolute and relative basis. A reasonable recovery period for positions with an unrealized loss is based on management's assessment of general economic data, trends within a particular asset class, valuations, earnings forecasts and bond durations.

Table of Contents

Management monitors the following issuances closely for impairment due to the history of OTTI losses recorded within these classes of securities. Management has determined that these securities possess characteristics which in the current economic environment could lead to further credit related OTTI charges. The following tables summarize pertinent information as of June 30, 2013, that was considered by management in determining if OTTI existed:

	Class	Amortized Cost (1)	Gross Unrealized Gain/(Loss	Than-Tempo	rary			ate n-	Total Cumulative cOther-Than- Temporary (Impairment)/ to Date	Recovery

Excess subordination represents the additional default/losses in excess of both current and projected defaults/losses that the security can absorb before the security experiences any credit impairment.

⁽²⁾ The Company reviewed credit ratings provided by S&P, Moody's and Fitch in its evaluation of issuers. Per review of the factors outlined above, seven of the securities shown in the table above were deemed to be OTTI. The remaining securities were not deemed to be OTTI as the Company does not intend to sell these investments and has determined, based upon available evidence, that it is more likely than not that the Company will not be required to sell the security before the recovery of its amortized cost basis.

Table of Contents

For the purpose of estimating the allowance for loan losses, management segregates the loan portfolio into the portfolio segments detailed in the above tables. Each of these loan categories possesses unique risk characteristics that are considered when determining the appropriate level of allowance for each segment. Some of the risk characteristics unique to each loan category include:

Commercial Portfolio:

Commercial & Industrial—Loans in this category consist of revolving and term loan obligations extended to business and corporate enterprises for the purpose of financing working capital and/or capital investment. Collateral generally consists of pledges of business assets including, but not limited to: accounts receivable, inventory, plant & equipment,

or real estate, if applicable. Repayment sources consist of: primarily, operating cash flow, and secondarily, liquidation of assets.

Commercial Real Estate—Loans in this category consist of mortgage loans to finance investment in real property such as multi-family residential, commercial/retail, office, industrial, hotels, educational and healthcare facilities and other specific use properties. Loans are typically written with amortizing payment structures. Collateral values are determined based upon third party appraisals and evaluations. Loan to value ratios at origination are governed by established policy and regulatory guidelines. Repayment sources consist of: primarily, cash flow from operating leases and rents, and secondarily, liquidation of assets.

Commercial Construction—Loans in this category consist of short-term construction loans, revolving and nonrevolving credit lines and construction/permanent loans to finance the acquisition, development and construction or rehabilitation of real property. Project types include: residential 1-4 family condominium and multi-family homes, commercial/retail, office, industrial,

Table of Contents

hotels, educational and healthcare facilities and other specific use properties. Loans may be written with nonamortizing or hybrid payment structures depending upon the type of project. Collateral values are determined based upon third party appraisals and evaluations. Loan to value ratios at origination are governed by established policy and regulatory guidelines. Repayment sources vary depending upon the type of project and may consist of: sale or lease of units, operating cash flows or liquidation of other assets.

Small Business—Loans in this category consist of revolving, term loan and mortgage obligations extended to sole proprietors and small businesses for purposes of financing working capital and/or capital investment. Collateral generally consists of pledges of business assets including, but not limited to: accounts receivable, inventory, plant & equipment, or real estate if applicable. Repayment sources consist of: primarily, operating cash flows, and secondarily, liquidation of assets.

For the commercial portfolio it is the Bank's policy to obtain personal guarantees for payment from individuals holding material ownership interests of the borrowing entities.

Consumer Portfolio:

Residential Real Estate—Residential mortgage loans held in the Bank's portfolio are made to borrowers who demonstrate the ability to make scheduled payments with full consideration to underwriting factors such as current and expected income, employment status, current assets, other financial resources, credit history and the value of the collateral. Collateral consists of mortgage liens on 1-4 family residential properties. The Company does not originate sub-prime loans.

Home Equity — Home equity loans and lines are made to qualified individuals for legitimate purposes secured by senior or junior mortgage liens on owner-occupied 1-4 family homes, condominiums or vacation homes or on nonowner occupied 1-4 family homes with more restrictive loan to value requirements. The home equity loan has a fixed rate and is billed equal payments comprised of principal and interest. The home equity line of credit has a variable rate and is billed in interest-only payments during the draw period. At the end of the draw period, the home equity line of credit is billed as a percentage of the principal balance plus all accrued interest. Borrower qualifications include favorable credit history combined with supportive income requirements and combined loan to value ratios within established policy guidelines.

Other Consumer—Other consumer loan products including personal lines of credit and amortizing loans made to qualified individuals for various purposes such as education, auto loans, debt consolidation, personal expenses or overdraft protection. Borrower qualifications include favorable credit history combined with supportive income and collateral requirements within established policy guidelines. These loans may be secured or unsecured. Credit Quality:

The Company continually monitors the asset quality of the loan portfolio using all available information. Based on this information, loans demonstrating certain payment issues or other weaknesses may be categorized as delinquent, impaired, nonperforming and/or put on nonaccrual status. Additionally, in the course of resolving such loans, the Company may choose to restructure the contractual terms of certain loans to match the borrower's ability to repay the loan based on their current financial condition. If a restructured loan meets certain criteria, it may be categorized as a troubled debt restructuring ("TDR").

The Company reviews numerous credit quality indicators when assessing the risk in its loan portfolio. For the commercial portfolio, the Company utilizes a 10-point commercial risk-rating system, which assigns a risk-grade to each borrower based on a number of quantitative and qualitative factors associated with a commercial loan transaction. Factors considered include industry and market conditions, position within the industry, earnings trends, operating cash flow, asset/liability values, debt capacity, guarantor strength, management and controls, financial reporting, collateral, and other considerations. The risk-ratings categories are defined as follows:

1- 6 Rating — Pass

Risk-rating grades "1" through "6" comprise those loans ranging from 'Substantially Risk Free' which indicates borrowers are of unquestioned credit standing and the pinnacle of credit quality, well established companies with a very strong financial condition, and loans fully secured by cash collateral, through 'Acceptable Risk', which indicates borrowers may exhibit declining earnings, strained cash flow, increasing leverage and/or weakening market fundamentals that indicate above average or below average asset quality, margins and market share. Collateral coverage is protective.

7 Rating — Potential Weakness

Borrowers exhibit potential credit weaknesses or downward trends deserving management's close attention. If not checked or corrected, these trends will weaken the Bank's asset and position. While potentially weak, currently these borrowers are marginally acceptable; no loss of principal or interest is envisioned.

Table of Contents

8 Rating — Definite Weakness

Borrowers exhibit well defined weaknesses that jeopardize the orderly liquidation of debt. Loan may be inadequately protected by the current net worth and paying capacity of the obligor or by the collateral pledged, if any. Normal repayment from the borrower is in jeopardy, although no loss of principal is envisioned. However, there is a distinct possibility that a partial loss of interest and/or principal will occur if the deficiencies are not corrected. Collateral coverage may be inadequate to cover the principal obligation.

9 Rating — Partial Loss Probable

Borrowers exhibit well defined weaknesses that jeopardize the orderly liquidation of debt with the added provision that the weaknesses make collection of the debt in full, on the basis of currently existing facts, conditions, and values, highly questionable and improbable. Serious problems exist to the point where partial loss of principal is likely. 10 Rating — Definite Loss

Borrowers deemed incapable of repayment. Loans to such borrowers are considered uncollectible and of such little value that continuation as active assets of the Bank is not warranted.

The credit quality of the commercial loan portfolio is actively monitored and any changes in credit quality are reflected in risk-rating changes. Risk-ratings are assigned or reviewed for all new loans, when advancing significant additions to existing relationships (over \$50,000), at least quarterly for all actively managed loans, and any time a significant event occurs, including at renewal of the loan.

The Company utilizes a comprehensive strategy for monitoring commercial credit quality. Borrowers are required to provide updated financial information at least annually which is carefully evaluated for any changes in credit quality. Larger loan relationships are subject to a full annual credit review by an experienced credit analysis group. Additionally, the Company retains an independent loan review firm to evaluate the credit quality of the commercial loan portfolio. The independent loan review process achieves significant penetration into the commercial loan portfolio and reports the results of these reviews to the Audit Committee of the Board of Directors on a quarterly basis.

The following table details the internal risk-rating categories for the Company's commercial portfolio:

Table of Contents

For the Company's consumer portfolio, the quality of the loan is best indicated by the repayment performance of an individual borrower. However, the Company does supplement performance data with current Fair Isaac Corporation ("FICO") and Loan to Value ("LTV") estimates. Current FICO data is purchased and appended to all consumer loans on a quarterly basis and automated valuation services and broker opinions of value are used to supplement original value data for the residential and home equity portfolios, periodically. In addition, for all second position home equity loans, management reviews the performance of the first position lien, which is often held at another institution, when determining the accrual status of the loan. The following table shows the weighted average FICO scores and the weighted average combined LTV ratios as of the periods indicated below:

	June 30,		December 31,	
	2013		2012	
Residential portfolio				
FICO score (re-scored) (1)	739		727	
LTV (re-valued) (2)	70.0	%	67.0	%
Home equity portfolio				
FICO score (re-scored) (1)	763		763	
LTV (re-valued) (2)	55.0	%	54.0	%

The average FICO scores for June 30, 2013 are based upon rescores available from May 2013 and actual score data for loans booked between June 1 and June 30, 2013. The average FICO scores for December 31, 2012 are based upon rescores available from November 2012 and actual score data for loans booked between December 1 and December 31, 2012.

The combined LTV ratios for June 30, 2013 are based upon updated automated valuations as of February 2013.

The combined LTV ratios for December 31, 2012 are based upon updated automated valuations as of November 30, 2011. For home equity loans and lines in a subordinate lien, the LTV data represents a combined

November 30, 2011. For home equity loans and lines in a subordinate lien, the LTV data represents a combined LTV, taking into account the senior lien data for loans and lines.

The Bank's philosophy toward managing its loan portfolios is predicated upon careful monitoring, which stresses early detection and response to delinquent and default situations. Delinquent loans are managed by a team of seasoned collection specialists and the Bank seeks to make arrangements to resolve any delinquent or default situation over the shortest possible time frame. As a general rule, loans more than 90 days past due with respect to principal or interest are classified as nonaccrual loans. As permitted by banking regulations, certain consumer loans past due 90 days or more may continue to accrue interest. The Company also may use discretion regarding other loans over 90 days delinquent if the loan is well secured and in process of collection. Set forth is information regarding the Company's nonperforming loans at the period shown.

The following table shows nonaccrual loans at the dates indicated:

	June 30, 2013	December 31, 2012	
	· ·	(Dollars in thousands)	
Commercial and industrial	\$3,009	\$2,666	
Commercial real estate	8,526	6,574	
Commercial construction	1,608		
Small business	698	570	
Residential real estate	12,496	11,472	
Home equity (1)	10,024	7,311	
Other consumer	134	121	
Total nonaccrual loans (2)	\$36,495	\$28,714	

Includes home equity loans which are currently performing but have been placed on nonaccrual as a result of delinquency with respect to the first position, which is held by another financial institution.

(2) Included in these amounts were \$9.8 million and \$6.6 million of nonaccruing TDRs at June 30, 2013 and December 31, 2012, respectively.

In the course of resolving nonperforming loans, the Bank may choose to restructure the contractual terms of certain loans. The Bank attempts to work out an alternative payment schedule with the borrower in order to avoid foreclosure actions. Any loans that are modified are reviewed by the Bank to identify if a TDR has occurred, which is when, for economic or legal reasons related to a borrower's financial difficulties, the Bank grants a concession to the borrower that it would not otherwise consider. Terms may be modified to fit the ability of the borrower to repay in line with its current financial status and the restructuring of the loan may include the transfer of assets from the borrower to satisfy the debt, a modification of loan terms, or a combination of the two.

Table of Contents

The following table shows the Company's total TDRs and other pertinent information as of the dates indicated:

	June 30, 2013	December 31, 2012
	(Dollars in thou	sands)
TDRs on accrual status	\$38,898	\$46,764
TDRs on nonaccrual	9,777	6,554
Total TDRs	\$48,675	\$53,318
Amount of specific reserves included in the allowance for loan losses associated with TDRs:	\$2,796	\$3,049
Additional commitments to lend to a borrower who has been a party to a T	DR: \$1,921	\$1,847

The Bank's policy is to have any restructured loan which is on nonaccrual status prior to being modified remain on nonaccrual status for six months, subsequent to being modified, before management considers its return to accrual status. If the restructured loan is on accrual status prior to being modified, it is reviewed to determine if the modified loan should remain on accrual status. Additionally, loans classified as TDRs are adjusted to reflect the changes in value of the recorded investment in the loan, if any, resulting from the granting of a concession. For all residential loan modifications, the borrower must perform during a 90 day trial period before the modification is finalized. The following table shows the modifications which occurred during the periods indicated and the change in the recorded investment subsequent to the modifications occurring:

The following table shows the loans that have been modified during the past twelve months which have subsequently defaulted during the periods indicated. The Company considers a loan to have defaulted when it reaches 90 days past due.

All TDR loans are considered impaired and therefore are subject to a specific review for impairment. The impairment analysis appropriately discounts the present value of the anticipated cash flows by the loan's contractual rate of interest in effect prior to the loan's modification. The amount of impairment, if any, is recorded as a specific loss allocation to each individual loan in the allowance for loan losses. Commercial loans (commercial and industrial, commercial construction, commercial real estate and small business loans), residential loans, and home equity loans that have been classified as TDRs and which subsequently default are reviewed to determine if the loan should be deemed collateral dependent. In such an instance, any shortfall between the value of the collateral and the book value of the loan is determined by measuring the recorded investment in the loan against the fair value of the collateral less estimated costs to sell. The Bank charges off the amount of any confirmed loan loss in the period when the loans, or portion of loans, are deemed uncollectible. Smaller balance consumer TDR loans are reviewed for performance to determine when a charge-off is appropriate.

A loan is considered impaired when, based on current information and events, it is probable that the Bank will be unable to collect the scheduled payments of principal or interest when due according to the contractual terms of the loan agreement. Factors considered by management in determining impairment include payment status, collateral value, and the probability of collecting scheduled principal and interest payments when due. Loans that experience insignificant payment delays and payment shortfalls generally are not classified as impaired. Management determines the significance of payment delays and payment shortfalls on a case-by-case basis, taking into consideration all of the circumstances surrounding the loan and the borrower, including the length of the delay, the reasons for the delay, the borrower's prior payment record, and the amount of the shortfall in relation to the principal and interest owed.

Certain loans acquired by the Company may have shown evidence of deterioration of credit quality since origination and it was therefore deemed unlikely that the Bank would be able to collect all contractually required payments. As such, these loans were deemed to be Purchase Credit Impaired ("PCI") loans and the carrying value and prospective income recognition are predicated upon future cash flows expected to be collected. The following table displays certain information pertaining to purchased credit impaired loans at the dated indicated:

	June 30, 2013	December 31, 2012		
	(Dollars in thousands)			
Outstanding balance	\$30,705	\$36,278		
Carrying amount	\$27,675	\$32,054		

Table of Contents

The following table summarizes activity in the accretable yield for the PCI loan portfolio:

	(Dollars in	
	thousands)	
Balance at January 1, 2012	\$	
Acquisition	3,095	
Accretion	(903)
Reclassification from nonaccretable difference for loans with improved cash flows (1)	272	
Balance at December 31, 2012	2,464	
Balance at January 1, 2013	\$2,464	
Accretion	(1,142)
Other change in expected cash flows (2)	439	
Reclassification from nonaccretable difference for loans with improved cash flows (1)	335	
Balance at June 30, 2013	\$2,096	

⁽¹⁾ Results in increased interest income during the period in which the loan paid off.

NOTE 5 – EARNINGS PER SHARE

Earnings per share consisted of the following components for the periods indicated:

	Three Months I	Ended	Six Months Ended		
	June 30		June 30		
	2013	2012	2013	2012	
	(Dollars in thou	ısands, except p	er share data)		
Net income	\$12,758	\$8,874	\$25,010	\$21,057

Effect of diluted securities	52,144	20,377	49,104	22,251	
Dilutive shares	22,940,299	21,644,204	22,905,236	21,614,667	
Net income per share					
Basic EPS	\$0.56	\$0.41	\$1.09	\$0.98	
Effect of diluted securities				(0.01)	
Dilutive EPS	\$0.56	\$0.41	\$1.09	\$0.97	

The following table illustrates the options to purchase common stock that were excluded from the calculation of diluted earnings per share because they were anti-dilutive:

	Three Months Ended		Six Months Ended	
	June 30		June 30	
	2013 2012		2013	2012
Stock options	241,268	804,249	245,312	807,147

⁽²⁾ Represents changes in cash flows expected to be collected and resulting in increased interest income as a prospective yield adjustment over the remaining life of the loan(s).

Table of Contents

NOTE 6 - STOCK BASED COMPENSATION

During 2013, the Company made the following awards of restricted stock:

Date	Shares Granted	Plan	Fair Value	Vesting Period
1/16/2013	2,000	2005 Employee Stock Plan	\$30.48	Ratably over 3 years from grant date
2/14/2013	•	2005 Employee Stock Plan	\$31.51	Ratably over 5 years from grant date
5/21/2013	14,700	2010 Non-Employee Director Stock Plan	\$33.17	At the end of 5 years from grant date

The fair value of the restricted stock awards is based upon the average of the high and low price at which the Company's common stock traded on the date of grant. The holders of restricted stock awards participate fully in the rewards of stock ownership of the Company, including voting and dividend rights.

The Company has not issued any awards of options to purchase shares of common stock during 2013.

NOTE 7 – DERIVATIVES AND HEDGING ACTIVITIES

The Company's derivative financial instruments are used to manage differences in the amount, timing, and duration of the Company's known or expected cash receipts and its known or expected cash payments principally to manage the Company's interest rate risk. Additionally, the Company enters into interest rate derivatives and foreign exchange contracts to accommodate the business requirements of its customers ("customer related positions"). The Company minimizes the market and liquidity risks of customer related positions by entering into similar offsetting positions with broker-dealers. Derivative instruments are carried at fair value in the Company's financial statements. The accounting for changes in the fair value of a derivative instrument is dependent upon whether or not it qualifies as a hedge for accounting purposes, and further, by the type of hedging relationship.

The Company does not enter into proprietary trading positions for any derivatives.

Interest Rate Positions

The Company currently utilizes interest rate swap agreements as hedging instruments against interest rate risk associated with the Company's borrowings. An interest rate swap is an agreement whereby one party agrees to pay a floating rate of interest on a notional principal amount in exchange for receiving a fixed rate of interest on the same notional amount, for a predetermined period of time, from a second party. The amounts relating to the notional principal amount are not actually exchanged. The maximum length of time over which the Company is currently hedging its exposure to the variability in future cash flows for forecasted transactions related to the payment of variable interest on existing financial instruments is six years.

Table of Contents

The following table reflects the Company's derivative positions for the periods indicated below for interest rate swaps which qualify as cash flow hedges for accounting purposes:

For derivative instruments that are designated and qualify as hedging instruments, the effective portion of the gains or losses is reported as a component of OCI, and is subsequently reclassified into earnings in the period that the hedged forecasted transaction affects earnings. The Company expects approximately \$5.0 million (pre-tax), to be reclassified to interest expense from OCI, related to the Company's cash flow hedges in the next twelve months. This reclassification is due to anticipated payments that will be made and/or received on the swaps based upon the forward curve as of June 30, 2013.

The Company had no fair value hedges as of June 30, 2013 or December 31, 2012.

The table below presents the net amortization income recognized as an offset to interest expense related to previously terminated swaps for the periods indicated:

	Three Mo	Three Months Ended		hs Ended	
	June 30		June 30		
	2013	2012	2013	2012	
	(Dollars i	(Dollars in thousands)		(Dollars in thousands)

Customer Deleted Desitions					

Customer Related Positions

Interest rate derivatives, primarily interest rate swaps, offered to commercial borrowers through the Bank's loan level derivative program do not qualify as hedges for accounting purposes. The Bank believes that its exposure to commercial customer derivatives is limited because these contracts are simultaneously matched at inception with an offsetting dealer transaction. The commercial customer derivative program allows the Bank to retain variable-rate commercial loans while allowing the customer to synthetically fix the loan rate by entering into a variable-to-fixed interest rate swap.

Table of Contents

Foreign exchange contracts offered to commercial borrowers through the Bank's derivative program do not qualify as hedges for accounting purposes. The Bank acts as a seller and buyer of foreign exchange contracts to accommodate its customers. To mitigate the market and liquidity risk associated with these derivatives, the Bank enters into similar offsetting positions.

The following table reflects the Company's customer related derivative positions for the periods indicated below for those derivatives not designated as hedging:

By using derivatives, the Company is exposed to credit risk to the extent that counterparties to the derivative contracts do not perform as required. Should a counterparty fail to perform under the terms of a derivative contract, the Company's credit exposure on interest rate swaps is limited to the net positive fair value and accrued interest of all swaps with each counterparty. The Company seeks to minimize counterparty credit risk through credit approvals, limits, monitoring procedures, and obtaining collateral, where appropriate. Institutional counterparties must have an investment grade credit rating and be approved by the Company's Board of Directors. As such, management believes the risk of incurring credit losses on derivative contracts with those counterparties is remote and losses, if any, would be immaterial. The Company had no exposure relating to interest rate swaps with institutional counterparties at June 30, 2013 and December 31, 2012, as all such swaps were in a liability position. The Company's exposure relating

to customer related positions was approximately \$16.7 million and \$31.0 million at June 30, 2013 and December 31, 2012, respectively. Credit exposure may be reduced by the amount of collateral pledged by the counterparty.

Table of Contents

The Company does not offset fair value amounts recognized for derivative instruments. The Company does net the amount recognized for the right to reclaim cash collateral against the obligation to return cash collateral arising from derivative instruments executed with the same counterparty under a master netting arrangement. Collateral legally required to be maintained at dealer banks by the Company is monitored and adjusted as necessary. Per a review completed by management of these instruments at June 30, 2013 it was determined that no additional collateral would have to be posted to immediately settle these instruments.

The following table presents the Company's asset derivative positions and the potential effect of netting arrangements on its financial position, as of the periods indicated:

Table of Contents

(1) Includes loan level swaps with customers which are not subject to a master netting arrangement and thus are not offset in the statement of financial position.

The Company has agreements with certain of its derivative counterparties that contain a provision where if the Company fails to maintain its status as a well capitalized institution, then the Company could be required to terminate any outstanding derivatives with the counterparty. Included in the table above are derivative instruments that contain credit-risk related contingent features that are in a net liability position, which require the Company to assign collateral. All liability position interest rate swap and customer loan level swap counterparties have credit-risk contingent instruments as of the dates indicated in the table above.

Mortgage Derivatives

Forward sale contracts of residential mortgage loans, considered derivative instruments for accounting purposes, are utilized by the Company in its efforts to manage risk of loss associated with its mortgage loan commitments and mortgage loans intended for sale. Prior to closing and funding certain one-to-four family residential mortgage loans, an interest rate lock commitment is generally extended to the borrower. During the period from commitment date to closing date, the Company is subject to the risk that market rates of interest may change. If market rates rise, investors generally will pay less to purchase such loans resulting in a reduction in the gain on sale of the loans or, possibly, a loss. In an effort to mitigate such risk, forward delivery sales commitments are executed, under which the Company agrees to deliver whole mortgage loans to various investors. The interest rate lock commitments and forward sales commitments are recorded at fair value, with changes in fair value recorded in current period earnings as a component of mortgage banking income. The Company has elected the fair value option to carry these instruments at fair value. Changes in the fair value marks on loans held for sale offset changes in interest rate lock and forward sales commitments. The change in fair value of loans held for sale is recorded in current period earnings as a component of mortgage banking income in accordance with the Company's fair value election.

The table below summarizes the fair value of residential mortgage loans commitments, forward sales agreements, and loans held for sale at the periods indicated:

	June 30,	December 31	1,
	2013	2012	
	(Dollars in th	ousands)

Table of Contents

NOTE 8 – FAIR VALUE MEASUREMENTS

Fair value is a market-based measure considered from the perspective of a market participant rather than an entity-specific measure. Therefore, even when market assumptions are not readily available, the Company's own assumptions are set to reflect those that market participants would use in pricing the asset or liability at the measurement date. If there has been a significant decrease in the volume and level of activity for the asset or liability, regardless of the valuation technique(s) used, the objective of a fair value measurement remains the same. Fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction (that is, not a forced liquidation or distressed sale) between market participants at the measurement date under current market conditions. The Company uses prices and inputs that are current as of the measurement date, including during periods of market dislocation. In periods of market dislocation, the observability of prices and inputs may be reduced for many instruments. This condition could cause an instrument to be reclassified from one level to another.

The Fair Value Measurements and Disclosures Topic of the FASB ASC defines fair value and establishes a fair value hierarchy that prioritizes the inputs to valuation techniques used to measure fair value. The hierarchy gives the highest priority to unadjusted quoted prices in active markets for identical assets or liabilities (Level 1 measurements) and the lowest priority to unobservable inputs (Level 3 measurements). The three levels of the fair value hierarchy under the Fair Value Measurements and Disclosures Topic of the FASB ASC are described below:

Level 1 – Inputs are quoted prices (unadjusted) in active markets for identical assets or liabilities that the reporting entity has the ability to access at the measurement date.

Level 2 – Valuations based on quoted prices in markets that are not active or for which all significant inputs are observable, either directly or indirectly.

Level 3 – Prices or valuations that require inputs that are both significant to the fair value measurement and unobservable.

To the extent that valuation is based on models or inputs that are less observable or unobservable in the market, the determination of fair value requires more judgment. Accordingly, the degree of judgment exercised by the Company in determining fair value is greatest for instruments categorized in Level 3. A financial instrument's level within the fair value hierarchy is based on the lowest level of any input that is significant to the fair value measurement. Valuation Techniques

There have been no changes in the valuation techniques used during the current period.

Securities:

U.S. Government Agency Securities

Fair value is estimated using either multi-dimensional spread tables or benchmarks. The inputs used include benchmark yields, reported trades, and broker/dealer quotes. These securities are classified as Level 2. Agency Mortgage-Backed Securities

Fair value is estimated using either a matrix or benchmarks. The inputs used include benchmark yields, reported trades, broker/dealer quotes, and issuer spreads. These securities are categorized as Level 2.

Agency Collateralized Mortgage Obligations and Private Mortgage-Backed Securities

The valuation model for these securities is volatility-driven and ratings based, and uses multi-dimensional spread tables. The inputs used include benchmark yields, recent reported trades, new issue data, broker and dealer quotes, and collateral performance. If there is at least one significant model assumption or input that is not observable, these securities are categorized as Level 3 within the fair value hierarchy; otherwise, they are classified as Level 2. Single and Pooled Issuer Trust Preferred Securities

The fair value of trust preferred securities, including pooled and single issuer preferred securities, is estimated using external pricing models, discounted cash flow methodologies or similar techniques. The inputs used in these valuations include benchmark yields, recent reported trades, new issue data, broker and dealer quotes and collateral performance. If there is at least one significant model assumption or input that is not observable, these securities are categorized as Level 3 within the fair value hierarchy; otherwise, they are classified as Level 2.

Marketable Securities

These equity and fixed income securities are valued based on market quoted prices. These securities are categorized in Level 1 as they are actively traded and no valuation adjustments have been applied.

Table of Contents

Loans Held for Sale

The Company elects to account for new originations of loans held for sale at fair value, which is measured using quoted market prices when available. If quoted market prices are not available, comparable market values or discounted cash flow analysis may be utilized. These assets are typically categorized as Level 2.

Derivative Instruments

Derivatives

The valuation of these instruments is determined using widely accepted valuation techniques including discounted cash flow analysis on the expected cash flows of each derivative. This analysis reflects the contractual terms of the derivatives, including the period to maturity, and uses observable market-based inputs, including interest rate curves and implied volatilities. The Company incorporates credit valuation adjustments to appropriately reflect nonperformance risk in the fair value measurements. In adjusting the fair value of its derivative contracts for the effect of nonperformance risk, the Company has considered the impact of netting and any applicable credit enhancements, such as collateral postings. Although the Company has determined that the majority of the inputs used to value its interest rate derivatives fall within Level 2 of the fair value hierarchy, the credit valuation adjustments associated with its derivatives utilize Level 3 inputs, such as estimates of current credit spreads to evaluate the likelihood of default by the Company and its counterparties. However, as of June 30, 2013 and December 31, 2012, the Company has assessed the significance of the impact of the credit valuation adjustments on the overall valuation of its derivative positions and has determined that the credit valuation adjustments are not significant to the overall valuation of its derivatives. Additionally, in conjunction with fair value measurement guidance, the Company has made an accounting policy election to measure the credit risk of its derivative financial instruments that are subject to master netting agreements on a net basis by counterparty portfolio. As a result, the Company has determined that its derivative valuations in their entirety are classified in Level 2.

Residential Mortgage Loan Commitments and Forward Sales Agreements

The fair value of the commitments and agreements are estimated using the anticipated market price based on pricing indications provided from syndicate banks. These commitments and agreements are categorized as Level 2. Impaired Loans

Loans that are deemed to be impaired are valued based upon the lower of cost or fair value of the underlying collateral. The inputs used in the appraisals of the collateral are not always observable, and therefore the loans may be categorized as Level 3 within the fair value hierarchy; otherwise, they are classified as Level 2.

Other Real Estate Owned

The fair values are estimated based upon recent appraisal values of the property less costs to sell the property. Certain inputs used in appraisals are not always observable, and therefore Other Real Estate Owned may be categorized as Level 3 within the fair value hierarchy. When inputs in appraisals are observable, they are classified as Level 2. Goodwill and Other Intangible Assets

Goodwill and identified intangible assets are subject to impairment testing. The Company conducts an annual impairment test of goodwill in the third quarter of each year and more frequently, if necessary. To estimate the fair value of goodwill and other intangible assets the Company utilizes both a comparable analysis of relevant price multiples in recent market transactions and discounted cash flow analysis. Both valuation models require a significant degree of management judgment. In the event the fair value as determined by the valuation model is less than the carrying value, the intangibles may be impaired. If the impairment testing resulted in impairment, the Company would classify the impaired goodwill and other intangible assets subjected to nonrecurring fair value adjustments as Level 3.

During the first quarter of 2012 the Company transferred the Single Issuer Trust Preferred Security from Level 3 to Level 2. The reason for this transfer was increased trading of the security, enabling the use of more observable inputs. It is the Company's policy to recognize the transfers as of the end of the reporting period. There were no transfers between the Levels of the fair value hierarchy for any assets or liabilities measured at fair value on a recurring basis during the second quarter of 2013.

Table of Contents

The following table sets forth certain unobservable inputs regarding the Company's investment in securities that are classified as Level 3 for the periods indicated:

	Fair Value (Dollars in June 30, 20	thousands)	Unobservable Inputs	Range	Weighted Average	
Pooled trust preferred securities	\$3,617	Discounted cash flow methodology	Cumulative Prepayment	0%-76.0%	7.2	%

			Loss Given Default	85.0% - 100.0%	94.9	%
			Cure Given Default	0% - 75.0%	33.8	%
Private mortgage-backed securities	\$3,532	Multi-dimensional spread tables	Cumulative Prepayment Rate	10.3%-14.5%	13.9	%
			Constant Default Rate	0.9% -20.4%	4.0	%
			Severity	20.0% -55.0%	33.6	%
Impaired loans	\$7,817	Appraisals of collateral (1)				
Other real estate owned	\$11,974	Appraisals of collateral (1)				

Fair value is generally determined through independent appraisals of the underlying collateral, which generally include various Level 3 inputs which are not identifiable. Appraisals may be adjusted by management for qualitative factors such as economic factors and estimated liquidation expenses. The range of these possible adjustments may vary.

For the fair value measurements in the table above, which are classified as Level 3 within the fair value hierarchy, the Company's Treasury and Finance groups determine the valuation policies and procedures. For the pricing of the securities, the Company uses third-party pricing information, without adjustment. Depending on the type of the security, management employs various techniques to analyze the pricing it receives from third-parties, such as analyzing changes in market yields and in certain instances reviewing the underlying collateral of the security. Management reviews changes in fair value from period to period and performs testing to ensure that prices received from the third parties are consistent with their expectation of the market. For the securities categorized as Level 3, the market is deemed to be inactive, the fair value models are calibrated and to the extent possible, significant inputs are back tested on a quarterly basis. This testing is done by the third party service provider, who performs this testing by comparing anticipated inputs to actual results. For example, modeled default and prepayment rates for private

mortgage-backed securities will be compared to actual rates for the previous period. Significant changes in fair value from period to period are closely scrutinized to ensure fair value models are not flawed. The driver(s) of the respective change in fair value and the method for forecasting the driver(s) is closely considered by management.

Table of Contents

The significant unobservable inputs used in the fair value measurement of the Company's pooled trust preferred securities are cumulative prepayment rates, cumulative defaults, loss given defaults and cure given defaults. Significant increases (decreases) in deferrals or defaults, in isolation would result in a significantly lower (higher) fair value measurement. Alternatively, significant increases (decreases) in cure rates, in isolation would result in a significantly higher (lower) fair value measurement.

The significant unobservable inputs used in the fair value measurement of the Company's private mortgage-backed securities are constant prepayment rates, constant default rates, and loss severity in the event of default. Significant increases (decreases) in any of those inputs in isolation would result in a significantly lower (higher) fair value measurement. Generally, a change in the assumption used for the probability of default is accompanied by a directionally similar change in the assumption used for the loss severity and a directionally opposite change in the assumption used for prepayment rates.

Additionally, the Company has financial instruments which are marked to fair value on a nonrecurring basis which are categorized within Level 3. These instruments include collateral dependent impaired loans and OREO. The determination of the fair value amount is derived from the use of independent third party appraisals and evaluations, prepared by firms from a predetermined list of qualified and approved appraisers or evaluators. Upon receipt of an appraisal or evaluation, the internal Commercial Real Estate Appraisal Department will review the report for compliance with regulatory and Bank standards, as well as reasonableness and acceptance of the value conclusions. Any issues or concerns regarding compliance or value conclusions will be addressed with the engaged firm and the report may be adjusted or revised. If a disagreement cannot be resolved, the Commercial Real Estate Appraisal Department will either address the key issues and modify the report for acceptance or reject the report and re-order a new report. Ultimately the Company's Commercial Real Estate Appraisal Department will confirm the collateral value as part of its review process.

Table of Contents

The estimated fair values and related carrying amounts for assets and liabilities for which fair value is only disclosed are shown below as of the periods indicated:

Table of Contents

The fair values presented are based on quoted market prices, where available. If quoted market prices are not (a) available, fair values are based on quoted market prices of comparable instruments and/or discounted cash flow analyses.

- Fair value is estimated by discounting the future cash flows using the current rates at which similar loans would be made to borrowers with similar credit ratings and for the same remaining maturities or cash flows.
- Fair value was determined by discounting anticipated future cash payments using rates currently available for (c) instruments with similar remaining maturities.

(d) Fair value was determined based upon market prices of securities with similar terms and maturities.

This summary excludes financial assets and liabilities for which the carrying value approximates fair value. For financial assets, these include cash and due from banks, federal funds sold, short-term investments, Federal Home Loan Bank stock, and cash surrender value of life insurance policies. For financial liabilities, these include demand,

savings, money market deposits, and federal funds purchased. The estimated fair value of demand, savings and money market deposits is the amount payable at the reporting date. These instruments would all be considered to be classified within Level 1 of the fair value hierarchy. Also excluded from the summary are financial instruments measured at fair value on a recurring and nonrecurring basis, as previously described.

The Company believes its financial instruments current use is considered to be the highest and best use of the instruments.

NOTE 9 – COMPREHENSIVE INCOME/LOSS

Information on the Company's comprehensive income, presented net of taxes, is set forth below for the periods indicated:

	Three Months Ended June 30, 2013						Six Months Ended June 30, 2013

⁽¹⁾ Net security losses includes pre-tax OTTI credit related losses of \$0 for the three and six month ended June 30, 2013 and \$76,000 for the three and six months ended June 30, 2012.

Includes the remaining balance of a realized but unrecognized gain, net of tax, from the termination of interest rate (2) swaps in June 2009. The original gain of \$1.4 million, net of tax, will be recognized in earnings through December 2018, the original maturity date of the swap. The balance of this gain has amortized to \$787,000 and \$931,000 at June 30, 2013 and 2012, respectively.

The amortization of prior service costs is included in the computation of net periodic pension cost as disclosed in (3)the Employee Benefit Plans footnote in the Company's Annual Report on Form 10-K for the year ended December 31, 2012, filed with the Securities and Exchange Commission.

Total reclassifications into income for the period were \$899,000 and \$1,737,000 for the three and six months (4) ending June 30, 2013 and \$864,000 and \$1,652,000 for the three and six months ending June 30, 2012, respectively.

Information on the Company's accumulated other comprehensive income (loss), net of tax is comprised of the following components as of the periods indicated:

Item 2. Management's Discussion and Analysis of Financial Condition and Results of Operations
The following discussion should be read in conjunction with the consolidated financial statements, notes and tables included in the Company's Annual Report on Form 10-K for the fiscal year ended December 31, 2012, filed with the Securities and Exchange Commission.

Cautionary Statement Regarding Forward-Looking Statements

A number of the presentations and disclosures in this Form 10-Q, including, without limitation, statements regarding the level of allowance for loan losses, the rate of delinquencies and amounts of charge-offs, and the rates of loan growth, and any statements preceded by, followed by, or which include the words "may," "could," "should," "will," "would," "hope," "might," "believe," "expect," "anticipate," "estimate," "intend," "plan," "assume" or similar expressions constitute forward-looking statements within the meaning of the safe harbor provisions of the Private Securities Litigation Reform Act of 1995.

These forward-looking statements, implicitly and explicitly, include the assumptions underlying the statements and other information with respect to the beliefs, plans, objectives, goals, expectations, anticipations, estimates, intentions, financial condition, results of operations, future performance and business, of the Company including the Company's expectations and estimates with respect to the Company's revenues, expenses, earnings, return on average equity, return on average assets, asset quality and other financial data and capital and performance ratios.

Although the Company believes that the expectations reflected in the Company's forward-looking statements are reasonable, these statements involve risks and uncertainties that are subject to change based on various important factors (some of which are beyond the Company's control). The following factors, among others, could cause the Company's financial performance to differ materially from the Company's goals, plans, objectives, intentions, expectations and other forward-looking statements:

a weakening in the United States economy in general and the regional and local economies within the New England region and the Company's market area, which could result in a deterioration of credit quality, a change in the allowance for loan losses, or a reduced demand for the Company's credit or fee-based products and services:

adverse changes in the local real estate market could result in a deterioration of credit quality and an increase in the allowance for loan losses, as most of the Company's loans are concentrated within the Bank's primary market area, and a substantial portion of these loans have real estate as collateral;

a further deterioration of the credit rating for U.S. long-term sovereign debt could adversely impact the Company. Although the 2011 downgrade by Standard and Poor's of U.S. long-term sovereign debt did not directly impact the financial position of the Company, an inability by the federal government to raise the U.S. debt limit or otherwise could result in further downgrades which in turn could cause a re-evaluation of the 'risk-free' rate used in many accounting models, other-than-temporary-impairment of securities and/or impairment of goodwill and other intangibles;

acquisitions may not produce results at levels or within time frames originally anticipated and may result in unforeseen integration issues or impairment of goodwill and/or other intangibles;

changes in trade, monetary and fiscal policies and laws, including interest rate policies of the Board of Governors of the Federal Reserve System could affect the Company's business environment or affect the Company's operations; changes in, and any failure by the Company to comply with, tax laws generally and requirements of the federal New Markets Tax Credit program in particular could adversely affect the Company's tax provision and its financial results; inflation, interest rate, market and monetary fluctuations could reduce net interest income and could increase credit losses:

adverse changes in asset quality could result in increasing credit risk-related losses and expenses;

- competitive pressures could intensify and affect the Company's profitability, including continued industry consolidation, the increased financial services provided by nonbanks and banking reform;
- a deterioration in the conditions of the securities markets could adversely affect the value or credit quality of the Company's assets, the availability and terms of funding necessary to meet the Company's liquidity needs, and the Company's ability to originate loans and could lead to impairment in the value of securities in the

Company's investment portfolios, having an adverse effect on the Company's earnings; the potential need to adapt to changes in information technology could adversely impact the Company's operations and require increased capital spending;

Table of Contents

the risk of electronic fraudulent activity within the financial services industry, especially in the commercial banking sector due to cyber criminals targeting bank accounts and other customer information, which could adversely impact the Company's operations, damage its reputation and require increased capital spending;

changes in consumer spending and savings habits could negatively impact the Company's financial results; new laws and regulations regarding the financial services industry including, but not limited to, the Dodd-Frank Wall Street Reform and Consumer Protection Act, may have a significant effect on the financial services industry in general, and/or the Company in particular, the exact nature and extent of which is uncertain;

changes in laws and regulations (including laws and regulations concerning taxes, banking, securities and insurance)
generally applicable to the Company's business could adversely affect the Company's operations; and
changes in accounting policies, practices and standards, as may be adopted by the regulatory agencies as well as

• the Public Company Accounting Oversight Board, the Financial Accounting Standards Board, and other accounting standard setters, could negatively impact the Company's financial results.

If one or more of the factors affecting the Company's forward-looking information and statements proves incorrect, then the Company's actual results, performance or achievements could differ materially from those expressed in, or implied by, forward-looking information and statements contained in this Form 10-Q. Therefore, the Company cautions you not to place undue reliance on the Company's forward-looking information and statements. The Company does not intend to update the Company's forward-looking information and statements, whether written or oral, to reflect change. All forward-looking statements attributable to the Company are expressly qualified by these cautionary statements.

Selected Quarterly Financial Data

The selected consolidated financial and other data of the Company set forth below does not purport to be complete and should be read in conjunction with, and is qualified in its entirety by, the more detailed information, including the Consolidated Financial Statements and related notes, appearing elsewhere herein.

Executive Level Overview

During the second quarter of 2013 the Company experienced continued business volume growth, as indicated by the growth in the commercial portfolio as the pipeline continues rebuilding nicely following the high level of closings experienced during the fourth quarter of 2012. Offsetting the growth in the commercial portfolio was a decrease in the residential portfolio due to high prepayment activity combined with management's ongoing decision to not retain long-term fixed rated mortgages on the balance sheet. Deposit balances increased during the second quarter, with core deposits now comprising 84.6% of total deposits. The cost of total deposits continued its decline, helping the Company mitigate the strong pressure on earning asset yields from the low rate environment.

Table of Contents

The following table illustrates key performance measures for the periods indicated, however the year to year comparison is somewhat affected by the loan fraud of \$4.0 million, or \$0.11 per share recorded in the second quarter of 2012.

	Three Months Ended June 30			Six Months	End	ed June 30

Net interest margin	3.57	%	3.80	%	3.58	%	3.81	%

The Company is focused on growing noninterest income as management continues to emphasize the importance of noninterest income in this prolonged low interest rate environment. The following chart shows the steady increase in noninterest income as a percentage of total revenue over the past five years.

The Company's focus on core checking accounts on both a personal and business level, as well as increased debit card usage, has led to increased interchange revenues. Deposit account fees have also increased, as has loan level derivative income. Investment management income also continues to be a large contributor to the noninterest income category as assets under administration have increased.

The net interest margin for the quarter decreased to 3.57%, down 1 basis point from the prior quarter. Although a decrease in the net interest margin was anticipated due to the prolonged low rate environment, it was countered slightly by the benefit of increased yields on purchased loans, as well as an improved balance sheet mix. Also, countering the pressure from this interest rate environment, the Company was successful in growing its interest earning assets, driven by its commercial loan portfolio, which grew by \$86.7 million during the second quarter of 2013, or 11.2% on an annualized basis. The Company is focused on maintaining a relatively stable net interest margin while positioning itself to take advantage of future rate increases as noted in the chart below, which reflects the estimated impact on the Company's net interest income, assuming a static balance sheet, under the following four gradual (12 to 24 month) shifts in interest rates:

- 1.Down 100 basis points over 12 months (parallel yield curve shift)
- 2.Up 200 basis points over 12 months (parallel yield curve shift)
- 3.Up 400 basis points over 24 months (parallel yield curve shift)
- 4. Flat up 500 basis points over 12 months (asymmetrical yield curve shift with short-term rates rising

Table of Contents

500 basis points and overall flatting of the yield curve)

As noted in the chart above, the Company is fundamentally positioned for a rising rate environment. The increase in market rates, combined with the Company's asset sensitive balance sheet, should continue to provide modest relief for the remainder of 2013. Management's approach to balance sheet strategy and the net interest margin continues to emphasize growth in the commercial portfolio, funding by core deposits, and continued disciplined asset quality. Management will work to ensure that asset generation is structured with a keen view toward interest-rate sensitivity and expects to avoid significant security purchases in this low rate environment. The following tables show the trends over the past five years in the Company's interest-earning assets and funding mixes based on these principles:

Table of Contents

Asset quality remains strong, as net charge-offs decreased to \$3.3 million during the first half of 2013, or 0.15% on an annualized basis of average loans, as compared to \$10.0 million, or 0.52% annualized, for the first half of 2012. The prior year was negatively impacted by an isolated loan fraud of \$4.0 million, inflating the prior year metrics. Accordingly, the provision for loan losses decreased to \$4.4 million as compared to \$10.1 million in the first six months of 2012. The allowance for loan losses as a percentage of loans was 1.17% and 1.15% as of June 30, 2013 and December 31, 2012, respectively. Nonperforming loans increased by \$7.8 million to \$36.5 million, or 0.81% of total loans at June 30, 2013, from \$28.8 million, or 0.64% of total loans at March 31, 2013. The increase in nonperforming loans is partially driven by an increase in the home equity portfolio, relating to performing junior lien mortgages. While these loans are currently performing they are placed on nonaccrual as a result of delinquency with respect to the first position, which is held by other financial institutions. Delinquency as a percentage of loans remains low at 1.03% at June 30, 2013, an increase when compared to 0.82% at June 30, 2012.

Despite the industry-wide challenges of a modestly improving economy, increased competition, continued pressure on the net interest margin, management anticipates that its strategy to grow solid core banking relationships with existing customers, while continually adding new relationships in the attractive markets of Eastern Massachusetts and Rhode Island, will result in diluted earnings per share for 2013 in a range of \$2.28 to \$2.38, on an operating basis. Non-GAAP Measures

When management assesses the Company's financial performance for purposes of making day-to-day and strategic decisions, it does so based upon the performance of its core banking business, which is primarily derived from the combination of net interest income and noninterest or fee income, reduced by operating expenses, the provision for loan losses, and the impact of income taxes. The Company's financial performance is determined in accordance with Generally Accepted Accounting Principles ("GAAP") which sometimes includes gains or losses due to items that management believes are unrelated to its core banking business and will not have a material financial impact on operating results in future periods, such as gains or losses on the sales of securities, merger and acquisition expenses, and other items. Management, therefore, also computes the Company's non-GAAP operating earnings, which excludes these items, to measure the strength of the Company's core banking business and to identify trends that may to some extent be obscured by such gains or losses.

Management's computation of the Company's non-GAAP operating earnings information is set forth because management believes it may be useful for investors to have access to the same analytical tool used by management to evaluate the Company's core operational performance so that investors may assess the Company's overall financial health and identify business and performance trends that may be more difficult to identify and evaluate when noncore items are included. Management also believes that the computation of non-GAAP operating earnings may facilitate the comparison of the Company to other companies in the financial services industry.

Non-GAAP operating earnings should not be considered a substitute for GAAP results. An item which management deems to be noncore and excludes when computing non-GAAP operating earnings can be of substantial importance to the Company's

Table of Contents

results for any particular quarter or year. The Company's non-GAAP operating earning information set forth is not necessarily comparable to non-GAAP information which may be presented by other companies.

The following tables summarizes the impact of noncore items recorded for the time periods indicated below and reconciles them in accordance with GAAP:

Critical Accounting Policies

Critical accounting policies are defined as those that are reflective of significant judgments and uncertainties, and could potentially result in materially different results under different assumptions and conditions. The Company believes that the Company's most critical accounting policies are those which the Company's financial condition depends upon, and which involve the most complex or subjective decisions or assessments.

There have been no material changes in critical accounting policies during the first six months of 2013. Please refer to the 2012 Form 10-K for a complete listing of critical accounting policies.

Table of Contents

FINANCIAL POSITION

Securities Portfolio The Company's securities portfolio consists of securities available for sale and securities which management intends to hold until maturity. Securities increased by \$21.5 million, or 4.2%, at June 30, 2013 as compared to December 31, 2012 due principal paydowns. The ratio of securities to total assets as of June 30, 2013 was 9.0%, compared to 8.8% at December 31, 2012.

The Company continually reviews investment securities for the presence of other-than-temporary impairment ("OTTI"). Further analysis of the Company's OTTI can be found in Note 3 "Securities" within Notes to Consolidated Financial Statements included in Item 1 hereof.

Residential Mortgage Loan Sales The Company's primary loan sale activity arises from the sale of government sponsored enterprise eligible residential mortgage loans to other financial institutions. During 2013 and 2012, the Bank originated residential loans with the intention of selling them in the secondary market. Loans may be sold with servicing rights released or with servicing rights retained. A mortgage servicing asset is recognized when a loan is sold with servicing rights retained. During the three and six months ended June 30, 2013 the Company sold \$83.6 million and \$187.5 million of mortgage loans compared to \$76.2 million and \$139.3 million for the three and six months ended June 30, 2012.

When a loan is sold, the Company enters into agreements that contain representations and warranties about the characteristics of the loans sold and their origination. The Company may be required to either repurchase mortgage loans or to indemnify the purchaser from losses if representations and warranties are breached. During the three and six months ended June 30, 2013 and 2012 the Company incurred an immaterial amount of losses on loans that were agreed to be repurchased. The Company has not at this time established a reserve for loan repurchases as it believes future material losses are not probable.

Forward sale contracts of mortgage loans, considered derivative instruments for accounting purposes, are utilized by the Company in its efforts to manage risk of loss associated with its mortgage loan commitments and mortgage loans held for sale. See Note 7, "Derivative and Hedging Activities" within Notes to Consolidated Financial statements included in Item 1 hereof for more information on mortgage loan commitments and forward sales agreements. Loan Portfolio Management continues to focus on growth in the commercial and home equity lending categories, while placing less emphasis on the other lending categories. Management believes this emphasis is prudent, given the prevailing interest rate and economic environment, as well as strategic priorities. At June 30, 2013, the Bank's loan portfolio remained relatively flat at \$4.5 billion. Loans grew in the commercial portfolio by \$125.2 million for the first half of 2013, or 8.2% on an annualized basis. Offsetting the growth in commercial, the residential portfolio decreased by \$99.3 million in the first half of 2013, or 32.7% on an annualized basis, due to continued high prepayment activity combined with management's ongoing decision to not retain long-term fixed rate mortgages on the balance sheet.

Table of Contents

The Bank's commercial and industrial portfolio has shown growth of 8.0% for the six months ended June 30, 2013. This portfolio is well-diversified with loans to various types of industries. The following pie chart shows the diversification of the commercial and industrial portfolio as of June 30, 2013:

(Dollars in thousands)

%

Average loan size \$212 Largest individual commercial and industrial loan \$13,743

Commercial and industrial nonperforming loans/commercial and industrial loans 0.41

The Bank's commercial real estate portfolio, inclusive of commercial construction, is the Bank's largest loan type concentration and has grown by 3.1% for the six months ended June 30, 2013. This portfolio is also well-diversified with loans secured by a variety of property types, such as owner-occupied and nonowner-occupied commercial, retail, office, industrial, warehouse, industrial development bonds, and other special purpose properties, such as hotels, motels, nursing homes, restaurants, churches, recreational facilities, marinas, and golf courses. Commercial real estate also includes loans secured by certain residential-related property types including multi-family apartment buildings, residential development tracts and condominiums. The following pie chart shows the diversification of the commercial real estate portfolio as of June 30, 2013:

Table of Contents

	(Dollars in	
	thousands)	
Average loan size	\$721	
Largest individual commercial real estate mortgage	\$18,000	
Commercial real estate nonperforming loans/commercial real estate loans	0.45	%
Owner occupied commercial real estate loans/commercial real estate loans	17.9	%

In addition to the commercial portfolios, the Bank also originates both fixed-rate and adjustable-rate residential real estate loans as well as residential construction lending related to single-home residential development within the Bank's market area. The Bank also provides home equity loans and lines that may be made as a fixed rate term loan or under a variable rate revolving line of credit secured by a first or second mortgage on the borrower's residence or second home. Additionally, the Bank makes loans for a wide variety of other personal needs. Consumer loans primarily consist of installment loans and overdraft protections. The residential and consumer portfolios have decreased by \$115.1 million for the six months ended June 30, 2013.

Asset Quality The Company continually monitors the asset quality of the loan portfolio using all available information. Based on this assessment, loans demonstrating certain payment issues or other weaknesses may be categorized as delinquent, impaired, nonperforming and/or put on nonaccrual status. Additionally, in the course of resolving such loans, the Company may choose to restructure the contractual terms of certain loans to match the borrower's ability to repay the loan based on their current financial condition. If a restructured loan meets certain criteria, it may be categorized as a troubled debt restructuring (TDR).

Delinquency The Bank's philosophy toward managing its loan portfolios is predicated upon careful monitoring, which stresses early detection and response to delinquent and default situations. The Bank considers a loan to have defaulted when it reaches 90 days past due. The Bank seeks to make arrangements to resolve any delinquent or default situation over the shortest possible time frame. Generally, the Bank requires that a delinquency notice be mailed to a borrower upon expiration of a grace period (typically no longer than 15 days beyond the due date). Reminder notices may be sent and telephone calls may be made prior to the expiration of the grace period. If the delinquent status is not resolved within a reasonable time frame following the mailing of a delinquency notice, the Bank's personnel charged with managing its loan portfolios contact the borrower to ascertain the reasons for delinquency and the prospects for payment. Any subsequent actions taken to resolve the delinquency will depend upon the nature of the loan and the length of time that the loan has been delinquent. The borrower's needs are considered as much as reasonably possible without jeopardizing the Bank's position. A late charge is usually assessed on loans upon expiration of the grace period.

Nonaccrual Loans As a general rule, within commercial real estate or home equity categories, loans more than 90 days past due with respect to principal or interest are classified as nonaccrual loans. As permitted by banking regulations, certain consumer loans past due 90 days or more continue to accrue interest. Certain commercial and real estate loans that are more than 90 days past due may be kept on an accruing status if the loans are well secured and in the process of collection. Additionally, a junior lien mortgage may be placed on nonaccrual as a result of delinquency with respect to the first position, which is held by another financial institution, while the loan in second position is currently performing. Income accruals are suspended on all nonaccrual loans and all previously accrued and uncollected interest is reversed against current income. A loan remains on nonaccrual status until it becomes current with respect to principal and interest (and in certain instances remains current for up to six months), when the loan is liquidated, or when the loan is determined to be uncollectible and is charged-off against the allowance for loan losses.

Troubled Debt Restructurings In the course of resolving problem loans, the Bank may choose to restructure the contractual terms of certain loans. The Bank attempts to work out an alternative payment schedule with the borrower in order to avoid or cure a default. Any loans that are modified are reviewed by the Bank to identify if a TDR has occurred, which is when, for economic or legal reasons related to a borrower's financial difficulties, the Bank grants a concession to the borrower that it would not otherwise consider. Terms may be modified to fit the ability of the borrower to repay in line with its current financial status and the restructuring of the loan may include adjustments to interest rates, extensions of maturity, consumer loans where the borrower's obligations have been effectively discharged through Chapter 7 Bankruptcy and the borrower has not reaffirmed the debt to the Bank, and other actions intended to minimize economic loss and avoid foreclosure or repossession of collateral. If such efforts by the Bank do not result in satisfactory performance, the loan is referred to legal counsel, at which time foreclosure proceedings are initiated. At any time prior to a sale of the property at foreclosure, the Bank may terminate foreclosure proceedings if the borrower is able to work-out a satisfactory payment plan.

It is the Bank's policy to have any restructured loans which are on nonaccrual status prior to being modified remain on nonaccrual status for six months, subsequent to being modified, before management considers its return to accrual status. If the restructured loan is on accrual status prior to being modified, it is reviewed to determine if the modified loan should remain on accrual status. Loans that are considered TDRs are classified as performing, unless they are on nonaccrual status or greater than 90 days delinquent. Loans classified as TDRs remain classified as such for the life of the loan, except in limited circumstances, when it may be determined that the borrower is performing under modified terms and the restructuring agreement specified an interest rate greater than or equal to an acceptable market rate for a comparable new loan at the time of the restructuring.

Purchased Credit Impaired Loans Purchased Credit Impaired ("PCI") loans are acquired loans which had evidence of deterioration in credit quality since origination and for which it is probable that all contractually required payments will not be collected. The PCI loans are recorded at fair value without any carryover of the allowance for loan losses. The excess cash flows expected to be collected over the carrying amount of the loans, referred to as the "accretable yield", is accreted into interest income over the life of the loans using the effective yield method. Accordingly, PCI loans are not subject to classification as nonaccrual in the same manner as originated loans, rather they are generally considered to be accruing loans to the extent there is a reasonable expectation about the timing and amount of cash flows expected to be collected, however, PCI loans can be placed on nonaccrual in limited circumstances. The carrying amount of these purchased credit impaired loans was \$27.7 as of June 30, 2013 as compared to \$32.1 million as of December 31, 2012. See Note 4, "Loans, Allowance for Loan Losses and Credit Quality" within Notes to Consolidated Financial Statements included in Item 1 hereof for more information.

Nonperforming Assets Nonperforming assets are comprised of nonperforming loans, nonperforming securities, other real estate owned ("OREO"), and other assets in possession. Nonperforming loans consist of nonaccrual loans and loans that are more than 90 days past due but still accruing interest.

Nonperforming securities consist of securities that are on nonaccrual status. The Company holds six collateralized debt obligation securities ("CDOs") comprised of pools of trust preferred securities issued by banks and insurance companies, which are currently deferring interest payments on certain tranches within the bonds' structures including the tranches held by the Company. The bonds are anticipated to continue to defer interest until cash flows are

sufficient to satisfy certain collateralization levels designed to protect more senior tranches. As a result the Company has placed the six securities on nonaccrual status and has reversed any previously accrued income related to these securities.

OREO consists of real estate properties, which have served as collateral to secure loans, that are controlled or owned by the Bank. These properties are recorded at fair value less estimated costs to sell at the date control is established, resulting in a new cost basis. The amount by which the recorded investment in the loan exceeds the fair value (net of estimated costs to sell) of the foreclosed asset is charged to the allowance for loan losses. Subsequent declines in the fair value of the foreclosed asset below the new cost basis are recorded through the use of a valuation allowance. Subsequent increases in the fair value are recorded as

reductions in the allowance, but not below zero. All costs incurred thereafter in maintaining the property are charged to noninterest expense. In the event the real estate is utilized as a rental property, rental income and expenses are recorded as incurred and included in noninterest income and noninterest expense, respectively. Other assets in possession primarily consist of foreclosed assets and other non real estate assets deemed to be in control of the Company.

The following table sets forth information regarding nonperforming assets held by the Bank at the dates indicated: Table 1—Nonperforming Assets

A loan is considered impaired when, based on current information and events, it is probable that the Bank will be unable to collect the scheduled payments of principal or interest when due according to the contractual terms of the loan agreement. Factors considered by management in determining impairment include payment status, collateral value, and the probability of collecting scheduled principal and interest payments when due. Loans that experience insignificant payment delays and payment shortfalls generally are not classified as impaired. Management determines the significance of payment delays and payment shortfalls on a case-by-case basis, taking into consideration all of the circumstances surrounding the loan and the borrower, including the length of the delay, the reasons for the delay, the borrower's prior payment record, and the amount of the shortfall in relation to the principal and interest owed. Impairment is measured on a loan by loan basis for commercial and industrial, commercial real estate, commercial construction, and small business categories and for all loans identified as a troubled debt restructuring by comparing the loan's value to either the present value of expected future cash flows discounted at the loan's effective interest rate, the loan's obtainable market price, or the fair value of the collateral if the loan is collateral dependent. For impaired loans deemed collateral dependent, where impairment is measured using the fair value of the collateral, the Bank will either order a new appraisal or use another available source of collateral assessment such as a broker's opinion of value to determine a reasonable estimate of the fair value of the collateral.

At June 30, 2013, impaired loans included all commercial and industrial loans, commercial real estate loans, commercial construction, and small business loans that are on nonaccrual status, TDRs, and other loans that have been categorized as impaired. Total impaired loans at June 30, 2013 and December 31, 2012 were \$71.4 million and \$66.7 million, respectively. For additional information regarding the Bank's asset quality, including delinquent loans, nonaccruals, TDRs, and impaired loans, see Note 4, "Loans, Allowance for Loan Losses, and Credit Quality" within Notes to Consolidated Financial Statements included in Item 1 hereof.

Table of Contents

Potential problem loans are any loans which are not included in nonaccrual or nonperforming loans, where known information about possible credit problems of the borrowers causes management to have concerns as to the ability of such borrowers to comply with present loan repayment terms. The table below shows the potential problem commercial loans at the time periods indicated:

Table 6 - Potential Problem Commercial Loans

June 30,	December
2013	31, 2012
(Dollars in	thousands)
68	70
\$93,947	\$110,624

Number of loan relationships Aggregate outstanding balance

At June 30, 2013, these potential problem loans continued to perform with respect to payments. Management actively monitors these loans and strives to minimize any possible adverse impact to the Bank.

Allowance for Loan Losses The allowance for loan losses is maintained at a level that management considers adequate to provide for probable loan losses based upon evaluation of known and inherent risks in the loan portfolio. The allowance is increased by providing for loan losses through a charge to expense and by recoveries of loans previously charged-off and is reduced by loans being charged-off.

While management uses available information to recognize losses on loans, future additions to the allowance may be necessary based on increases in nonperforming loans, changes in economic conditions, or for other reasons. Additionally, various regulatory agencies, as an integral part of the Bank's examination process, periodically assess the adequacy of the allowance for loan losses and may require it to increase its provision for loan losses or recognize further loan charge-offs.

Table of Contents

The following table summarizes changes in the allowance for loan losses and other selected statistics for the periods presented:

Table of Contents

For purposes of the allowance for loan losses, management segregates the loan portfolio into the portfolio segments detailed in the table below. The allocation of the allowance for loan losses is made to each loan category using the analytical techniques and estimation methods described herein. While these amounts represent management's best estimate of the distribution of probable losses at the evaluation dates, they are not necessarily indicative of either the categories in which actual losses may occur or the extent of such actual losses that may be recognized within each category. Each of these loan categories possess unique risk characteristics that are considered when determining the appropriate level of allowance for each segment. The total allowance is available to absorb losses from any segment of the loan portfolio.

The following table sets forth the allocation of the allowance for loan losses by loan category at the dates indicated: Table 8—Summary of Allocation of Allowance for Loan Losses

	June 30, 2013			December 31, 2012

Other consumer	679	0.5	%	807	0.6	%
Total allowance for loan losses	\$52,976	100.0	%	\$51,834	100.0	%

To determine if a loan should be charged-off, all possible sources of repayment are analyzed. Possible sources of repayment include the potential for future cash flows, the value of the Bank's collateral, and the strength of co-makers or guarantors. When available information confirms that specific loans or portions thereof are uncollectible, these amounts are promptly charged-off against the allowance for loan losses and any recoveries of such previously charged-off amounts are credited to the allowance.

Regardless of whether a loan is unsecured or collateralized, the Company charges off the amount of any confirmed loan loss in the period when the loans, or portions of loans, are deemed uncollectible. For troubled, collateral-dependent loans, loss-confirming events may include an appraisal or other valuation that reflects a shortfall between the value of the collateral and the book value of the loan or receivable, or a deficiency balance following the sale of the collateral.

For additional information regarding the Bank's allowance for loan losses, see Note 4, "Loans, Allowance for Loan Losses, and Credit Quality" within Notes to Consolidated Financial Statements included in Item 1hereof. Federal Home Loan Bank Stock The Bank held an investment in Federal Home Loan Bank ("FHLB") of Boston of \$38.7 million and \$41.8 million at June 30, 2013 and December 31, 2012, respectively. The FHLB is a cooperative that provides services to its member banking institutions. The primary reason for the FHLB of Boston membership is to gain access to a reliable source of wholesale funding, particularly term funding, as a tool to manage interest rate risk. The purchase of stock in the FHLB is a requirement for a member to gain access to funding. The Company purchases FHLB stock proportional to the volume of funding received and views the purchases as a necessary long-term investment for the purposes of balance sheet liquidity and not for investment return.

Goodwill and Identifiable Intangible Assets Goodwill and identifiable intangible assets were \$161.1 million and \$162.1 million at June 30, 2013 and December 31, 2012, respectively.

The Company typically performs its annual goodwill impairment testing during the third quarter of the year, unless certain indicators suggest earlier testing to be warranted. The Company plans on performing the 2013 testing during

the upcoming third quarter.

Cash Surrender Value of Life Insurance Policies The Bank holds life insurance policies for the purpose of offsetting its future obligations to its employees under its retirement and benefits plans. The cash surrender value of life insurance policies was

Table of Contents

were CDARS.

\$98.9 million and \$97.3 million at June 30, 2013 and December 31, 2012, respectively. The Bank recorded tax exempt income from the life insurance policies of \$786,000 and \$1.5 million for the three and six months ended June 30, 2013, respectively, an increase of 6.1% and 5.3%, respectively, compared to the year ago periods.

Deposits As of June 30, 2013, deposits increased by 2.9% to \$4.7 billion when compared to \$4.5 billion at December 31, 2012, with core deposits representing 84.6% of total deposits. Total cost of deposits was 0.23% for the quarter, reflecting management's continued emphasis on core deposits and profitable relationships.

The Bank also participates in the Certificate of Deposit Registry Service ("CDARS") program, allowing the Bank to provide easy access to multi-million dollar FDIC deposit insurance protection on certificate of deposits investments for consumers, businesses and public entities. The economic downturn and subsequent flight to safety makes CDARS an attractive product for customers. In addition, the Bank may occasionally raise funds through brokered certificates of deposit. This channel allows the Bank to seek additional funding in potentially large quantities by attracting deposits from outside the Bank's core market. At June 30, 2013 and December 31, 2012, the Company had \$81.1

Borrowings The Company's borrowings consist of both short-term and long-term borrowings and provide the Bank with one of its primary sources of funding. The borrowings also serve the Bank by providing a contingent source of liquidity.

million and \$96.0 million, respectively, of brokered deposits of which \$57.3 million and \$72.2 million, respectively,

The Company's borrowings consisted of the following as of the periods indicated: Table 9—Borrowings

	June 30,	December 31,
	2013	2012
	(Dollars in th	ousands)
Short-term borrowings - one year and under (1)		
Federal Home Loan Bank and other borrowings (2)	\$150,305	\$175,245
Customer repurchase agreements	141,826	153,359
Total short-term borrowings	\$292,131	\$328,604
Long-term borrowings - over one year (1)		
Federal Home Loan Bank borrowings	\$111,151	\$108,324
Wholesale repurchase agreements	50,000	50,000
Junior subordinated debentures:		
Capital Trust V	51,547	51,547

Central Trust II	6,903	7,012
Subordinated debentures	30,000	30,000
Total long-term borrowings	\$265,169	\$262,451
Total borrowings	\$557,300	\$591,055

⁽¹⁾ Classification is based upon duration at origination and not predicated upon remaining time to maturity.

⁽²⁾ Includes a \$12.0 million, at December 31, 2012, Parent Company outstanding line of credit. As of June 30, 2013 and December 31, 2012, the Bank had \$2.8 billion and \$3.0 billion, respectively, of assets pledged as collateral against borrowings. These assets are primarily pledged to the FHLB of Boston, the Federal Reserve Bank of Boston, and serve as collateral for customer repurchase agreements.

Capital Resources On June 20, 2013, the Company's Board of Directors declared a cash dividend of \$0.22 per share to stockholders of record as of the close of business on July 1, 2013. This dividend was paid on July 12, 2013. The Federal Reserve, the FDIC, and other regulatory agencies have established capital guidelines for banks and bank holding companies. Risk-based capital guidelines issued by the federal regulatory agencies require banks to meet a minimum Tier 1 risk-based capital ratio of 4.0% and a total risk-based capital ratio of 8.0%. A minimum requirement of 4.0% Tier 1 leverage capital is also mandated. At June 30, 2013, the Company and the Bank exceeded the minimum requirements for Tier 1 risk-based, total risk-based capital, and Tier 1 leverage capital.

Table of Contents

The Company's and the Bank's actual capital amounts and ratios are also presented in the following table: Table 10—Company and Bank's Capital Amounts and Ratios

In July 2013, the U.S. federal banking agencies approved an interim final rule which consolidates and adopts, with revisions, the three Notices of Proposed Rulemaking ("NPR's") that were previously issued to implement the Basel III capital standards, along with changes required by the Dodd-Frank Act. The Basel III standards are now scheduled to be phased-in beginning January 1, 2014 for advanced approaches FDIC-supervised institutions, and beginning on January 1, 2015 for all other institutions, including the Company.

The interim final rule will strengthen both the quality and quantity of risk-based capital for all banks, including placing greater emphasis on tier 1 common equity capital, and creates a new regulatory minimum capital level for common equity tier 1 ("CET1"). The new rules redefine regulatory capital, increase existing minimum amounts, and introduce a capital conservation buffer to be held in excess of minimum amounts. Additionally, the rules attempt to harmonize the agencies' rules for calculating risk-weighted assets to enhance risk sensitivity and address weaknesses identified over recent years, by incorporating certain international capital standards of the Basel Committee of Banking Supervision. The revisions to the originally issued NPRs do not change the current risk-weighting approach for residential mortgages, include an opt-out option from the recognition of accumulated other comprehensive income as regulatory capital, and grandfather the treatment of Trust Preferred Securities as regulatory capital. Based on

preliminary assessments of the proposed framework, management believes that the Company will continue to exceed all estimated well-capitalized regulatory requirements over the course of the proposed phase-in period. Investment Management As of June 30, 2013, the Rockland Trust Investment Management Group had assets under administration of \$2.3 billion, representing approximately 4,266 trust, fiduciary, and agency accounts. At December 31, 2012, assets under administration were \$2.2 billion, representing approximately 4,051 trust, fiduciary, and agency accounts. Included in these amounts as of June 30, 2013 and December 31, 2012 are assets under administration of \$164.3 million and \$139.8 million, respectively, relating to the Company's registered investment advisor, Bright Rock Capital Management, LLC, which provides

Table of Contents

institutional quality investment management services to institutional and high net worth clients. Revenue from the Investment Management Group amounted to \$4.0 million and \$7.5 million for the three and six months ended June 30, 2013, respectively compared to \$3.4 million and \$6.6 million for the three and six months ended June 30, 2012, respectively.

Additionally, for the three and six months ended June 30, 2013 retail investments and insurance revenue was \$403,000 and \$751,000 respectively, compared to \$401,000 and \$832,000 for the three and six months ended June 30, 2012, respectively. Retail investments and insurance includes revenue from LPL Financial and its affiliates, LPL Insurance Associates, Inc., Savings Bank Life Insurance of Massachusetts, and Smith Companies LTD, a division of Capitas Financial, LLC.

Mortgage Banking The Bank originates residential loans for both its portfolio and with the intention of selling them in the secondary market. The Bank's mortgage banking income consists primarily of revenue from premiums received on loans sold with servicing released, origination fees, and gains and losses on sold mortgages less related commission expense. The gains and losses resulting from the sales of loans with servicing retained are adjusted to recognize the present value of future servicing fee income over the estimated lives of the related loans. The following table shows the total residential loans that were closed and the amounts which were held in the portfolio and sold or held for sale in the secondary market during the periods indicated:

Table 11—Closed Residential Real Estate Loans

	Three Month 30	s Ended June	Six Months Ended June 30		
	2013 2012		2013	2012	
	(Dollars in th	ousands)			
Held in portfolio	\$8,109	\$19,485	\$12,147	\$32,590	
Sold/held for sale in secondary market	77,381	76,217	171,464	141,870	
Total closed loans	\$85,490	\$95,702	183,611	174,460	

Included in mortgage banking income is the impact of the Bank's mortgage servicing assets. Servicing assets are recognized as separate assets when rights are acquired through sale of loans with servicing rights retained. The principal balance of loans serviced by the Bank on behalf of investors amounted to \$212.8 million at June 30, 2013 and \$198.8 million at December 31, 2012. Upon sale, the mortgage servicing asset is established, which represents the then current estimated fair value based on market prices for comparable mortgage servicing contracts, when available, or alternatively is based on a valuation model that calculates the present value of estimated future net servicing income. The valuation model incorporates assumptions that market participants would use in estimating future net servicing income, such as the cost to service, the discount rate, an inflation rate, ancillary income, prepayment speeds and default rates and losses. Impairment is determined by stratifying the rights based on predominant characteristics, such as interest rate, loan type and investor type. Impairment is recognized through a valuation allowance, to the extent that fair value is less than the capitalized amount. If the Company later determines that all or a portion of the impairment no longer exists, a reduction of the allowance may be recorded as an increase to income. Servicing rights are recorded in other assets in the consolidated balance sheets, are amortized in proportion to and over the period of estimated net servicing income, and are assessed for impairment based on fair value at each reporting date. The following table shows the adjusted cost of the servicing rights associated with these loans and the changes for the periods indicated:

Table 12—Mortgage Servicing Asset

Table of Contents

RESULTS OF OPERATIONS

The Company's results of operations are largely dependent on net interest income, which is the difference between the interest earned on loans and securities and the interest paid on deposits and borrowings. The results of operations are also affected by the level of income/fees from loans, deposits, mortgage banking and investment management, as well as the level of operating expenses, provision for loan losses, provision for income taxes, and the relative levels of interest rates and economic activity. The following table provides a summary of results of operations:

Table 13—Summary of Results of Operations

	Three Months Ended June 30			Six Months Ended June			30	
	2013		2012		2013		2012	
	(Dollars in thousands)							
Net Income	\$12,758		\$8,874		\$25,010		\$21,057	
Diluted earnings per share	\$0.56		\$0.41		\$1.09		\$0.97	
Return on average assets	0.89	%	0.71	%	0.89	%	0.86	%
Return on average equity	9.40	%	7.34	%	9.33	%	8.81	%
Net interest margin	3.57	%	3.80	%	3.58	%	3.81	%

The variances between these periods are impacted by the Central Bancorp, Inc. ("Central") acquisition which took place in the fourth quarter of 2012.

Net Interest Income The amount of net interest income is affected by changes in interest rates and by the volume and mix of interest earning assets and interest bearing liabilities.

On a fully tax equivalent basis, net interest income for the second quarter of 2013 increased \$3.0 million, or 6.9%, to \$45.9 million, when compared to the second quarter of 2012. The Company's net interest margin was 3.57% for the quarter ended June 30, 2013 as compared to 3.80% for the quarter ended June 30, 2012. The Company's interest rate spread was 3.42% and 3.63% for the second quarters of 2013 and 2012, respectively. The decline in the net interest margin is primarily the result of assets re-pricing in a lower rate environment without the ability to fully offset this impact through further reductions in funding costs.

The following tables present the Company's daily average balances, net interest income, interest rate spread, and net interest margin for the three and six months ending June 30, 2013 and 2012. For purposes of the table and the following discussion, income from interest-earning assets and net interest income are presented on a fully-taxable equivalent basis by adjusting income and yields earned on tax-exempt interest received on securities and loans, to make them equivalent to income and yields on fully-taxable earning assets. The fully-taxable equivalent ("FTE") was calculated using the blended federal and state statutory tax rate.
