(Address of principal executive offices)

Indicate by check mark whether the registrant files or will file annual reports  
under cover of Form 20-F or Form 40-F: FORM 20-F  FORM 40-F

Indicate by check mark if the registrant is submitting the Form 6-K in paper as  
permitted by Regulation S-T Rule 101(b)(1): \_\_\_\_\_

Indicate by check mark if the registrant is submitting the Form 6-K in paper as  
permitted by Regulation S-T Rule 101(b)(7): \_\_\_\_\_

Indicate by check mark whether the registrant by furnishing the information  
contained in this Form, is also thereby furnishing the information to the  
Commission pursuant to Rule 12g3-2(b) under the Securities Exchange Act of 1934.  
YES  NO

If "Yes" is marked, indicate below the file number assigned to the registrant in  
connection with Rule 12g3-2(b): 82-\_\_\_\_\_

SIGNATURES

Pursuant to the requirements of the Securities Exchange Act of 1934, the  
registrant has duly caused this report to be signed on its behalf of the  
undersigned, thereunto duly authorized.

## MATERIAL CHANGE REPORT

1. NAME AND ADDRESS OF COMPANY

IMA Exploration Inc. (the "Issuer")  
#709 - 837 West Hastings Street  
Vancouver, BC  
V6C 3N6  
Phone: (604) 687-1828

2. DATE OF MATERIAL CHANGE

January 21, 2005

3. PRESS RELEASE

The press release was released on January 21, 2005 through various approved public media and filed with the TSX Venture Exchange and the British Columbia, Ontario, Alberta and Quebec Securities Commissions.

4. SUMMARY OF MATERIAL CHANGE(S)

See attached press release for details.

5. FULL DESCRIPTION OF MATERIAL CHANGE

See attached press release for details.

6. RELIANCE ON SUBSECTION 7.1(2) OR (3) OF NATIONAL INSTRUMENT 51-102

Not Applicable

7. OMITTED INFORMATION

Not Applicable

8. EXECUTIVE OFFICER

Joseph Grosso  
Phone: (604) 687-1828

9. DATE OF REPORT

January 21, 2005.

NEWS RELEASE

JANUARY 21, 2005

### SOIL SAMPLING REVEALS A 6 KM MINERALIZED TREND PARALLEL TO THE NAVIDAD AND ESPERANZA TRENDS

IMA EXPLORATION INC. (IMR-TSX.V, IMXPF-OTC.BB) is pleased to announce results of ongoing surface work at its 100% owned Navidad project in Patagonia, Argentina. A large expansion to the soil sample grid and follow-up prospecting has uncovered a series of new mineralized zones to the southeast of Loma de la Plata. The newly named "ARGENTA TREND" includes Sector Zeta and Loma de la Plata and extends approximately six kilometres to the southeast, parallel with the Esperanza and Navidad Trends. Ongoing prospecting and detailed rock sampling continue to define this exciting new trend and individual mineralized zones along it.

1366 new samples (including blanks and duplicates) were collected at 50m intervals on lines spaced 200m apart and cover an area of over 1300 hectares to the south of the previous grid (see <http://www.imaexploration.com/s/Navidad.asp> for updated maps showing results of the entire Navidad soil grid). The Argenta Trend is highlighted by anomalous silver, lead and zinc values with subordinate and sporadic anomalous copper.

Prospecting and geological mapping along the Argenta Trend has found several new zones of silver-lead, lead-silver, and silver-copper mineralization. Results have been received to date from 32 rock chip and grab samples, these range from below detection to high-grade silver, lead, and copper. Highlights include eight samples containing over 100 g/t silver (up to 290g/t Ag), ten samples with over 10% lead (up to 29.7% Pb), and two samples with over 1% copper (up to 1.42%). Detailed sampling along the Argenta Trend is ongoing with the objective of defining size and average grade of individual mineralized zones, results will be reported as they become available.

Mineralization along the Argenta Trend occurs mainly within latite volcanic rocks that appear similar to those at Galena and Navidad Hills and the newly discovered Loma de la Plata zone. However, mineralization in the Argenta Trend also occurs in sandstones and limestones with which the volcanics are interbedded. The sequence is interpreted to be at the same stratigraphic level as mineralization defined at Galena Hill, but with some differences in that sedimentary facies are coarser grained. An interesting and unusual feature of the Argenta Trend is the presence of a more than 5 km long continuous strontium in soil anomaly caused by a bed of celestite (strontium sulfate) that appears to have an exhalative hydrothermal origin. Much more restricted beds of celestite have previously been found on the flanks of Navidad and Galena Hill. At both Navidad and the Argenta Trend the celestite lies stratigraphically above the levels most favorable for silver mineralization.

Volcanic strata outcropping along the Argenta Trend dip shallowly to the northeast towards the Navidad and Galena Hill area (see previously published map and cross-section of Loma de la Plata on IMA's web-site). Based on geological mapping it is interpreted that this same favourable stratigraphic level is present at depth between the Argenta and Esperanza Trends, a distance of over 2.4 kilometers. Geophysical crews are currently on site surveying this area with the objective of developing additional targets that may be present along this favourable stratigraphic level but not exposed on surface.

## Edgar Filing: IMA EXPLORATION INC - Form 6-K

Dr. Paul Lhotka is IMA's Qualified Person for the Navidad project under National Instrument 43-101 regulations and has overseen all aspects of the current program. For more information and maps depicting the work described herein please visit IMA's web site at <http://www.imaexploration.com/>.
