Securities registered or to be registered pursuant to Section 12(b) of the Act.

#### Title of each class

Name of each exchange on which registered

Series B shares, in the form of American Depositary Shares New York Stock Exchange Securities registered or to be registered pursuant to Section 12(g) of the Act.

### **NONE**

Securities for which there is a reporting obligation pursuant to Section 15(d) of the Act.

### **NONE**

Indicate the number of outstanding shares of each of the issuer's classes of capital or common stock as of the close of the period covered by the annual report.

Series A shares 142,819,552

### Series B shares 120,376,972

Indicate by check mark if the registrant is a well-known seasoned issuer, as defined in rule 405 of the Securities Act:

x YES "NO

If this report is an annual or transition report, indicate by check mark if the registrant is not required to file reports pursuant to Section 13 or 15(d) of the Securities Exchange act of 1934:

"YES x NO

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days.

x YES "NO

Indicate by check mark whether the registrant has submitted electronically and posted on its corporate Web site, if any, every Interactive Data File required to be submitted and posted pursuant to Rule 405 of Regulation S-T (§232.405 of this chapter) during the preceding 12 months (or for such shorter period that the registrant was required to submit and post such files).

"YES "NO

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, or a non accelerated filer. See definition of "accelerated filer and large accelerated filer" in rule 12b-2 of the Exchange Act.

x Large accelerated filer "Accelerated filer "Non- accelerated filer

Indicate by check mark which basis of accounting the registrant has used to prepare the financial statements included in this filing:

"U.S. GAAP xInternational Financial Reporting Standards as issued by the International Accounting Standards Board "Other

If "Other" has been checked in response to the previous question, indicate by check mark which financial statement item the registrant has elected to follow.

Indicate by check mark which financial statement item the registrant has elected to follow.

"Item 17" Item 18

If this is an annual report, indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Exchange Act):

"YES x NO

### PRESENTATION OF INFORMATION

In this Annual Report on Form 20-F, except as otherwise provided or unless the context requires otherwise, all references to "we", "us", "Company" or "SQM" are to Sociedad Química y Minera de Chile S.A., an open stock corporation (*sociedad anónima abierta*) organized under the laws of the Republic of Chile, and its consolidated subsidiaries.

All references to "\$," "US\$," "U.S. dollars," "USD" and "dollars" are to United States dollars, references to "pesos," "CLP" and "Ch\$" are to Chilean pesos, references to ThUS\$ are to thousands of United States dollars, references to ThCh\$ are to thousands of Chilean pesos and references to "UF" are to *Unidades de Fomento*. The UF is an inflation-indexed, peso-denominated unit that is linked to, and adjusted daily to reflect changes in, the previous month's Chilean consumer price index. As of December 28, 2012, UF 1.00 was equivalent to US\$47.75 and Ch\$22,851.84.

The Republic of Chile is governed by a democratic government, organized in fourteen regions plus the Metropolitan Region (surrounding and including Santiago, the capital of Chile). Our production operations are concentrated in northern Chile, specifically in the Tarapacá Region and in the Antofagasta Region.

Our fiscal year ends on December 31. As December 31 is a public holiday in Chile; certain financial information is reflected as of December 28, 2012.

We use the metric system of weights and measures in calculating our operating and other data. The United States equivalent units of the most common metric units used by us are as shown below:

1 kilometer equals approximately 0.6214 miles

1 meter equals approximately 3.2808 feet

1 centimeter equals approximately 0.3937 inches

| Edgar Filing: CHEMICAL & MINING CO OF CHILE INC - Form 20-F   |
|---|
| 1 hectare equals approximately 2.4710 acres   |
| 1 metric ton ("MT") equals 1,000 kilograms or approximately 2,205 pounds.   |
| We are not aware of any independent, authoritative source of information regarding sizes, growth rates or market shares for most of our markets. Accordingly, the market size, market growth rate and market share estimates contained herein have been developed by us using internal and external sources and reflect our best current estimates. These estimates have not been confirmed by independent sources. |
| Percentages and certain amounts contained herein have been rounded for ease of presentation. Any discrepancies in any figure between totals and the sums of the amounts presented are due to rounding.  |
| GLOSSARY  |
| "assay values" Chemical result or mineral component amount that contains the sample.  |
| "average global metallurgical recoveries" Percentage that measures the metallurgical treatment effectiveness based of the quantitative relationship between the initial product contained in the mine-extracted material and the final product produced in the plant.   |
|   |

"average mining exploitation factor" Index or ratio that measures the mineral exploitation effectiveness, based on the quantitative relationship between (in-situ mineral minus exploitation losses) / in-situ mineral.

"CAGR" Compound annual growth rate, the year over year growth rate of an investment over a specified period of time

"cash and cash equivalents" The International Accounting Standards Board (IASB) defines cash and cash equivalents as short-term, highly liquid investments that are readily convertible to known amounts of cash and which are subject to an insignificant risk of changes in value.

"Controller Group"\*\* A person or company or group of persons or companies that according to Chilean law, have executed a joint performance agreement, that have a direct or indirect share in a company's ownership and have the

power to influence the decisions of the company's management.

ii

| "Corfo" Production Development Corporation ( <i>Corporación de Fomento de la Producción</i> ), formed in 1939, a nationa organization in charge of promoting Chile's manufacturing productivity and commercial development. |
|---|
| "cut-off grade" The minimal assay value or chemical amount of some mineral component above which exploitation is economical.  |
| "dilution" Loss of mineral grade because of contamination with barren material (or waste) incorporated in some exploited ore mineral.   |
| "exploitation losses" Amounts of ore mineral that have not been extracted in accordance with exploitation designs.  |
| "fertigation" The process by which plant nutrients are applied to the ground using an irrigation system.  |
| "geostatistical analysis" Statistical tools applied to mining planning, geology and geochemical data that allow estimation of averages, grades and quantities of mineral resources and reserves.                            |
| "heap leaching" A process whereby minerals are leached from a heap, or pad, of crushed ore by leaching solutions percolating down through the heap and collected from a sloping, impermeable liner below the pad.           |
| "horizontal layering" Rock mass (stratiform seam) with generally uniform thickness that conform to the sedimentary fields (mineralized and horizontal rock in these cases).   |
| "hypothetical resources" Mineral resources that have limited geochemical reconnaissance, based mainly on geologica data and samples assay values spaced between 500–1000 meters.  |
| "Indicated Mineral Resource" See "Resources—Indicated Mineral Resource."  |

"Inferred Mineral Resource" See "Resources—Inferred Mineral Resource."

| " <b>industrial crops</b> " Refers to crops that require processing after harvest in order to be ready for consumption or sale. Tobacco, tea and seed crops are examples of industrial crops.                                  |
|--|
| "Kriging Method" A technique used to estimate ore reserves, in which the spatial distribution of continuous geophysical variables is estimated using control points where values are known.                                    |
| "LIBOR" London Inter Bank Offered Rate.  |
| "limited reconnaissance" Low or limited level of geological knowledge.   |
| "Measured Mineral Resource" See "Resources—Measured Mineral Resource."   |
| "metallurgical treatment" A set of chemical and physical processes applied to the caliche ore and to the salar brines t extract their useful minerals (or metals).   |
| "ore depth" Depth of the mineral that may be economically exploited.   |
| "ore type" Main mineral having economic value contained in the caliche ore (sodium nitrate or iodine).   |
| "ore" A mineral or rock from which a substance having economic value may be extracted.   |
| "Probable Mineral Reserve" See "Reserves—Probable Mineral Reserve."  |
| "Proved Mineral Reserve" See "Reserves—Proved Mineral Reserve."  |
| "Reserves—Probable Mineral Reserve"* The economically mineable part of an Indicated Mineral Resource and, in some circumstances, Measured Mineral Resource. The calculation of the reserves includes diluting of materials and |

allowances for losses which may occur when the material is mined. Appropriate assessments, which may include feasibility studies, have been carried out and include consideration of and modification by realistically assumed mining, metallurgical, economic, marketing, legal, environmental, social and governmental factors. These assessments demonstrate at the time of reporting that extraction is reasonably justified. A Probable Mineral Reserve has a lower level of confidence than a Proved Mineral Reserve.

"Reserves—Proved Mineral Reserve"\* The economically mineable part of a Measured Mineral Resource. The calculation of the reserves includes diluting materials and allowances for losses which may occur when the material is mined. Appropriate assessments, which may include feasibility studies, have been carried out and include consideration of and modification by realistically assumed mining, metallurgical, economic, marketing, legal, environmental, social and governmental factors. These assessments demonstrate at the time of reporting that extraction is reasonably justified.

iii

"Resources—Indicated Mineral Resource"\* That part of a Mineral Resource for which tonnage, densities, shape, physical characteristics, grade and mineral content can be estimated with a reasonable level of confidence. The calculation is based on exploration, sampling and testing information gathered through appropriate techniques from locations such as outcrops, trenches, pits, workings, and drill holes. The locations are too widely or inappropriately spaced to confirm geological continuity and/or grade continuity but are spaced closely enough for continuity to be assumed. An Indicated Mineral Resource has a lower level of confidence than that applying to a Measured Mineral Resource, but has a higher level of confidence than that applying to an Inferred Mineral Resource.

A deposit may be classified as an Indicated Mineral Resource when the nature, quality, amount and distribution of data are such as to allow the Competent Person, as that term is defined under Chilean Law Number 20,235, determining the Mineral Resource to confidently interpret the geological framework and to assume continuity of mineralization. Confidence in the estimate is sufficient to allow the appropriate application of technical and economic parameters and to enable an evaluation of economic viability.

"Resources—Inferred Mineral Resource"\* That part of a Mineral Resource for which tonnage, grade and mineral content can be estimated with a low level of confidence, by inferring them on the basis of geological evidence and assumed but not verified geological and/or grade continuity. The estimate is based on information gathered through appropriate techniques from locations such as outcrops, trenches, pits, workings and drill holes, and this information is of limited or uncertain quality and/or reliability. An Inferred Mineral Resource has a lower level of confidence than that applying to an Indicated Mineral Resource.

"Resources—Measured Mineral Resource"\* The part of a Mineral Resource for which tonnage, densities, shape, physical characteristics, grade and mineral content can be estimated with a high level of confidence. The estimate is based on detailed and reliable exploration, sampling and testing information gathered through appropriate techniques from locations such as outcrops, trenches, pits, workings, and drill holes. The locations are spaced closely enough to confirm geological and/or grade continuity.

A deposit may be classified as a Measured Mineral Resource when the nature, quality, amount and distribution of data are such as to leave no reasonable doubt, in the opinion of the Competent Person, as that term is defined under Chilean Law Number 20,235, determining the Mineral Resource, that the tonnage and grade of the deposit can be estimated within close limits and that any variation from the estimate would not significantly affect potential economic viability. This category requires a high level of confidence in, and understanding of, the geology and controls of the mineral deposit. Confidence in the estimate is sufficient to allow the appropriate application of technical and economic parameters and to enable an evaluation of economic viability.

"solar salts" A mixture of 60% sodium nitrate and 40% potassium nitrate used in the storage of thermo-energy.

"vat leaching" A process whereby minerals are extracted from crushed ore by placing the ore in large vats containing leaching solutions.

"waste" Rock or mineral which is not economical for metallurgical treatment.

"Weighted Average Age" The sum of the product of the age of each fixed asset at a given facility and its current gross book value as of December 31, 2012 divided by the total gross book value of the Company's fixed assets at such facility as of December 31, 2012.

- \*The definitions we use for resources and reserves are based on those provided by the "*Instituto de Ingenieros de Minas de Chile*" (Chilean Institute of Mining Engineers).
- \*\* The definition of a Controller Group that has been provided is the one that applies to the Company. Chilean law provides for a broader definition of a Controller Group.

### CAUTIONARY STATEMENT REGARDING FORWARD-LOOKING STATEMENTS

This Form 20-F contains statements that are or may constitute forward-looking statements within the meaning of the Private Securities Litigation Reform Act of 1995. These statements are not based on historical facts and reflect our expectations for future events and results. Words such as "believe," "expect," "predict," "anticipate," "intend," "estimate," "should," "may," "likely", "could" or similar expressions may identify forward-looking information. These statements appear throughout this Form 20-F and include statements regarding the intent, belief or current expectations of the Company and its management, including but not limited to any statements concerning:

iv

trends affecting the prices and volumes of the products we sell; level of reserves, quality of the ore and brines, and production levels and yields; our capital investment program and development of new products; the future impact of competition; and regulatory changes.

Such forward-looking statements are not guarantees of future performance and involve risks and uncertainties. Actual results may differ materially from those described in such forward-looking statements included in this Form 20-F, including, without limitation, the information under Item 4. Information on the Company, Item 5. Operating and Financial Review and Prospects and Item 11. Quantitative and Qualitative Disclosures About Market Risk. Factors that could cause actual results to differ materially include, but are not limited to:

volatility of global prices for our products;
political, economic and demographic developments in certain emerging market countries, where we conduct a large portion of our business;

changes in production capacities;
the nature and extent of future competition in our principal markets;
our ability to implement our capital expenditures program, including our ability to obtain financing when required;
changes in raw material and energy prices;
currency and interest rate fluctuations;
risks relating to the estimation of our reserves;
changes in quality standards or technology applications;
adverse legal, regulatory or labor disputes or proceedings;
changes in governmental regulations; and
additional factors discussed below under Item 3. Key Information—Risk Factors

#### 3.A. Selected Financial Data

The following table presents selected financial data as of December 31, 2012 and the previous four years. The selected financial data should be read in conjunction with the Consolidated Financial Statements and notes thereto, "Item 5. Operating and Financial Review and Prospects" and other financial information included herein.

Since January 1, 2010, the Company's consolidated financial statements have been prepared in accordance with the International Financial Reporting Standards as published by the International Accounting Standards Board (IASB).

The Company's consolidated financial information as of and for the year ended December 31, 2009, was restated in accordance with IFRS.

|  | As of and for the year ended December |           |           |         |  |  |
|--|---------------------------------------|-----------|-----------|---------|--|--|

- (1) Except shares outstanding, dividend and net earnings per share and net earnings per ADS.
- (2) There are no authoritative pronouncements related to the calculation of earnings per share in accordance with IFRS. The Company has not conducted any type of operation which would give rise to a potential dilutive effect on its earnings per share. The total number of outstanding shares is the same as the weighted average shares outstanding.
- (3) The Series A ADSs were delisted from the New York Stock Exchange on March 27, 2008. The ratio of ordinary shares to Series B ADSs changed from 10:1 to 1:1 on March 28, 2008. The calculation of earnings per ADS is based on the ratio of 1:1.
- (4) Dividends per share are calculated based on 263,196,524 shares for the periods ended December 31, 2012, 2011, 2010, and 2009.
- (5) Dividends may only be paid from net income as determined in accordance with IFRS; see Item 8.A.8. Dividend Policy. For dividends in Ch\$ see Item 8.A.8. Dividend Policy Dividends.
- (6) Dividend amount paid per calendar year to shareholders of the Company.

#### **EXCHANGE RATES**

Chile has two currency markets, the Formal Exchange Market (*Mercado Cambiario Formal*) in which we conduct our transactions, and the Informal Exchange Market (*Mercado Cambiario Informal*). The Formal Exchange Market comprises banks and other entities authorized by the Chilean Central Bank (*Banco Central de Chile*). The Informal Exchange Market comprises entities that are not expressly authorized to operate in the Formal Exchange Market, such as certain foreign exchange houses and travel agencies, among others. The Chilean Central Bank is empowered to determine that certain purchases and sales of foreign currencies be carried out on the Formal Exchange Market.

Both the Formal Exchange Market and the Informal Exchange Market are driven by free market forces. Current regulations require that the Chilean Central Bank be informed of certain transactions and that these transactions be effected through the Formal Exchange Market.

The Observed Exchange Rate (dólar observado), which is reported by the Chilean Central Bank and published daily in the Chilean newspapers, is computed by taking the weighted average of the previous business day's transactions on the Formal Exchange Market. The Chilean Central Bank has the power to intervene by buying or selling foreign currency on the Formal Exchange Market to attempt to maintain the Observed Exchange Rate within a desired range. During the past few years the Chilean Central Bank has intervened to attempt to maintain the Observed Exchange Rate within a certain range only under special circumstances. Although the Chilean Central Bank is not required to purchase or sell U.S. dollars at any specific exchange rate, it generally uses spot rates for its transactions. Other banks generally carry out authorized transactions at spot rates as well.

The Informal Exchange Market reflects transactions carried out at an informal exchange rate (the "Informal Exchange Rate"). There are no limits imposed on the extent to which the Informal Exchange Rate can fluctuate above or below the Observed Exchange Rate. In recent years, the variations between the Observed Exchange Rate and the Informal Exchange Rate have not been significant.

The Federal Reserve Bank of New York does not report a noon buying rate for Chilean pesos.

| Observed Exchange Rate (1) |         |               |                |                   |  |  |  |

### 3.C. Reasons for the Offer and Use of Proceeds

Not applicable.

#### 3.D. Risk Factors

Our operations are subject to certain risk factors that may affect SQM's financial condition or results of operations. In addition to other information contained in this Annual Report on Form 20-F, you should carefully consider the risks described below. These risks are not the only ones we face. Additional risks not currently known to us or that are known but we currently believe are not significant may also affect our business operations. Our business, financial condition or results of operations could be materially affected by any of these risks.

### Risks Relating to our Business

Volatility of world fertilizer and chemical prices and changes in production capacities could affect our business, financial condition and results of operations

The prices of our products, specifically potassium chloride, are determined principally by world prices, which, in some cases, have been subject to substantial volatility in recent years. World fertilizer and chemical prices vary depending upon the relationship between supply and demand at any given time. Supply and demand dynamics for our products are tied to a certain extent to global economic cycles, and have been impacted by current global economic conditions. Furthermore, the supply of certain fertilizers or chemical products, including certain products that we provide, varies principally depending on the production of the major producers, including SQM, and their respective business strategies.

During 2008, world prices of potassium-based fertilizers (including some of our specialty plant nutrients and potassium chloride) increased significantly during the first nine months of the year. Towards the end of 2008, fertilizer prices generally fell as a result of the global economic and financial slowdown. In 2009, volatility in prices continued to affect commodity markets around the world. Since 2010, prices of potassium-based fertilizers have stabilized after the conclusion of important contract negotiations between major producers and buyers at the end of 2009. However, during the last quarter of 2012, we observed lower pricing of contracts between Chinese purchasers and major potash producers, which has created increased volatility in the price of fertilizers. We cannot assure you that prices and sales

volumes will not decline in the future.

Iodine prices have followed an upward trend since late 2003, reaching an average price of approximately US\$53 per kilogram in 2012, over 40% higher than average prices in 2011. During 2012, iodine demand reached record highs, surpassing demand in previous years. We cannot assure you that prices or sales volumes will not decline in the future.

We started production of lithium carbonate from the brines extracted from the Salar de Atacama in October 1996 and started selling lithium carbonate commercially in January 1997. Our entry into the market created an oversupply of lithium carbonate, resulting in a drop in prices from over US\$3,000 per ton before our entry to less than US\$2,000 per ton in 1997. At the end of 2008, prices were approximately US\$6,000 per ton and remained at this level until the fourth quarter of 2009 when prices declined to approximately US\$5,000 per ton. As a result of events in global markets during 2009, demand for lithium carbonate declined, causing a drop in lithium prices and sales volumes. In September 2009, we announced a 20% price cut for lithium carbonate and lithium hydroxide as a measure to stimulate demand. As a result, in 2010, we observed demand recovery in the lithium market, which continued in 2011. In 2012, we continued to see strong market growth, driven mostly by an increase in demand related to battery use. We cannot assure you that this positive trend will continue in the future. We cannot assure you that prices and sales volumes will not decline in the future.

We expect that prices for the products we manufacture will continue to be influenced, among other things, by worldwide supply and demand and the business strategies of major producers. Some of the major producers, including SQM, have increased or have the ability to increase production. As a result, the prices of our products may be subject to substantial volatility. High volatility or a substantial decline in the prices, or in volume demand, of one or more of our products could have a material adverse effect on our business, financial condition and results of operations.

Our sales to emerging markets and expansion strategy expose us to risks related to economic conditions and trends in those countries

We sell our products in more than 110 countries around the world. In 2012, approximately 46% of our sales were made in emerging market countries: 17% in Central and South America (excluding Chile); 6% to Africa and the Middle East; 11% in Chile; and 12% in Asia and Oceania (excluding Japan). We expect to expand our sales in these and other emerging markets in the future. In addition, we may carry out acquisitions or joint ventures in jurisdictions in which we currently do not operate, relating to any of our businesses or to new businesses in which we believe we may have sustainable competitive advantages. The results of our operations and our prospects in other countries in which we establish operations will depend, in part, on the general level of political stability and economic activity and policies in those countries. Future developments in the political systems or economies of these countries or the implementation of future governmental policies in those countries, including the imposition of withholding and other taxes, restrictions on the payment of dividends or repatriation of capital, the imposition of import duties or other restrictions, the imposition of new environmental regulations or price controls or changes in relevant laws or regulations, could have a material adverse effect on our sales or operations in those countries.

#### Our inventory levels may increase because of the global economic slowdown

In general, the global economic slowdown experienced during 2008 and 2009 had an impact on our inventories. Demand decreased during 2009 and, as a result, inventories increased significantly and continue to be high in 2013. Higher inventories carry a financial risk due to increased need for cash to fund working capital. Higher inventory levels could also imply increased risk of loss of product. We cannot assure you that inventory levels will not continue to remain high in 2013, or increase further, in the future. These factors could have a material adverse effect on our business, financial condition and results of operations.

Our level of and exposure to unrecoverable accounts receivable may significantly increase

Potentially negative effects of the global economic slowdown on the financial condition of our customers may include the extension of the payment terms of our accounts receivable and may increase our exposure to bad debt. While we have implemented, such as using credit insurance, letters of credits and prepayment for a portion of sales, to minimize this risk, the increase in our accounts receivable coupled with the financial condition of customers may result in losses that could have a material adverse effect on our business, financial condition and results of operations.

### New production of iodine or lithium carbonate from current or new competitors

Potential new production of iodine and lithium carbonate from current or new competitors in the markets in which we operate could adversely affect prices. There is limited information on the status of new iodine or lithium carbonate production capacity expansion projects being developed by current and potential competitors and, as such, we cannot make accurate projections regarding the capacities of possible new entrants into the market and the dates on which they could become operational. If these potential projects are completed in the short term, they could adversely affect market prices and our market share, which, in turn, could have a material adverse effect on our business, financial condition and results of operations.

### We have an ambitious capital expenditure program that is subject to significant risks and uncertainties

Our business is capital intensive. Specifically, the exploration and exploitation of reserves, mining and processing costs, the maintenance of machinery and equipment and compliance with applicable laws and regulations require substantial capital expenditures. We must continue to invest capital to maintain or to increase our exploitation levels and the amount of finished products we produce. We require environmental permits for our new projects. Obtaining permits in certain cases may cause significant delays in the execution and implementation of new projects and, consequently, may require us to reassess the related risks and economic incentives. We cannot assure you that we will be able to maintain our production levels or generate sufficient cash flow, or that we will have access to sufficient investments, loans or other financing alternatives, to continue our activities at or above present levels, or that we will be able to implement our projects or receive the necessary permits required for them in time. Any or all of these factors may have a material adverse effect on our business, financial condition and results of operations.

High raw materials and energy prices could increase our production costs and cost of sales, and energy may become unavailable at any price

We rely on certain raw materials and various sources of energy (diesel, electricity, natural gas, including LNG, fuel oil and others) to manufacture our products. Purchases of raw materials that we do not produce and energy constitute an important part of our cost of sales, approximately 20% in 2012. In addition, we may not be able to obtain energy at any price if supplies of our sources of energy are curtailed or otherwise become unavailable. To the extent we are unable to pass on increases in raw materials and energy prices to our customers or we are unable to obtain energy, our business, financial condition and results of operations could be materially adversely affected.

Currency fluctuations may have a negative effect on our financial performance

We transact a significant portion of our business in U.S. dollars, and the U.S. dollar is the currency of the primary economic environment in which we operate. In addition, the U.S. dollar is our functional currency for financial statement reporting purposes. A significant portion of our costs, however, is related to the Chilean peso. Therefore, an increase or decrease in the exchange rate between the Chilean peso and the U.S. dollar would affect our costs of production. The Chilean peso has been subject to large devaluations and revaluations in the past and may be subject to significant fluctuations in the future. As of December 31, 2012, the Chilean peso exchange rate was Ch\$479.96 per U.S. dollar, while as of December 31, 2011, the Chilean peso exchange rate was Ch\$519.20 per U.S. dollar. As of March 15, 2013, the Observed Exchange Rate was Ch\$471.10 per U.S. dollar.

As an international company operating in several other countries, we also transact business and have assets and liabilities in other non-U.S. dollar currencies, such as, among others, the euro, the South African rand, the Mexican peso, the Chinese yuan and the Brazilian real. As a result, fluctuations in the exchange rates of such foreign currencies to the U.S. dollar may have a material adverse effect on our business, financial condition and results of operations.

### Interest rate fluctuations may have a material impact on our financial performance

We have outstanding short and long-term debt that bears interest based on the London Interbank Offered Rate ("LIBOR"), plus a spread. Since we are currently hedging only a portion of these liabilities into fixed rates, we are exposed to interest rate risk relating to LIBOR fluctuations. As of December 31, 2012, approximately 21% our financial debt had LIBOR-based pricing that was not hedged into fixed rates. A relative increase in the rate could materially impact our financial condition and results of operations.

### Our reserves estimates could be subject to significant changes

Our mining reserves estimates are prepared by our own geologists, and were validated in February 2013, by Mrs. Marta Aguilera, a geologist with over 20 years of experience in the field. She is currently employed by SQM as Manager of Non-metallic Geology. Mrs. Aguilera is a Competent Person (*Persona Competente*), as that term is defined under Chilean Law No. 20,235 that Regulates the Position of Competent Person and Creates the Qualifying Committee for Competencies in Mining Resources and Reserves (*Ley que Regula la Figura de las Personas Competentes y Crea la Comisión Calificadora de Competencias de Recursos y Reservas Mineras* or "Competent Person Law"). Estimation methods involve numerous uncertainties as to the quantity and quality of the reserves, and reserve estimates could change upwards or downwards. In addition, our reserve estimates are not subject to review by external geologists or an external auditing firm. A downward change in the quantity and/or quality of our reserves could affect future volumes and costs of production and therefore have a material adverse effect on our business, financial condition and results of operations.

### Quality standards in markets in which we sell our products could become stricter over time

In the markets in which we do business, customers may impose quality standards on our products and/or governments may enact or are enacting stricter regulations for the distribution and/or use of our products. As a result, if we cannot meet such new standards or regulations, we may not be able to sell our products. In addition, our cost of production may increase in order to meet any such newly imposed or enacted standards. Failure to sell our products in one or more markets or to important customers could materially adversely affect our business, financial condition and results

of operations.

### Chemical and physical properties of our products could adversely affect their commercialization

Since our products are derived from natural resources, they contain inorganic impurities that may not meet certain customer or government standards. As a result, we may not be able to sell our products if we cannot meet such requirements. In addition, our cost of production may increase in order to meet such standards. Failure to meet such standards could materially adversely affect our business, financial condition and results of operations.

Our business is subject to many operating and other risks for which we may not be fully covered under our insurance policies

Our facilities and business operations in Chile and abroad are insured against losses, damages or other risks by insurance policies that are standard for the industry and that would reasonably be expected to be sufficient by prudent and experienced persons engaged in businesses similar to ours.

We may be subject to certain events that may not be covered under our insurance policies, which could have a material adverse effect on our business, financial condition and results of operations. Additionally, as a result of the major earthquake in Chile in February 2010 and other natural disasters worldwide in 2011 and 2012, conditions in the insurance market have changed and may continue to change in the future, and as a result, we may face higher premiums and reduced coverage.

#### Changes in technology or other developments could result in preferences for substitute products

Our products, particularly iodine, lithium and their derivatives, are preferred raw materials for certain industrial applications, such as rechargeable batteries and LCD screens. Changes in technology, the development of substitute raw materials or other developments could adversely affect demand for these and other products which we produce.

We are exposed to labor strikes and labor liabilities that could impact our production levels and costs

Over 96% of our employees are employed in Chile, of which approximately 67% were represented by 24 labor unions as of December 31, 2012. As in previous years, during 2012, we renegotiated collective labor contracts with individual unions one year before the expiration of such contracts. As of December 31, 2012, we had concluded advanced negotiations with 22 labor unions, which represent 96% of our total unionized workers, signing new

agreements with each for durations of three years. We are in the process of negotiating collective labor contracts with the two remaining unions. We are exposed to labor strikes that could impact our production levels. If a strike occurs and continues for a sustained period of time, we could be faced with increased costs and even disruption in our product flow that could have a material adverse effect on our business, financial condition and results of operations.

Chilean Law No. 16,744, known as the Law on Work Related Accidents and Professional Diseases (*Ley de Accidentes de Trabajo y Enfermedades Profesionales* or the "Labor Accidents Law"), provides that when a serious accident in the workplace occurs, a company must halt work at the site where the accident took place until authorities from either the National Geology and Mining Service (*Servicio Nacional de Geología y Minería* or "SERNAGEOMIN") or the Labor Board (*Dirección del Trabajo* or "Labor Board") or the National Health Service (*Servicio Nacional de Salud* or "SNA"), inspect the site and prescribe the measures such company must take to prevent future risks. Work may not be resumed until such company has taken the prescribed measures, and the period of time before work may be resumed may last for a number of hours, days, or longer. The effects of this law could have a material adverse effect on our business, financial condition and results of operations.

### Lawsuits and arbitrations could adversely impact us

We are party to a range of lawsuits and arbitrations involving different matters as described in Note 16.1 of our Consolidated Financial Statements. Although we intend to defend our positions vigorously, our defense of these actions may not be successful. Judgments or settlements in these lawsuits may have a material adverse effect on our business, financial condition and results of operations. In addition, our strategy of being a world leader includes entering into commercial and production alliances, joint ventures and acquisitions to improve our global competitive position. As these operations increase in complexity and are carried out in different jurisdictions, we might be subject to legal proceedings that, if settled against us, could have a material adverse effect on our business, financial condition and results of operations.

The Chilean labor code (*Código del Trabajo* or "Labor Code") has recently established new procedures for labor matters which include oral trials conducted by specialized judges. The majority of these oral trials have found in favor of the employee. These new procedures could increase the probability of adverse judgments in labor lawsuits which could have a material adverse effect on our business, financial condition and results of operations.

#### We have operations in multiple jurisdictions with differing regulatory, tax and other regimes

We operate in multiple jurisdictions with complex regulatory environments subject to different interpretations by companies and respective governmental authorities. These jurisdictions may each have their own tax codes, environmental regulations, labor codes and legal framework, which could complicate efforts to comply with these regulations, which could have, in turn, a material adverse effect on our business, financial condition and results of operations.

### Our water supply could be affected by geological changes

Our access to water may be impacted by changes in geology or other natural factors, such as wells drying up, that we cannot control, and which may have a material adverse effect on our business, financial condition and results of operations.

### Risks Relating to Chile

### As we are a company based in Chile, we are exposed to Chilean political risks

Our business, results of operations, financial condition and prospects could be affected by changes in policies of the Chilean government, other political developments in or affecting Chile, and regulatory and legal changes or administrative practices of Chilean authorities, over which we have no control.

Changes in regulations regarding, or any revocation or suspension of our concessions could negatively affect our business

Any changes to regulations to which we are subject or adverse changes to our concession rights, or a revocation or suspension of our concessions, could have a material adverse effect on our business, financial condition and results of operations.

### Changes in mining or port concessions could affect our operating costs

We conduct our mining (including brine extraction) operations under exploitation and exploration concessions granted in accordance with provisions of the Chilean constitution and related laws and statutes. Our exploitation concessions essentially grant a perpetual right to conduct mining operations in the areas covered by the concessions, provided that we pay annual concession fees. Our exploration concessions permit us to explore for mineral resources on the land covered thereby for a specified period of time and to subsequently request a corresponding exploitation concession. Furthermore, under the regulations of the Chilean Nuclear and Energy Commission (*Comisión Chilena de Energía y Nuclear* or "CCHEN"), we are limited to 180,100 tons of total lithium extraction in the aggregate for all periods. More than halfway through the term of the lease agreement, we have extracted less than half of the total accumulated extraction limit of lithium. However, there can be no assurance that we will not reach the lithium extraction limit prior to the term of the lease agreement.

We also operate port facilities at Tocopilla, Chile for the shipment of our products and the delivery of certain raw materials, pursuant to concessions granted by Chilean regulatory authorities. These concessions are renewable provided that we use such facilities as authorized and pay annual concession fees.

Any significant changes to any of these concessions could have a material adverse effect on our business, financial condition and results of operations.

#### Changes in water rights laws could affect our operating costs

We hold water rights that are key to our operations. These rights were obtained from the Chilean Water Authority (*Dirección General de Aguas*) for supply of water from rivers and wells near our production facilities, which we believe are sufficient to meet current operating requirements. However, the Chilean water rights code (*Código de* 

Aguas or the "Water Code") is subject to changes, which could have a material adverse impact on our business, financial condition and results of operations. For example, an amendment published on June 16, 2005 modified the Water Code, allowing, under certain conditions, the granting of permanent water rights of up to two liters per second for each well built prior to June 30, 2004, in the locations where we conduct our mining operations, without considering the availability of water, or how the new rights may affect holders of existing rights. Therefore, the amount of water we can effectively extract based on our existing rights could be reduced if these additional rights are exercised. In addition, we must pay annual concession fees to maintain water rights we are not exercising. These and potential future changes to the Water Code could have a material adverse effect on our business, financial condition and results of operations.

### The Chilean government could levy additional taxes on corporations operating in Chile

In 2005, the Chilean Congress approved Law No. 20,026 that Establishes a Specific Tax on Mining Activity (*Ley que Establece un Impuesto Específico a la Actividad Minera* or the "Royalty Law"), establishing a royalty tax to be applied to mining activities developed in Chile.

As a result of the earthquake and tsunami in February 2010, the Chilean government raised the corporate income tax rate in order to pay for reconstruction following the earthquake and tsunami. Such legislation increased the general corporate tax rate from its historic rate of 17.0% to 20.0% for the income accrued in 2011, which was declared and paid in 2012. On September 27, 2012, Law No. 20,630 introduced new amendments to existing tax legislation. Among the amendments introduced, the corporate income tax was permanently maintained at 20% effective for the 2012 calendar year.

We cannot assure you that the manner in which the Royalty Law or the corporate tax rate are interpreted and applied will not change in the future. In addition, the Chilean government may decide to levy additional taxes on mining companies or other corporations in Chile. Such changes could have a material adverse effect on our business, financial condition and results of operations.

Environmental laws and regulations could expose us to higher costs, liabilities, claims and failure to meet current and future production targets

Our operations in Chile are subject to national and local regulations relating to environmental protection. We are required to conduct environmental impact studies or statements of any future projects or activities (or significant modifications thereto) that may affect the environment and we are required to obtain an environmental license for certain projects and activities. The environmental assessment service (*Servicio de Evaluación Ambiental* or "Environmental Assessment Service") currently evaluates environmental impact studies submitted for its approval, and private citizens, public agencies or local authorities may challenge projects that may adversely affect the environment, either before these projects are executed or once they are already operating, if they fail to comply with applicable regulations. Enforcement remedies available include fines up to approximately US\$10 million and temporary or permanent closure of facilities and revocation of the environmental license.

Chilean environmental regulations have become increasingly stringent in recent years, both with respect to the approval of new projects and in connection with the implementation and development of projects already approved, and we believe that this trend is likely to continue. Given public interest in environmental enforcement matters, these regulations or their application may also be subject to political considerations that are beyond our control.

We continuously monitor the impact of our operations on the environment and have, from time to time, made modifications to our facilities to minimize any adverse environmental impacts. We believe we are currently in compliance in all material respects with applicable environmental regulations in Chile. Future developments in the creation or implementation of environmental requirements, or in their interpretation, could result in substantially increased capital, operation or compliance costs or otherwise adversely affect our business, financial condition and results of operations. In connection with our current investments at the Salar de Atacama and Nueva Victoria, the

success of these investments is dependent on the behavior of the ecosystem variables being monitored over time. If the behavior of these variables in future years does not meet environmental requirements, our operation may be subject to important restrictions by the authorities on the maximum allowable amounts of brine and water extraction.

Our future development depends on our ability to sustain future production levels, which requires additional investments and the submission of the corresponding environmental impact studies or statements. If we fail to obtain approval or required environmental licenses, our ability to maintain production at specified levels will be seriously impaired, thus having a material adverse effect on our business, financial condition and results of operations.

In addition, our worldwide operations are subject to international and other local environmental regulations. Since environmental laws and regulations in the different jurisdictions in which we operate may change, we cannot guarantee that future environmental laws, or changes to existing environmental laws, will not materially adversely impact our business, financial condition and results of operations.

Ratification of the International Labor Organization's Convention 169 concerning indigenous and tribal peoples might affect our development plans

Chile, a member of the International Labor Organization ("ILO"), has ratified the ILO's Convention 169 (the "Indigenous Rights Convention") concerning indigenous and tribal peoples. The Indigenous Rights Convention established several rights for indigenous individuals and communities. Among other rights, the Indigenous Rights Convention outlines that (i) indigenous groups be notified of and consulted prior to the development of any project on land deemed indigenous (without any veto or approval right) and of any legislative or administrative measure that may affect them directly; and (ii) indigenous groups have, to the extent possible, a stake in benefits resulting from the exploitation of natural resources in alleged indigenous land. The extent of these benefits has not been defined by the Chilean government. The new rights outlined in the Indigenous Rights Convention could affect the development of our investment projects in alleged indigenous lands which could have a material adverse effect on our business, financial condition and results of operations.

## Chile is located in a seismically active region

Chile is prone to earthquakes because it is located along major fault lines. The most recent major earthquake in Chile occurred in February 2010 and caused substantial damage to major areas of the country. Chile also has experienced volcanic activity. A major earthquake or a volcano eruption could have significant negative consequences for our operations and for the general infrastructure, such as roads, rail, and access to goods, in Chile. Although we maintain insurance policies standard for this industry with earthquake coverage, we cannot assure you that a future seismic event will not have a material adverse effect on our business, financial condition and results of operations.

## Risks related to our shares and to our ADRs

The price of our ADRs and the U.S. dollar value of any dividends will be affected by fluctuations in the U.S. dollar/Chilean peso exchange rate

Chilean trading in the shares underlying our ADRs is conducted in Chilean pesos. The depositary will receive cash distributions that we make with respect to the shares in Chilean pesos. The depositary will convert such Chilean pesos to U.S. dollars at the then prevailing exchange rate to make dividend and other distribution payments in respect of ADSs. If the value of the Chilean peso falls relative to the U.S. dollar, the value of the ADRs and any distributions to be received from the depositary will decrease.

Developments in other emerging markets could materially affect the value of our ADRs

The Chilean financial and securities markets are, to varying degrees, influenced by economic and market conditions in other emerging market countries or regions of the world. Although economic conditions are different in each country or region, investor reaction to developments in one country or region can have significant effects on the securities of issuers in other countries and regions, including Chile and Latin America. Events in other parts of the world may have a material effect on Chilean financial and securities markets and on the value of our ADRs.

The volatility and low liquidity of the Chilean securities markets could affect the ability of our shareholders to sell our ADRs

The Chilean securities markets are substantially smaller, less liquid and more volatile than the major securities markets in the United States. The volatility and low liquidity of the Chilean markets could increase the price volatility of our ADRs and may impair the ability of a holder to sell our ADRs into the Chilean market in the amount and at the price and time he wishes to do so.

Our share price may react negatively to future acquisitions and investments

As world leaders in our core businesses, part of our strategy is to look for opportunities that will allow us to consolidate and strengthen our competitive position in jurisdictions in which we currently do not operate. Pursuant to this strategy, we may carry out acquisitions or joint ventures relating to any of our businesses or to new businesses in which we believe we may have sustainable competitive advantages. Depending on our capital structure at the time of such acquisitions, we may need to raise significant debt and/or equity which will affect our financial condition and future cash flows. Any change in our financial condition could affect our results of operations, negatively impacting our share price.

You may be unable to enforce rights under U.S. Securities Laws

Because we are a Chilean company subject to Chilean law, the rights of our shareholders may differ from the rights of shareholders in companies incorporated in the United States, and you may not be able to enforce or may have difficulty enforcing rights currently in effect under U.S. Federal or State securities laws.

Our Company is a "sociedad anónima abierta" (open stock corporation) incorporated under the laws of the Republic of Chile. Most of our directors and officers reside outside the United States, principally in Chile. All or a substantial portion of the assets of these persons are located outside the United States. As a result, if any of our shareholders, including holders of our ADRs, were to bring a lawsuit against our officers or directors in the United States, it may be difficult for them to effect service of legal process within the United States upon these persons. Likewise, it may be difficult for them to enforce judgments obtained in United States courts based upon the civil liability provisions of the federal securities laws of the United States against them in United States courts.

In addition, there is no treaty between the United States and Chile providing for the reciprocal enforcement of foreign judgments. However, Chilean courts have enforced judgments rendered in the United States, provided that the Chilean court finds that the United States court respected basic principles of due process and public policy. Nevertheless, there is doubt as to whether an action could be brought successfully in Chile in the first instance on the basis of liability based solely upon the civil liability provisions of the United States federal securities laws.

As preemptive rights may be unavailable for our ADR holders, they have the risk of their holdings being diluted if we issue new stock

Chilean laws require companies to offer their shareholders preemptive rights whenever selling new shares of capital stock. Preemptive rights permit holders to maintain their existing ownership percentage in a company by subscribing for additional shares. If we increase our capital by issuing new shares, a holder may subscribe for up to the number of shares that would prevent dilution of the holder's ownership interest.

If we issue preemptive rights, United States holders of ADRs would not be able to exercise their rights unless a registration statement under the Securities Act were effective with respect to such rights and the shares issuable upon exercise of such rights or an exemption from registration were available. We cannot assure holders of ADRs that we will file a registration statement or that an exemption from registration will be available. We may, in our absolute discretion, decide not to prepare and file such a registration statement. If our holders were unable to exercise their preemptive rights because we did not file a registration statement, the depositary bank would attempt to sell their rights and distribute the net proceeds from the sale to them, after deducting the depositary's fees and expenses. If the depositary could not sell the rights, they would expire and holders of ADRs would not realize any value from them. In either case, ADR holders' equity interest in us would be diluted in proportion to the increase in our capital stock.

If we were classified as a Passive Foreign Investment Company there could be adverse consequences for U.S. investors

We believe that we were not classified as a passive foreign investment company, or PFIC, for 2012. Characterization as a PFIC could result in adverse U.S. tax consequences to you if you are a U.S. investor in our shares or ADRs. For example, if we (or any of our subsidiaries) are a PFIC, our U.S. investors may become subject to increased tax liabilities under U.S. tax laws and regulations and will become subject to burdensome reporting requirements. The determination of whether or not we (or any of our subsidiaries or portfolio companies) are a PFIC is made on an annual basis and will depend on the composition of our (or their) income and assets from time to time. See Item 10.E. Taxation – United States Tax Considerations.

## Changes in Chilean tax regulations could have adverse consequences for U.S. investors

Currently cash dividends paid by us to foreign shareholders are subject to a 35% Chilean withholding tax. If we have paid corporate income tax (the "First Category Tax") on the income from which the dividend is paid, a credit for the First Category Tax effectively reduces the rate of Withholding Tax. Changes in Chilean tax regulations could have adverse consequences for U.S. investors.

### ITEM 4. INFORMATION ON THE COMPANY

4.A. History and Development of the Company

## **Historical Background**

Sociedad Química y Minera de Chile S.A. "SQM" is an open stock corporation (*sociedad anónima abierta*) organized under the laws of the Republic of Chile. We were constituted by public deed issued on June 17, 1968 by the Notary Public of Santiago, Mr. Sergio Rodríguez Garcés. Our existence was approved by Decree No. 1,164 of June 22, 1968 of the Ministry of Finance, and we were registered on June 29, 1968 in the Registry of Commerce of Santiago, on page 4,537 No. 1,992. Our headquarters is located at El Trovador 4285, Fl. 6, Las Condes, Santiago, Chile. Our telephone number is +56 2 2425-2000.

Commercial exploitation of the caliche ore deposits in northern Chile began in the 1830s, when sodium nitrate was extracted from the ore for use in the manufacturing of explosives and fertilizers. By the end of the nineteenth century, nitrate production had become the leading industry in Chile and the country was the world's leading supplier of nitrates. The accelerated commercial development of synthetic nitrates in the 1920s and the global economic depression in the 1930s caused a serious contraction of the Chilean nitrate business, which did not recover significantly until shortly before the Second World War. After the war, the widespread commercial production of synthetic nitrates resulted in a further contraction of the natural nitrate industry in Chile, which continued to operate at depressed levels into the 1960s.

We were formed in 1968 through a joint venture between Compañía Salitrera Anglo Lautaro S.A. ("Anglo Lautaro") and *Corporación de Fomento de la Producción* ("Production Development Corporation" or "Corfo"), a Chilean government entity. Three years after our formation, in 1971, Anglo Lautaro sold all of its shares to Corfo, and we were wholly owned by the Chilean Government until 1983. In 1983, Corfo began a process of privatization by selling our shares to the public and subsequently listing such shares on the Santiago Stock Exchange. By 1988, all of our shares were publicly owned. Our Series B ADRs have traded on the NYSE under the ticker symbol "SQM" since 1993.

Since our inception, in addition to producing nitrates, we have produced iodine, which is also found in the caliche ore deposits in northern Chile.

Between the years 1994 and 1999, we invested approximately US\$300 million in the development of the Salar de Atacama project in northern Chile. The project involved the construction of a potassium chloride plant, a lithium carbonate plant, a potassium sulfate plant, and a boric acid plant.

To help finance the above projects, we accessed the international capital markets by issuing additional Series B ADRs on the New York Stock Exchange in 1995. In 1999 we issued additional Series A shares, which were also listed on the New York Stock Exchange as ADRs. Effective March 27, 2008, the Company voluntarily delisted its Series A ADR ("SQM-A") from the New York Stock Exchange. In addition, on April 5, 2013. we filed a Form F-6 in order to issue 100 million additional Series B ADRs on the New York Stock Exchange, to be effective as of April 15, 2013.

During the period from 2000 through 2004, we principally consolidated the investments carried out in the preceding five years. We focused on reducing costs and improving efficiencies throughout the organization.

Since 2005, we have strengthened our leadership in our main businesses by increasing our capital expenditure program and making advantageous acquisitions and divestitures. During this period we acquired Kemira Emirates Fertiliser Company (Kefco) in Dubai and the iodine business of Royal DSM N.V. (DSM). We also sold (i) Fertilizantes Olmeca, our Mexican subsidiary, (ii) our butyllithium plant located in Houston, Texas and (iii) our stake in Impronta S.R.L., our Italian subsidiary. These sales allowed us to concentrate our efforts on our core products. In 2007, we completed the construction of a new prilling and granulating plant. In 2008, we completed our lithium carbonate capacity expansion and began work on the engineering stage of a new potassium nitrate plant.

From 2010 to 2012, we continued to expand our production capacity of potassium products in our operations in the Salar de Atacama. In 2011, we completed the construction of a new potassium nitrate facility in Coya Sur, increasing our overall production capacity of potassium nitrate by 300,000 metric tons. In addition, in 2008 we entered into a joint venture with Migao Corporation ("Migao") for the construction of a potassium nitrate plant with a production capacity of 40,000 metric tons per year. This facility was completed and began operating in January 2011.

In the second half of 2011, we effected a corporate reorganization whereby our subsidiary Soquimich European Holding B.V. acquired a 66.6% ownership in Fertilizantes Naturales S.A. (later renamed SQM Iberian S.A.) from Nutrisi Holding N.V. Soquimich European Holding B.V. owned a non-controlling 50% stake in Nutrisi Holding N.V. which was divested following this acquisition in December 2011. The effect of these transactions has been that we

indirectly control SQM Iberian S.A. through Soquimich European Holding B.V. SQM Iberian S.A. sells and distributes fertilizers, primarily in Spain.

In 2012, SQM Vitas FZ Company, our joint venture with the French Roullier Group, started the construction of new plants in Brazil (Candeias), Peru and South Africa (Durban) for the production of water soluble fertilizers containing different relative amounts of nitrogen, phosphorus and potassium, and, occasionally, smaller amounts of other chemicals. The Brazilian plant (Candeias Industrial Complex) began operating in March 2012. It has a production capacity of 25,000 metric tons per year, and represented a total investment of US\$10 million.

# **Capital Expenditure Program**

We regularly review different opportunities to improve our production methods, reduce costs, increase production capacity of existing products and develop new products and markets. Additionally, significant capital expenditures are required every year in order to sustain our production capacity. We are focused on developing new products in response to identified customer demand, as well as new products that can be derived as part of our existing production or other products that could fit our long-term development strategy. Our capital expenditures during the past five years were mainly related to the acquisition of new assets, construction of new facilities and renewal of plant and equipment.

Our capital expenditures include investments aimed at sustaining, improving or increasing production levels, including acquisitions and investments in related companies.

Our capital expenditures for the years ended December 31, 2012, 2011 and 2010 were as follows:

(in millions of US dollars) 2012 2011 2010 Capital Expenditures 446.0 501.1 336.0

During 2010, we had total capital expenditures of US\$336.0 million, primarily relating to:

- · continued investment in a new potassium nitrate production facility in Coya Sur;
- · investments related to increasing production capacity of potassium-based products at the Salar de Atacama;
  - upgrades of our railroad system to handle expanded production capacity; and
  - · various projects designed to maintain production capacity, increase yields and reduce costs.

During 2011, had total capital expenditures of US\$501.1 million, primarily relating to:

increased production capacity of potassium-based products at the Salar de Atacama, with the continued construction and completion of potassium chloride and granulated potassium chloride facilities at the Salar de Atacama;

increased capacity and efficiencies at nitrate and iodine facilities;

optimization of our rail system; and

· various projects designed to maintain production capacity, increase yields and reduce costs.

During 2012, we had total capital expenditures of US\$446.0 million, primarily relating to:

projects to increase capacity and efficiencies at nitrate and iodine facilities in the Tarapacá region;

continued investments related to increasing production capacity of potassium-based products at the Salar de Atacama, including several projects related to production of finished products; and

various projects designed to maintain production capacity, increase yields and reduce costs.

We have developed a capital expenditure program for 2013 calling for investments totaling approximately US\$500.0 million, excluding possible mergers, acquisitions or similar arrangements. Among other things, the program will focus on:

- · investments related to increasing production of potassium-based products at the Salar de Atacama;
- · continued investments related to increased production capacity and efficiencies at our nitrate and iodine facilities;
  - optimization of our muriate of potassium facility at the Salar de Atacama; and
  - various projects designed to maintain production capacity, increased yields and reduce costs.

We expect substantially all of the approximately US\$500.0 million under our current capital expenditure program to be made in Chile. No external financing is required to finance the capital expenditure program for the 2013 period; however, we reserve the right to access capital markets in order to optimize its financial position.

4.B. Business Overview

### The Company

We believe that we are the world's largest producer of potassium nitrate, iodine and lithium chemicals. We produce specialty plant nutrients, iodine and iodine derivatives, lithium and lithium derivatives, potassium chloride, potassium sulfate and certain industrial chemicals (including industrial nitrates and solar salt). Our products are sold in more than 110 countries through our worldwide distribution network, with 89% of our sales in 2012 derived from countries outside Chile.

Our products are mainly derived from mineral deposits found in northern Chile. We mine and process caliche ore and brine deposits. The caliche ore in northern Chile contains the only known nitrate and iodine deposits in the world and is the world's largest commercially exploited source of natural nitrates. The brine deposits of the Salar de Atacama, a salt-encrusted depression in the Atacama desert in northern Chile, contain high concentrations of lithium and potassium as well as significant concentrations of sulfate and boron.

From our caliche ore deposits, we produce a wide range of nitrate-based products used for specialty plant nutrients and industrial applications, as well as iodine and iodine derivatives. At the Salar de Atacama, we extract brines rich in potassium, lithium, sulfate and boron in order to produce potassium chloride, potassium sulfate, lithium solutions, boric acid and bischofite (magnesium chloride). We produce lithium carbonate and lithium hydroxide at our plant near the city of Antofagasta, Chile, from the solutions brought from the Salar de Atacama. We market all of these products through an established worldwide distribution network.

Our products are divided into six categories: specialty plant nutrients; iodine and its derivatives; lithium and its derivatives; potassium chloride and potassium sulfate; industrial chemicals; and other commodity fertilizers. Specialty plant nutrients are premium fertilizers that enable farmers to improve yields and the quality of certain crops. Iodine, lithium and their derivatives are used in human nutrition, pharmaceuticals and other industrial applications. Iodine and its derivatives are mainly used in the X-ray contrast media and biocides industries and in the production of polarizing film, which is an important component in liquid crystal display ("LCD") screens. Lithium and its derivatives are mainly used in batteries, greases and frits for production of ceramics. Potassium chloride is a commodity fertilizer that is produced and sold by us worldwide. In addition, we complement our portfolio of plant nutrients through the buying and selling of other commodity fertilizers for use mainly in Chile. Industrial chemicals have a wide range of applications in certain chemical processes such as the manufacturing of glass, explosives and ceramics, and, more recently, industrial nitrates are being used in solar thermal energy plants as a means for energy storage.

For the year ended December 31, 2012, we had revenues of US\$2,429.2 million, gross profit of US\$1,028.6 million and profit attributable to controlling interests of US\$649.2 million. Our world wide market capitalization as of December 31, 2012 was approximately US\$15.0 billion.

Our Series A and Series B common shares are listed on the Santiago Stock Exchange. Our Series B American Depositary Shares ("ADSs") have been listed on the New York Stock Exchange (the "NYSE") since 1993. Our ticker symbols on the Santiago Stock Exchange for our Series A and Series B common shares are "SQM-A" and "SQM-B," respectively, and our ticker symbol on the NYSE for the Series B ADSs is "SQM."

Specialty Plant Nutrition: We produce four principal types of specialty plant nutrients: potassium nitrate, sodium nitrate, sodium potassium nitrate, and specialty blends. Furthermore, we sell other specialty fertilizers including trading of third party products. All of these specialty plant nutrition products are used in either solid or liquid form mainly on high value crops such as vegetables, fruits and flowers. They are widely used in crops that employ modern agricultural techniques such as hydroponics, greenhousing, fertigation (where fertilizer is dissolved in water prior to irrigation) and foliar application. According to the type of use or application our products are marketed under the brands: Ultrasol<sup>TM</sup> (fertigation), Qrop<sup>TM</sup> (open field application), Speedfol<sup>TM</sup> (foliar application), and Allganic<sup>TM</sup> (organic farming). Specialty plant nutrition has certain advantages over commodity fertilizers, such as rapid and effective absorption (without requiring nitrification), superior water solubility, increased soil pH (which reduces soil acidity) and low chlorine content. One of the most important products in this business line is potassium nitrate, which is available in crystalline and prill form, allowing for multiple application methods. Crystalline potassium nitrate products are ideal for application by fertigation and foliar sprays, and potassium nitrate prills are suitable for soil applications.

The needs of more sophisticated customers are leading the industry to provide solutions rather than individual products. The advantages of our products, plus customized specialty blends that meet specific needs along with agronomic service provided, allow us to create plant nutrition solutions that add value to crops through higher yields and better quality production. Because our products are derived from natural nitrate compounds or natural potassium brines, they have certain advantages over synthetically produced fertilizers, including the presence of certain beneficial trace elements, which makes them more attractive to customers who prefer products of natural origin. As a result, specialty plant nutrition products are sold at a premium price compared to other commodity fertilizers.

*Iodine and its derivatives*: We believe that we are the world's leading producer of iodine and iodine derivatives, which are used in a wide range of medical, pharmaceutical, agricultural and industrial applications, including x-ray contrast media, polarizing films for liquid crystal displays ("LCDs"), antiseptics, biocides and disinfectants in the synthesis of pharmaceuticals, herbicides, electronics, pigments, and dye components.

Lithium and its derivatives: We are the leading producer of lithium carbonate, which is used in a variety of applications, including electrochemical materials for batteries, frits for the ceramic and enamel industries, heat-resistant glass (ceramic glass), air conditioning chemicals, continuous casting powder for steel extrusion, primary aluminum smelting process, pharmaceuticals, and lithium derivatives. We are also a leading supplier of lithium hydroxide, which is used primarily as a raw material in the lubricating grease industry and certain cathodes for batteries.

**Potassium:** We produce potassium chloride and potassium sulfate from brines extracted from the Salar de Atacama. Potassium chloride is a commodity fertilizer used to fertilize a variety of crops including corn, rice, sugar, soybean, and wheat. Potassium sulfate is a specialty fertilizer used mainly in crops such as vegetables, fruits and industrial crops.

Industrial Chemicals: We produce four industrial chemicals: sodium nitrate, potassium nitrate, and boric acid. Sodium nitrate is used primarily in the production of glass, explosives, charcoal briquettes and metal treatment. Potassium nitrate is used in the manufacturing of specialty glass, and it is also an important raw material for the production of frits for the ceramics and enamel industries. Solar salts, a combination of potassium nitrate and sodium nitrate are used as a thermal storage medium in solar-based electricity generating plants. Boric acid is used in the manufacture of frits for the ceramics and enamel industries, LCDs, glass and fiberglass. Potassium chloride is used as an additive in oil drilling as well as in the production of carragenine.

Other Products and Services: We also sell other fertilizers and blends, some of which we do not produce.

We are the only company that produces and distributes the three main potassium sources: potassium nitrate, potassium sulphate and potassium chloride.

The following table sets forth the percentage breakdown of our revenues for 2012, 2011 and 2010 according to our product lines:

|                             | 2012 |   | 2011 |   | 2010 | ) |
|-----------------------------|------|---|------|---|------|---|
| Specialty Plant Nutrition   | 28   | % | 34   | % | 33   | % |
| Iodine and Derivatives      | 24   | % | 21   | % | 17   | % |
| Lithium and Derivatives     | 9    | % | 9    | % | 8    | % |
| Potassium                   | 25   | % | 26   | % | 29   | % |
| <b>Industrial Chemicals</b> | 10   | % | 7    | % | 8    | % |
| Other                       | 4    | % | 4    | % | 5    | % |
| Total                       | 100  | % | 100  | % | 100  | % |

## **Business Strategy**

Our general business strategy is to:

maintain leadership in specialty plant nutrients, iodine, lithium and industrial nitrates, in terms of production capacity, competitive pricing and the development of new products;

- · increase our production capacity of potassium-related fertilizers from the Salar de Atacama; maintain our competitiveness through the continued increase in the efficiency of our production processes and cost reduction;
- evaluate and execute acquisitions, joint ventures or commercial alliances which have concrete synergies with our current core businesses or provide sustainable competitive advantages; and
  - maintain a solid, conservative financial position and investment grade ratings for our debt securities.

We have identified market demand in each of our major product lines, both within our existing customer base and in new markets, for existing products and for additional products that can be produced from our natural resources. In order to take advantage of these opportunities, we have developed specific strategies for each of our product lines.

## **Specialty Plant Nutrition**

Our strategy in our specialty plant nutrients business is to: (i) continue expanding our sales of natural nitrates by continuing to leverage the advantages of our specialty products over commodity-type fertilizers; (ii) selectively expand by increasing our sales of higher margin specialty plant nutrients based on potassium and natural nitrates, particularly soluble potassium nitrate and NPK blends; (iii) pursue investment opportunities in complementary businesses to enhance our product portfolio, increase production, reduce costs, and add value to, and improve the marketing of, our products; (iv) develop new specialty nutrient blends produced in our mixing plants that are strategically located in or near our principal markets, in order to meet specific customer needs; (v) focus primarily on the markets for plant nutrients in soluble and foliar applications in order to establish a leadership position; (vi) further develop our global distribution and marketing system directly and through strategic alliances with other producers and global or local distributors; and (vii) reduce our production costs through improved processes and higher labor productivity so as to compete more effectively.

### Iodine and its derivatives

Our strategy in our iodine business is to (i) maintain our leadership in the iodine market by expanding our production capacity in line with demand growth; (ii) encourage demand growth and develop new iodine derivatives, (iii) participate in iodine recycling projects; and (iv) reduce our production costs through improved processes and higher productivity in order to compete more effectively.

#### Lithium and its derivatives

Our strategy in our lithium business is to (i) maintain our leadership in the lithium industry as a principal producer and distributor of lithium carbonate and lithium hydroxide; (ii) encourage demand growth, (iii) selectively pursue opportunities in the lithium derivatives business by creating new lithium compounds; and (iv) reduce our production costs through improved processes and higher productivity in order to compete more effectively.

#### Potassium

Our strategy in our potassium business is to significantly increase our production capacity of potassium chloride and potassium sulfate. Our distribution strategy is to (i) offer a portfolio of potassium products, including potassium sulfate, potassium chloride and other fertilizers to our traditional markets; (ii) create flexibility to offer crystalized (standard) or granular (compacted) form products according to market requirements; and (iii) focus on markets where we have logistical advantages.

### **Industrial Chemicals**

Our strategy in our industrial chemical business is to (i) maintain our leadership position in the industrial nitrates market, (ii) encourage demand growth in different applications, (iii) become a long-term, reliable supplier for the thermal storage industry; and (iv) reduce our production costs through improved processes and higher productivity in order to compete more effectively.

### New Business Ventures

From time to time we evaluate opportunities to expand in our current core businesses or within new businesses in which we believe we may have sustainable competitive advantages, both within and outside Chile, and we expect to continue to do so in the future. We are currently exploring concessions for certain metallic minerals. If such minerals are found, we may decide to exploit, sell or enter into a joint venture to extract these resources. We may decide to acquire part or all of the equity of, or undertake joint ventures or other transactions with, other companies involved in our businesses or in other businesses. We are also exploring the possibility of acquiring controlling interests in companies that have mining properties in our core business areas, and that are in early stages of development. Consistent with our business strategy, we will continue to evaluate acquisitions, joint ventures and alliances in our core businesses and, depending on all facts and circumstances, may seek to acquire controlling stakes or other interests in companies with mining properties outside of Chile and Latin America, including in other emerging markets.

In addition we are actively conducting exploration operations in various properties we own for copper, gold and other metals deposits and we have already identified several areas in which we are conducting more targeted exploration. Fiel Rosita, a copper-gold deposit located close to the city of Vallenar, is our most advanced prospect. It is located in the same district as other deposits currently being exploited by other companies. We are completing a preliminary economic assessment, expected in 2013, based on which we will decide whether to conduct a pre-feasibility study or to sell part or all of the deposit. We may decide not to move forward with any potential metallic prospects discovered from our exploration operations.

In parallel to our exploration operations, we have entered into memoranda of understanding, option agreements and similar arrangements with third-party mining companies relating to metallic minerals. In all these agreements, we retain the rights on non-metallic minerals such as nitrate, iodine, potassium, lithium and their respective derivatives

### **Main Business Lines**

# Specialty Plant Nutrition

We believe we are the world's largest producer of potassium nitrate. We estimate that our sales accounted for approximately 46% of global potassium nitrate sales by volume in 2012. This estimate does not include potassium nitrate we produced and sold locally in China, only net imports. During 2012, the potassium nitrate market was stable compared to 2011, despite increases in price. Global sales totaled approximately 0.9 million metric tons in 2012. We also produce the following specialty plant nutrients: sodium nitrate, sodium potassium nitrate and specialty blends (containing various combinations of nitrogen, phosphate and potassium and generally known as "NPK blends").

These specialty plant nutrients have specific characteristics that increase productivity and enhance quality when used on certain crops and soils. Our specialty plant nutrients have significant advantages for certain applications over commodity fertilizers based on nitrogen and potassium, such as urea and potassium chloride.

In particular, our specialty plant nutrients:

are fully water soluble, allowing their use in hydroponics, fertigation, foliar applications and other advanced agricultural techniques;

improve the water use efficiency of crops and help conserve water; are chlorine-free, which prevents chlorine toxicity in certain crops associated with high levels of chlorine in plant nutrients;

provide nitrogen in nitric form, thereby allowing crops to absorb nutrients faster than they absorb urea or ammonium-based fertilizers;

do not release hydrogen after application, thereby avoiding increased soil acidity;
possess trace elements, which promote disease resistance in plants; and
are more attractive to customers who prefer products of natural origin.

In 2012, our specialty plant nutrients sales were US\$675.3 million, representing 28% of our total sales for that year and a 6.4% decrease from US\$721.7 million specialty plant nutrients sales in 2011. This increase was a result of higher demand for premium vegetables and fruits, caused by improved economic conditions, which has reinforced the consumption of specialty fertilizers.

Specialty Plant Nutrition: Our Market

The target market for our specialty plant nutrients includes producers of high-value crops such as vegetables, fruits, industrial crops, flowers, cotton and others. Furthermore, we sell specialty plant nutrients to producers of chloride-sensitive crops. Since 1990, the international market for specialty plant nutrients has grown at a faster rate than the international market for commodity-type fertilizers. This is mostly due to: (i) the application of new agricultural technologies such as fertigation and hydroponics, and the increasing use of greenhouses; (ii) the increase in the cost of land and the scarcity of water, which has forced farmers to improve their yields and reduce water use; and (iii) the increase in demand for higher quality crops, such as fruits and vegetables.

Over the last 10 years, the compound annual growth rate for vegetable production per capita was 3.0% while the compound annual growth rate for the world population was only 1.5%.

Worldwide scarcity of water and arable land drives the development of new agricultural techniques to maximize the use of these resources. Irrigation has grown at an average annual rate of 1.5% during last 20 years (a pace equal with population growth). However, micro-irrigation has grown at 10% per year over the same period. Microirrigation systems, which include drip-irrigation and micro-sprinklers, are the most efficient forms of technical irrigation. Global microirrigation acreage is estimated at 10 million hectares, which represents approximately 3% of total worldwide irrigated area. These applications require fully water-soluble plant nutrients. Our nitrate-based specialty plant nutrients provide nitrogen in nitric form, which helps crops absorb these nutrients faster than they absorb urea- or ammonium-based fertilizers, facilitating a more efficient application of nutrients to the plant and thereby increasing the crop's yield and improving its quality.

Specialty Plant Nutrition: Our Products

Potassium nitrate, sodium potassium nitrate and specialty blends are higher margin products derived from, or consisting of, sodium nitrate, and they are all produced in crystallized or prilled form. Specialty blends are produced using our own specialty plant nutrients and other components at blending plants operated by us or our affiliates and

related companies in Chile, the United States, Mexico, United Arab Emirates, South Africa, Turkey, China, India, Thailand, Brazil and Peru.

The following table shows our sales volumes of and revenues from specialty plant nutrients for 2012, 2011 and 2010.

|  | 2012  | 2011  | 2010  |
|--|-------|-------|-------|
| Sales Volume (Th. MT)                                      |       |       |       |
| Sodium nitrate   | 24.4  | 22.2  | 16.8  |
| Potassium nitrate and sodium potassium nitrate             | 469.3 | 551.1 | 534.7 |
| Blended and other specialty plant nutrients <sup>(1)</sup> | 286.5 | 276.0 | 263.9 |
| Total Revenues (in US\$ millions)                          | 675.3 | 721.7 | 603.7 |

<sup>(1)</sup> Includes blended and other specialty plant nutrients. It also includes Yara's products sold pursuant to our commercial agreement

Specialty Plant Nutrition: Marketing and Customers

In 2012, we sold our specialty plant nutrients in close to 90 countries. During the same year, sales of our specialty plant nutrients were exported to the following regions: 18% to customers in Central and South America (not including Chile), 19% to customers in Chile, 27% to customers in North America, 18% to customers in Europe and 18% to customers in other regions. No single customer represented more than 10% of our specialty plant nutrient sales during 2012, and we estimate that our 10 largest customers accounted in the aggregate for approximately 29% of sales during that period.

| Sales Breakdown         | 2012 | 2011 | 2010 |  |
|-------------------------|------|------|------|--|
| Central & South America | 18 % | 14 % | 14 % |  |
| North America           | 27 % | 24 % | 25 % |  |
| Europe                  | 18 % | 26 % | 22 % |  |
| Chile                   | 19 % | 17 % | 16 % |  |
| Others                  | 18 % | 19 % | 23 % |  |

We sell our specialty plant nutrients products outside Chile mainly through our own worldwide network of representative offices and through our distribution affiliates.

We maintain stocks of our specialty plant nutrients in the main markets of the Americas, Asia, Europe, the Middle East and Africa in order to facilitate prompt deliveries to customers. In addition, we sell specialty plant nutrients directly to some of our large customers. Sales are made pursuant to spot purchase orders and short-term contracts.

In connection with our marketing efforts, we provide technical and agronomical assistance and support to some of our customers. By working closely with our customers, we are able to identify new, higher-value-added products and markets. Our specialty plant nutrients products are used on a wide variety of crops, particularly value-added crops, where the use of our products enables our customers to increase yield and command a premium price.

Our customers are located in both the northern and southern hemispheres. Consequently, we believe there are no material seasonal or cyclical factors that can materially affect the sales of our specialty plant nutrient products.

From time to time we evaluate opportunities to expand in our current core businesses, including our specialty plant nutrients business, or within new businesses in which we believe we may have sustainable competitive advantages, both within and outside Chile. Consistent with our business strategy, we evaluate potential acquisitions, joint ventures and alliances in our core businesses with companies outside of Chile and Latin America, including in emerging markets.

In November 2001, we signed an agreement with Yara. This agreement allows us to make use of Yara's distribution network in countries where its presence and commercial infrastructure are larger than ours. Similarly, in those markets where our presence is larger, both our specialty plant nutrients and Yara's are marketed through our offices. Both parties, however, maintain an active control over the marketing of their own products.

In 2005, SQM acquired 100% of the shares of Kefco, which has a urea phosphate plant located in Dubai. Urea phosphate is a specialty plant nutrient that is used primarily in drip irrigation systems. The plant has an annual production capacity of 30,000 metric tons.

In 2005, SQM and Yara formed a joint venture called MISR Specialty Fertilizers, for the production of tailor-made liquid NPK (nitrogen-phosphate-potassium) fertilizers. The plant is located in Egypt and has a production capacity of 80,000 metric tons per year. We sold our stake in this joint venture in 2012.

In May 2008, we signed a commitment letter for a joint venture with Migao for the production and distribution of specialty plant nutrients in China. In 2009, we signed a shareholders agreement in connection with this joint venture. Through the joint venture, we constructed a potassium nitrate plant with a production capacity of 40,000 metric tons per year. The plant began operating in January 2011. This joint venture will enable us to increase our presence in China, which represents one of the most important and fastest-growing markets for the fertilizer industry.

In May 2009, our subsidiary Soquimich European Holdings entered into an agreement with Coromandel Fertilizers Ltd. to create a joint venture for the production and distribution of water soluble fertilizers in India. The agreement established a 50/50 contribution to the joint venture. As part of the agreement, a new 15,000 metric ton facility was constructed in the city of Kakinada to produce water soluble fertilizers (NPK grades). This new facility required a total investment of approximately US\$2.6 million and began operating in January 2012.

In October 2009, SQM S.A. signed an agreement with Qingdao Star Plant Protection Technology Co., Ltd., resulting in the creation of the joint venture SQM Star, for the production, distribution and sale of soluble NPK specialty plant nutrients in China. The agreement, a 50/50 joint venture, entailed a total investment of US\$2 million for the

construction of a new production plant. The plant, located in the city of Jimo, province of Shangdong, is currently operational and has an annual production capacity of 15,000 metric tons.

In December 2009, we signed an agreement with the French Roullier Group to form the joint venture SQM Vitas. This agreement joins two of the largest companies in the businesses of specialty plant nutrients, specialty animal nutrition and professional hygiene. Peru, Brazil and Dubai are the main focus markets of this joint venture. As part of the agreement, our phosphate plant located in Dubai became part of this joint venture. In September 2010, SQM Vitas implemented a new phosphate line that will allow the production of two of the main water soluble phosphorus products in the world: mono ammonium phosphate and urea phosphate.

In the second half of 2011, we effected a corporate reorganization whereby our subsidiary Soquimich European Holding B.V. acquired a 66.6% ownership in Fertilizantes Naturales S.A. (later renamed SQM Iberian S.A.) from Nutrisi Holding N.V. Soquimich European Holding B.V. owned a non-controlling 50% stake in Nutrisi Holding N.V. which was sold following this acquisition. The effect of these transactions has been that we indirectly control SQM Iberian S.A. through Soquimich European Holding B.V. SQM Iberian S.A. sells and distributes fertilizers, primarily in Spain.

In 2012, SQM Vitas started the construction of new plants in Brazil (Candeias), Peru and South Africa (Durban) for the production of water soluble fertilizers containing different relative amounts of nitrogen, phosphorus and potassium, and at times, smaller amounts of other chemicals. The Brazilian plant (Candeias Industrial Complex) began operating in March 2012. It has a production capacity of 25,000 million tons per year, and represented a total investment of US\$10 million.

Between 2010 and 2012, we continued to expand our production capacity of potassium products in our operations in the Salar de Atacama. In 2011, we completed the construction of a new potassium nitrate facility in Coya Sur, increasing our overall production capacity of potassium nitrate by 300,000 metric tons. In addition, as mentioned above, we entered into a joint venture with Migao in 2008 for the construction of a potassium nitrate plant with a production capacity of 40,000 metric tons per year that began operating in January 2011.

### Specialty Plant Nutrition: Fertilizer Sales in Chile

We market specialty plant nutrients in Chile through Soquimich Comercial S.A., either as a standalone product or in blends with other imported products, in particular triple super phosphate (TSP) and diammonium phosphate (DAP).

Soquimich Comercial S.A. sells imported fertilizers to farmers in Chile principally for use in the production of sugar beets, cereals, industrial crops, potatoes, grapes and other fruits. Most of the fertilizers that Soquimich Comercial S.A. imports are purchased on a spot basis from different countries in the world, including China, Mexico and Venezuela.

All contracts and agreements between Soquimich Comercial S.A. and its suppliers of imported fertilizers generally contain standard and customary commercial terms and conditions. During the preceding 10 years, Soquimich Comercial S.A. has experienced no material difficulties in obtaining adequate supplies of such fertilizers at satisfactory prices.

Soquimich Comercial S.A.'s sales of fertilizers represented approximately 30% of total fertilizer sales in Chile during 2012. No single customer represented more than 8% of Soquimich Comercial S.A.'s total fertilizer sales revenues, and its 10 largest customers in total represented less than 43% of its revenues. Revenues generated by Soquimich Comercial S.A. represented 10.6% of our 2012 consolidated revenues. Soquimich Comercial S.A.'s consolidated revenues were approximately US\$256 million and US\$227 million in 2012 and 2011, respectively.

## Specialty Plant Nutrition: Competition

We believe we are the world's largest producer of sodium and potassium nitrate for agricultural use. Our sodium nitrate products compete indirectly with specialty and commodity-type substitutes, which may be used by some customers instead of sodium nitrate depending on the type of soil and crop to which the product will be applied. Such substitute products include calcium nitrate, ammonium nitrate and calcium ammonium nitrate.

In the potassium nitrate market our largest competitor is Haifa Chemicals Ltd. ("Haifa"), in Israel, which is a subsidiary of Trans Resources International Inc. We estimate that sales of potassium nitrate by Haifa accounted for approximately 34% of total world sales during 2012 (excluding sales by Chinese producers to the domestic Chinese market), compared to our share of the market which accounted for approximately 46% of global potassium nitrate sales by volume for the period.

ACF, another Chilean producer, mainly oriented to iodine production, has produced potassium nitrate from caliche ore and potassium chloride since 2005. Kemapco, a Jordanian producer owned by Arab Potash, produces potassium nitrate in a plant located close to the Port of Aqaba, Jordan. In addition, there are several potassium nitrate producers in China, the largest of which are Wentong and Migao. Most of the Chinese production is consumed by the Chinese domestic market.

The principal means of competition in the sale of potassium nitrate are product quality, customer service, location, logistics, agronomic expertise and price.

In Chile, our products mainly compete with imported fertilizer blends that use calcium ammonium nitrate or potassium magnesium sulfate. Our specialty plant nutrients also compete indirectly with lower-priced synthetic commodity-type fertilizers such as ammonia and urea, which are produced by many producers in a highly price-competitive market. Our products compete on the basis of advantages that make them more suitable for certain applications as described above.

### **Iodine and its derivatives**

We believe we are the world's largest producer of iodine. In 2012, our revenues from iodine and iodine derivatives amounted to US\$578.1 million, representing 24% of our total revenues in that year. We estimate that our sales accounted for approximately 34% of world iodine sales by volume in 2012.

## Market

Iodine and iodine derivatives are used in a wide range of medical, agricultural and industrial applications as well as in human and animal nutrition products. Iodine and iodine derivatives are used as raw materials or catalysts in the formulation of products such as X-ray contrast media, biocides, antiseptics and disinfectants, pharmaceutical intermediates, polarizing films for LCDs, chemicals, herbicides, organic compounds and pigments. Iodine is also added in the form of potassium iodate or potassium iodide to edible salt to prevent iodine deficiency disorders. Iodine is also added in the form of potassium iodate or potassium iodide to edible salt to prevent iodine deficiency disorders. We have seen consistent growth in the iodine market in recent years, with demand being led by uses related to X-ray contrast media and pharmaceuticals. We estimate that the global market size in 2012 was between 30,500 and 31,000 metric tons, with almost 60% of supply coming from Chilean producers, including us. Increased supply entered the market in 2012 and we expect to see additional new supply in 2013.

## Iodine: Our Products

We produce iodine, and through a joint venture with Ajay North America L.L.C., ("Ajay"), a U.S.-based Company, we produce organic and inorganic iodine derivatives. Ajay-SQM Group ("ASG"), established in the mid-1990s, has production plants in the United States, Chile and France. ASG is the world's leading inorganic and organic iodine derivatives producer.

Consistent with our business strategy, we are constantly working on the development of new applications for our iodine-based products, pursuing a continuing expansion of our businesses and maintaining our market leadership.

We manufacture our iodine and iodine derivatives in accordance with international quality standards and have qualified our iodine facilities and production processes under the ISO-9001:2008 program, providing third party certification of the quality management system and international quality control standards that we have implemented.

The following table sets forth our total sales and revenues from iodine and iodine derivatives for 2012, 2011 and 2010:

|                             | 2012  | 2011  | 2010  |
|-----------------------------|-------|-------|-------|
| Sales Volume (Th. MT)       |       |       |       |
| Iodine and derivatives      | 11.0  | 12.2  | 11.9  |
| Revenues (in US\$ millions) | 578.1 | 454.5 | 316.3 |

Our sales revenues increased from US\$454.5 million in 2011 to US\$578.1 million in 2012. This increase was primarily attributable to increases in price as a consequence of strong demand growth among most uses.

### **Iodine: Marketing and Customers**

In 2012, we sold our iodine products to approximately 300 customers in 60 countries and most of our sales were exports: 31% was sold to customers in Europe, the Middle East and Africa, 36% to customers in North America, 3% to customers in Central and South America and 30% to customers in Asia and other regions. No single customer accounted for more than 8% of our iodine sales in 2012, and we estimate that our 10 largest customers accounted in the aggregate for approximately 47% of sales.

The following table sets forth the geographical breakdown of our sales for 2012, 2011, and 2010.

| Sales Breakdown              | 2012 |   | 2011 |   | 2010 |   |
|------------------------------|------|---|------|---|------|---|
| Europe, Middle East & Africa | 31   | % | 36   | % | 35   | % |
| North America                | 36   | % | 32   | % | 33   | % |
| Central & South America      | 3    | % | 3    | % | 5    | % |
| Others                       | 30   | % | 29   | % | 27   | % |

We sell iodine through our own worldwide network of representative offices and through our sales, support and distribution affiliates. We maintain inventories of iodine at our facilities throughout the world to facilitate prompt delivery to customers. Iodine sales are made pursuant to spot purchase orders or within the framework of supply agreements. Supply agreements generally specify annual minimum and maximum purchase commitments, and prices are adjusted periodically, according to prevailing market prices.

### **Iodine:** Competition

The world's main iodine producers are based in Chile, Japan and the United States. Iodine is also produced in Russia, Turkmenistan, Indonesia and China.

Iodine production in Chile starts from a unique mineral ore known as caliche ore, whereas in Japan, the United States, Russia, Turkmenistan and Indonesia, producers extract iodine from underground brines that are mainly obtained together with the extraction of natural gas and petroleum. In China, iodine is extracted from seaweed.

Six Chilean companies (SQM; Sirocco Mining Inc., a Canadian company previously known as Atacama Minerals; Atacama Chemical S.A. (Cosayach), controlled by the Chilean holding Inverraz S.A.; ACF Minera S.A. also owned by a Chilean family; Algorta Norte S.A., a joint venture between ACF Minera and Toyota Tsusho; and SCM Bullmine) accounted for approximately 58% of global iodine sales in 2012 (34% by SQM and 24% by the other five Chilean producers).

We estimate that eight Japanese iodine producers accounted for approximately 31% of global iodine sales in 2012, including recycled iodine.

We estimate that iodine producers in the United States (one of which is owned by Ise Chemicals Ltd., a Japanese company) accounted for 4% of world iodine sales in 2012.

Iodine recycling is an increasing trend worldwide. Several Japanese producers have recycling facilities where they recover iodine and iodine derivatives from iodine waste streams. Iodine recycling, mainly related to LCD consumption, has increased over the past few years and currently represents approximately 17% of world iodine sales. It is estimated that approximately 70% to 75% of the world recycling was done by Japanese iodine producers.

We, through ASG or alone, are also actively participating in the iodine recycling business using iodinated side-streams from a variety of chemical processes in Europe, the United States and Asia.

We estimate that worldwide sales of iodine were between 30,500 and 31,000 metric tons in 2012.

The prices of iodine and iodine derivative products are determined by market conditions. World iodine prices vary depending upon, among other things, the relationship between supply and demand at any given time. The supply of iodine varies principally depending upon the production of the few major iodine producers, including us, and their respective business strategies. As a result of steadily growing demand, and despite new supply from other Chilean producers, our average iodine sales prices increased to more than US\$50 per kilogram in 2012.

Demand for iodine varies depending upon overall levels of economic activity and the level of demand in the medical, pharmaceutical, industrial and other sectors that are the main users of iodine and iodine-derivative products.

The main factors of competition in the sale of iodine and iodine derivative products are reliability, price, quality, customer service and the price and availability of substitutes. We believe we have competitive advantages compared to other producers due to the size and quality of our mining reserves and the available production capacity. We believe our iodine is competitive with that produced by other manufacturers in certain advanced industrial processes. We also believe we benefit competitively from the long-term relationships we have established with our largest customers. While there are substitutes for iodine available for certain applications, such as antiseptics and disinfectants, there are limited cost-effective substitutes currently available for the main nutritional, pharmaceutical, animal feed, and main chemical uses of iodine, which together account for most iodine sales.

## **Lithium and its derivatives**

We believe we are the leading producer of lithium carbonate and one of the world's largest producers of lithium hydroxide. In 2012, our revenues from lithium sales amounted to US\$222.2 million, representing 9% of our total revenues. We estimate that our sales accounted for approximately 35% of the sale of global lithium chemicals sales in volume.

Lithium: Market

Lithium carbonate is used in a variety of applications, including electrochemical materials for batteries, ceramic and enamel frits, heat resistant glass (ceramic glass), primary aluminum smelting process, air conditioning chemicals, continuous casting powder for steel extrusion, synthesis of pharmaceuticals and lithium derivatives.

Lithium hydroxide is primarily used as a raw material in the lubricating grease industry, as well as in the dyes and the battery industries.

Lithium: Our Products

We produce lithium carbonate at the Salar del Carmen facilities, near Antofagasta, Chile, from solutions with high concentrations of lithium coming from the potassium chloride production at the Salar de Atacama. The annual production capacity of our lithium carbonate plant is 48,000 metric tons per year. We believe that the technologies we use, together with the high concentrations of lithium and unique characteristics of the Salar de Atacama, such as high evaporation rate and concentration of other minerals, allow us to be one of the lowest cost producers worldwide.

We also produce lithium hydroxide at our facilities at the Salar del Carmen, next to the lithium carbonate operation. The lithium hydroxide facility has a production capacity of 6,000 metric tons per year and is one of the largest plants in the world.

The following table sets forth our total sales and revenues from lithium carbonate and its derivatives for 2012, 2011 and 2010:

|                             | 2012  | 2011  | 2010  |
|-----------------------------|-------|-------|-------|
| Sales Volume (Th. MT)       |       |       |       |
| Lithium and derivatives     | 45.7  | 40.7  | 32.4  |
| Revenues (in US\$ millions) | 222.2 | 183.4 | 150.8 |

Our revenues in 2012 were US\$222.2 million, a 21% increase from US\$183.4 million in 2011, due to higher sales volumes resulting from an increase in demand in 2012, mainly driven by an increase in demand for rechargeable batteries and by uses related to construction, such as grease and glass. Other producers experienced some supply constraints during part of the year, allowing us to strengthen our position as a leader in lithium carbonate supply.

## Lithium: Marketing and Customers

In 2012, we sold our lithium products to over 300 customers in approximately 50 countries. Virtually all of our lithium products were sold overseas: 24% to customers in Europe, the Middle East and Africa, 10% to customers in North America, 64% to customers in Asia and Oceania and 2% to customers in other regions. No single customer accounted for more than 13% of our lithium sales in 2012, and we estimate that our 10 largest customers accounted in aggregate for approximately 50% of sales.

The following table sets forth the geographical breakdown of our sales for 2012, 2011 and 2010.

| Sales Breakdown              | 2012 | 2011 | 2010 |
|------------------------------|------|------|------|
| Europe, Middle East & Africa | 24 % | 28 % | 34 % |
| North America                | 10 % | 10 % | 12 % |
| Asia & Oceania               | 64 % | 61 % | 53 % |
| Others                       | 2 %  | 1 %  | 1 %  |

We sell lithium carbonate and lithium hydroxide through our own worldwide network of representative offices and through our sales, support and distribution affiliates. We maintain inventories of these products at our facilities throughout the world to facilitate prompt delivery to customers. Sales of lithium carbonate and lithium hydroxide are made pursuant to spot purchase orders or within the framework of supply agreements. Supply agreements generally specify annual minimum and maximum purchase commitments, and prices are adjusted periodically, according to prevailing market prices.

#### Lithium: Competition

Our main competitors in the lithium carbonate and lithium hydroxide businesses are Rockwood Lithium ("Rockwood"), a subsidiary of Rockwood Specialties Group Inc., and FMC Corporation ("FMC"). In addition, a number of Chinese producers together accounted for approximately 29% of the world market in 2012 in volume. Rockwood produces lithium carbonate at its operations in Chile, through Sociedad Chilena del Litio Limitada, and in Nevada, United States. Its production of downstream lithium products is mostly performed in the United States, Germany and Taiwan. FMC has production facilities in Argentina through Minera del Altiplano S.A., where it produces lithium chloride and lithium carbonate. Production of its downstream lithium products is mostly performed in the United States and the United Kingdom.

We believe that lithium production will increase in the near future. A number of new projects to develop lithium deposits have been announced recently, some of which could materialize in the short- to medium-term.

We estimate that worldwide sales of lithium chemicals, expressed as lithium carbonate equivalent (excluding direct use for lithium minerals), amounted to approximately 125,000 metric tons in 2012.

### **Potassium**

We produce potassium chloride and potassium sulfate by extracting brines from the Salar de Atacama that are rich in potassium chloride and other salts.

Since 2009, our end product capacity has increased to over 2 million metric tons per year, granting us improved flexibility and market coverage.

In 2012, our potassium chloride and potassium sulfate revenues amounted to US\$605.1 million, representing 25% of our total revenues and a 8.9% increase compared to 2011. We are currently making investments within our potassium products that will enable us to increase our production and sales of these products.

Potassium is one of the three macronutrients that a plant needs to develop. Although potassium does not form part of a plant's structure, it is essential to the development of its basic functions. Potassium chloride is the most commonly used potassium-based fertilizer, and it is used to fertilize crops that can resist high levels of chloride, such as wheat, corn and soybeans, among others.

Some benefits that may be obtained through the use of potassium are:

increased yield and quality;

· increased production of proteins;

· increased photosynthesis;

· intensified transport and storage of assimilates;

· prolonged and more intense assimilation period;

· improved water efficiency;

· regulated opening and closure of stomata; and

synthesis of lycopene.

Potassium chloride is also an important component for our specialty plant nutrients product line where it is used as a raw material to produce potassium nitrate.

#### Potassium: Market

During the last decade, the potassium chloride market has experienced rapid growth due to several key factors such as a growing world population, higher demand for protein-based diets and less arable land. All of these factors have contributed to growing demand for fertilizers and, in particular, potassium chloride, as efforts are being made to maximize crop yields and use resources more efficiently. For the last 10 years, the compound annual growth for the global potassium chloride market was approximately 2%.

Demand in the potassium chloride market decreased in 2012. We estimate that demand reached the level of 50 million metric tons for potassium chloride during 2012, a reduction of approximately 10% as compared to 2011. Despite favorable economic conditions for relevant crops, the demand was mainly affected by economic uncertainty. We expect the potassium chloride market to return to levels closer to 55 million during 2013.

Average prices in the potassium market remained relatively stable compared to 2011. The market has seen major industry contracts close at significantly lower prices in the early months of 2012. We believe these price pressures will have an impact on our potassium revenues in the near term.

#### Potassium: Our Products

Potassium chloride differs from our specialty plant nutrient products because it is a commodity fertilizer and contains chloride. We offer potassium chloride in two grades: standard and compacted. Potassium sulfate is considered a specialty fertilizer and we offer three grades: standard, compacted and soluble.

The following table shows our sales volumes of and revenues from potassium chloride and potassium sulfate for 2012, 2011 and 2010.

|  | 2012    | 2011    | 2010    |
|--|---------|---------|---------|
| Sales Volume (Th. MT)                  |         |         |         |
| Potassium Chloride & Potassium Sulfate | 1,209.5 | 1,103.4 | 1,273.0 |
| Revenues (in US\$ millions)            | 605.1   | 555.7   | 528.2   |

### Potassium: Marketing and Customers

In 2012, we sold potassium chloride and potassium sulfate in approximately 80 countries, with 5% of our sales to customers in Chile, 42% to customers in other countries in Central and South America, 11% to customers in Africa, 15% to customers in North America and 27% to customers in other regions. No single customer accounted for more than 23% of our sales of potassium chloride and potassium sulfate in 2012, and we estimate that our 10 largest customers accounted in the aggregate for approximately 61% of such sales.

The following table sets forth the geographical breakdown of our sales for 2012, 2011, and 2010.

| Sales Breakdown         | 2012 | 2011 | 2010 |
|-------------------------|------|------|------|
| Chile                   | 5 %  | 8 %  | 6 %  |
| Central & South America | 42 % | 32 % | 21 % |
| Africa                  | 11 % | 15 % | 16 % |
| North America           | 15 % | 11 % | 10 % |
| Others                  | 27 % | 34 % | 47 % |

#### Potassium: Competition

We estimate that we accounted for less than 3% of global sales of potassium chloride in 2012. Our main competitors are Uralkali Group, PCS, Belaruskali and Mosaic. We believe that in 2012 the principal producers in the market were Uralkali Group, which accounted for approximately 18% of global sales, PCS and Belaruskali, which each accounted for approximately 16% of global sales, and Mosaic, which accounted for approximately 15% of global sales.

In the potassium sulfate market, we have several competitors, of which the most important are K+S KALI GmbH (Germany), Tessenderlo Chemie (Belgium) and Great Salt Lake Minerals Corp. (United States). We believe that those three producers account for approximately 40% of the world production of potassium sulfate.

#### **Industrial Chemicals**

In addition to producing sodium and potassium nitrate for agricultural applications, we produce three grades of sodium and potassium nitrate for industrial applications: industrial, technical and refined grades. The three grades differ mainly in their chemical purity. We enjoy certain operational flexibility when producing industrial sodium and potassium nitrate because they are produced from the same process as their equivalent agricultural grades, needing only an additional step of purification. We may, with certain constraints, shift production from one grade to the other depending on market conditions. This flexibility allows us to maximize yields and to reduce commercial risk.

In addition to producing industrial nitrates, we produce and commercialize other industrial chemicals such as boric acid, a by-product of the production of potassium sulfate, and industrial-grade potassium chloride, both of which are sold into industrial markets in crystalline form. In 2012, our revenues from industrial chemicals were US\$245.2 million, representing approximately 10% of our total revenues for that year.

Industrial Chemicals: Market

Industrial sodium and potassium nitrates are used in a wide range of industrial applications, including the production of glass, ceramics, explosives, charcoal briquettes, metal treatments and various chemical processes. In addition, this product line enjoys long-term growth potential from industrial nitrates for thermal storage in solar energy projects. Solar salts for this specific application contain a blend of 60% sodium nitrate and 40% potassium nitrate by weight ratio.

Boric acid is primarily used as raw material in the manufacturing of glass, fiberglass, ceramic and enamel frits, and LCD flat panel displays.

Industrial potassium chloride is mainly used as an additive in oil and gas drilling fluids as well as in the production of carragenine.

Industrial Chemicals: Our Products

The following table sets forth our sales volumes of industrial chemicals and total revenues for 2012, 2011 and 2010:

|                             | 2012  | 2011  | 2010  |
|-----------------------------|-------|-------|-------|
| Sales Volume (Th. MT)       |       |       |       |
| Industrial nitrates         | 277.7 | 181.2 | 198.9 |
| Boric Acid                  | 1.8   | 2.4   | 2.6   |
| Revenues (in US\$ millions) | 245.2 | 139.5 | 149.7 |

Sales of industrial chemicals increased from US\$139.5 million in 2011 to US\$245.2 million in 2012 primarily as a result of an increase in sales volumes of solar salts products due to new alternative energy projects that utilize industrial grade sodium and potassium nitrate solar thermal energy.

Industrial Chemicals: Marketing and Customers

We sold our industrial nitrate products in 50 countries in 2012, with 49% percent of our sales of industrial chemicals to customers in North America, 37% to customers in Europe, the Middle East and Africa, 7% to customers in Central and South America and 7% to customers in other regions. No single customer accounted for more than 33% of our sales of industrial chemicals in 2012, and we estimate that our 10 largest customers accounted in the aggregate for approximately 70% of such sales.

The following table sets forth the geographical breakdown of our sales for 2012, 2011, and 2010.

| Sales Breakdown              | 2012 | 2 | 2011 | l | 2010 | ) |
|------------------------------|------|---|------|---|------|---|
| Europe, Middle East & Africa | 37   | % | 52   | % | 55   | % |
| North America                | 49   | % | 26   | % | 18   | % |
| Central & South America      | 7    | % | 17   | % | 22   | % |
| Others                       | 7    | % | 5    | % | 5    | % |

We sell our industrial chemical products mainly through our own worldwide network of representative offices and through our sales and distribution affiliates. We maintain inventories of our different grades of sodium nitrate and potassium nitrate products at our facilities in Europe, North America, South Africa and South America to achieve prompt deliveries to customers. Our Research and Development department, together with our foreign affiliates, provides technical support to our customers and continuously works with them to develop new products or applications for our products.

### **Industrial Chemicals: Competition**

We believe we are the world's largest producer of industrial sodium and potassium nitrate. In the case of industrial sodium nitrate, we estimate that our sales represented 60% of world demand in 2012 (excluding China and India internal demand, for which we believe reliable estimates are not available). Our competitors are mainly based in Europe and Asia, producing sodium nitrate as a by-product of other production processes. In refined grade sodium nitrate, BASF AG, a German corporation and several producers in China and Eastern Europe are highly competitive in the European and Asian markets. Our industrial sodium nitrate products also compete indirectly with substitute chemicals, including sodium carbonate, sodium hydroxide, sodium sulfate, calcium nitrate and ammonium nitrate, which may be used in certain applications instead of sodium nitrate and are available from a large number of producers worldwide.

Our main competitor in the industrial potassium nitrates business is Haifa; which we estimate had a 25% of the market share. We estimate that our market share was approximately 40% for 2012.

Producers compete in the market for industrial sodium and potassium nitrate based on reliability, product quality, price and customer service. We believe that we are a low cost producer of both products and are able to produce high quality products.

In the boric acid market, we are a relatively small producer mainly supplying regional needs.

### **Other Products**

A large part of our other revenue is related to fertilizer trading, usually commodities. These fertilizers are traded in large volumes worldwide. We have developed a trade, supply, and inventory management business that allows us to respond quickly and effectively to the changing fertilizer market in which we operate and profit on these trades.

## **Production Process**

Our integrated production process can be classified according to our natural resources:

caliche ore deposits, which contain nitrates and iodine; and
 salar brines, which contain potassium, lithium, sulfate, boron and magnesium.

### Caliche Ore Deposits

Caliche ore deposits are located in northern Chile. During 2012, we operated three mines in this region: Pedro de Valdivia, El Toco (mining site of Maria Elena production facilities) and Nueva Victoria. In March 2010, operations at El Toco and Pampa Blanca, two of our mines, were temporarily suspended in an effort to optimize inventory of these products due to decreased global demand for nitrates and iodine during the preceding 15 months. In November 2010, mining activities resumed in El Toco.

Caliche ore is found under a layer of barren overburden in seams with variable thickness from twenty centimeters to five meters, and with the overburden varying in thickness from half a meter to one and a half meters.

Before proper mining begins, a full exploration stage is carried out, including full geological reconnaissance, sampling and drilling caliche ore to determine the features of each deposit and its quality. Drill-hole samples are properly identified and tested at our chemical laboratories. With the exploration information on a closed grid pattern of drill holes, the ore evaluation stage provides information for mine planning purposes. Mine planning is done on a long-term basis (10 years), medium-term basis (three years) and short-term basis (one year). A mine production plan is a dynamic tool that details daily, weekly and monthly production plans. After drill holes are made, information is updated to offer the most accurate ore supply schedule to the processing plants.

The mining process generally begins with bulldozers first ripping and removing the overburden in the mining area. This process is followed by production drilling and blasting to break the caliche seams. Front-end loaders load the ore on off-road trucks. In the Pedro de Valdivia mine, trucks deliver the ore to stockpiles next to rail loading stations. The stockpiled ore is later loaded onto railcars that take the mineral to the processing facilities.

At the Pedro de Valdivia facility, the ore is crushed and leached to produce concentrated solutions carrying the nitrate and iodine. The crushing of the ore produces a coarse fraction that is leached in a vat system and a fine fraction that is leached by agitation. These are followed by liquid-solid separation, where solids precipitate as sediment and liquids containing nitrate and iodine are sent to be processed. Operations at the El Toco mining site of Maria Elena use a heap leaching production process. In Nueva Victoria and El Toco, the run of mine ore is loaded in heaps and leached to produce concentrated solutions.

Caliche Ore-Derived Products

Caliche ore-derived products are: sodium nitrate, potassium nitrate, sodium potassium nitrate, iodine and iodine derivatives.

#### Sodium Nitrate

During 2012, sodium nitrate for both agricultural and industrial applications was produced at the Pedro de Valdivia facility using the Guggenheim method, which was originally patented in 1921, and is based on a closed circuit method of leaching vats. This process uses heated brines to leach the crushed caliche in vats and selectively dissolve the contents. The concentrated solution is then cooled, producing sodium nitrate crystals, which can then be separated from the brine using basket centrifuges. After the crystallization process, the brine is pumped to the iodine facilities, where the iodide is separated in a solvent extraction plant. The brine is returned to the vat leaching process. The fine fraction of caliche's crushing process is leached at ambient temperature with water, producing a weak solution that is pumped to the iodine facilities. After a solvent extraction process, the brine is pumped to solar evaporation ponds in

Coya Sur, 15 km south of María Elena.

Our total current crystallized sodium nitrate production capacity at the Pedro de Valdivia facility is approximately 500,000 metric tons per year. Crystallized sodium nitrate is processed further at the Coya Sur and María Elena production plants to produce potassium nitrate in different qualities, sodium potassium nitrate and/or crystallized or prilled nitrates (potassium or sodium), which are transported to our port facilities in Tocopilla by railway for shipping to customer and distributors worldwide.

#### Potassium nitrate

Potassium nitrate is produced at our Coya Sur facility using a production process developed by us. The brine leached with the fine fraction process at Pedro de Valdivia and the brines produced by heap leaching process in Maria Elena are pumped to Coya Sur's solar evaporation ponds for a nitrate concentration process. After the nitrate concentration process, the brine is pumped to a conversion plant where potassium salts are added and where a chemical reaction begins and produces brine with dissolved potassium nitrate. This brine is pumped to a crystallization plant, which crystallizes the potassium nitrate by cooling and separating it from the liquid by centrifuge.

Concentrated nitrate salts were produced at Pampa Blanca until March 2010, and are currently produced at Nueva Victoria by leaching caliche ore in heaps in order to extract solutions that are rich in iodine and nitrates. These solutions are then sent to plants where iodine is extracted through both solvent-extraction and blow out processes. The remaining solutions are subsequently sent to solar evaporation ponds where the solutions are evaporated and rich nitrate salts are produced. These concentrated nitrate salts are then sent to Coya Sur where they are used to produce potassium nitrate.

Our current potassium nitrate production capacity at Coya Sur is approximately 950,000 metric tons per year, including 500,000 metric tons per year of technical grade potassium nitrate. A new potassium nitrate plant began operations in 2011. During 2012, we produced approximately 246,000 tons of potassium nitrate at this plant. This new plant was designed to use raw material salts harvested in Nueva Victoria and potassium salts from the Salar de Atacama.

The nitrates produced in crystallized or prilled form at Coya Sur have been certified by TÜV-Rheiland under the quality standard ISO 9001:2008. Potassium nitrate produced at Coya Sur and María Elena is transported to Tocopilla for shipping to customers and distributors.

### Sodium potassium nitrate

Sodium potassium nitrate is a mixture of approximately two parts sodium nitrate per one part potassium nitrate. We produce sodium potassium nitrate at our Coya Sur and María Elena prilling facilities using standard, non-patented production methods we have developed. Crystallized sodium nitrate is mixed with the crystallized potassium nitrate to make sodium potassium nitrate, which is then prilled. The prilled sodium potassium nitrate is transported to Tocopilla for bulk shipment to customers.

The production process for sodium potassium nitrate is basically the same as that for sodium nitrate and potassium nitrate. With certain production restraints and following market conditions we may supply sodium nitrate, potassium nitrate or sodium potassium nitrate either in prilled or crystallized form.

#### Iodine and iodine derivatives

We produce iodine at our Pedro de Valdivia, Maria Elena and Nueva Victoria facilities. During 2012, iodine was produced by extracting it from the solutions resulting from the heap leaching of caliche ore at María Elena and Nueva Victoria, including the Iris facility as part of the Nueva Victoria facility, and from the vat leaching of caliche ore at the Pedro de Valdivia facilities. Production of iodine at the Iris plant began in December 2011.

As in the case of nitrates, the process of extracting iodine from the caliche ore is well established, but variations in the iodine and other chemical contents of the treated ore and other operational parameters require a high level of know-how to manage the process effectively and efficiently.

The solutions resulting from the leaching of caliche carry iodine in iodate form. Part of the iodate solution is reduced to iodide using sulfur dioxide, which is produced by burning sulfur. The resulting iodide is combined with the rest of the untreated iodate solution to release elemental iodine in low concentrations. The iodine is then extracted from the aqueous solutions and concentrated as iodide form using a solvent extraction and stripping plant in the Pedro de Valdivia and Nueva Victoria facilities and using a blow out plant in Iris. The concentrated iodide is oxidized to solid iodine, which is then refined through a smelting process and prilled. We have obtained patents in the United States and recently in Chile under the Chilean patent number 47,080, for our iodine prilling process.

Prilled iodine is tested for quality control purposes, using international standard procedures that we have implemented, then packed in 20 to 50 kilogram drums or 350 to 700 kilogram maxibags and transported by truck to Antofagasta or Iquique for export. Our iodine and iodine derivatives production facilities have qualified under the new ISO-9001:2008 program, providing third-party certification—by TÜV-Rheiland—of the quality management system. The last recertification process was approved in February 2011. Iodine from the Iris plant was certified under ISO-9001:2008 in April 2012.

Our total iodine production in 2012 was approximately 10,900 metric tons: approximately 6,000 metric tons from Nueva Victoria and Iris, 3,200 metric tons from Pedro de Valdivia, and 1,700 metric tons from María Elena. The Nueva Victoria facility is also used for recycling iodine from the potassium iodide contained in the LCD waste solutions imported mainly from Korea. Nueva Victoria is also equipped to toll iodine from iodide delivered from other SQM facilities. We have the flexibility to adjust our production according to market conditions. Our total current production capacity at our iodine production plants is approximately 12,500 metric tons per year.

We use a portion of the produced iodine to manufacture inorganic iodine derivatives, which are intermediate products used for manufacturing agricultural and nutritional applications, at facilities located near Santiago, Chile. We also produce inorganic and organic iodine derivative products together with Ajay, which purchases iodine from us. In the past, we have primarily marketed our iodine derivative products in South America, Africa and Asia, while Ajay and its affiliates have primarily sold their iodine derivative products in North America and Europe.

In September 2010, the National Environmental Commission of Chile (*Comisión Nacional del Medioambiente* or "CONAMA") approved the environmental study of our Pampa Hermosa project in the Region of Tarapacá in Chile. This approval allowed us to increase the production capacity of our Nueva Victoria operations from 4,500 to 11,000 metric tons of iodine per year and to produce up to 1.2 million metric tons of nitrates, mine up to 33 million metric tons of caliche per year and use new water rights of up to 570.8 liters per second. During 2012, we made investments in order to increase the water capacity in the Nueva Victoria operations from two water sources approved by the environmental study of Pampa Hermosa, expand the capacity of solar evaporation ponds and to implement new areas of mining and collection of solutions. Additional expansions may be done from time to time in the future, depending on market conditions.

During 2012, we submitted a request to the CONAMA requesting approval to expand our caliche ore extraction in the region of Antofagasta, which, if approved, is expected to increase production capacity by 10,000 tons of iodine and 1.3 million tons of nitrates per year. The project also requested permission to build a pipeline from the Pacific Ocean to the mining site. Currently, the request is being evaluated by the commission and other governmental agencies.

### Salar de Atacama Brine Deposits

The Salar de Atacama, located approximately 250 kilometers east of Antofagasta, is a salt-encrusted depression in the Atacama desert, within which lies an underground deposit of brines contained in porous sodium chloride rock fed by an underground inflow from the Andes mountains. The brines are estimated to cover a surface of approximately 2,800 square kilometers and contain commercially exploitable deposits of potassium, lithium, sulfates and boron. Concentrations vary at different locations throughout the Salar de Atacama. Our production rights to the Salar de Atacama are pursuant to a lease agreement with Corfo, which expires in 2030. The lease agreement permits the CCHEN to establish a total accumulated extraction limit of 180,100 tons of lithium.

Brines are pumped from depths of 1.5 to 60 meters below surface, through a field of wells that are located in areas of the Salar de Atacama that contain relatively high concentrations of potassium, lithium, sulfate, boron and other minerals.

We process these brines to produce potassium chloride, potassium sulfate, lithium carbonate, lithium hydroxide, lithium chloride, boric acid and bischofite (magnesium chloride).

#### Potassium chloride

We use potassium chloride in the production of potassium nitrate. Production of our own supplies of potassium chloride provides us with substantial raw material cost savings.

In order to produce potassium chloride, brines from the Salar de Atacama are pumped to solar evaporation ponds. Evaporation of the brines results in a complex crystallized mixture of salts of potassium, sodium and magnesium. Waste sodium chloride salts are removed by precipitation. After further evaporation, the sodium and potassium salts are harvested and sent for treatment at one of the potassium chloride plants where potassium chloride is separated by a grinding, flotation, and filtering process. Potassium salts also containing magnesium are harvested and sent for treatment at one of the cold leach plants where magnesium is removed. Potassium chloride is transferred for approximately 300 kilometers to our Coya Sur facilities via a dedicated truck transport system, where it is used in the production of potassium nitrate. We sell potassium chloride produced at the Salar de Atacama in excess of our needs to third parties. All of our potassium-related plants in the Salar de Atacama currently have a production capacity in excess of up to 2.6 million metric tons per year. Actual production capacity will depend on volume, metallurgical recovery rates and quality of the mining resources pumped from the Salar de Atacama.

During 2012, we achieved a production capacity of compacted potassium chloride in excess of 1.2 million metric tons per year and we plan to carry out further expansions of production capacity of the compaction plant during 2013.

The by-products of the potassium chloride production process are (i) brines remaining after removal of the potassium chloride, which are used to produce lithium carbonate as described below, with the excess amount being reinjected into the Salar de Atacama; (ii) sodium chloride, which is similar to the surface material of the Salar de Atacama and is deposited at sites near the production facility; and (iii) other salts containing magnesium chloride.

#### Lithium carbonate and lithium chloride

A portion of the brines remaining after the production of potassium chloride is sent to additional solar concentration ponds adjacent to the potassium chloride production facility. Following additional evaporation, the remaining concentrated solution of lithium chloride is transported by truck to a production facility located near Antofagasta, approximately 230 kilometers from the Salar de Atacama. At the production facility, the solution is purified and treated with sodium carbonate to produce lithium carbonate, which is dried and then, if necessary, compacted and finally packaged for shipment. A portion of this purified lithium chloride solution is packaged and shipped to customers. The production capacity of our lithium carbonate facility is approximately 48,000 metric tons per year. Future production will depend on the actual volumes and quality of the lithium solutions sent by the Salar de Atacama operations, as well as prevailing market conditions.

Lithium carbonate production quality assurance program has been certified by TÜV-Rheiland under ISO 9001:2000 since 2005 and under ISO 9001:2008 since October 2009.

#### Lithium hydroxide

Lithium carbonate is sold to customers, and we also use it as a raw material for our lithium hydroxide monohydrate facility, which started operations at the end of 2005. This facility has a production capacity of 6,000 metric tons per year and is located in the Salar del Carmen, adjacent to our lithium carbonate operations. In the production process, lithium carbonate is reacted with a lime solution to produce lithium hydroxide brine and calcium carbonate salt, which is filtered and piled in reservoirs. The brine is evaporated in a multiple effect evaporator and crystallized to produce the lithium hydroxide monohydrate, which is dried and packaged for shipment to customers.

Lithium hydroxide production quality assurance program has been certified by TÜV-Rheiland under ISO 9001:2000 since 2007 and under ISO 9001:2008 since October 2009.

#### Potassium sulfate and boric acid

Approximately 12 kilometers northeast of the potassium chloride facilities at the Salar de Atacama, we use the brines from the Salar de Atacama to produce potassium sulfate, potassium chloride (as a by-product of potassium sulfate process) and boric acid. The plant is located in an area of the Salar de Atacama where high sulfate and potassium concentrations are found in the brines. Brines are pumped to pre-concentration solar evaporation ponds where waste sodium chloride salts are removed by precipitation. After further evaporation, the sulfate and potassium salts are

harvested and sent for treatment at the potassium sulfate plant. Potassium sulfate is produced using flotation, concentration and reaction processes, after which it is crystallized, dried and packaged for shipment. Production capacity for the potassium sulfate plant is approximately 340,000 metric tons per year. This capacity is part of the total plant capacity of 2.6 million metric tons per year, in our dual plant complex where we may switch, to some extent, between potassium chloride and potassium sulfate production. Part of the pond system in this area is also used to process potassium chloride brines extracted from the low sulfate sulfate concentration areas found in the salar.

The principal by-products of the production of potassium sulfate are: (i) non-commercial sodium chloride, which is deposited at sites near the production facility, and (ii) remaining solutions, which are re-injected into the Salar de Atacama or returned to the evaporation ponds. The principal by-products of the boric acid production process are remaining solutions that are treated with sodium carbonate to neutralize acidity and then are reinjected into the Salar de Atacama.

#### Raw materials

The main raw material that we require in the production of nitrate and iodine is caliche ore, which is obtained from our surface mines. The main raw material in the production of potassium chloride, lithium carbonate and potassium sulfate is the brine extracted from our operations at the Salar de Atacama.

Other important raw materials are sodium carbonate (used for lithium carbonate production and for the neutralization of iodine solutions), sulfur, sulfuric acid, kerosene, anti-caking and anti-dust agents, ammonium nitrate (used for the preparation of explosives in the mining operations), woven bags for packaging our final products, electricity acquired from electric utilities, and liquefied natural gas and fuel oil in heat generation. Our raw material costs (excluding caliche ore and salar brines and including energy) represented approximately 20% of our cost of sales in 2012.

We have several electricity supply agreements signed with major producers in Chile which are expected to cover our electricity needs until 2030. We have been connected to the northern power grid in Chile, which currently supplies electricity to most cities and Industrial facilities in northern Chile, since April 2000.

In May 2001, we entered into a 10-year gas supply contract with Distrinor S.A. (a subsidiary of E-CL) for a maximum of 3,850,000 million Btu per year. This gas supply was considered sufficient at the time to satisfy the requirements for the facilities that are connected to a natural gas supply. However, beginning in 2004, the Argentinean government imposed restrictions on the supply of natural gas to Chile and, in 2011, the supply came to a complete stop. In 2010, Chile began to import liquefied natural gas. In 2012, we received liquefied natural gas through this supply stream.

We obtain ammonium nitrate, sulfur, sulfuric acid, kerosene and soda ash from several large suppliers, mainly in Chile and the United States, under long-term contracts or general agreements, some of which contain provisions for annual revisions of prices, quantities and deliveries. Diesel fuel is obtained under contracts that provide fuel at international market prices.

We believe that all of our contracts and agreements with third-party suppliers with respect to our main raw materials contain standard and customary commercial terms and conditions.

## Water Supply

The main sources of water for our nitrate and iodine facilities at Pedro de Valdivia, María Elena and Coya Sur are the Loa and San Salvador rivers, which run near our production facilities. Water for our Nueva Victoria and Salar de Atacama facilities is obtained from wells near the production facilities. We additionally buy water from third parties for our production processes at the Salar del Carmen lithium carbonate plant. In addition, we purchase potable water from local utility companies. We have not experienced significant difficulties obtaining the necessary water to conduct our operations.

### **Government Regulations**

Regulations in Chile Generally

We are subject to the full range of government regulations and supervision generally applicable to companies engaged in business in Chile, including labor laws, social security laws, public health laws, consumer protection laws, environmental laws, tax laws, securities laws and anti-trust laws. These include regulations to ensure sanitary and safety conditions in manufacturing plants.

We conduct our mining operations pursuant to exploration concessions and exploitation concessions granted pursuant to applicable Chilean law. Exploitation concessions essentially grant a perpetual right to conduct mining operations in the areas covered by the concessions, provided that annual concession fees are paid (with the exception of the Salar de Atacama rights, which have been leased to us until 2030). Exploration concessions permit us to explore for mineral resources on the land covered thereby for a specified period of time, and to subsequently request a corresponding exploitation concession.

Under Law No. 16,319 that created the CCHEN (*Ley 16.319 que crea la Comisión Chilena de Energía Nuclear*), we have an agreement with the CCHEN regarding the exploitation and sale of lithium from the Salar de Atacama. The agreement sets quotas for the tonnage of lithium authorized to be sold.

We also hold water rights obtained from the Chilean water regulatory authority for the supply of water from rivers or wells near our production facilities sufficient to meet our current and anticipated operating requirements. See "Risk factors—Risks relating to Chile." The Water Code is subject to changes, which could have a material adverse impact on our business, financial condition and results of operations. Law No. 20,017, published on June 16, 2005, modified the Chilean laws relating to water rights. Under certain conditions, these modifications allow the constitution of permanent water rights of up to two liters per second for each well built prior to June 30, 2004, in the locations where we conduct our mining operations. In constituting these new water rights, the law does not consider the availability of water, or how the new rights may affect holders of existing rights. Therefore, the amount of water we can effectively extract based on our existing rights could be reduced if these additional rights are exercised. These and other potential future changes to Chilean laws relating to water rights could have a material adverse impact on our business, financial condition and results of operations.

We operate port facilities at Tocopilla for shipment of products and delivery of certain raw materials pursuant to maritime concessions, under applicable Chilean laws, which are normally renewable on application, provided that such facilities are used as authorized and annual concession fees are paid.

In 2005, the Chilean Congress approved the Royalty Law, which established a royalty tax to be applied to mining activities developed in Chile. In 2010, modifications were made to the law and taxes were increased. In 2012, new modifications to the tax laws were enacted to permanently set the corporate tax rate at 20%. The Chilean government may again decide to levy additional taxes on mining companies or other corporations in Chile, and such taxes could have a material adverse impact on our business, financial condition and results of operations.

In 2006, the Chilean Congress amended the Labor Code, and effective January 15, 2007, certain changes were made affecting companies that hire subcontractors to provide certain services. This new law, known as the Subcontracting Law (*Ley de Subcontratación*), further amends the Labor Accidents Law No. 16,744 to provide that, that when a serious accident in the workplace occurs, a company must halt work at the site where the accident took place until authorities from the SERNAGEOMIN, the Labor Board or the SNA, inspect the site and prescribe the measures such company must take to prevent future risks. Work may not be resumed until such company has taken the prescribed measures, and the period of time before work may be resumed may last for a number of hours, days, or longer. The effects of this law could have a material adverse effect on our business, financial condition and results of operations.

On December 2, 2009, Law No. 20,393 went into effect, establishing a system of criminal liability for legal entities. The objective of the new regulation is to allow legal entities to be prosecuted for the crimes of (a) asset laundering, (b) financing terrorism and (c) bribery, where such crimes are committed by people who hold relevant positions within a legal entity in order to benefit that legal entity. The law establishes a prevention model that includes, among others, the designation of a person in charge of prevention and the establishment of special programs and policies. The implementation of this model can exempt a company from liability.

On January 1, 2010, Law No. 20,382 went into effect, introducing modifications to the Securities Law and Law No. 18,046 on Corporations (*Ley de Sociedades Anónimas* or the "Chilean Corporations Act"). The new law relates to corporate governance and, in general, seeks to improve such matters as the professionalization of senior management at corporations, the transparency of information, and the detection and resolution of possible conflicts of interest. The law establishes the concept of an independent director for certain corporations, including SQM. Such director has a preferential right to be a member of the Directors' Committee, which position, in turn, grants the director further powers. The new independent director may be proposed by any shareholder with an ownership interest of 1% or more in a company, but he or she must satisfy a series of independence requirements with respect to the company and the company's competition, providers, customers and majority shareholders. The new law also refines the regulations regarding the information that companies must provide to the general public and to the SVS, as well as regulations relating to the use of inside information, the independence of external auditors, and procedures for the analysis of transactions with related parties.

On January 26, 2010, the Chilean Congress amended the Environmental Law to create the Ministry of Environment, the Environmental Assessment Service and the environmental enforcement superintendence (*Superintendencia del Medioambiente* or "Environmental Enforcement Superintendence"). These changes introduced important amendments to environmental regulations by setting up new agencies and introducing new provisions and procedures applicable to projects whose operations bear an impact on the environment. The new Ministry designs and implements environmental policies relating to environmental conservation, sustainable growth and the protection of Chile's renewable energy resources. In addition, the Ministry is responsible for enacting emission and quality standard regulations, as well as recovery and decontamination plans. The Environmental Assessment Service pursues procedures of the Environmental Impact Assessment System, pursuant to which projects are environmentally approved or rejected. In procedures for obtaining an environmental license, any person, including legal entities and companies, will be allowed to file oppositions and comments. Summary procedures, such as Environmental Impact Statements, allow comments in support or opposition under certain circumstances. Technical reports from governmental agencies are considered to be final. The Environmental Enforcement Superintendence is an independent

agency which oversees and coordinates with other governmental agencies in charge of supervision of suspended projects and projects requiring environmental approval. Likewise, it will receive, investigate and decide complaints concerning the infringement of environmental regulations and will sanction violators, deliver injunction orders and levy relevant fines. The Environmental Enforcement Superintendence had its powers suspended until the First Environmental Court was installed in Santiago on December 28, 2012.

There are currently no material legal or administrative proceedings pending against us except as discussed in Note 16.1 to our Consolidated Financial Statements and below under "—Safety, health and environmental regulations in Chile," and we believe that we are in compliance in all material respects with all applicable statutory and administrative regulations with respect to our business.

### Safety, Health and Environmental Regulations in Chile

Our operations in Chile are subject to both national and local regulations related to safety, health, and environmental protection. In Chile, the main regulations on these matters that are applicable to SQM are the Mine Health and Safety Act of 1989 (*Reglamento de Seguridad Minera* or the "Mine Health and Safety Act"), the Health Code (*Código Sanitario*), the Health and Safety Act 1999 (*Reglamento sobre Condiciones Sanitarias y Ambientales Básicas en los Lugares de Trabajo* or the "Health and Basic Conditions Act"), the Subcontracting Law, and the environmental framework law (*Ley sobre Bases Generales del Medio Ambiente* or the "Environmental Law").

Health and safety at work are fundamental aspects in the management of mining operations, which is why SQM has made constant efforts to maintain good health and safety conditions for the people working at its mining sites. In addition to the role played by us in this important matter, the Chilean government has a regulatory role, enacting and enforcing regulations in order to protect and ensure the health and safety of workers. The Chilean government, acting through the Ministry of Health and the SERNAGEOMIN, performs health and safety inspections and oversees mining projects, among other tasks, and it has exclusive powers to enforce standards related to environmental conditions and the health and safety of the people performing activities related to mining.

The Mine Health and Safety Act protects workers and nearby communities against health and safety hazards, and it provides for enforcement of the law where compliance has not been achieved. SQM's Internal Mining Standards (*Reglamentos Internos Mineros*) establish our obligation to maintain a workplace that is safe and free of health risks, in as much as this is reasonably practicable. We must comply with the general provisions of the Health and Basic Conditions Act, our own internal standards, and the provisions of the Mine Health and Safety Act. In the event of non-compliance, the Ministry of Health and particularly the SERNAGEOMIN are entitled to use their enforcement powers to ensure compliance with the law.

In November 2011, the Ministry of Mining enacted Law No. 20,551 that Regulates Mine Closure and its Facilities (*Ley que Regula el Cierre de Faenas e Instalaciones Mineras*). This new statute entered in force in November 2012. Its main requirements are related to disclosures to the SERNAGEOMIN regarding decommissioning plans for each mining site and its facilities, along with the estimated cost to implement such plans. There is a requirement to provide a form of financial assurance to the SERNAGEOMIN to secure compliance with the decommissioning plans. There are various types of financial assurance that satisfy the requirement. By November 2014, we have to inform the SERNAGEOMIN of the estimated costs for each of our decommissioning plans and the corresponding financial assurances we propose to provide, which are subject to approval by the SVS.

The Environmental Law was subjected to several important modifications that entered into effect in January 2010, including the creation of the Ministry of the Environment, the Environmental Assessment Service, and the Environmental Enforcement Superintendence began operations on December 28, 2012. The new and modified Environmental Law replaced the CONAMA with both the Ministry of the Environment, which is currently the governmental agency responsible for coordinating and supervising environmental issues and the Environmental Assessment Service. Under the new Environmental Law, we will continue to be required to conduct environmental impact studies or statements of any future projects or activities (or their significant modifications) that may affect the environment. With the above mentioned modifications to the Environmental Law, the Environmental Assessment Service, together with other public institutions with mandates related to the environment, evaluates environmental impact studies or statements submitted for its approval. The Environmental Enforcement Superintendence is responsible for auditing environmental performance during the construction, operation, and closure of the projects. The Environmental Law also promotes citizen participation in project evaluation and implementation, providing more opportunities during the environmental evaluation process.

In August 10, 1993, the Ministry of Health published in the Official Gazette a resolution establishing that atmospheric particulate levels at our production facilities in María Elena and Pedro de Valdivia exceeded air quality standards, affecting the nearby towns. The high particulate matter levels came principally from dust produced during the processing of caliche ore, particularly the crushing of the ore before leaching. Residents of the town of Pedro de Valdivia were relocated to the town of María Elena, practically removing Pedro de Valdivia from the scope of the determination of the Ministry of Health. In 1998, authorities approved a plan to reduce the atmospheric particulate levels later modified by Decree No. 37/2004 in March 2004, which called for an 80% reduction of the emissions of atmospheric particulate material. This was achieved by 2008 through the implementation of a project that modified the milling and screening systems used in the processing of the caliche ore at the María Elena facilities. Due to international market conditions, this project ceased its operation in March 2010, and today the milling and screening systems used in the processing of the caliche ore at the María Elena facilities remain closed. Air quality in the area has improved significantly and compliance of air quality standards required by law is being assessed. When the average of three consecutive years meets the Chilean air quality standard, the resolution of 1993 of the Ministry of Health may be reviewed.

On March 16, 2007, the Ministry of Health published in the Official Gazette a resolution establishing that atmospheric particulate levels exceeded air quality standards in the coast-town of Tocopilla, where we have our port operations. The high particulate matter levels are caused mainly by two thermoelectric power plants that use coal and fuel oil and are located next to our port operations. Our participation in particulate matter emissions is very small (less than 0.20% of the total). However, a decontamination plan was developed by the environmental authority, and its implementation began in October 2010. During 2008 and 2009, earlier than required, SQM implemented control measures for mitigating particulate matter emissions in its port operations according to the requirements of this plan. We do not expect any additional measures to be required of SQM following the implementation of the plan.

We continuously monitor the impact of our operations on the environment and have made, from time to time, modifications to our facilities in an effort to eliminate any adverse impacts. Also, over time, new environmental standards and regulations have been enacted, which have required minor adjustments or modifications of our operations for full compliance. We anticipate that additional laws and regulations will be enacted over time with

respect to environmental matters. While we believe that we will continue to be in compliance with all applicable environmental regulations of which we are now aware, there can be no assurance that future legislative or regulatory developments will not impose new restrictions on our operations. We are committed to both complying with all applicable environmental regulations and applying an Environmental Management System to continuously improve our environmental performance.

We have submitted and will continue to submit several environmental impact assessment studies related to our projects to the governmental authorities. We require the authorization of these submissions in order to maintain and to increase our production capacity.

#### **International Regulations**

In 2007, a new European Community Regulation on chemicals and their safe use went into effect. This regulation, called REACH (Regulation, Evaluation, Authorisation and Restriction of Chemical Substances), requires all manufacturers and importers of chemicals – including us – to identify and manage risks linked to the substances they manufacture and market. Non-compliance with this regulation would preclude us from commercializing our products in the European market. In 2010, we completed, on schedule, the registration of all products exported to the European Community in quantities larger than 1,000 MT, and since 2011 we have been working on the registration of products exported in amounts under 1,000 MT, which will be completed by 2013; thus, ensuring delivery to European customers.

In 2012, the Environmental Protection Agency ("EPA") required importers of chemicals into the US to comply with the Chemical Data Reporting Rule. For the 2012 submission period, we have provided the required information for the year 2011 for all reportable chemical substances. In addition, the Occupational Health and Safety Administration ("OSHA") aligned the standard for chemicals hazard communication to comply with the Globally Harmonized System ("GHS"), which requires companies to review hazard information for all chemicals imported into the US, classify chemicals according to the new classification criteria, and update labels and safety data sheets by June 2015. We are already working on a program which aims to comply with the requirements of this new regulation in line with the stages and deadlines established by OSHA, and we have updated the Material Safety Data Sheets ("MSDS") for products imported into the US.

### Research and development, patents and licenses

See Item 5.C. Research and Development, Patents and Licenses, etc.

## 4.C. Organizational Structure

All of our principal operating subsidiaries are essentially wholly-owned, except for Soquimich Comercial S.A., which is approximately 61% owned by us and whose shares are listed and traded on the Santiago Stock Exchange, and Ajay SQM Chile S.A., which is 51% owned by us. The following is a summary of our main subsidiaries as of December 31, 2012. For a list of all our consolidated subsidiaries, see Note 2.5 to our Consolidated Financial Statements.

|  |  |                          | SQM Beneficial     |  |
|--|--|--------------------------|--------------------|--|
| Principal subsidiaries   | Activity   | Country of Incorporation | Ownership Interest |  |
|  |  | Theor por acion          | (Direct/Indirect)  |  |
| SQM Nitrates S.A.  | Extracts and sells caliche ore to subsidiaries and affiliates of SQM   | Chile                    | 100%               |  |
| SQM Industrial S.A.  | Produces and markets SQM's products directly and through other subsidiaries and affiliates of SQM                                | Chile                    | 100%               |  |
| SQM Salar S.A.   | Exploits the Salar de Atacama to produce and market SQM's products directly and through other subsidiaries and affiliates of SQM | Chile                    | 100%               |  |
| SQM Potasios S.A.  | Produces and markets SQM's products directly and through other subsidiaries and affiliates of SQM                                | Chile                    | 100%               |  |
| Servicios Integrates de Transitos y<br>Transferencias S.A. (SIT) | Owns and operates a rail<br>transport system and also owns<br>and operates the Tocopilla port<br>facilities                      | Chile                    | 100%               |  |
| Soquimich Comercial S.A.   | Markets SQM's specialty plant<br>nutrition products domestically<br>and imports fertilizers for resale<br>in Chile               | Chile                    | 61%                |  |

| Ajay-SQM Chile S.A.   | Produces and markets SQM's iodine and iodine derivatives | Chile   | 51% |
|---|--|---------|-----|
| Sales and distribution subsidiaries in the United States, Belgium, Brazil, Venezuela, Ecuador, Peru, Argentina, Mexico, South Africa and other locations. | Market SQM's products throughout the world               | Various |     |

### 4.D. Property, Plant and Equipment

Discussion of our mining rights is organized below according to the geographic location of our mining operations. SQM's mining interests located throughout the valley of the Tarapacá and Antofagasta regions of northern Chile (in a part of the country known as "el Norte Grande"), referred to collectively as the "Caliche Ore Mines", are discussed first. The Company's mining interests within the Atacama Desert in the eastern region of el Norte Grande (the "Salar de Atacama Brines") are discussed second.

#### **Description of the Caliche Ore Mines**

As of December 31, 2012, we held constituted exploitation rights to mineral resources representing approximately 543,882 hectares. In addition, as of December 31, 2012, we held exploration rights to mineral resources representing approximately 2,700 hectares, and we have applied for additional exploration rights for approximately 19,900 hectares. Currently, Pedro de Valdivia, María Elena and Nueva Victoria are being exploited.

#### Pedro de Valdivia

The mine and facilities that we operate in Pedro de Valdivia are located 170 kilometers northeast of Antofagasta and are accessible by highway. These facilities have been in operation for approximately 79 years and were previously owned and operated by Anglo Lautaro. The areas currently being mined are located approximately 17 kilometers southeast and approximately 20 kilometers west of the Pedro de Valdivia production facilities. Our mining facilities at Pedro de Valdivia have a Weighted Average Age of approximately 11.41 years. Electricity, diesel, and fuel oil are the primary sources of power for this operation.

#### María Elena

We operated mining facilities at María Elena until March 2010, and mining activities using heap leaching resumed in November 2010. The María Elena mine and facilities, named El Toco, are located 220 kilometers northeast of Antofagasta and are accessible by highway. These facilities were operated for approximately 83 years before operations were suspended and were previously owned and operated by Anglo Lautaro. The area mined until operations were suspended is located approximately 14 kilometers north of the María Elena production facilities. Electricity, diesel, and fuel oil are the primary sources of power. The Weighted Average Age of the Company's mining facilities at María Elena is approximately 12.58 years.

## Pampa Blanca

We operated mining facilities in Pampa Blanca, which is located 100 kilometers northeast of Antofagasta, until operations were suspended in March 2010. Ore from the Pampa Blanca mine was transported by truck to nearby heap leaching pads where it is used to produce iodine and nitrate salts. The Weighted Average Age of the ore recovery facilities at Pampa Blanca is approximately 13.78 years. Electricity, produced by mobile diesel generators was the primary source of power.

#### Nueva Victoria

We currently conduct caliche ore operations in Nueva Victoria, which is located 180 kilometers north of María Elena and is accessible by highway. Since 2007, the Nueva Victoria mine includes the mining properties Soronal, Mapocho and Iris. Ore from Nueva Victoria is transported by truck to heap leaching pads where it is then used to produce iodine in Nueva Victoria and the Iris plants. The Weighted Average Age of the ore recovery facilities at Nueva Victoria is approximately 3.32 years. Electricity is the primary source of power.

|  | Des | cription | of the | Salar | de | Atacama | <b>Brines</b> |
|--|-----|----------|--------|-------|----|---------|---------------|
|--|-----|----------|--------|-------|----|---------|---------------|

Salar de Atacama Brines

As of December 31, 2012, SQM Salar S.A. held exclusive rights to exploit the mineral resources in an area covering approximately 140,000 hectares of land in the Salar de Atacama in northern Chile, of which SQM Salar S.A. is entitled to exploit the mineral resources existing in 81,920 hectares. These rights are owned by Corfo and leased to SQM Salar S.A. pursuant to a lease agreement between Corfo and SQM Salar S.A. (the "Lease Agreement"). Corfo may not unilaterally amend the Lease Agreement, and the rights to exploit the resources cannot be transferred. The Lease Agreement provides that SQM Salar S.A. is responsible for the maintenance of Corfo's exploitation rights and for annual payments to the Chilean government, and it expires on December 31, 2030. Furthermore, the same lease Agreement permits the CCHEN to establish a total accumulated extraction limit set at,180,100 tons of lithium per year. SQM Salar S.A. is required to make lease-royalty payments to Corfo according to specified percentages of the value of production of minerals extracted from the Salar de Atacama brines. SQM Salar S.A. holds an additional 119,023 hectares of constituted exploitation rights in the Salar de Atacama.

In addition, as of December 31, 2012, we held constituted exploration rights covering approximately 52,400 hectares, and we had applied for additional exploration rights covering approximately 54,600 hectares. Exploration rights are valid for a period of two years, after which we can (i) request an exploitation concession for the land, (ii) request an extension of the exploration rights for an additional two years (the extension only applies to a reduced surface area equal to 50% of the initial area), or (iii) cease exploration of the zone covered by the rights. The weighted average age of the assets of our mining facilities at the Salar de Atacama is approximately 6.79 years. Solar energy is the primary source of power used by the Salar de Atacama operation.

Under the terms of the Salar de Atacama project agreement between Corfo and SQM Salar S.A., (the "Project Agreement"), Corfo has agreed that it will not permit any other person to explore, exploit or mine any mineral resources in approximately 147,000 hectares of the Salar de Atacama (which include the 140,000 hectares) mentioned above. The Project Agreement expires on December 31, 2030.

Concessions, Extraction Yields and Reserves for the Caliche Ore Mines and Salar Brines

**Concessions Generally** 

*Caliche ore.* We hold our mineral rights pursuant to one of two types of exclusive concessions granted pursuant to applicable law in Chile:

- (1) "Exploitation Concessions" These are concessions whereby we are legally entitled to use the land in order to exploit the mineral resources contained therein on a perpetual basis subject to annual payments to the Chilean government; or
- (2) "Exploration Concessions" These are concessions whereby we are legally entitled to use the land in order to explore for mineral resources for a period of two years, at the expiration of which the concession may be extended one time only for two additional years if the area covered by the concession is reduced by half.

An Exploration Concession is generally obtained for purposes of evaluating the mineral resources in an area. Generally, after the holder of the Exploration Concession has determined that the area contains exploitable mineral resources, such holder will apply for an Exploitation Concession for the area. Such application will give the holder absolute priority with respect to such Exploitation Concession against third parties. If the holder of the Exploration Concession determines that the area does not contain commercially exploitable mineral resources, the concession is usually allowed to lapse. An application also can be made for an Exploitation Concession without first having obtained an Exploration Concession for the area involved.

### Concessions for the Caliche Ore Mines and Salar Brines

As of December 31, 2012, approximately 93% of our total mining concessions were held pursuant to exploitation concessions and 7% pursuant to exploration concessions. Of the exploitation concessions, approximately 80% already have been granted pursuant to applicable Chilean law, and approximately 20% are in the process of being granted. Of the exploration concessions, approximately 54% already have been granted pursuant to applicable Chilean law, and approximately 46% are in the process of being granted.

We made payments to the Chilean government for our exploration and exploitation concessions of approximately US\$9.6 million in 2012.

The following table sets forth our constituted exploitation and exploration concessions as of December 31, 2012:

|                                 | Exploitation |           | Explo  | Exploration |        |           |  |
|---------------------------------|--------------|-----------|--------|-------------|--------|-----------|--|
|                                 | concess      | ions      | conce  | ssions      | Total  |           |  |

Operations at the El Toco and Pampa Blanca mines were temporarily suspended in March 2010. Mining activities resumed at El Toco in November 2010. Operations have not yet resumed at Pampa Blanca.

Includes production at Coya Sur from treatment of fines from María Elena and Pedro de Valdivia, nitrates from pile treatment at Pampa Blanca and net production from NPT, or technical (grade) potassium nitrate, plants.

(3) Lithium carbonate is extracted at the Salar de Atacama and processed at our facilities at the Salar del Carmen.

#### Reserves

Reserves for the Caliche Ore Deposits

Our in-house staff of geologists and mining engineers prepares our estimates of caliche ore reserves. The proven and probable reserve figures presented below are estimates, and no assurance can be given that the indicated levels of recovery of nitrates and iodine will be realized.

We estimate ore reserves based on engineering evaluations of assay values derived from sampling of drill-holes and other openings. Drill-holes have been made at different space intervals in order to recognize mining resources. Normally, we start with 400x400 meters and then we reduce spacing to 200x200 meters, 100x100 meters and 50x50 meters. The geological occurrence of caliche mineral is unique and different from other metallic and non-metallic minerals. Caliche ore is found in large horizontal layers at depths ranging from one to four meters and has an overburden between zero and two meters. This horizontal layering is a natural geological condition and allows us to estimate the continuity of the caliche bed based on surface geological reconnaissance and analysis of samples and trenches. Mining resources can be calculated using the information from the drill-hole sampling.

According to our experience in caliche ore, the grid pattern drill-holes with spacing equal to or less than 100 meters produce data on the caliche resources that is sufficiently defined to consider them measured resources and then, adjusting for technical, economic and legal aspects, as proven reserves. These reserves are obtained using the Kriging Method and the application of operating parameters to obtain economically profitable reserves. Similarly, the information obtained from detailed geologic work and samples taken from grid pattern drill-holes with spacing equal to or less than 200 meters can be used to determine indicated resources. By adjusting such indicated resources to account for technical, economic and legal factors, it is possible to calculate probable reserves. Probable reserves are calculated by evaluating polygons and have an uncertainty or error margin greater than that of proven reserves. However, the degree of certainty of probable reserves is high enough to assume continuity between points of observation.

Probable reserves are the economically mineable part of a "mineral resource" and, in some circumstances, a "measured mineral resource." An indicated mineral resource is that part of a mineral resource for which tonnage, densities, shape, physical characteristics, grade and mineral content can be estimated with a reasonable level of confidence. The calculation is based on exploration, sampling and testing information gathered through appropriate techniques from locations such as outcrops, trenches, pits, workings, and drill holes. A measured mineral resource is the part of a mineral resource for which tonnage, densities, shape, physical characteristics, grade and mineral content can be estimated with a high level of confidence. The estimate is based on detailed and reliable exploration, sampling and testing information gathered through appropriate techniques from locations such as outcrops, trenches, pits, workings, and drill holes.

The calculation of reserves includes diluting materials and allowances for losses which may occur when the material is mined. Appropriate assessments, which may include feasibility studies, have been carried out and include consideration of and modification by realistically assumed mining, metallurgical, economic, marketing, legal, environmental, social and governmental factors. These assessments demonstrate at the time of reporting that extraction is reasonably justified.

Proven and probable reserves are determined using extensive drilling, sampling and mine modeling, in order to estimate potential restrictions on production yields, including cut-off grades, ore type, dilution, waste-to-ore ratio and ore depth. Economic feasibility is determined on the basis of this information.

The estimates of proven reserves of caliche ore at each of our mines as of December 31, 2012 are as follows:

| Mine              | Proven Reserves <sup>(1)</sup> | Nitrate Average Grade  | ) | Iodine Average Grade |  |  |
|-------------------|--------------------------------|------------------------|---|----------------------|--|--|
| Willie            | (millions of metric tons)      | (percentage by weight) |   | (parts per million)  |  |  |
| Pedro de Valdivia | 172.3                          | 7.0                    | % | 365                  |  |  |
| Maria Elena       | 135.3                          | 7.1                    | % | 414                  |  |  |

| Pampa Blanca   | 71.4  | 5.6 | % | 544 |
|----------------|-------|-----|---|-----|
| Nueva Victoria | 351.2 | 5.7 | % | 451 |

In addition, the estimates of our probable reserves of caliche ore at each of our principal mines as of December 31, 2012, are as follows:

| Mine <sup>(3)</sup> | Probable Reserves <sup>(1)(2)</sup> (millions of metric tons) | Nitrate Average Grade (percentage by weight) | ) | <b>Iodine Average Grade</b> (parts per million) |
|---------------------|---|--|---|---|
| Pedro de Valdivia   | 78.5  | 6.9  | % | 488   |
| Maria Elena         | 98.0  | 7.3  | % | 380   |
| Pampa Blanca        | 447.8   | 5.8  | % | 538   |
| Nueva Victoria      | 59.1  | 7.6  | % | 362   |
| Notes on Reserves   | :   |  |   |   |

The proven and probable reserves set forth in the tables above are shown before losses related to exploitation and mineral treatment. Proven and probable reserves are affected by mining exploitation methods, which result in differences between the estimated reserves that are available for exploitation in the mining plan and the recoverable material that is finally transferred to the leaching vats or heaps. The average mining exploitation factor for our different mines ranges between 80% and 90%, whereas the average global metallurgical recoveries of processes for nitrate and iodine contained in the recovered material vary between 55% and 65%.

Probable reserves can be expressed as proven reserves using a conversion factor. On average, this conversion factor is higher than 60%. This factor depends on geological conditions and caliche ore continuity, which vary (2) from mine to mine. The difference between the probable reserve amounts and the converted probable reserve amounts is the result of the lower degree of certainty pertaining to probable reserves compared with proven reserves.

Information set forth in the table above was validated in February 2013, by Mrs. Marta Aguilera, a geologist with over 20 years of experience in the field. She is currently employed by SQM as Manager of Non-metallic Geology. Mrs. Aguilera is a Competent Person (*Persona Competente*), as that term is defined under the Competent Person Law.

The proven and probable reserves shown above are the result of exploration and evaluation of approximately 19.3% of the total caliche-related mining property of SQM. However, we have explored those areas in which we believe there is a higher potential of finding high-grade caliche ore minerals. The remaining 80.7% of this area has not been explored yet or has had limited reconnaissance to determine hypothetical resources. Reserves shown in these tables are calculated based on mining properties that are not involved in any legal disputes between SQM and other parties.

We maintain an ongoing program of exploration and resource evaluation on the land surrounding the mines at Nueva Victoria, Pedro de Valdivia, María Elena and Pampa Blanca and at other sites for which we have the appropriate concessions. In 2012, we continued a basic reconnaissance program on new mining properties including a geological

mapping of the surface and spaced drill-hole campaign covering approximately 17,000 hectares. Additionally, we conducted general explorations based on a closer grid pattern of drill-holes over a total area of approximately 9,365 hectares and, in addition, carried out in-depth sampling of approximately 3,563 hectares (771 hectares at Pedro de Valdivia, 206 hectares at Maria Elena and 2,586 hectares at Nueva Victoria). The exploration and development program in 2013 calls for a basic reconnaissance program over a total area of 4,378 hectares, general exploration over a total area of approximately 2,400 hectares and, in addition, in-depth sampling of approximately 1,957 hectares.

#### Reserves for the Salar de Atacama Brines

Our in-house staff of hydro-geologists and mining engineers prepares our estimates of potassium, sulfate, lithium and boron reserves at the Salar de Atacama. We have carried out geological explorations, brine sampling and geostatistical analysis in 819.2 square kilometers of our exploration concessions. We estimate that our proven and probable reserves as of December 31, 2012, based on economic restrictions, geological exploration, brine sampling and geostatistical analysis up to a depth of 100 meters of our total exploration concessions, and additionally, up to a depth of 500 meters over approximately 47% of the same total area, are as follows:

|                     | Proven Reserves (1)       | Probable Reserves (1)     | Total Proven and          |  |  |
|---------------------|---------------------------|---------------------------|---------------------------|--|--|
|                     | 1 TOVCII RESCIVES (1)     | Tiodadic Reserves (1)     | Probable Reserves         |  |  |
|                     | (millions of metric tons) | (millions of metric tons) | (millions of metric tons) |  |  |
| Potassium (K+) (2)  | 54.0                      | 18.6                      | 72.6                      |  |  |
| Sulfate (SO4-2) (3) | 39.7                      | 2.3                       | 42.0                      |  |  |
| Lithium (Li+) (4)   | 3.0                       | 3.2                       | 6.2                       |  |  |
| Boron (B3+) (5)     | 1.1                       | 0.2                       | 1.3                       |  |  |

Information set forth in the table above was validated in February 2013, by Mrs. Aguilera, a geologist with over 20 years of experience in the field. She is currently employed by SQM as Manager of Non-metallic Geology.

Mrs. Aguilera is a Competent Person (*Persona Competente*), as that term is defined under the Competent Person Law.

#### Notes on Reserves:

(5)

Metric tons of potassium, sulfate, lithium and boron considered in the proven and probable reserves are shown (1) before losses from evaporation processes and metallurgical treatment. The recoveries of each ion depend on both brine composition, which changes over time, and the process applied to produce the desired commercial products.

(2) Recoveries for potassium vary from 47% to 77%.
(3) Recoveries for sulfate vary from 27% to 45%.
(4) Recoveries for lithium vary from 28% to 40%.

Recoveries for boron vary from 28% to 32%.

The proven and probable reserves are based on drilling, brine sampling and geo-statistic reservoir modeling in order to estimate brine volumes and their composition. To evaluate reserves, we conduct a geostatistical study using the Kriging Method in 2D. We calculate the quality of brine effectively drainable or exploitable in each evaluation unit. We consider chemical parameters to determine the process to be applied to the brines. Based on the chemical characteristics, the volume of brine and drainable porosity, we determine the number of metric tons for each of the chemical ions. Proven reserves are defined as those geographical blocks that comply with a Kriging method estimation error of up to 15%. In the case of probable reserves, the selected blocks must comply with an estimation error between 15% and 35%. Blocks with an error greater than 35% are not considered in the evaluation of reserves. This procedure is used to estimate potential restrictions on production yields and the economic feasibility of producing such commercial products as potassium chloride, potassium sulfate, lithium carbonate and boric acid is determined on the basis of the evaluation.

#### Ports and water rights

We operate port facilities at Tocopilla in northern Chile for shipment of products and delivery of certain raw materials pursuant to renewable concessions granted by Chilean regulatory authorities, provided that such facilities are used as authorized and annual concession fees are paid by us. We also hold water rights for the supply of water from rivers and wells near our production facilities sufficient to meet our current operational requirements.

#### **PRODUCTION FACILITIES**

Our principal production facilities are located near our mines and extraction facilities in northern Chile. The following table sets forth the principal production facilities as of December 31, 2012:

| Location                             | Type of Facility   | Approximate Size (Hectares) |
|--------------------------------------|--|-----------------------------|
| Pedro de Valdivia (1)                | Nitrates and iodine production   | 236                         |
| María Elena (1)                      | Nitrates and iodine production   | 98                          |
| Coya Sur (1)                         | Nitrates and iodine production   | 251                         |
| Pampa Blanca (1)                     | Concentrated nitrate salts and iodide production                       | 129                         |
| Nueva Victoria (1)                   | Concentrated nitrate salts and iodine production                       | 537                         |
| Salar de Atacama (2)                 | Potassium chloride, lithium chloride, potassium sulfate and boric acid | 4,122                       |
| Salar del Carmen,<br>Antofagasta (2) | Lithium carbonate and lithium hydroxide production                     | 63                          |
| Tocopilla                            | Port facilities  | 22                          |

- (1) Includes production facilities, solar evaporation ponds and leaching heaps.
- (2) Includes production facilities and solar evaporation ponds.

We own, directly or indirectly through subsidiaries, all of the facilities free of any material liens, pledges or encumbrances, and believe that they are suitable and adequate for the business we conduct in them. As of December 31, 2012, the approximate gross book value of the property and associated plant and equipment at our locations was as follows: Pedro de Valdivia (US\$117.9 million), María Elena (US\$157.3 million), Coya Sur (US\$311.7 million), Pampa Blanca (US\$18.5 million), Nueva Victoria (US\$357.3 million), Salar de Atacama (US\$697.5 million), Salar del Carmen (US\$214.0 million) and Tocopilla (US\$87.5 million).

In addition to the above-listed facilities, we operate a computer and information system linking our principal subsidiaries to our operating facilities throughout Chile via a local area network. The computer and information system is used mainly for accounting, monitoring of supplies and inventories, billing, quality control and research activities. The system's mainframe computer equipment is located at our offices in Santiago.

The approximate Weighted Average Age of our production facilities as of December 31, 2012 was as follows: Pedro de Valdivia (11.02 years), María Elena (11.66 years), Coya Sur (6.04 years), Nueva Victoria (7.27 years), Salar de Atacama (6.79 years), and Salar del Carmen (9.00 years). Our railroad line between our production facilities and Tocopilla was originally constructed in 1890, but the rails, locomotives and rolling stock have been replaced and refurbished as needed. The Tocopilla port facilities were originally constructed in 1961 and have been refurbished and expanded since that time. The Weighted Average Age of the Tocopilla port facilities is approximately 11.13 years. We consider the condition of our principal plant and equipment to be good.

#### TRANSPORTATION AND STORAGE FACILITIES

We own and operate railway lines and equipment, as well as port and storage facilities, for the transport and handling of finished products and consumable materials.

Our main center for production and storage of raw materials is the hub composed of the facilities in Coya Sur - Pedro de Valdivia and the Salar de Atacama facilities. Other facilities include Nueva Victoria and the lithium carbonate and lithium hydroxide finishing plants. The Tocopilla port terminal ("Tocopilla Port Terminal"), which we own, is the main facility for storage and shipment of our products.

Nitrate raw materials are produced and first stored at our Pedro de Valdivia mine, and then transported by trucks to the plants described in the next paragraph, for further processing. Nitrate raw material is also produced at Nueva Victoria, from where it is transported by trucks to Coya Sur for further processing.

Nitrate finished products are produced at our facilities in Coya Sur and then transported by our rail system to Tocopilla Port Terminal, where they are stored and shipped, either bagged or in bulk. Potassium chloride is produced at our facilities in the Salar de Atacama and transported either to Tocopilla Port Terminal or Coya Sur by truck owned by a third-party dedicated contractor. Products transported to Coya Sur are used as a raw material for the production of potassium nitrate. Potassium sulfate and boric acid are both produced at our facilities in the Salar de Atacama and are then transported by trucks to the Tocopilla Port Terminal.

Lithium solutions, produced at our facilities in the Salar de Atacama, are transported to the lithium carbonate facility in the Salar del Carmen area, where finished lithium carbonate is produced. Part of the lithium carbonate is fed to the adjacent lithium hydroxide plant, where finished lithium hydroxide is produced. These two products are bagged and stored on the premises and are subsequently transported by truck to the Tocopilla Port Terminal or to the Antofagasta and Mejillones terminals for shipment on charter vessels or container vessels.

Iodine raw material, obtained in the same mines as the nitrates, is processed, bagged and stored exclusively in the facilities of Pedro de Valdivia and Nueva Victoria, and then shipped by truck to Antofagasta, Mejillones or Iquique for vessel container transport or by truck to Santiago, where iodine derivatives are produced.

The facilities at Tocopilla Port Terminal are located approximately 186 kilometers north of Antofagasta and approximately 124 kilometers west of Pedro de Valdivia, 84 kilometers west of María Elena and Coya Sur and 372 kilometers west of the Salar de Atacama. Our subsidiary, Servicios Integrales de Tránsitos y Transferencias S.A. (SIT) operates the facilities under maritime concessions granted pursuant to applicable Chilean laws. The port also complies with ISPS (International Ship and Port Facility Security Code) regulation. The Tocopilla Port Terminal facilities include a railcar dumper to transfer bulk product into the conveyor belt system used to store and ship bulk product.

Storage facilities consist of a six silo system, with a total production capacity of 55,000 metric tons, and an open storage area for approximately 250,000 metric tons. Additionally, to meet future storage needs, we will continue to make investments in accordance with the investment plan outlined by management. Products are also bagged at port facilities in Tocopilla, where the bagging capacity is approximately 300,000 metric tons per year.

For shipping bulk product, the conveyor belt system extends over the coast line to deliver product directly inside bulk carrier hatches. Using this system, the loading capacity is 1,200 tons per hour. Bags are loaded to bulk vessels using barges that are loaded in the Tocopilla Port Terminal dock and unloaded by vessel cranes into the hatches. Both bulk and bagged trucks are loaded in Tocopilla Port Terminal for transferring product directly to customers or for container vessels shipping from other ports, mainly Antofagasta, Mejillones and Iquique.

Bulk carrier loading in the Tocopilla Port Terminal is mostly contracted to transfer product to our hubs around the world or for shipping to customers, which in limited cases use their own contracted vessels for delivery. Trucking is provided by a mix of spot, contracted and customer- owned equipment.

Tocopilla processes related to the reception, handling, storage, and shipment of bulk/packaged nitrates produced in Coya Sur are certified by third party organization TÜV-Rheiland under the quality standard ISO 9001:2008.

| ITEM 4A. UNRESOLVED STAFF COMMENTS  |
|---|
| Not applicable.   |
| ITEM 5. OPERATING AND FINANCIAL REVIEW AND PROSPECTS  |
| The information in this Item 5 should be read in conjunction with the Company's Consolidated Financial Statements and the notes thereto included elsewhere in this Annual Report.   |
| Since January 1, 2010, the Company's consolidated financial statements have been prepared in accordance with the International Financial Reporting Standards as published by the International Accounting Standards Board (IASB).   |
| CRITICAL ACCOUNTING POLICIES AND ESTIMATES  |
| Critical accounting policies are defined as those that are reflective of significant judgments and uncertainties, which would potentially result in materially different results under different assumptions and conditions.  |
| We believe that our critical accounting policies applied in the preparation of our audited consolidated financial statements are limited to those described below. It should be noted that in many cases, IFRS specifically dictates the accounting treatment of a particular transaction, limiting management's judgment in their application. There are also areas in which management's judgment in selecting available alternatives would not produce materially different results. |
| Trade and Other Accounts Receivable   |

Trade and other accounts receivable relate to non-derivative financial assets with fixed payments that can be

services that we sell directly to our customers that are not within the following categories:

determined and are not quoted in any active market. These arise from sales operations involving the products and/or

those which we have the intention of selling immediately in the near future and which are held-for-sale;
 those designated at their initial recognition as available-for-sale; and
 those through which the holder does not intend to partially recover substantially its entire investment for reasons other than credit impairment and therefore must be classified as available-for-sale.

These assets are initially recognized at their fair value (which is equivalent to their face value, discounting implicit interest for installment sales) and subsequently at amortized cost according to the effective interest rate method less a provision for impairment loss. When the face value of the account receivable does not significantly differ from its fair value, it is recognized at face value. An allowance for impairment loss is established for trade accounts receivable when there is objective evidence that we will not be able to collect all the amounts owed to us according to the original terms of accounts receivable.

Implicit interest in installment sales is recognized as interest income when interest is accrued over the term of the sale.

#### Income tax

Corporate income tax for the year is determined as the aggregate of current taxes from all of the consolidated companies. Current taxes are calculated on the basis of the tax laws enacted or substantively enacted as of the date of our statements of financial position in the countries in which we and our subsidiaries operate and generate taxable income.

Deferred tax is recognized using the liability method on temporary differences arising between the tax basis for assets and liabilities and their carrying amounts in our audited consolidated financial statements. Deferred income taxes are calculated using the tax rates expected to be applicable when the assets are realized or the liabilities are settled.

In conformity with current Chilean tax regulations, the provision for corporate income tax and taxes on mining activity is recognized on an accrual basis, presenting the net balances of accumulated monthly tax provisional payments for the fiscal period and credits associated with it. The balances of these accounts are presented in current income taxes recoverable or current taxes payable, as applicable.

Tax on companies and variations in deferred tax assets or liabilities that are not the result of business combinations are recorded in income statement accounts or net shareholders' equity accounts in our consolidated statements of financial position, depending on the origin of the gains or losses which have generated them.

At year end, the carrying value of deferred tax assets has been reviewed and reduced for as long as it is possible for there to be no sufficient taxable income to allow the recovery of all or a portion of the deferred tax asset. Likewise, at the date of the statement of financial position, deferred tax assets not recognized are revalued and recognized as long as it has become possible that future taxable income will allow the recovery of the deferred tax asset.

With respect to deductible temporary differences associated with investments in subsidiaries, associated companies and interests in joint ventures, deferred tax assets are recognized solely provided that there is a possibility that the temporary differences will be reversed in the near future and that there will be taxable income with which they may be used.

The deferred income tax related to entries directly recognized in equity is recognized with an effect on equity and not with an effect on profit or loss.

Deferred tax assets and liabilities are offset if there is a legally receivable right of offsetting tax assets against tax liabilities and the deferred tax is related to the same tax entity and authority.

#### Inventories

We state inventory for the lower of cost and net realizable value. The method used to determine the cost of inventory is weighted average cost. The cost of finished products and products-in-progress includes direct costs of materials and, as applicable, labor costs, indirect costs incurred to transform raw materials into finished products and general expenses incurred in carrying inventory to their current location and conditions.

The net realizable value represents the estimate of the sales price less all finishing estimated costs and costs that will be incurred in sales and distribution processes. Commercial discounts, rebates obtained and other similar entries are deducted in the determination of the cost. We conduct an evaluation of the net realizable value of inventory at the end of each year, recording a provision with a charge to income when circumstances warrant. When the circumstances that previously gave rise to the reserve cease to exist, or when there is clear evidence of an increase in the net realizable value due to a change in economic circumstances or prices of main raw materials, the estimate made previously is modified. The valuation of obsolete, impaired or slow-moving products relates to their estimated net realizable value.

Provisions on our inventory have been made based on a technical study which covers the different variables affecting products in stock (density, humidity, among others).

Raw materials, supplies and materials are recorded at the lower of acquisition cost or market value. Acquisition cost is calculated according to the annual average price method.

#### Obligations related to staff severance indemnities and pension commitments

Our obligations with respect to our employees are established in collective bargaining agreements and individual employment contracts. In the case of certain employees in the United States, our obligations are established through a pension plan, which was terminated in 2002.

These obligations are valued using the actuarial calculation, which considers such hypotheses as the mortality rate, employee turnover, interest rates, retirement dates, effects related to increases in employees' salaries, as well as the effects on variations in services derived from variations in the inflation rate.

Actuarial losses and gains that may be generated by variations in previously defined obligations are directly recorded in profit or loss for the year.

Actuarial losses and gains that have their origin in deviations between the estimate and the actual behavior of actuarial hypotheses or in the reformulation of established actuarial hypotheses are recorded in equity.

The discount rate used by us for calculating obligation's outside the United States was 6% for the periods ended as of December 31, 2012 and 2011.

Our United States subsidiary, SQM North America Corp. has established pension plans for its retired employees that are calculated by measuring the projected obligation of International Accounting Standards ("IAS") using a net salary progressive rate net of adjustments to inflation, mortality and turnover assumptions, deducting the resulting amounts at present value using a 5.0% interest rate for 2012 and 2011. The net balance of this obligation is presented in the line item called Noncurrent Employee Benefit Provisions.

#### Mining development costs

Mine exploration costs and stripping costs to maintain production of mineral resources extracted from operating mines are considered variable production costs and are included in the cost of inventory produced during the period. Mine development costs at new mines, and major development costs at operating mines outside existing areas under extraction that are expected to benefit future production, are capitalized under "other long-term assets" and amortized using a units-of-production method over the associated proven and probable reserves. We determine our proven and probable reserves based on drilling, brine sampling and geostatistical reservoir modeling in order to estimate mineral volume and composition.

All other mine exploration costs, including expenses related to low grade mineral resources rendering reserves that are not economically exploitable, are charged to the statement of income in the period in which they are incurred.

#### Asset value impairment

We assess on an annual basis any impairment on the amount of buildings, plant and equipment, intangible assets, goodwill and investments accounted for using the equity method of accounting in accordance with IAS 36 "Impairment of Assets." Assets to which this method applies are:

investments recognized using the equity method of accounting; property, plant and equipment; intangible assets; and goodwill.

Assets are reviewed for impairment as to the existence of any indication that the carrying value is lower than the recoverable amount. If such an indication exists, the asset recoverable amount is calculated in order to determine the extent of the impairment, if any. In the event that the asset does not generate any cash flows independent from other assets, we determine the recoverable amount of the cash generating unit to which this asset belongs according to the corresponding business segment (specialty plant nutrients, iodine and derivatives, lithium and derivatives, potassium, industrial chemicals and other products and services.)

We conduct impairment tests on intangible assets and goodwill with indefinite useful lives on an annual basis and every time there is indication of impairment. If the recoverable value of an asset is estimated at an amount lower than its carrying value, the latter decreases to its recoverable amount.

#### Financial derivatives and hedging transactions

Derivatives are recognized initially at fair value at the date in which the derivatives contract has been signed and subsequently they are valued at fair value at each period end. The method for recognizing the resulting loss or gain depends on whether the derivative has been designated as an accounting hedging instrument and if so, the type of hedging, which may be:

a. fair value hedge of assets and liabilities recognized (fair value hedges); or b. hedging of a single risk associated with an asset or liability recognized or a highly possible foreseen transaction (cash flow hedge).

At the beginning of the transaction, we document the relationship between hedging instruments and those entries hedged, as well as their objectives for risk management purposes and the strategy to conduct different hedging operations.

We also document our evaluation both at the beginning and the end of each period of whether derivatives used in hedging transactions are highly effective to offset changes in the fair value or in cash flows of hedged entries.

The fair value of derivative instruments used for hedging purposes is shown in Note 9.3 to our Consolidated Financial Statements.

Non-hedge instruments are classified as current assets or liabilities, and the change in their fair value is recognized directly in profit or loss.

#### a. Fair value hedge

The change in the fair value of a derivative is recognized with a debit or credit to profit or loss, as applicable. The change in the fair value of the hedged entry attributable to hedged risk is recognized as part of the carrying value of the hedged entry and is also recognized with a debit or credit to profit or loss.

For fair value hedging related to items recorded at amortized cost, the adjustment of the fair value is amortized against income on the remaining year to its expiration. Any adjustment to the carrying value of a hedged financial instrument for which the effective rate is used is amortized with a debit or credit to profit or loss at its fair value attributable to the risk being covered.

If the hedged entry no longer meets the criteria for hedge accounting, the fair value not amortized is immediately recognized with a debit or credit to profit or loss.

#### b. Cash flow hedge

The effective portion of gains or losses from the hedging instrument is initially recognized as "other revenue" with a debit or credit to other comprehensive income whereas any ineffective portion is immediately recognized with a debit or credit to profit or loss, as applicable.

Amounts accumulated in equity are transferred to profit or loss when the hedged transaction affects income for the period, such as when the hedged interest income or expense is recognized when a forecasted sale occurs. When the hedged item is the cost of a non-financial asset or liability, amounts taken to equity are transferred to the initial carrying value of the non-financial asset or liability.

Should the expected firm transaction or commitment no longer be expected to occur, the amounts previously recognized other comprehensive income are transferred to income. If a hedging instrument expires, is sold, finished, and exercised without any replacement, or if a rollover is performed or if its designation as hedging is revoked, the amounts previously recognized in equity are maintained in equity until the expected firm transaction or commitment occurs.

**Operating Results** 

| ·   |
|---|
| Introduction  |
| The following discussion should be read in conjunction with the Company's Consolidated Financial Statements. Certain calculations (including percentages) that appear herein have been rounded. |
| Our Consolidated Financial Statements are prepared in accordance with IFRS standards and prepared in U.S. dollars. The U.S. dollar is the primary currency in which we operate.                 |
| We operate as an independent corporation. Nonetheless we are a "controlled corporation", as that term is defined under Chilean law. See Item 6.E. Share Ownership.                              |
| Overview of Our Results of Operations   |
| We divide our operations into the production and sale of the following product lines:   |
| <ul> <li>specialty plant nutrients;</li> </ul>  |
| <ul> <li>iodine and its derivatives;</li> </ul>   |
| • lithium and its derivatives;  |
| • potassium, including potassium chloride and potassium sulfate;  |
| · industrial chemicals, principally industrial nitrates and solar salts; and  |
| • the purchase and sale of other commodity fertilizers for use primarily in Chile.  |
| We sell our products through three primary channels: our own sales offices; a network of distributors; and, in the case   |

of our fertilizer products, through Yara International ASA's (formerly Norsk Hydro ASA) ("Yara") distribution network in countries where its presence and commercial infrastructure are larger than ours. Similarly, in those markets where

our presence is larger, both our specialty plant nutrients and Yara's are marketed through our offices.

#### Factors Affecting Our Results of Operations

Our results of operations substantially depend on:

- trends in demand for and supply of our products, including global economic conditions, which impact prices and volumes;
- efficient operations of our facilities, particularly as some of them run at production capacity;
- our ability to accomplish our capital expenditures program in a timely manner;
- the levels of our inventories;
- trends in the exchange rate between the U.S. dollar and Chilean peso, as a significant portion of the cost of sales is in Chilean pesos, and trends in the exchange rate between the U.S. dollar and the euro, as a significant portion of our sales is denominated in euros; and
- energy, logistics, raw materials, labor and maintenance costs.

The following table sets forth our revenues (in millions of U.S. dollars) and the percentage accounted for by each of our product lines for each of the periods indicated:

|                             | 2012    |      | 2011    | 2010 |         |     |
|-----------------------------|---------|------|---------|------|---------|-----|
|                             | US\$    | %    | US\$    | %    | US\$    | %   |
| Specialty plant nutrition   | 675.3   | 28 % | 721.7   | 34 % | 603.7   | 33  |
| Iodine and derivatives      | 578.1   | 24 % | 454.5   | 21 % | 316.3   | 17  |
| Lithium and derivatives     | 222.2   | 9 %  | 183.4   | 9 %  | 150.8   | 8   |
| Potassium                   | 605.1   | 25 % | 555.7   | 26 % | 528.2   | 29  |
| Industrial chemicals        | 245.2   | 10 % | 139.5   | 7 %  | 149.7   | 8   |
| Other Income <sup>(1)</sup> | 103.2   | 4 %  | 90.5    | 4 %  | 81.8    | 5   |
|                             |         |      |         |      |         |     |
| Total                       | 2,429.2 | 100  | 2,145.3 | 100  | 1,830.4 | 100 |

The following table sets forth certain financial information of the Company under IFRS (in millions of U.S. dollars) for each of the periods indicated, as a percentage of revenues:

|  | Year Ended December 31, |       |           |       |           |       |
|--|-------------------------|-------|-----------|-------|-----------|-------|
|  | 2012                    |       | 2011      |       | 2010      |       |
| (in millions of U.S. dollars)                            | US\$                    | %     | US\$      | %     | US\$      | %     |
| Revenues   | 2,429.2                 | 100.0 | 2,145.3   | 100.0 | 1,830.4   | 100.0 |
| Cost of sales  | (1,400.6)               | 57.7  | (1,290.5) | 60.2  | (1,204.4) | 65.8  |

| <b> </b>   |                         |       |           |       |           |       |

Results of Operations - 2012 compared to 2011

# Revenues

During 2012, we generated total revenues of US\$2,429.2 million, a 13.2% increase compared to US\$2,145.3 million in 2011.

The main factors causing the increase in revenues and the variation in the different product lines are described below.

#### Specialty plant nutrition

Specialty plant nutrition revenues for 2012 totaled US\$675.3 million, a 6.4% decrease compared to US\$721.7 million in 2011. Set forth below are sales volume data for the specified years by product category in this product line.

| (in Th. MT)                                    | 2012  | 2011  | % Chan | ge |
|--|-------|-------|--------|----|
| Potassium nitrate and sodium potassium nitrate | 469.3 | 551.1 | (15    | )% |
| Specialty blends                               | 197.5 | 189.3 | 4      | %  |
| Other specialty plant nutrients (*)            | 89.0  | 86.7  | 3      | %  |
| Sodium nitrate                                 | 24.4  | 22.2  | 10     | %  |

<sup>\*</sup> Includes trading of other specialty fertilizers.

Market supplies of the specialty plant nutrition market increased during 2012, as a significant competitor returned to normal production levels. In general, the specialty plant nutrition markets are less volatile than commodity and fertilizer markets, but future improvement in this product line will depend on the behavior of the market for potassium based fertilizers such as potassium chloride.

Our overall sales volumes in the specialty plant nutrition product line in 2012 decreased compared to 2011. This was a result of increased supply in the market and low market growth due mainly to the financial situation in Europe, one of the most important markets for this product line. Prices within our specialty plant nutrition product line increased by almost 2% in 2012 as compared to 2011.

#### Iodine and its derivatives

Revenues for iodine and its derivatives during 2012 totaled US\$578.1 million, a 27.2% increase compared to US\$454.5 million in 2011. Set forth below are sales volume data for the specified years.

Overall market sales volumes of iodine reached new levels in 2012 mainly as a result of increased demand. Strong demand was led primarily by X-ray contrast media and pharmaceutical applications. Increased supply entered the market in 2012, and we expect to see additional new supply in 2013.

Our sales volumes decreased by approximately 10% in 2012, as a result of new market supply, and as we returned to normal operational inventory. These volume decreases were more than offset by prices that were more than 40% higher than average prices during 2011, increasing gross profit in the iodine product line by over 38%.

#### Lithium and its derivatives

Revenues for lithium and its derivatives totaled US\$222.2 million during 2012, a 21.2% increase compared to US\$183.4 million in 2011. Set forth below are sales volume data for the specified years.

(in Th. MT) 2012 2011 % Change Lithium and its derivatives 45.7 40.7 12 %

The lithium market continued to grow in 2012, primarily due to growth in the rechargeable battery and lubricating grease markets, as has been the trend in recent years.

Our sales volumes in the lithium segment increased by 12% in 2012, as compared to 2011. We believe we supply over one-third of the world lithium chemical market, and aim to maintain this market share in coming years.

Along with increased volumes, we saw increased prices of approximately 8% in this product line during 2012 as compared to the previous year, increasing our gross margin by approximately 30% as compared with 2011.

We believe we are the lowest cost producer of lithium in the world. We produce lithium as a by-product of potassium chloride, which gives us a unique competitive advantage.

#### Potassium

Potassium revenues for 2012 totaled US\$605.1 million, an 8.9% increase as compared to US\$555.7 million in 2011. Set forth below are sales volume data for the specified years.

We estimate that market sales volumes of potassium chloride decreased by 12% in 2012 as compared to 2011. Despite favorable economic conditions of relevant crops, demand was mainly affected by economic uncertainty in Europe and the behavior of influential buyers in China and India.

We increased our sales volumes in this product line approximately 10% compared to 2011, as we took advantage of our developed distribution network. Average prices in the potassium market remained relatively stable as compared to 2011. In the fourth quarter of 2012, the potassium market saw major contracts close at lower prices than seen earlier in 2012; during the first quarter of 2013, prices have remained stable.

#### Industrial chemicals

Industrial chemicals revenues for 2012 totaled US\$245.2 million, a 75.8% increase as compared to US\$139.5 million in 2011. Set forth below are sales volume data for the specified years by product category.

| (in Th. MT)         | 2012  | 2011  | % Change |    |
|---------------------|-------|-------|----------|----|
| Industrial nitrates | 277.7 | 181.2 | 53       | %  |
| Boric acid          | 1.8   | 2.4   | (23      | )% |

Industrial chemical demand for traditional applications such as detergents and glass has remained relatively stable as compared to 2011.

New alternative energy projects that utilize industrial-grade sodium and potassium nitrate in solar thermal energy storage had a positive impact on our 2012 industrial chemicals volumes, which increased by over 50% as compared to 2011.

Prices for industrial chemicals increased by 15%, mainly because of the product mix, increasing our gross margins by approximately 48%.

#### Other products and services

Revenues from sales of other commodity fertilizers and other products totaled US\$103.2 million during 2012, a 14.0% increase compared to US\$90.5 million in 2011.

#### Cost of sales

During 2012, cost of sales increased by 8.5% to US\$1,400.6 million in 2012 from US\$1,290.5 million in 2011, but remained stable as a percentage of revenues, representing 58% of revenues in 2012 as compared to 60% of revenues in 2011. This increase was principally caused by higher volume production and a stronger Chilean peso. Cost of sales includes, among others, the costs of depreciation and amortization.

#### **Gross profit**

Gross profit increased by 20.3% from US\$854.8 million in 2011 to US\$1,028.6 million in 2012 and remained stable as percentage of revenues, representing 42.3% of revenues in 2012 as compared to 39.8% of revenues in 2011. Gross margin was impacted by generally higher average prices in 2012 compared to 2011, led by iodine prices, which increased by 40% on average in 2012 as compared to prices in 2011.

#### Administrative expenses

Administrative expenses as a percentage of revenues remained stable in 2012 as compared to 2011. Administrative expenses were US\$106.4 million (4.4% of revenues) in 2012 and US\$91.8 million (4.3% of revenues) in 2011.

#### Other expenses

Other expenses decreased by 45.1% to US\$34.6 million in 2012 from US\$63.0 million in 2011. Other expenses represented 1.4% of revenues in 2012 as compared to 2.9% of revenues in 2011. The decrease in other expenses is attributable to a decrease in expenses accounted for as depreciation of assets no longer in use.

#### Other gains (losses)

Other gains (losses) decreased by 87.9% to a gain of US\$0.7 million in 2012 from a gain of US\$5.8 million in 2011, but remained stable as a percentage of revenues, representing 0.03% of revenues in 2012 as compared to 0.3% of revenues in 2011. The decrease is attributable in part to a loss in sales of investment in associates and a provision no longer in effect for the suspension of our operations at El Toco mine at the Maria Elena facility.

#### Finance income

Finance income increased by 25.4% to US\$29.1 million in 2012 from US\$23.2 million in 2011, but remained stable as a percentage of revenues, representing 1.2% of revenues in 2012 as compared to 1.1% of revenues in 2011.

#### **Finance expenses**

Finance expenses increased by 37.7% to US\$54.1 million in 2012 from US\$39.3 million in 2011, but remained stable as a percentage of revenues, representing 1.8% of revenues in 2011 as compared to 2.1% of revenues in 2012. The increase in finance expenses was due to a net increase in indebtedness during 2012 and a decrease in capitalized interest related to ongoing capital expenditure projects as compared to 2011.

### Equity income of associates and joint ventures accounted for using the equity method

Equity income of associates and joint ventures accounted for using the equity method increased by 11.9% to US\$24.4 million in 2012 from US\$21.8 million in 2011, but remained stable as a percentage of revenues, representing 1.0% of revenues both in 2012 and in 2011.

#### Foreign currency exchange differences

Losses from foreign currency exchange differences increased by 5.9% to a loss of US\$26.8 million in 2012 from a loss of US\$25.3 million in 2011, but remained stable as a percentage of revenues, representing 1.1% of revenues in 2012 as compared to 1.2% of revenues in 2011. Since most of our operations are in Chile, part of our costs of sales are related to the Chilean peso. Although we have an active hedging program and policy, we are subject to currency fluctuations. During 2012, the Chilean peso appreciated by 7.6% against the U.S. dollar.

#### **Income tax expense**

In 2012, income taxes were US\$216.1 million, compared to income taxes of US\$179.7 million in 2011. During 2012, the Chilean tax rate increased to 20%. The effective tax rate in 2012 was 24.7% compared with 24.5% in 2011. The

| difference between the statutory and effective tax ra | ates is due primarily to royalty taxes on | income. |
|---|---|---------|
|---|---|---------|

# Profit for the year

Profit for the year increased by 18.6% to US\$657.4 million in 2012 from US\$554.1 million in 2011, as a result of the foregoing factors.

# Results of Operations - 2011 compared to 2010

#### **Revenues**

During 2011, we generated total revenues of US\$2,145.3 million, a 17.2% increase compared to US\$1,830.4 million in 2010.

The main factors causing the increase in revenues and the variation in the different product lines are described below:

#### Specialty plant nutrition

Specialty plant nutrition revenues for 2011 totaled US\$721.7 million, a 19.5% increase compared to US\$603.7 million in 2010. Set forth below are sales volume data for the specified years by product category in this product line.

| (in Th. MT)                                    | 2011  | 2010  | % chan | ge |
|--|-------|-------|--------|----|
| Potassium nitrate and sodium potassium nitrate | 551.1 | 534.7 | 3      | %  |
| Specialty blends                               | 189.3 | 176.3 | 7      | %  |
| Other specialty plant nutrients(*)             | 86.7  | 87.6  | (1     | )% |
| Sodium nitrate                                 | 22.2  | 16.8  | 32     | %  |

<sup>\*</sup> Includes trading of other specialty fertilizers.

Market sales volumes of fertilizer showed a significant improvement in 2011 over 2010 levels, and our specialty plant nutrition product line was no exception. The specialty plant nutrition market showed the same upward trend as the potash market. Additionally, tight supply issues in the potassium nitrate market created opportunities to increase sales volumes, and this, coupled with strong growth in demand in potassium, led to increased prices in 2011. North American and European markets were demand drivers during 2011.

Average prices in 2011 increased by 14% over average prices in 2010. We also had improved margins as a result of increased production from the highly efficient facility in Coya Sur.

#### Iodine and its derivatives

Revenues for iodine and its derivatives during 2011 totaled US\$454.5 million, a 43.7% increase compared to US\$316.3 million in 2010. Set forth below are sales volume data for the specified years.

Iodine markets surpassed previous records and reached historical levels in 2011. Demand increased in most applications, but specifically in the X-ray contrast media market and for pharmaceutical uses. Weakened supply also had an impact on the iodine markets in 2011, driving spot prices to unprecedented highs. As a result of a strong demand recovery, together with a tightened availability from other suppliers, iodine prices increased substantially

during 2011, and SQM saw an increase in average prices for iodine of almost 40%.

We continue to be a world leader in the iodine market, and we were uniquely positioned to take advantage of increased demands in the iodine markets and meet the shortfall in supply in 2011.

#### Lithium and its derivatives

Revenues for lithium and its derivatives totaled US\$183.4 million during 2011, a 21.6% increase as compared to US\$150.8 million in 2010. Set forth below are sales volume data for the specified years.

The lithium market continued to grow in 2011, primarily due to growth in the rechargeable battery and lubricating grease markets. Lithium sales exceeded expectations in 2011. Prices in this product line remained relatively stable throughout 2011.

#### Potassium

Potassium revenues for 2011 totaled US\$555.7 million, a 5.2% increase as compared to US\$528.21 million in 2010. Set forth below are sales volume data for the specified years.

The potassium chloride market continued to be robust in 2011, as farmers continued to be motivated to maximize yields and improve soil productivity through optimal fertilization. Additionally, world demand for commodity products continues to expand as the world population grows and the demand for more and better quality food increases.

Prices in the fertilizer market continued to increase over the course of 2011, and average prices in the potassium product line were 21% higher in 2011 as compared to 2010.

#### Industrial chemicals

Industrial chemicals revenues for 2011 totaled US\$139.5 million, a 6.8% decrease from US\$149.7 million in 2010. Set forth below are sales volume data for the specified years by product category.

Industrial chemical demand for traditional applications such as explosives, detergents and glass, among others, remained relatively stable in 2011 as compared to 2010. Average prices for industrial chemicals in 2011 saw a slight increase compared to 2010.

#### Other products and services

Revenues from sales of other commodity fertilizers and other products totaled US\$90.5 million during 2011, a 10.6% increase compared to US\$81.8 million in 2010.

#### Cost of sales

During 2011, cost of sales increased by 7.1% to US\$1,290.5 in 2011 from from US\$1,204.4 million in 2010, but decreased as a percentage of revenues, representing 60% of revenues in 2011 as compared to 66% of revenues in 2010. This cost of sales increase was mainly caused by higher energy prices and a stronger Chilean peso. Cost of sales includes, among others, the costs of depreciation and amortization.

# **Gross profit**

Gross profit increased by 36.5% from US\$626.0 million in 2010 to US\$854.8 million in 2011. As a percentage of revenues, gross profit increased from 34.2% of revenues in 2010 to 39.8% of revenues in 2011. Gross margin increased mainly as a result of higher average prices of potash (approximately 20%) and iodine (approximately 40%) in 2011as compared to 2010.

#### Administrative expenses

Administrative expenses as a percentage of revenues remained unchanged in 2011 as compared to 2010. Administrative expenses were US\$91.8 million in 2011 and US\$78.8 million in 2010, representing 4.3% of revenues in both years.

#### Other expenses

Other expenses increased by 74.0% to US\$63.0 million in 2011 from US\$36.2 million in 2010. Other expenses represented 2.9% of revenues in 2011 as compared to 2.0% of revenues in 2010. The increase in other expenses is attributable in part to the recognition of depreciation of certain assets that we no longer use.

#### Other gains (losses)

Other gains (losses) increased to a gain of US\$5.8 million in 2011 from a loss of US\$7.0 million in 2010, but remained stable as a percentage of revenues, representing 0.3% of revenues in 2011 as compared to 0.4% of revenues in 2010. This increase is attributable in part to the provision relating to the temporary suspension of our operations at El Toco mine at the Maria Elena facility.

#### Finance income

Finance income increased by 79.8% to US\$23.2 million in 2011 from US\$12.9 million in 2010, but remained stable as a percentage of revenues, representing 1.1% of revenues in 2011 as compared to 0.7% of revenues in 2010. The increase was mainly due to an increase in cash and cash equivalents in 2011, together with higher investment yields in Chile in 2011.

#### **Finance expenses**

Finance expenses increased by 12.3% to US\$39.3 million in 2011 from US\$35.0 million in 2010, but remained stable as a percentage of revenues, representing 1.8% of revenues in 2011 as compared to 1.9% of revenues in 2010.

#### Equity income of associates and joint ventures accounted for using the equity method

Equity income of associates and joint ventures accounted for using the equity method increased by 103.7% to US\$21.8 million in 2011 from US\$10.7 million in 2010, but remained relatively stable as a percentage of revenues, representing 1.0% of revenues in 2011 as compared to 0.6% of revenues in 2010.

### Foreign currency exchange differences

Losses from foreign currency exchange differences increased to a loss of US\$25.3 million in 2011 from a loss of US\$5.8 million in 2010, partly due to significant depreciations in the euro and South African rand. Although we have an active hedging program and policy, we are still subject to exchange rate fluctuations.

#### **Income tax expense**

In 2011, income tax expense increased by 69.5% to US\$179.7 million, representing an effective consolidated tax rate of 24.5%, as compared to income tax expense of US\$106.0 million in 2010. This increase was a result of an increase in the Chilean corporate tax rate from 17% in 2010 to 20% in 2011, as well as an increase in gross profit of 36.5% from 2010 to 2011.

#### Profit for the year

Profit for the year increased by 43.1% to US\$554.1 million in 2011 from US\$387.3 million in 2010, as a result of the foregoing factors.

#### **Impact of Foreign Exchange Rates**

We transact a significant portion of our business in U.S. dollars, which is the currency of the primary economic environment in which we operate and is our financial currency for financial reporting purposes. A significant portion of our operating costs is related to the Chilean peso, and therefore an increase or decrease in the exchange rate between the Chilean peso and the U.S. dollar affects our costs of production. Additionally, as an international company operating in Chile and several other countries, we transact a portion of our business and have assets and liabilities in Chilean pesos and other non-U.S. dollar currencies, such as the Euro, the South African Rand and the Mexican peso. As a result, fluctuations in the exchange rate of such currencies to the U.S. dollar may affect our financial condition and results of operations. See Note 24 of Financial Statements included in this Annual Report.

We monitor and attempt to maintain our non-dollar assets and liabilities position in balance and make use of foreign exchange contracts and other hedging instruments aiming to minimize our exposure to the risks of changes in foreign exchange rates. As of December 31, 2012, for hedging purposes we had open contracts to buy U.S. dollars and sell Euros for approximately US\$310.1 million (EUR235million) and sell South African rand for approximately US\$30.8 million (ZAR260.5 million), as well as forward exchange contracts to sell U.S. dollars and buy Chilean pesos for US\$75.5 million (CH\$36,237 million). As of this date, all of our UF and Chilean pesos bonds were hedged with cross-currency swaps to the U.S. dollar for approximately US\$ 515.2 million.

Also, we had open forward exchange contracts to buy U.S. dollars and sell Chilean pesos to hedge our time deposits in Chilean Pesos for approximately US\$245.21 million (CH\$117,629 million) and forward contracts to buy U.S. dollars and sell Chilean pesos for approximately US\$70.1million (CH\$33,645million) hedging our fertilizer trading business

in Chile.

# 5.B. Liquidity and Capital Resources

As of December 31, 2012, we had US\$568.5 million of cash and cash equivalents and time deposits. In addition, as of December 31, 2012, we had unused uncommitted working capital credit lines amounting to US\$530.0 million.

Shareholders' equity increased from US\$1,812.8 million as of December 31, 2011 to US\$2,132.8 million as of December 31, 2012. Our ratio of total liabilities to total equity (including non-controlling interest) on a consolidated basis decreased from 1.08 as of December 31, 2011 to 1.02 as of December 31, 2012.

We evaluate from time to time our cash requirements to fund capital expenditures, dividend payouts and increases in working capital. As debt requirements also depend on the level of accounts receivables and inventories, we cannot accurately determine the amount of debt we will require.

The table below sets forth our cash flows for 2012, 2011, and 2010:

| (in millions of U.S. dollars)                                      | 2012    | 2011    | 2010    |
|--|---------|---------|---------|
| Net cash from (used in):   |         |         |         |
| Net cash from operating activities                                 | 650.2   | 571.3   | 618.5   |
| Net cash used in financing activities                              | (197.7) | (105.2) | (254.2) |
| Net cash used in investing activities                              | (562.9) | (516.2) | (236.8) |
| Effects of exchange rate fluctuations on cash and cash equivalents | (10.3)  | (29.6)  | 21.5    |
| Net increase (decrease) in cash and cash equivalents               | (120.6) | (79.7)  | 149.0   |

We operate a capital-intensive business that requires significant investments in revenue-generating assets. Our growth strategy has included the purchase of production facilities and equipment and has also included the improvement and expansion of existing facilities. Funds for capital expenditures and working capital requirements have been obtained from net cash from operating activities, borrowings under credit facilities and issuance of debt securities.

Our capital expenditures, including the purchase of property, plant and equipment, amounted to approximately US\$446.0 million in 2012. For 2013, we expect total capital expenditures of approximately US\$500.0 million, which amount may be increased or decreased based on market conditions. See "Business—Business strategy—Capital expenditure program."

We expect substantially all of the approximately US\$500.0 million under our current capital expenditure program to be made in Chile. No external financing is required to finance the capital expenditure program for the 2013 period; however, we reserve the right to access capital markets in order to optimize its financial position.

Our other major use of funds is the payment of dividends. We paid dividends of US\$334.8 million and US\$277.3 million during 2012 and 2011, respectively. Our current dividend policy, as approved by shareholders, is to pay 50% of our profit for each fiscal year in dividends. Under Chilean law, the minimum dividend payout is 30% of profit for each fiscal year.

#### **Financing activities**

Our current ratio (current assets divided by current liabilities) was 3.69 as of December 31, 2012. The following table sets forth key information about our outstanding long- and short-term debt as of December 31, 2012.

| Debt Instrument <sup>(1)(2)</sup>        | Interest rate | Issue date    | Maturity date | Amortization                  |
|--|---------------|---------------|---------------|-------------------------------|
| Series O Bond — UF 1.50 million          | 3.80 %        | Apr. 4, 2012  | Feb. 1, 2033  | Bullet                        |

| Bilateral loan — US\$20 million          | 1.09 %        | Dec. 3, 2012  | Aug. 30, 2013 | Bullet                        |

- (1) UF- and Ch\$-denominated bonds are fully hedged to U.S. dollars with cross-currency swaps.
  - (2) Some floating rate bilateral loans are currently hedged to fixed rate loans using interest rate swaps.

As of December 31, 2012, we had total debt of US\$1,599 million, compared to total debt of US\$1,398.03 million as of December 31, 2011. Taking into account the effects of financial derivatives, our total debt amounted to US\$1,498.39 million as of December 31, 2012 and US\$1,341.93 million as of December 31, 2011. Of the total debt as of December 31, 2012, US\$152.84 million was short-term debt. All of our UF and Ch\$ local bonds, as of December 31, 2012, were hedged with cross-currency swaps to the U.S. dollar.

All of our long-term debt (including the current portion) as of December 31, 2012 was denominated in U.S. dollars, and all our UF and Ch\$ local bonds were hedged with cross-currency swaps to the U.S. dollar.

From December 31, 2012 to the date of this Annual Report, we repaid or renewed the following debt:

On January 16, 2013, we repaid a short term bank loan, in the principal amount of US\$20 million, with a term of nine months and an annual interest rate of approximately LIBOR + 0.72%, and we entered into a short term bank loan, in the principal amount of US\$20 million, with a term of eight months and an annual interest rate of approximately LIBOR + 0.315%.

On February 28, 2013, we repaid a short term bank loan, in the principal amount of US\$20 million, with a term of 10 months and an annual interest rate of approximately LIBOR + 0.72%, and we entered into a short term bank loan, in an amount of US\$20 million with a term of nine months and an annual interest rate of approximately LIBOR 3M + 0.35%.

On April 3, 2013, we issued US\$300 million 3.625% notes due 2023 the proceeds of which will be used to refinance existing debt and for general corporate purposes.

The financial covenants related to our debt instruments include: (i) limitations on the ratio of total liabilities to equity (including non-controlling interest) on a consolidated basis, (ii) minimum net worth requirements, (iii) limitations on net financial debt to EBITDA, (iv) limitations on interest indebtedness of operating subsidiaries and (v) minimum production assets. We believe that the terms and conditions of our debt agreements are standard and customary and that we are in compliance in all material respects with such terms and conditions.

The following table sets forth the maturities of our long-term debt by year as of December 31, 2012 (in millions of US dollars):

| Maturity <sup>(1)</sup> | Amount   |
|-------------------------|----------|
| 2013                    | 7.14     |
| 2014                    | 300.67   |
| 2015                    | 97.14    |
| 2016                    | 287.14   |
| 2017                    | 194.74   |
| 2018                    | 7.14     |
| 2019 and thereafter     | 568.92   |
| Total                   | 1,462.89 |

Only the principal amount has been included. For the UF- and Ch\$-denominated local bonds, the amounts presented reflect the real U.S. dollar obligation as of December 31, 2012, not including the effects of the cross currency swaps that hedge these bonds to the U.S. dollar and which had, as of December 31, 2012, a market value of US\$100.6 million in favor of SQM.

#### **Environmental Projects**

In 2012, we made disbursements amounting to US\$16.1 million related to environmental, safety and health projects. We have budgeted future disbursements for the year 2013 amounting to approximately US\$14.9 million related to environmental, safety and health projects. This amount forms part of the capital expenditure program discussed above.

5.C. Research and Development, Patents and Licenses, etc.

One of the main objectives of our research and development team is to develop new processes and products in order to maximize the returns obtained from the resources that we exploit. Our research is performed by four different units whose research topics include chemical process design, phase chemistry, chemical analysis methodologies and physical properties of finished products.

Our research and development policy emphasizes the following: (i) optimization of current processes in order to decrease costs and improve product quality through the implementation of new technology, and (ii) development of higher-margin products from current products through vertical integration or different product specifications.

Our research and development activities have been instrumental in improving our production processes and developing new value-added products. As a result of research and development activities, new methods of extraction, crystallization and finishing products have been developed. Technological advances in recent years have enabled us to improve process efficiency for the nitrate, potassium and lithium operations, to improve the physical quality of our prilled products and to reduce dust emissions and caking by applying specially designed additives for our products handled in bulk. Our research and development efforts have also resulted in new, value-added markets for our products. One example is the use of sodium nitrate and potassium nitrate as thermal storage in solar power plants.

We have patented several production processes for nitrate, iodine, and lithium products. These patents have been filed mainly in the United States, Chile, and in other countries when necessary.

For the years ended December 31, 2012, 2011 and 2010, we invested US\$10.4, US\$6.9 million, and US\$5.8 million, respectively, on research and development activities.

#### 5.D. Trend Information

Our revenues totaled US\$2,429.2 million during 2012, representing an increase of 13.2% from revenues of US\$2,145.3 million in 2011. Gross margin reached US\$1,028.6 million (42.3% of revenues), 20.3% higher than gross revenues of US\$854.8 million (39.8% of revenues) in 2011. Profit attributable to controlling interests increased by 18.9% to US\$649.2 million in 2012, compared to US\$545.8 million in 2011.

Our sales volumes in the specialty plant nutrition product line in 2012 decreased by 8.1% compared to 2011. The decrease was a result of increased supply in the market and low market growth mainly due to economic uncertainty in Europe, one of the most important markets for the product line. In general, the specialty plant nutrition markets are less volatile than commodity and fertilizer markets, but future improvement in this product line will depend on the behavior of the market for potassium based fertilizers such as potassium chloride. Potassium chloride is an important raw material in the production of potassium nitrate, a specialty fertilizer and, as a result, prices of the two products are related. We feel confident in the future of specialty plant nutrient market as food quality requirements increase, and land and fresh water scarcity impacts some parts of the world. We suspect market growth to be led primarily by potassium nitrate, and we believe we are prepared to meet the growing market demand in the future.

Our sales volumes in the iodine product line decreased by 10.0% in 2012, as a result of new supply by competitors in the market, and as we returned to normal operational inventory. This volume decrease was more than offset by prices that were more than 40% higher than the average prices in this product line during 2011, thus increasing margins in the iodine segment. This increase in average prices in 2012 was attributable to an increase in demand which was met by new supply in 2012, which stabilized average prices at higher levels compared to 2011. We continue to be a world leader in the iodine market, and these special market conditions have created unique opportunities for us. We expect to maintain our efforts to assure that world iodine needs are met in the future.

Our sales volumes in the lithium product line increased by 12% in 2012 compared to 2011. Along with increased sales volumes, we saw increased prices in this product line during 2012 when compared to 2011, resulting in increased margins in this product line by nearly 30%. The increase in sales volumes and prices were principally attributable to stronger demand and higher costs for marginal producers compared to 2011. We believe the lithium market is positioned to grow in the short and long term due to the development of new technologies, as well as strong growth in

industrial applications. We expect world lithium production to increase in the near future, as a number of new projects have been announced and have begun procurement.

Our sales volumes in the potassium product line increased by almost 10% in 2012 compared to the prior year, as we took advantage of our developed distribution network. Our average prices in the potassium market remained relatively stable as compared to 2011. In the fourth quarter of 2012, the potassium market saw major contracts close at lower prices than seen earlier in 2012; during the first quarter of 2013, prices have remained stable. We expect market sales volumes to increase during 2013, but we expect that price pressures will have an impact on potassium revenues in the near term.

Our sales volumes in the industrial chemicals product line increased by 52% in 2012 compared to 2011. The increase was driven by new alternative energy projects that utilize industrial-grade sodium and potassium nitrate in solar thermal energy storage. As a result of the uncertain financial situation in Europe and continued slow growth in the United States, the market has seen higher financing costs for projects in Europe and the United States. As a result, we anticipate some project delays which, in turn, we expect will have an impact on short term sales in the industrial chemicals product line. We remain confident in the long-term prospects in the solar thermal energy storage market, and expect to see industrial chemicals sales volumes in 2014 exceed volumes seen in 2013.

Our profit for the fourth quarter of 2012 declined by 10.8% from the comparable period in 2011 and was 14.2% lower than our profit for the third quarter of 2012, due principally to the decline in average prices in the potassium market during the fourth quarter of 2012, which affected our specialty plant nutrients product line and potassium product line, and decreased sales volumes in our iodine product line as a result of new supply by competitors in the market. Although potassium prices have remained stable in 2013 to date at the levels reached during the fourth quarter of 2012, we expect pressure on potassium prices to have an impact on our overall profits during the near term. The effect of the volume decrease in our iodine product line was partially offset by prices that were more than 40% higher for 2012 than the average prices in this product line during 2011. As mentioned above, increased supply entered the market in 2012, and we expect to see additional new supply in 2013.

#### 5.E. Off-Balance Sheet Arrangements

We have not entered into any transactions with unconsolidated entities whereby we have financial guarantees, retained or contingent interests in transferred assets, derivative instruments or other contingent arrangements that would expose us to material continuing risks, contingent liabilities, or any other obligations arising out of a variable interest in an unconsolidated entity that provides financing, liquidity, market risk or credit risk support to us or that engages in leasing, hedging or research and development services with us.

## 5.F. Tabular Disclosure of Contractual Obligations

The following table sets forth our material expected obligations and commitments as of December 31, 2012:

|                           |           | Less Than | 1 - 3   | 3 - 5   | More<br>Than |
|---------------------------|-----------|-----------|---------|---------|--------------|
|                           | Total     | 1 year    | vears   | Years   | 5 years      |
|                           |           | 2         | J       |         | •            |

## 5.G. Safe Harbor

The information contained in Items 5.E and 5.F contains statements that may constitute forward-looking statements. See "Cautionary Statement Regarding Forward-Looking Statements" in this Annual Report, for safe harbor provisions.

#### ITEM 6. DIRECTORS, SENIOR MANAGEMENT AND EMPLOYEES

#### 6.A. Directors and Senior Management

We are managed by our executive officers under the direction of our Board of Directors, which, in accordance with our by-laws, consists of eight directors, seven of whom are elected by holders of Series A common shares and one of whom is elected by holders of Series B common shares. The entire Board of Directors is regularly elected every three years at our ordinary shareholders' meeting. Cumulative voting is allowed for the election of directors. At the annual ordinary shareholders' meeting that took place on April 28, 2011, a new Board was elected, and their terms will expire in 2014. The Board of Directors may appoint replacements to fill any vacancies that occur during periods between elections. If a vacancy occurs, the entire Board must be elected or re-elected at the next regularly scheduled meeting of shareholders. On April 05, 2013, Mr. Kendrick T. Wallace resigned from his position as Director of the Company. In light of this vacancy, we will hold elections for the entire board at the next regularly scheduled meeting of shareholders on or about April 25, 2013. Our Chief Executive Officer is appointed by the Board of Directors and holds office at the discretion of the Board. The Chief Executive Officer appoints our executive officers. There are regularly scheduled meetings of the Board of Directors once a month. Extraordinary meetings may be called by the Chairman when requested by (i) the director elected by holders of the Series B common shares, (ii) any other director with the assent of the Chairman or (iii) an absolute majority of all directors. The Board has a Directors' Committee and its regulations are discussed below.

Our directors as of the date of this Annual Report are as follows:

| Name                             | Position and relevant experience  | Current position held since |
|----------------------------------|---|-----------------------------|
| Julio Ponce<br>L. <sup>(1)</sup> | Chairman of the Board and Director. Mr. Ponce is a Forestry Engineer with a degree from the Universidad de Chile. He joined SQM in 1981. He is also Chairman of the board of directors of the following corporations: Sociedad de Inversiones Pampa Calichera S.A., Sociedad de Inversiones Oro Blanco S.A., Norte Grande S.A. and Soquimich Comercial S.A. He is the brother of Eugenio Ponce L.     | September 1987              |
| Wayne R.<br>Brownlee             | Vice Chairman of the Board and Director. Mr. Brownlee is Executive Vice-President, Treasurer and Chief Financial Officer of Potash Corporation of Saskatchewan, Inc. Mr. Brownlee earned degrees in Arts and Science and Business Administration from the University of Saskatchewan. He is on the board of directors of Great Western Brewing Company. He became a director of SQM in December 2001. | December 2001               |

| Name                           | Position and relevant experience   | Current position held since |
|--------------------------------|--|-----------------------------|
| Hernan<br>Buchi B.             | Director. Mr. Buchi is a Civil Engineer with a degree from the Universidad de Chile. He served as Vice Chairman of SQM's Board from January 2000 to April 2002. He is currently a member of the board of directors of Quinenco S.A. Banco de Chile, S.A.C.I. Falabella and Madeco S.A., among others. He is also Chairman of the board of directors of Universidad del Desarrollo.   | April 1993                  |
| Jose Maria<br>Eyzaguirre<br>B. | Director. Mr. Eyzaguirre is a lawyer and is a partner of the Chilean law firm Claro y Cía. He obtained his law degree from the Universidad de Chile and was admitted to the Chilean Bar in 1985. In 1987, he obtained a Master's Degree from New York University School of Law. He was admitted to the New York Bar in 1988. He is also a member of the board of directors of Gasoducto del Pacifico S.A., a transandean gas pipeline, Embotelladora Andina S.A., a bottler of The Coca Cola Company, and Chairman of the board of directors of Club de Golf Valle Escondido.  | December 2001               |
| Daniel<br>Yarur E.             | Director. Mr. Yarur is a businessman and an Information Engineer with a degree from the Universidad de Chile and holds an MS in Finance from the London School of Economics and an AMP from Harvard Business School. He is president of the Federación Deportiva Nacional Ajedrez Federado de Chile. Mr. Yarur was chairman of the Chilean Securities and Exchange Commission from 1994 to 2000 and was also chairman of the Council Organization of the Securities Regulators of America. He is also a professor in the Faculty of Economic and Administrative Sciences, Universidad de Chile and is currently studying for a PhD in philosophy at Pontificia Universidad Católica. | April 2003                  |
| Wolf von<br>Appen              | Director. Mr. Von Appen is an entrepreneur. He is currently a member of Centro de Estudios Publicos.   | May 2005                    |

| Name                | Position and relevant experience  | <b>Current position held since</b> |
|---------------------|---|------------------------------------|
| Eduardo<br>Novoa C. | Director. Mr. Novoa is an economist with a degree from the Universidad de Chile and holds a Master in Business Administration from the University of Chicago. He has held positions in business development, corporate level strategic direction and asset management at a number of Chilean and multinational companies, either as a member of the board of directors, chief development officer, country manager or CEO. Currently, Mr. Novoa provides strategic advisory services and is a member of the board of several private companies. | April 2008                         |

Our executive officers as of the date of this Annual Report were as follows:

| Name                        | Position and relevant experience  | Current position held since |
|-----------------------------|---|-----------------------------|
| Patricio<br>Contesse G.     | Chief Executive Officer. Mr. Contesse is a Forestry Engineer with a degree from the Universidad de Chile. He joined SQM in 1981 as CEO, a position he held until 1982, and again in 1988 for one year. In the past, he has been CEO of Celco Limitada, Schwager S.A. and Compañía de Aceros del Pacífico S.A. He has also served as Operations Senior Executive Vice President of Codelco Chile, President of Codelco USA and Executive President of Codelco Chile. Mr. Contesse is also a member of the board of directors of Soquimich Comercial S.A. | March<br>1990               |
| Patricio de<br>Solminihac T | Chief Operating Officer and Executive Vice President. Mr. de Solminihac is an Industrial Engineer with a degree from the Pontificia Universidad Católica de Chile and holds a Master in Business Administration from the University of Chicago. He joined SQM in 1988 as Business Development Vice President. Currently he is a member of the board of directors of Melon S.A. Mr. de Solminihac is also a member of the board of directors of Soquimich Comercial S.A.   | January<br>2000             |

| Name                        | Position and relevant experience   | Current position held since |
|-----------------------------|--|-----------------------------|
| Matías<br>Astaburuaga<br>S. | General Counsel and Senior Vice President. Mr. Astaburuaga is a lawyer with a degree from the Pontificia Universidad Católica de Chile. He joined SQM in 1989. Prior to joining SQM, he was Regional Counsel of The Coca Cola Export Corporation, Andean Region and Regional Counsel of American Life Insurance Company, Latin America Region.   | February 1989               |
| Ricardo<br>Ramos R.         | Chief Financial Officer and Business Development Senior Vice President. Mr. Ramos is an Industrial Engineer with a degree from the Pontificia Universidad Católica de Chile. He joined SQM in 1989. Mr. Ramos is also a member of the board of directors of Soquimich Comercial S.A.   | November 1994               |
| Jaime San<br>Martín L.      | Nueva Victoria Operations Senior Vice President. Mr. San Martín is a Transportation Engineer with a degree from the Pontificia Universidad Católica de Chile. He joined SQM in 1995 as Project Manager. He became Metallic Mining Development Manager in 1997, and Development Manager in 1998, Business Development and Mining Property Vice President in 1999, Technical Senior Vice President in 2001, and Senior Vice President of Lithium Operations and Mining Affairs in January 2007. Since 2008, he has been the Senior Vice President of Nueva Victoria Operations (iodine and nitrates in the I Region of Chile). | March 2008                  |
| Eugenio<br>Ponce L.         | Senior Commercial Vice President. Mr. Ponce is a Mechanical Engineer with a degree from the Universidad Católica de Valparaíso. In 1981, he joined SQM as a Sales Manager. He became Commercial Manager in 1982, Commercial and Operations Manager in 1988 and Chief Executive Officer of SQM Nitratos S.A. in 1991. Currently he is a member of the board of directors of Soquimich Comercial S.A. and Vice Chairman of the board of directors of Pampa Calichera S.A.  | March 1999                  |

| Name                            | Position and relevant experience  | <b>Current position</b> held since |
|---------------------------------|---|------------------------------------|
| Carlos<br>Díaz O.               | Nitrates-Iodine Operations Senior Vice President. Mr. Diaz is an Industrial Civil Engineer with an engineering degree and an MBA from the Pontificia Universidad Católica de Chile. In 1996, he joined SQM as Planning Engineer in the Sales Division where he was promoted to Planning Manager in 1998. In 2002, he assumed the position of Deputy Financial Manager of the Commercial Offices and after four years took up the position of Logistics Manager.   | June 2005                          |
| Pauline<br>De Vidts<br>S.       | Safety, Health & Environment Senior Vice President. Mrs. De Vidts is an Industrial Engineer with a degree from the Pontificia Universidad Católica de Chile and holds a Ph.D. in Chemical Engineering from Texas A&M University. She joined SQM in 1996 to work in process development for the Salar de Atacama Operations, becoming Development Manager for these operations in 1998, and later Corporate R&D and Environmental Issues Vice President in 2001. Since 2005, she has overseen safety, health and environmental issues, and in 2011, she also began overseeing public affairs for SQM.  | June 2005                          |
| Juan<br>Carlos<br>Barrera<br>P. | Salar and Lithium Operations Senior Vice President. Mr. Barrera is an Industrial Engineer with a degree from the Pontificia Universidad Católica de Chile and holds a Masters in Business Administration degree from Tulane University and a Masters in Business Administration degree from Universidad de Chile. He joined SQM in 1991 as an advisor in the Business Development area and has served in many positions since then. In 1995, he became Business Development Manager of SQM Nitratos S.A. In 1999, he became the Corporate Quality Manager, in 2000, Corporate Supply Chain Vice president and, in 2006, General Manager of Soquimich Comercial S.A. | January 2007                       |

| Name                    | Position and relevant experience  | <b>Current position</b> held since |
|-------------------------|---|------------------------------------|
| Daniel<br>Jiménez<br>S. | Senior Vice President Human Resources, Corporate Services and Exploration Mr. Jiménez is an Industrial Engineer with a degree from the Pontificia Universidad Católica de Chile and holds a Masters in Business Administration degree from Old Dominion University. He joined SQM in 1991, holding several positions in the finance and sales areas at SQM's headquarters and foreign subsidiaries in USA and Belgium, countries he | May 2007                           |
|                         | was based in for eight years. In 2002, he became VP Sales and Marketing Iodine, Lithium and Industrial Chemicals.   |                                    |

Mr. Julio Ponce's ownership interest in SQM is explained in Item 6.E. Share Ownership.
 The individual beneficially owns less than one percent of the Company's shares

#### 6.B. Compensation

During 2012, directors were paid a monthly fee (UF 300 to the Chairman and UF 50 to each of the remaining seven directors), which was independent of attendance and the number of Board sessions. In addition, the directors received variable compensation (in Chilean pesos) based on a profit-sharing program approved by the shareholders. In 2012, the Chairman received the equivalent of 0.35% of 2011 profit and each of the remaining seven directors received the equivalent of 0.04% of 2011 profit.

In addition, during 2012, members of the Directors' Committee were paid UF 17 regardless of the number of sessions held by the Committee. Additionally, shareholders approved variable compensation for the 2012 fiscal year of an amount equal to 0.013% of 2011 profit for each Committee member. This remuneration is also independent from what the Committee members obtain as members of our Board of Directors.

During 2012, the compensation paid to each of our directors, who served on the Board during the year, was as follows (amounts in Chilean pesos):

|                          | SQM Board     | SQM              | SQM Committee  | Total (Ch\$)  |
|--------------------------|---------------|------------------|----------------|---------------|
|                          | Meeting(Ch\$) | Committee (Ch\$) | Meeting (Ch\$) | Total (Clip)  |
| Julio Ponce L.           | 997,014,607   | _                | 73,102,445     | 1,070,117,052 |

| Wolf Von Appen      | 110,708,571   | 40,964,854  | _          | 151,673,425   |
|---------------------|---------------|-------------|------------|---------------|
| Eduardo Novoa C.    | 119,780,195   | 39,132,389  | _          | 158,912,584   |
| Kendrick T. Wallace | 110,708,571   | _           | _          | 110,708,571   |
| Total               | 1,810,431,801 | 119,220,338 | 73,102,445 | 2,002,754,584 |

For the year ended December 31, 2012, the aggregate compensation paid to our 120 principal executives based in Chile was US\$32.9 million. We do not disclose to our shareholders or otherwise make available to the public information as to the compensation of our individual executive officers.

We maintain incentive programs for our employees, based on individual performance, company performance, and short- medium- and long-term indicators. Additionally, in order to provide incentives to key executives and to retain such executives, we maintain a long-term cash bonus compensation plan for certain senior executives, which consists of a long-term bonus linked to share price and is payable between 2012 and 2016.

As of December 31, 2012, the provision providing a long-term bonus linked to our share price would have increased or decreased by approximately US\$1.1 million per each movement of US\$1 in the Series B common share price. The amount of actual cash bonuses payable under the long-term incentive program will vary depending on the market share price of the Series B common shares on the date as of which the bonuses are paid.

As of December 31, 2012, we had a provision related to all of the incentive programs in an aggregate of US\$33.9 million.

We do not maintain any pension or retirement programs for the members of the Board or our executive officers in Chile.

#### 6.C. Board Practices

Information regarding the period of time each of SQM's current Directors has served in his or her respective office is provided in the discussion of each member of the board above in Item 6.A Directors and Senior Managers.

The date of expiration of the term of the current Board of Directors is April 2014. The contracts of our executive officers are indefinite. On April 05, 2013, Mr. Kendrick T. Wallace resigned from his position as Director of the Company. As required by our by-laws and in light of this vacancy, we will hold elections for the entire board at the next regularly scheduled meeting of shareholders on April 25, 2013.

The members of the Board are remunerated in accordance with the information provided above in Item 6.B. Compensation. There are no contracts between SQM, or any of its subsidiaries, and the members of the Board providing for benefits upon termination of their term.

#### **Directors' Committee - Audit Committee**

As required by Chilean Law, during 2012, we had a Directors' Committee (Comité de Directores) composed of three directors, which performs many of the functions of an audit committee. This Directors' Committee complies with the requirements of the NYSE corporate governance rules applicable to audit committees. Under the NYSE corporate governance rules, the audit committee of a U.S. company must perform the functions detailed in the NYSE Listed Company Manual Rules 303A.06 and 303A.07. Non-U.S. companies are required to comply with Rule 303A.06 but are not at any time required to comply with Rule 303A.07.

As of December 31, 2012, our Directors' Committee was comprised of three Directors: Mr. Buchi, Mr. Novoa and Mr. Von Appen. Each of the three members meet the NYSE independence requirements for audit committee members. According to Chilean independence requirements, Mr. Novoa meets the requirements for independence. Our Directors' Committee operates in accordance with article 50 bis of the Chilean Corporations Act, which provides that the Directors' Committee will, among other things:

- (a) examine and issue an opinion regarding the external auditor's report including financial statements prior to its final presentation for approval at the ordinary shareholders meeting;
- (b) propose to the Board the external auditors and the rating agencies that will be presented to the ordinary shareholders meeting;

| (c) examine and elaborate a report concerning the operations covered by Title XVI of the Chilean Corporations Act, which relates to related party transactions; and   |
|---|
| (d) examine the remuneration and compensation plans of the senior management.   |
| Accordingly, the following were the main activities of our Directors' Committee during 2012:  |
| (a) analysis of unaudited financial reports;  |
| (b) analysis of audited financial reports;  |
| (c) analysis of reports and proposals submitted by external auditors, account inspectors and rating agencies, and recommendations to the Board of Directors regarding external auditors and rating agencies that could be designated by shareholders at the respective annual general shareholders meeting; |
| (d) analysis of tax and other non-audit services provided by external auditors for SQM and its subsidiaries in Chile and abroad;  |
| (e) analysis of functions, objectives and working programs of the Internal Audit Department;  |
| (f) analysis of SQM's senior executives' remuneration and compensation plans;   |
| (g) analysis of the records relating to the transactions referred to in Title XVI of the Chilean Corporations Act;  |
| (h) analysis of matters related to the Sarbanes-Oxley Act, especially regarding Section 404;  |

- (i) analysis of matters related to IFRS and standards issued by U.S. standard-setter, the Public Company Accounting Oversight Board; and
- (j) analysis of an internal control report.

On April 26, 2012, the Annual General Shareholders Meeting of SQM approved an operational budget for the Directors Committee; the operational budget is equivalent to the annual remuneration of the members of the Directors Committee.

The activities carried out by the Committee, as well as the expenses incurred by it, are to be disclosed at the General Shareholders Meeting. During 2012, the Directors Committee did not incur any consulting expenses.

Article 50 bis of the Chilean Corporations Act states that the Committee should consist of three directors, of which at least one member should preferably be independent from the controller (i.e. any person or entity who "controls" the company for Chilean law purposes), if any, and that their functions be remunerated.

Comparative Summary of Differences in Corporate Governance Standards

The following table provides a comparative summary of differences in corporate governance practices followed by us under our home-country rules and those applicable to U.S. domestic issuers pursuant to Section 303A of the New York Stock Exchange (NYSE) Listed Company Manual.

Listed Companies that are foreign private issuers, such as SQM, are permitted to follow home country practices in lieu of the provisions of Section 303A, except such companies are required to comply with the requirements of Section 303A.06, 303A.11 and 303A.12(b) and (c).

# Section NYSE Standards

Listed companies must 303A.01 have a majority of independent directors.

# **SQM** practices pursuant to Chilean Stock Exchange regulations

There is no legal obligation to have a majority of independent directors on the Board but according to Chilean law, the Company's directors cannot serve as executive officers.

#### Section NYSE Standards

303A.02 No director qualifies as "independent" unless the board of directors affirmatively within the last 18 months he or she: determines that the director has no material relationship with the listed company (either directly or as a partner, shareholder or officer of an organization that has a relationship with the company).

> In addition, a director is not independent if:

- (i) The director is, or has been within the last three years, an employee of the listed company, or an immediate family member is, or has been within the last three years, an executive officer, of the listed company.
- (ii) The director has received, or has an immediate family member who has received, during any twelve-month period contributions from (i) above; within the last three years, more than \$120,000 in direct compensation from the listed company, other than director and committee fees and pension or other forms of deferred compensation for prior service (provided such compensation is not contingent in any way on continued service).
- (iii) (A) The director is a current partner or employee of a firm that is the listed company's internal or external auditor; (B) the director has an immediate family firm; (C) the director has an immediate family member who is a current employee of such a firm and personally works on the listed company's audit; or (D) the director or an immediate family member was within the last three years a partner or employee of such a firm and personally worked on the listed company's audit within that time.

# **SQM** practices pursuant to Chilean Stock Exchange regulations

A director would not be considered independent if, at any time,

- (i) Maintained any relationship of a relevant nature and amount with the company, with other companies of the same group, with its controlling shareholder or with the principal officers of any of them or has been a director, manager, administrator or officer of any of them;
- (ii) Maintained a family relationship with any of the members described in (i) above;
- (iii) Has been a director, manager, administrator o principal officer of non-profit organizations that have received
- (iv) Has been a partner or a shareholder that has had or controlled, directly or indirectly, 10% or more of the capital stock or has been a director, manager, administrator or principal officer of an entity that has provided consulting or legal services for a relevant consideration or external audit services to the persons listed in (i) above;
- (v) Has been a partner or a shareholder that has had or controlled, member who is a current partner of such a directly or indirectly, 10% or more of the capital stock or has been a director, manager, administrator or principal officer of the principal competitor, supplier or clients.

- (iv) The director or an immediate family member is, or has been with the last three years, employed as an executive officer of another company where any of the listed company's present executive officers at the same time serves or served on that company's compensation committee.
- (v) The director is a current employee, or an immediate family member is a current executive officer, of a company that has made payments to, or received payments from, the listed company for property or services in an amount which, in any of the last three fiscal years, exceeds the greater of \$1 million, or 2% of such other company's consolidated gross revenues.

The non-management directors must meet at regularly scheduled executive sessions 303A.03 without management.

These meetings are not needed given that directors cannot serve as executive officers.

- 303A.04 (a) Listed companies must have a nominating/corporate governance committee composed entirely of independent directors.
- This committee is not required as such in the Chilean regulations. However, pursuant to Chilean regulations SQM has a Directors' Committee (see Board practices above).
- (b) The nominating/corporate governance committee must have a written charter that addresses:
- (i) the committee's purpose and responsibilities which, at minimum, must be to: identify individuals qualified to become board members, consistent with criteria approved by the board, and to select, or to recommend that the board select, the director nominees for the next annual meeting of shareholders; develop and recommend to the board a set of corporate governance guidelines applicable to the corporation; and oversee the evaluation of the board and management; and

(ii) an annual performance evaluation of the committee.

#### **Section NYSE Standards**

# **SQM** practices pursuant to Chilean Stock Exchange regulations

Listed companies must have a compensation committee composed entirely of independent directors, and must have a written charter

This committee is not required as such in the Chilean regulations. Pursuant to Chilean regulations SQM has a Director's Committee (see Board practices above) that is in charge of reviewing management's compensation.

Listed companies must have an audit 303A.06 committee.

This committee is not required as such in the Chilean regulations. Pursuant to Chilean regulations, SQM has a Directors' Committee that performs the functions of an audit committee and that complies with the requirements of the NYSE corporate governance rules.

The audit committee must have a minimum of three members. All audit committee members must satisfy requirements of independence, and the committee must have a written charter. The listed companies must have an management with ongoing assistance of the Company's risk management process and the system of internal controls

The audit committee must have a minimum of three members. All audit purchased and the pursuant to Section 303A.00, So requirements in 303A.07. Pursuant to Section 303A.07 pursuant to Section 303A.07. Pursuant to Section 303A.07 pursuant to

Pursuant to Section 303A.00, SQM is not required to comply with requirements in 303A.07. Pursuant to Chilean Regulations SQM has a Director's Committee (see Board practices above) that also performs the functions of an audit committee with certain requirements of independence.

Shareholders must have the opportunity 303A.08 to vote on all equity-compensation plans and material revisions thereto.

SQM does not have equity compensation plans. However, as mentioned in Item 6.B Compensation, the Company does have a long-term cash bonus compensation plan for certain senior executives, which consists of a long-term bonus linked to the Company's share price. Directors and executives may only acquire SQM shares by individual purchases. The purchaser must give notice of such purchases to the Company and the Superintendence of Securities and Insurance.

Listed companies must adopt and disclose corporate governance 303A.09 guidelines.

Chilean law does not require that corporate governance guidelines be adopted. Directors' responsibilities and access to management and independent advisors are directly provided for by applicable law. Directors' compensation is approved at the annual meeting of shareholders, pursuant to applicable law.

303A.10 Listed companies must adopt and disclose a code of business conduct and ethics for directors, officers and

Not required in the Chilean regulations. SQM has adopted and disclosed a Code of Business Conduct and Ethics, available at the Company's website, www.sqm.com.

employees and promptly disclose any waivers of the code for directors or executive officers.

Listed foreign private issuers must

disclose any significant ways in which their corporate governance practices

differ from those followed by domestic companies under NYSE listed standards.

Pursuant to 303A.11, this table sets forth a comparative summary of differences in corporate governance practices followed by SQM under Chilean regulations and those applicable to U.S. domestic issuers pursuant to Section 303A.

Each listed company CEO must (a) certify to the NYSE each year that he or she is not aware of any violation by the listed company of NYSE corporate governance listing standards; (b) promptly notify the NYSE in writing after any executive officer becomes aware of any material non-compliance with any applicable provisions of Section 303A; and (c) must submit an executed Written Affirmation annually

after any executive officer becomes aware of any material non-compliance with any applicable provisions of 303A.12 Section 303A; and (c) must submit an executed Written Affirmation annually to the NYSE. In addition, each listed company must submit an interim Written Affirmation as and when required by the interim Written Affirmation form specified by the NYSE. The annual and interim Written Affirmations must be in the form specified by the NYSE.

Not required in the Chilean regulations. The CEO must only comply with Section 303A.12 (b) and (c).

### **Section NYSE Standards**

# **SQM practices pursuant to Chilean Stock Exchange regulations**

The NYSE may issue a public reprimand letter to 303A.13 any listed company that violates a NYSE listing standard.

Not specified in the Chilean regulations.

### 6.D. Employees

As of December 31, 2012, we had 5,643 permanent employees, 193 of whom were employed outside of Chile. The average tenure of our permanent employees is approximately 6.5 years.

|                            | As of December 31, |       |       |  |  |  |
|----------------------------|--------------------|-------|-------|--|--|--|
|                            | 2012               | 2011  | 2010  |  |  |  |
| Employees in Chile         | 5,450              | 4,720 | 4,073 |  |  |  |
| Employees outside of Chile | 193                | 182   | 254   |  |  |  |
| Total employees            | 5,643              | 4,902 | 4.327 |  |  |  |

As of December 31, 2012, 67% of our permanent employees in Chile were represented by 24 labor unions, which represent their members in collective negotiations with us. Compensation for unionized personnel is established in accordance with the relevant collective bargaining agreements. The terms of most such agreements currently in effect are three years, and expiration dates of such agreements vary from contract to contract. Under these agreements, employees receive a salary according to a scale that depends upon job function, seniority and productivity. Unionized employees also receive certain benefits provided by law and certain benefits provided under the applicable collective bargaining agreement, which vary depending upon the terms of the collective agreement, such as housing allowances and additional death and disability benefits.

In addition, we own all of the equity of Institución de Salud Previsional Norte Grande Limitada ("Isapre Norte Grande"), which is a health care organization that provides medical services primarily to our employees and Sociedad Prestadora de Servicios de Salud Cruz de Norte S.A. ("Prestadora"), which is a hospital in María Elena. We make contributions to Isapre Norte Grande and to Prestadora in accordance with Chilean laws and the provisions of our various collective bargaining agreements, but we are not otherwise responsible for its liabilities.

Non-unionized employees receive individually negotiated salaries, benefits provided for by law and certain additional benefits which we provide.

We provide housing and other facilities and services for employees and their families at the María Elena site.

We do not maintain any pension or retirement programs for our Chilean employees. Most workers in Chile are subject to a national pension law, adopted in 1980, which establishes a system of independent pension plans that are administered by the corresponding Sociedad Administradora de Fondos de Pensiones. We have no liability for the performance of any of these pension plans or any pension payments to be made to our employees. We, however, sponsor staff severance indemnities plans for our employees and employees of our Chilean subsidiaries whereby we commit to provide a lump sum payment to each employee at the end of his/her employment, whether due to death, termination, resignation or retirement.

Over 96% of our employees are employed in Chile, of which approximately 67% were represented by 24 labor unions as of December 31, 2012. As in previous years, during 2012, we renegotiated collective labor contracts with individual unions one year before the expiration of such contracts. As of December 31, 2012, we had concluded advanced negotiations with 22 labor unions, which represent 96% of our total unionized workers, signing new agreements with each for durations of three years. We are in the process of negotiating collective labor contracts with the two remaining unions. We are exposed to labor strikes that could impact our production levels. If a strike occurs and continues for a sustained period of time, we could be faced with increased costs and even disruption in our product flow that could have a material adverse effect on our business, financial condition and results of operations.

### 6.E. Share Ownership

SQM has been informed that Mr. Julio Ponce L., Chairman of the Board of SQM, and related persons beneficially own through Pampa Calichera, Potasios de Chile S.A. ("Potasios") and Inversiones Global Mining (Chile) Ltda. ("Global Mining"), a total of 84,135,095 shares, constituting 31.97% of SQM's total shares. SQM has been advised that this beneficial ownership is based on the following: Mr. Ponce and related persons control 100% of the total shares of Inversiones SQYA S.A. ("SQYA"); SQYA controls 67.31% of the total shares of Norte Grande S.A. ("Norte Grande"); Norte Grande controls 76.34% of the total shares of Sociedad de Inversiones Oro Blanco S.A. ("Oro Blanco"); Oro Blanco controls 88.62% of the total shares of Pampa Calichera, and Potasios controls 10.07% of Pampa Calichera; Pampa Calichera and the related companies Global Mining and Potasios ultimately control 31.97% of SQM's total common shares. The stake held by Mr. Ponce and related parties as of December 31, 2011 and 2010 was, respectively, 31.97% and 31.12% of SQM's total shares.

Pampa Group and Kowa Group – which was the owner, directly and indirectly, of 2.08% of the total shares of SQM as of December 31, 2012, entered into a joint Performance Agreement on December 21, 2006, that allows them to currently control 34.05% of the total shares of SQM. As a result of this Agreement, the group lead by Mr. Julio Ponce L. indirectly controls 34.05% of the total shares of SQM and is, therefore, the Controller Group of SQM.

No director or executive officer other than Mr. Ponce owns more than 1% of each share class of the Company as of December 31, 2012. See Item 6. Directors, Senior Management and Employees—footnote (1). Individual ownership has not been publicly disclosed.

We do not grant stock options or other arrangements involving the capital of SQM to directors, managers or employees.

The following table shows the combined stakes that the Controller Group held in SQM as of:

|                   | % Beneficial owners | ship |
|-------------------|---------------------|------|
| December 31, 2012 | 34.05               | %    |
| December 31, 2011 | 34.05               | %    |
| December 31, 2010 | 33.20               | %    |

Separately from any ownership interest held by the Controller Group, as of December 31, 2012, SQM has been informed that the Canadian company Potash Corporation of Saskatchewan Inc. ("PCS") indirectly controls 100% of the shares of Inversiones el Boldo Limitada and 100% of the shares of Inversiones RAC Limitada. Through these companies PCS owns 32% of the total shares of SQM. For additional information regarding share ownership of the Company, see Item 7. below.

### ITEM 7. MAJOR SHAREHOLDERS AND RELATED PARTY TRANSACTIONS

### 7.A. Major Shareholders

The following table sets forth certain information concerning beneficial ownership of the Series A and Series B common shares of SQM as of December 31, 2012 with respect to each shareholder known by us to beneficially own more than 5% of the outstanding Series A or Series B common shares. The following information is derived from our records and reports filed by certain of the persons named below with the SVS and the Santiago Stock Exchange.

|                                       | Number of series      |        |                 | Number of    |        |         |        |   |
|---------------------------------------|-----------------------|--------|-----------------|--------------|--------|---------|--------|---|
| Shareholder                           | A shares % series A s |        | series B shares | % series B   | 3      | % total |        |   |
| Shareholder                           | beneficially          | shares |                 | beneficially | shares |         | shares |   |
|                                       | owned                 |        |                 | owned        |        |         |        |   |
| Inversiones El Boldo Ltda.(1)         | 44,751,196            | 31.33  | %               | 17,571,676   | 14.60  | %       | 23.68  | % |
| Pampa Calichera <sup>(2)(3)</sup>     | 44,558,830            | 31.20  | %               | 9,003,799    | 7.48   | %       | 20.35  | % |
| The Bank of New York                  | _                     |        |                 | 46,559,106   | 38.68  | %       | 17.69  | % |
| Inversiones RAC Chile Ltda.(1)        | 19,200,242            | 13.44  | %               | 2,699,773    | 2.24   | %       | 8.32   | % |
| Potasios de Chile S.A. <sup>(3)</sup> | 17,919,147            | 12.55  | %               | _            | _      |         | 6.81   | % |

Potash Corporation of Saskatchewan ("PCS") owns 100% of Inversiones El Boldo Limitada and 100% of Inversiones RAC Ltda., and, accordingly, is the beneficial owner of 84,222,887 of SQM's shares, or 32.00% of SQM's total shares. The stake held by PCS as of December 31, 2011 and 2010 was, respectively, 32.00% and 32.00% of SQM's total shares.

Pampa Calichera is a publicly held corporation whose shares are traded on the Santiago Stock Exchange.

- (2) Originally, the shareholders of Pampa Calichera were employees of SQM. Pampa Calichera was formed to hold the capital stock of SQM contributed by such employees or later acquired in the open market. SQM has been informed that Mr. Julio Ponce L., Chairman of the Board of SQM, and related persons beneficially own through Pampa Calichera, Potasios de Chile S.A. ("Potasios") and Inversiones Global Mining (Chile) Ltda. ("Global Mining"), a total of 84,135,095 shares, constituting 31.97% of SQM's total shares, of which 30.50% is held directly and 1.47% is in the custody of various brokers, including LarrainVial, Euro America, Tanner, and BCI Corredora. SQM has been advised that this beneficial ownership is based on the following: Mr. Ponce and related
- (3) persons control 100% of the total shares of Inversiones SQYA S.A. ("SQYA"); SQYA controls 67.31% of the total shares of Norte Grande S.A. ("Norte Grande"); Norte Grande controls 76.34% of the total shares of Sociedad de Inversiones Oro Blanco S.A. ("Oro Blanco"); Oro Blanco controls 88.62% of the total shares of Pampa Calichera, and Potasios controls 10.07% of Pampa Calichera; Pampa Calichera and the related companies Global Mining and Potasios ultimately control 31.97% of SQM's total common shares. The stake held by Mr. Ponce and related parties as of December 31, 2011 and 2010 was, respectively, 31.97% and 31.12% of SQM's total shares.

On December 21, 2006, Pampa Calichera and Kowa executed a joint performance agreement that allows them to become the "controller group" of the Company, as such term is defined under Chilean law. We have been informed that,

as of December 31, 2012, Mr. Julio Ponce L. and related persons beneficially owned, through Pampa Calichera and certain other companies, 31.97% of the shares of the Company. As of December 31, 2012, Kowa owned, directly and indirectly, 2.08% of the shares of the Company. As of December 31, 2012, pursuant to the joint performance agreement, the "controller group" led by Mr. Julio Ponce L. owned 34.05% of the total shares of the Company.

Series A and Series B common shares have the same economic rights (i.e., both series are entitled to share equally in any dividends declared on the outstanding stock) and voting rights at any shareholders meeting, whether ordinary or extraordinary, with the exception of the election of the Board, in which the Series A shareholders elect seven members and the Series B shareholders elect one member. Additionally, Series B common shares cannot exceed 50% of SQM's issued and outstanding stock; shareholders of at least 5% of this series may call an ordinary or extraordinary shareholders' meeting; and the director elected by this series may request an extraordinary Board meeting without the authorization of the Chairman of the Board. These conditions will remain in effect until 2043. Under our by-laws, the maximum individual voting power personally and/or in representation of other shareholders per series is limited to 37.5% of the subscribed shares of each series with voting rights and 32% of the total subscribed shares with voting rights. To calculate these percentages, shares that belong to the voting shareholder's related persons must be added. In addition, the director elected by the Series B shareholders cannot vote in the election of the Chairman of the Board if a tie vote has occurred in the prior voting process. As of December 31, 2012, there are 142,819,552 Series A common shares and 120,376,972 Series B common shares outstanding.

### 7.B. Related Party Transactions

Title XVI of the Chilean Corporations Act regulates transactions with related parties for publicly held corporations and its related parties.

Articles 146 to 149 of the Chilean Corporations Act requires that our transactions with related parties (i) have as their purpose to contribute to SQM's interests (ii) be on price, terms and conditions similar to those customarily prevailing in the market at the time of their approval and (iii) satisfy the requirements and procedures established by the Chilean Corporations Act. Violation of such articles may also result in administrative or criminal sanctions and civil liability may be sought by SQM, shareholders or interested third parties that suffer losses as a result of such violations.

In addition, article 89 of the Chilean Corporations Act requires that transactions between affiliates, subsidiaries or related parties of a sociedad anónima cerrada, such as some of SQM's main affiliates and subsidiaries, shall also be on terms similar to those customarily prevailing in the market. Directors and executive officers of companies that violate article 89 are liable for losses resulting from such violations.

With respect to SQM, operations with related parties include negotiations, proceedings, contracts or operations involving SQM and its controller, directors, managers and officers, and their spouses and relatives, and other companies and persons connected to the abovementioned parties or mentioned in the by-laws or by the Directors' Committee. Such operations may only be carried out if (i) their objective is to contribute to SQM's interests and if their price, terms and conditions conform to prevailing market prices, terms and conditions at the time of their approval and (ii) they satisfy the requirements and procedures established by the Chilean Corporations Act. Such requirements include, among others:

- that the operation be informed to the Directors' Committee and to the Board of Directors prior to its execution;
- that the Board of Directors, excluding any Directors involved in the operation, approves the operation with an absolute majority of its members, or, if an absolute majority is not feasible, with a unanimous vote by the Directors not involved in the transaction, or, if neither of these options is available, that an extraordinary shareholders' meeting be held and that shareholders representing 2/3 of the outstanding shares with voting rights approve the operation. In the latter case, prior to the meeting, the shareholders must be provided with a report by an independent evaluator and with statements by the directors as to whether or not such operation is in SQM's interest;
- that the grounds for the decision and for the exclusion be recorded in the respective minutes of the Board meeting; and

| • that the agreement and the names of the directors who approved the same be reported at the next shareholders' meeting. Infractions will not affect the validity of the operation but they will grant SQM or its shareholders the right to demand that the related party committing such infraction refund the amount equivalent to the benefits received by such party in the operation to SQM, and that such party indemnify for any corresponding damages.  |
|---|
| However, the Board of Directors may authorize the following operations with related parties to be carried out without following such requirements and procedures, as long as such authorization is obtained in advance: (a) operations wherein the amount of the transaction is not significant or (b) operations that, according to the general policies on customary practices determined by the Board of Directors, are considered normal based on SQM's business activities or (c) operations carried out between legal entities wherein SQM holds at least a 95% ownership interest in the counterpart.                            |
| We believe that we have complied with the applicable requirements of the referred articles in all transactions with related parties. Accounts receivable from and payable to related companies are stated in U.S. dollars and accrue no interest. Other than the above, transactions are made under terms and conditions that are similar to those offered to unrelated third parties. We further believe that we could obtain from third parties all raw materials now being provided by related parties that are not our affiliates. The provision of such raw materials by new suppliers could initially entail additional expenses. |
| In each case, terms and conditions vary depending on the transaction pursuant to which it was generated.  |
| The Company regularly enters into business arrangements with related parties, principally its joint ventures and associates, which are described in Note 8.2 and 8.3 to the Consolidated Financial Statements (pages F-57 - F-61).  |
| 7.C. For additional information concerning our transactions with affiliates and other related parties, see Note 8 of the Consolidated Financial Statements. Interests of Experts and Counsel  |
| Not applicable.   |

### 8.A.7 Legal Proceedings

In October 2010, the City of Pomona, California, named Sociedad Química y Minera de Chile S.A. (SQM) and SQM North America Corporation (SQMNA) as defendants in an action filed in the California Superior Court for Los Angeles County. In this matter the plaintiff seeks damages for alleged groundwater contamination from the use of defendant's fertilizer products. This case has been dismissed by the trial court and is currently on appeal by the plaintiff to the Ninth Circuit Court of Appeals.

In October 2010, the City of Lindsay, California, named Sociedad Química y Minera de Chile S.A. (SQM) and SQM North America Corporation (SQMNA) as defendants in an action filed in the California Superior Court for Tulare County. In this matter the plaintiff seeks damages for alleged groundwater contamination from the use of defendant's fertilizer products. This case is pending in the trial court subject to the resolution of the Ninth Circuit Court of Appeals in the City of Pomona's action.

SQM has not been served in either action. SQMNA and SQM (if it is legally served) intend to vigorously defend both actions.

We are party to various other lawsuits arising in the ordinary course of business. For more information on these lawsuits, see Note 16.1 to our Consolidated Financial Statements. Also see Item 3.D. Risk Factors—Risks Relating to our Business—Lawsuits and arbitrations could adversely impact us.

#### 8.A.8. Dividend Policy

As required by Chilean law and regulations, our dividend policy is decided upon from time to time by our Board of Directors and is announced at the Annual Ordinary Shareholders' Meeting, which is generally held in April of each year. Shareholder approval of the dividend policy is not required. However, each year the Board must submit the declaration of the final dividend or dividends in respect of the preceding year, consistent with the then-established dividend policy to the Annual Ordinary Shareholders' Meeting for approval. As required by the Chilean Companies Act, unless otherwise decided by unanimous vote of the holders of issued shares, we must distribute a cash dividend in an amount equal to at least 30% of our consolidated net income for that year (determined on an IFRS basis), unless and except to the extent it has a deficit in retained earnings.

The dividend policy for 2012 established that SQM must distribute and pay in favor of its shareholders, as a final dividend, the amount in Chilean pesos equivalent to 50% of the distributable income for 2011. At the Annual Shareholders' Meeting held on April 26, 2012, SQM's shareholders approved a payment of a definitive dividend in the amount of US\$1.03679 per share. From this definitive dividend, the interim dividend amount of US\$0.73329 per share was deducted. Payments for this dividend were made on May 09, 2012.

At the Annual Shareholders' Meeting held on April 26, 2012, shareholders also agreed to pay and distribute a dividend equal to 50% of the distributable income corresponding to 2012. For this purpose, distributable net income includes income for the year included in the income statement item "Profit (Loss) Attributable to Owners of the Parent" less significant changes in the fair value of assets and liabilities that are not realized - and which correspond to earnings net of taxes that have been generated in relation to the acquisition of companies. Also, at the same meeting, shareholders agreed to the payment and distribution of an interim dividend. The interim dividend was paid on December 05, 2012 in the amount of US\$0.94986 per share.

We generally declare dividends in U.S. dollars (but may declare dividends in Chilean Pesos) and pay such dividends in Chilean Pesos. When a dividend is declared in U.S. dollars, the exchange rate to be used to convert the dividend into Chilean Pesos is decided by the shareholders at the meeting that approves the dividend, which has usually been the Observed Exchange Rate on the date the dividend is declared. In the case of interim dividends, the exchange rate to be used is the Observed Exchange Rate published five business days before the payment date.

Although the Board of Directors has no current plan to recommend a change in the dividend policy, the amount and timing for payment of dividends is subject to revision from time to time, depending upon our then current level of sales, costs, cash flow and capital requirements, as well as market conditions. Accordingly, there can be no assurance as to the amount or timing of declaration or payment of dividends in the future. Any change in dividend policy would ordinarily be effective for dividends declared in the year following adoption of the change, and a notice as to any such change of policy must be filed with Chilean regulatory authorities and would be publicly available information.

### Dividends

Each Series A Share and Series B Share is entitled to share equally in any dividends declared on the outstanding capital stock of SQM.

The following table sets forth the U.S. dollar equivalent of dividends per share and per ADS paid in each of the years indicated, based on the Observed Exchange Rate for the date on which the dividend was declared.

| Dividends                      |         | Per Share | Per ADS (1) |  |  |
|--------------------------------|---------|-----------|-------------|--|--|
| Declared for the business year | Paid in | Ch\$      | US\$        |  |  |
| 2007                           | 2008    | 204.14    | 0.44459     |  |  |
| 2008 (interim)                 | 2008    | 243.34    | 0.37994     |  |  |
| 2008                           | 2009    | 515.90    | 0.85835     |  |  |

| 2011           | 2012 | 147.66 | 0.30350 |
| 2012 (interim) | 2012 | 456.93 | 0.94986 |

The Series A ADRs were delisted from the New York Stock Exchange on March 27, 2008. The ratio of ordinary (1) shares to Series B ADSs changed from 10:1 to 1:1 on March 28, 2008. The calculation in the table for all periods is based on the ratio of 1:1.

Dividends payable to holders of ADRs will be paid net of conversion expenses of the Depositary and will be subject to Chilean withholding tax, currently imposed at the rate of 35% (subject to credits in certain cases).

As a general requirement, a shareholder who is not a resident of Chile must register as a foreign investor under one of the foreign investment regimes contemplated by Chilean law to have dividends, sale proceeds or other amounts with respect to its shares remitted outside Chile through the Formal Exchange Market. Under the Foreign Investment Contract, the Depositary, on behalf of ADR holders, will be granted access to the Formal Exchange Market to convert cash dividends from Chilean Pesos to U.S. dollars and to pay such U.S. dollars to ADR holders outside Chile net of taxes, and no separate registration of ADR holders is required.

### 8.B. Significant Changes

No significant change has occurred since the date of the financial statements set forth in Item 18.

### ITEM 9. THE OFFER AND LISTING

9.A. Offer and Listing Details

### **Price History**

The table below sets forth, for the periods indicated, the reported high and low closing prices for our shares on the Santiago Stock Exchange and the high and low closing prices of the ADRs as reported by the NYSE, as the two main exchanges on which our shares are traded. On March 27, 2008, the Company voluntarily delisted its series A ADRs from the New York Stock Exchange. In addition, on March 28, 2008, a ratio change for the Company's series B ADSs entered into effect, modifying the ratio of ordinary shares to series B ADSs from the previous ratio of 10:1 to a new ratio of 1:1.

<sup>(1)</sup> Pesos per share of Common Stock reflect nominal price at trade date.

As of December 31, 2012, there were 46,559,106 Series B ADRs outstanding. As of December 31, 2012, such ADRs represented approximately 17.69% of the total number of issued and outstanding shares of our Company.

### 9.B Plan Of Distribution

Not Applicable.

### 9.C Markets

The Series A shares and the Series B shares are currently traded on the Santiago Stock Exchange, the Bolsa Electrónica de Chile Bolsa de Valores S.A., (the Electronic Stock Exchange), and the Bolsa de Corredores Bolsa de

<sup>(2)</sup> Series A shares started trading on the New York Stock Exchange on April 9, 1999.

<sup>(3)</sup> Series B shares began trading on the New York Stock Exchange on September 20, 1993. Historical prices have been restated to reflect the change in the ratio of local shares to ADSs from 10:1 to 1:1, effective March 28, 2008.

Valores S.A., (the Valparaíso Stock Exchange). As of December 31, 2007, each series was also traded on the New York Stock Exchange in the form of ADRs, where each ADR represented 10 underlying shares of the corresponding series. On February 26, 2008, the Company's Board of Directors voted to voluntarily delist the Series A ADRs from the New York Stock Exchange, due to the low trading volume of those shares. On the same date, the Board of Directors also approved a ratio change for the Series B ADSs, modifying the previous ratio of 10 ordinary shares to 1 ADS to a new ratio of 1:1. The Series A ADRs were delisted on March 27, 2008, and the Series B ratio change entered into effect on March 28, 2008. Prior to their delisting, the ADRs representing Series A shares traded on the NYSE beginning on April 9, 1999. The ADRs representing Series B shares have traded on the NYSE since September 20, 1993. The depositary bank for these ADRs is the Bank of New York Mellon.

| SQM S.A., headquartered at El Trovador No. 4285, 6th Floor, Santiago, Chile, is an open stock corporation <i>-sociedad anónima abierta-</i> organized under the laws of the Republic of Chile. The Company was constituted by public deed issued on June 17, 1968 by Mr. Sergio Rodríguez Garcés, Notary Public of Santiago. Its existence was approved by Decree No. 1,164 of June 22, 1968, of the Ministry of Finance, and it was registered on June 29, 1968, in the Business Registry of Santiago, on page 4,537 No. 1,992. |

**Corporate purposes** 

Our main purposes, which appear in article 4 of our By-laws, are to: (a) perform all kinds of chemical or mining activities and businesses and, among others, those related to researching, prospecting, extracting, producing, working, processing, purchasing, disposing of, and commercializing properties, as applicable, of all metallic and non-metallic and fossil mining substances and elements of any type or nature, to be obtained from them or from one or more concessions or mining deposits, and in their natural or converted state, or transformed into different raw materials or manufactured or partially manufactured products, and of all rights and properties thereon; (b) manufacture, produce, work, purchase, transfer ownership, import, export, distribute, transport, and commercialize in any way, all kinds of fertilizers, components, raw materials, chemical, mining, agricultural, and industrial products, and their by-products; (c) generate, produce, distribute, purchase, transfer ownership, and commercialize, in any way, all kinds of electrical, thermal, geothermic or other type of power, and hydric resources or water rights in general; (d) request, manifest, claim, constitute, explore, work, lease, transfer ownership, and purchase, in any way, all kinds of mining concessions; (e) purchase, transfer ownership, and administer, in any way, any kind of telecommunications, railroads, ships, ports, and any means of transport, and represent and manage shipping companies, common carriers by water, airlines, and carries in general; (f) manufacture, produce, commercialize, maintain, repair, assemble, construct, disassemble, purchase and transfer ownership, and in any way, any kind of electromechanical structure, and substructure in general, components, parts, spares, or parts of equipment, and machines, and execute, develop, advice, and commercialize, any kind of electromechanical or smelting activities; (g) purchase, transfer ownership, lease, and commercialize any kind of agro industrial and farm forestry activities, in any way (h) purchase, transfer ownership, lease, and commercialize, in any way, any kind of urban or rural real estate; (i) render any kind of health services and manage hospitals, private clinics, or similar facilities; (i) construct, maintain, purchase, transfer ownership, and manage, in any way, any kind of roads, tunnels, bridges, water supply systems, and other required infrastructure works, without any limitation, regardless of whether they may be public or private, among others, to participate in bids and enter into any kind of contracts, and to be the legal owner of the applicable concessions; and (k) purchase, transfer ownership, and commercialize, in any way, any kind of intangible properties such as stocks, bonds, debentures, financial assets, commercial papers, shares or rights in corporations, and any kind of bearer securities or instruments, and to administer such investments, acting always within the Investment and Financing Policies approved by the applicable General Shareholders Meeting. We may comply with the foregoing by acting ourselves or through or with other different legal entities or natural persons, within the country or abroad, with properties of our own or owned by third parties, and additionally, in the ways and territories, and with the aforementioned properties and purposes, we may also construct and operate industrial or agricultural facilities or installations; constitute, administer, purchase, transfer ownership, dissolve, liquidate, transform, modify, or form part of partnerships, institutions, foundations, corporations, or associations of any kind or nature; perform all actions, enter into all contracts, and incur in all obligations convenient or necessary for the foregoing; perform any business or activity related to our properties, assets, or patrimony, or with that of our affiliates, associated companies, or related companies; and render financial, commercial, technical, legal, auditing, administrative, advisory, and other pertinent services.

#### **Directors**

As stated in article 9 of the Company's By-laws, the Company has 8 Directors. One of the Directors must be "independent" as such term is defined in article 50 bis of Law No. 18,046. Moreover, the possession of shares is not a condition necessary to become a Director of the Company.

As stated in article 10 of the Company's By-laws, the term of the Directors is of three years and they can be reelected indefinitely; thus, there is no age limit for their retirement.

The Company's By-laws, in articles 16 and 16 bis, essentially establish that the transactions in which a Director has a material interest must comply with the provisions set forth in articles 136 and 146 to 149 of Law No. 18,046 and the applicable regulations of such Law.

The Board of Directors duties are remunerated, as stated in article 17 of the Company's By-laws, and the amount of that compensation is fixed yearly by the Ordinary Shareholders' Meeting. Therefore, Directors can neither determine nor modify their compensation.

Directors cannot authorize Company loans on their behalf.

The Board of Directors must provide shareholders and the public with sufficient, reliable and timely information pertaining to the Company's legal, economic and financial situation, as required by the Law or the Chilean Superintendency of Securities and Insurance. The Board of Directors must adopt the appropriate measures in order to avoid the disclosure of such information to persons other than those persons who should possess such information as a result of their title, position or activity within the Company before such information is disclosed to shareholders and the public. The Board of Directors must treat business dealings and other information about the Company as confidential until such information is officially disclosed. No Director may take advantage of the knowledge about commercial opportunities that he has obtained through his position as Director.

Independent Directors and Directors Committee

According to Chilean Law, SQM must appoint at least one Independent Director and a Directors' Committee, due to the fact that (a) the Company has a market capitalization greater than or equal to UF 1,500,000 and (b) at least 12.5%

of the Company's shares with voting rights are held by shareholders who, on an individual basis, control or possess less than 10% of such shares.

Persons who have not been involved in any of the circumstances described in the Law at any time during the preceding 18 months are considered independent. Candidates for the position of Independent Director must be proposed by shareholders representing 1% or more of the Company's shares, at least 10 days prior to the date of the Shareholders' Meeting that has been called in order to elect the Directors. No less than two days prior to the respective Shareholders' Meeting, the candidate must provide the Chief Executive Officer with a sworn statement indicating that he: (a) accepts his candidacy for the position of Independent Director (b) does not meet any of the conditions that would prevent him from being the Independent Director (c) is not related to the Company, the other companies of the group to which the Company belongs, the controller of the Company, or any of the Company's officers in such a way that would deprive a sensible person of a reasonable degree of autonomy, interfere with his ability to perform his duties objectively and effectively, generate a potential conflict of interest, or interfere with his independent judgment, and (d) assumes the commitment to remain independent as long as he holds the position of Director.

The Directors' Committee shall have the following powers and duties: (a) to examine the reports of the external auditors, the balance sheet and other financial statements presented by the Company's managers or liquidators to its shareholders and issue an opinion about the same prior to their submission for the approval of the shareholders (b) to propose to the Board of Directors the external auditors and risk rating agencies to be proposed to the shareholders at the respective Shareholders' Meeting. In the event that an agreement cannot be reached, the Board of Directors shall formulate its own suggestion, and both options shall be submitted for shareholder consideration at such Shareholders' Meeting (c) to examine the information relating to operations referred to in articles 146 to 149 of Law No. 18,046 and to prepare a report about such operations. A copy of such report shall be sent to the Board of Directors, and such report must be read at the Board Meeting called for the purpose of approving or rejecting the respective operation or operations (d) to examine the remuneration system and compensation plans for the Company's management, officers and employees (e) to prepare an annual report on its activities, including its main recommendations to the shareholders (f) to inform the Board of Directors about whether or not it is advisable to hire the external audit firm to provide non-audit services where the audit firm is not prohibited from providing such services because the nature of the same could pose a threat to the audit firm's independence, and (g) any other issues indicated in the Company's by-laws or authorized by a Shareholders' Meeting or the Board of Directors.

The Directors' Committee shall be comprised of three members, with at least one independent member. In the event that more than three Directors have the right to form part of the Committee, these same Directors shall unanimously determine who shall make up the Committee. In the event that an agreement cannot be reached, the Directors who were elected with a greater percentage of votes by shareholders controlling or possessing less than 10% of the Company's shares shall be given priority. If there is only one Independent Director, this Director shall name the other members of the Committee among the other Directors who are not independent. Such other members of the Committee shall have all of the rights associated with such position. The members of the Committee shall be compensated for their role. The amount of their remuneration shall be set annually at the General Shareholders' Meeting, and it may not be less than the remuneration set for the Company Directors, plus an additional 1/3 of that amount. The General Shareholders' Meeting shall determine a budget for the expenses of the Committee and its advisors. Such budget may not be less than the sum of the annual remunerations of the Committee members. The Committee may need to hire professional advisory services in order to carry out its duties in accordance with the abovementioned budget. The proposals made by the Committee to the Board of Directors that are not accepted by the latter must be reported to the Shareholders' Meeting prior to the vote by shareholders on the corresponding matter or matters. In addition to the responsibilities that are associated with the position of Director, the members of the Committee are jointly and severally liable for any damages they cause in performing their duties as such to the

shareholders and to the Company.

**Shares** 

Dividends are annually distributed to the Series A and Series B shareholders of record on the fifth business day prior to the date for payment of the dividends. The By-laws do not specify a time limit after which dividend entitlement elapses but Chilean regulations establish that after 5 years, unclaimed dividends are to be donated to the Fire Department.

Article 5 of the Company's By-laws establishes that Series B shares may in no case exceed fifty percent of the issued, outstanding and paid shares of SQM Series B shares have a restricted right to vote as they can only elect one Director of the Company, regardless of their capital stock's share. Series B shares have the right to call for an Ordinary or Extraordinary Shareholders' Meeting when the shareholders of at least 5% of the Series B issued shares request so and for an Extraordinary Board of Directors Meeting without the Chairman's authorization when it is requested by the Director elected by the shareholders of the Series B shares. Series A shares have the option to exclude the Director elected by Series B shareholders from the voting process in which the Chairman of the Board is to be elected, if there is a tie in the first voting process. However, articles 31 and 31 bis of the Company's By-laws establish that in General Shareholders' Meetings each shareholder will have a right to one vote for each share he owns or represents and (a) that no shareholder will have the right to vote for himself or on behalf of other shareholders of the same Series A or Series B shares representing more than 37.5% of the total outstanding shares with right to vote of each Series and (b) that no shareholder will have the right to vote for himself or on behalf of other shareholders representing more than 32% of the total outstanding shares with a right to vote. In calculating a single shareholder's ownership of Series A or B shares, the shareholder's stock and those pertaining to third parties related to them are to be added.

Article 5 bis of the Company's By-laws establishes that no person may directly or by means of related third persons concentrate more than 32% of the Company's total shares with right to vote.

Each Series A share and Series B share is entitled to share equally in the Company's profits, i.e., they have the same rights on any dividends declared on the outstanding shares of SQM.

The Company By-laws do not contain any provision relating to (a) redemption provisions (b) sinking funds or (c) liability to capital calls by the Company.

As established in article 103 of Law No. 18,046, a company subject to the supervision of the Superintendency of Securities and Insurance (SVS) may be liquidated in the following cases:

- (a) Expiration of the duration term, if any, as established in its By-laws;
- (b) All the shares end up in the possession of one individual for more than ten continuous days;
- (c) By agreement of an Extraordinary Shareholders Meeting;
- (d) By abolition, pursuant to applicable laws, of the decree that authorized its existence;
- (e) Any other reason contemplated in its By-laws.

Article 40 of the Company's By-laws states that in the event of liquidation, the Shareholders' Meeting will appoint a three-member receiver committee that will have the authority to carry out the liquidation process. Any surplus will be distributed equally among the shareholders.

The only way to change the rights of the holders of the SQM shares is by modifying its By-laws, which can only be carried out by an Extraordinary Shareholders' Meeting, as set forth in article 28 of the Company By-laws.

Shareholders' meetings

Article 29 of the Company's By-laws states that the call to a Shareholders' Meeting, either Ordinary or Extraordinary, will be by means of a highlighted public notice that will be published at least three times, and on different days, in the newspaper of the legal address determined by the Shareholders' Meeting, and in the way and under the conditions indicated by the regulations. Additionally, a notice will be sent by mail to each shareholder at least fifteen days prior to the date of the Meeting, which shall include a reference of the matters to be addressed at the meeting. However, those meetings with the full attendance of the shares with right to vote may be legally held, even if the foregoing formal notice requirements are not met. Notice of any Shareholders' Meeting shall be delivered to the SVS at least fifteen days in advance of such meeting.

Any holder of Series A and/or Series B shares registered in the Company's shareholder registry on the fifth business day prior to the date of the meeting will have a right to participate at that meeting

Article 67 of Law No. 18,046 provides that decisions made at Extraordinary Shareholders' Meeting on the following matters require the approval of 2/3 of the outstanding shares with voting rights: (1) transformation or division of the Company and its merger with another company; (2) modification of the Company's term of duration, if any; (3) early dissolution of the Company; (4) change of the corporate domicile; (5) capital decrease; (6) approval of contributions and estimation of non-cash assets; (7) modification of powers reserved for Shareholders Meetings or limitations on powers of the Board of Directors; (8) reduction in the number of members of the Board of Directors; (9) disposal of 50% or more of the Company's assets; formulation or modification of any business plan exceeding the above percentage; disposal of 50% or more of an asset belonging to a subsidiary that represents at least 20% of the Company's assets and disposal of shares of the referred subsidiary such that the parent company would lose its position as controller of the same; (10) method in which profits are distributed; (11) granting of real or personal guarantees as sureties for third-party obligations that exceed 50% of the Company assets, except for subsidiaries, in which case approval of the Board of Directors shall suffice; (12) acquisition of own shares as set forth in articles 27A and 27B of the said law; (13) other matters indicated in the By-laws; (14) amendment of the Company By-laws as a result of errors in the constitution process and amendments in the By-laws involving one or more of the matters stated in the preceding numbers; (15) forced sale of shares carried out by the controller who would acquire more than 95% of the Company's shares in a tender offer, and (16) approval or ratification of proceedings or contracts with related parties in accordance with the provisions of articles 44 and 147 of Law No. 18,046.

Amendments to the By-laws that are intended to create, modify, defer or suspend preferential rights shall be approved by 2/3 of the shares of the affected Series.

The transformation of the Company, the merger of the same, the disposal of assets referred to in number (9) above, the constitution of guarantees set forth in number (11) above, the constitution of preferences or the increase, postponement or decrease of the existing preferences, the reparation of formal nullities incurred in the By-laws and the

possession of more than 95% of the Company's shares and other matters contemplated in the Law or in the By-laws, confer "withdrawal rights".

Foreign shareholders

There exists no restriction on ownership or share concentration, or limiting the exercise of the related right to vote, by local or foreign shareholders other than those discussed under Item 2.B. Memorandum and Articles of Association -Shares above.

### Change in control

The Company By-laws provide that no shareholder may hold more than 32% of the Company's shares, unless the By-laws are modified at an Extraordinary Shareholders' Meeting. Moreover, on December 12, 2000, the Chilean Government published the Ley de Oferta Pública de Acciones ("Public Share Offering Law") or (OPA law) that seeks to protect the interests of minority shareholders of open stock corporations in transactions involving a change in control, by requiring that the potential new controller purchase the shares owned by the remaining shareholders either in total or pro rata. The law applies to those transactions in which the controlling party would receive a material premium price compared with the price that would be received by the minority shareholders.

There are three conditions that would make it mandatory to operate under the OPA law:

- 1) When an investor wants to take control of a company's stock.
- When a controlling shareholder holds two-thirds of the company's stock. If such shareholder buys one more share, it will be mandatory to offer to acquire the rest of the outstanding stock within 30 days of surpassing that threshold.
- When an investor wants to take control of a corporation, which, in turn, controls an open stock corporation that represents 75% or more of the consolidated assets of the former corporation.

Parties interested in taking control of a company must (i) notify the company of such intention in writing, and notify its controllers, the companies controlled by it, the SVS and the markets where its stocks are traded and (ii) publish a highlighted public notice in two newspapers of national circulation at least 10 business days prior to the date of materialization of the OPA.

Disclosure of share ownership

The Company's By-laws do not provide for a minimum threshold at which share ownership must be disclosed.

### 10.C. Material Contracts

The following summarizes the terms and conditions of the main contracts to which SQM or any subsidiary is a party:

On February 12, 1999, SQM S.A. entered into an Electrical Energy Supply contract with Electroandina S.A. This contract allowed for two three-year renewal options, at the option of SQM. The two options were exercised. As a result, the contract extends through March 16, 2016. Early termination of the contract is subject to payment of non-amortized investments.

On March 21, 1997, SQM Salar S.A. entered into an Electricity Supply agreement with Norgener S.A. The term of this contract extends through March 20, 2017, and early termination is subject to penalties.

On January 13, 1998, SQM Nitratos S.A. entered into an Electrical Energy Supply agreement with Norgener S.A. • The term of this contract extends through January 31, 2013. Early termination of the contract is subject to payment of non-amortized investments.

On March 30, 2012, SQM S.A. entered into an Electrical Energy Supply agreement with Norgener S.A. The term of this contract extends through December 31, 2030. Early termination of the contract is subject to an agreement between both parties, or in case of Force-Majeure extended for more than 12 months.

In addition, the Company, during the normal course of business, has entered into different contracts, some of which have been described herein, related to its production, commercial and legal operations. We believe all of these contracts are standard for this type of industry, and none of them is expected to have a material effect on the Company's results of operations.

### 10.D. Exchange Controls

The Central Bank of Chile is responsible for, among other things, monetary policies and exchange controls in Chile. Appropriate registration of a foreign investment in Chile permits the investor access to the Formal Exchange Market. Foreign investments can be registered with the Foreign Investment Committee under Decree Law No. 600 of 1974 or can be registered with the Central Bank of Chile under the Central Bank Act, Law No 18,840 of October 1989. The Central Bank Act is an organic constitutional law requiring a "special majority" vote of the Chilean Congress to be modified.

Our 1993, 1995 and 1998 capital increases were carried out under and subject to the then current legal regulations, whose summary is hereafter included:

A 'Convención Capítulo XXVI del Título I del Compendio de Normas de Cambios Internacionales' or Compendium of Foreign Exchange Regulations of the Central Bank of Chile, "Foreign Investment Contract" was entered into and among the Central Bank of Chile, our Company and the Depositary, pursuant to Article 47 of the Central Bank Act and to Chapter XXVI of the Compendium of Foreign Exchange Regulations of the Central Bank of Chile, "Chapter XXVI", which addresses the issuance of ADRs by a Chilean company. Absent the Foreign Investment Contract, under applicable Chilean exchange controls, investors would not be granted access to the Formal Exchange Market for the purposes of converting from Chilean pesos to U.S. dollars and repatriating from Chile amounts received in respect to deposited Series A or B shares or Series A or B shares withdrawn from deposit on surrender of ADRs (including amounts received as cash dividends and proceeds from the sale in Chile of the underlying Series A and B shares and any rights arising therefrom). The following is a summary of the material provisions contained in the Foreign Investment Contract. This summary does not purport to be complete and is qualified in its entirety by reference to Chapter XXVI and the Foreign Investment Contract.

Under Chapter XXVI and the Foreign Investment Contract, the Central Bank of Chile has agreed to grant to the Depositary, on behalf of ADR holders, and to any investor not residing or not domiciled in Chile who withdraws Series A or Series B shares upon delivery of ADRs (such Series A and Series B shares being referred to herein as "Withdrawn Shares") access to the Formal Exchange Market to convert Chilean pesos to U.S. dollars (and remit such U.S. dollars outside of Chile) in respect of the Withdrawn Shares, including amounts received as (a) cash dividends,

(b) proceeds from the sale in Chile of Withdrawn Shares, or from shares distributed because of the liquidation, merger or consolidation of the Company, subject to receipt by the Central Bank of Chile of a certificate from the holder of such shares (or from an institution authorized by the Central Bank of Chile) that such holder's residence and domicile are outside Chile and a certificate from a Chilean stock exchange (or from a brokerage or securities firm established in Chile) that such shares were sold on a Chilean Exchange, (c) proceeds from the sale in Chile of preemptive rights to subscribe for additional Series A and Series B shares, (d) proceeds from the liquidation, merger or consolidation of the Company and (e) other distributions, including without limitation those resulting from any recapitalization, as a result of holding Withdrawn Shares. Transferees of Withdrawn Shares will not be entitled to any of the foregoing rights under Chapter XXVI unless the Withdrawn Shares are redeposited with the Depositary. Investors receiving Withdrawn Shares in exchange for ADRs will have the right to redeposit such shares in exchange for ADRs, provided that the conditions to redeposit described hereunder are satisfied.

Chapter XXVI provided that access to the Formal Exchange Market in connection with dividend payments will be conditioned upon certification by the Company to the Central Bank of Chile that a dividend payment has been made and any applicable tax has been withheld. Chapter XXVI also provided that access to the Formal Exchange Market in connection with the sale of Withdrawn Shares or distributions thereon will be conditioned upon receipt by the Central Bank of Chile of certification by the Depositary that such shares have been withdrawn in exchange for ADRs and receipt of a waiver of the benefit of the Foreign Investment Contract with respect thereto until such Withdrawn Shares are redeposited.

Chapter XXVI and the Foreign Investment Contract provide that a person who brings certain types of foreign currency into Chile, including U.S. dollars, to purchase Series A shares and/or Series B shares with the benefit of the Foreign Investment Contract must convert it into Chilean pesos on the same date and has 5 banking business days within which to invest in Series A shares and/or Series B shares in order to receive the benefits of the Foreign Investment Contract. If such person decides within such period not to acquire Series A shares and/or Series B shares, he can access the Formal Exchange Market to reacquire foreign currency, provided that the applicable request is presented to the Central Bank within 7 banking business days of the initial conversion into Chilean pesos. Series A shares and/or Series B shares acquired as described above may be deposited for ADRs and receive the benefits of the Foreign Investment Contract, subject to receipt by the Central Bank of Chile of a certificate from the Depositary that such deposit has been effected and that the related ADRs have been issued and receipt by the Custodian of a declaration from the person making such deposit waiving the benefits of the Foreign Investment Contract with respect to the deposited Series A shares and/or Series B shares.

Access to the Formal Exchange Market under any of the circumstances described above is not automatic. Pursuant to Chapter XXVI, such access requires approval of the Central Bank of Chile based on a request presented through a banking institution established in Chile. The Foreign Investment Contract will provide that if the Central Bank of Chile has not acted on such request within seven banking days, the request will be deemed approved.

Under current Chilean law, foreign investments abiding by the Foreign Investment Contract cannot be changed unilaterally by the Central Bank of Chile. No assurance can be given, however, that additional Chilean restrictions applicable to the holders of ADRs, the disposition of underlying Series A shares and/or Series B shares or the repatriation of the proceeds from such disposition could not be imposed in the future, nor can there be any assessment of the duration or impact of such restrictions if imposed.

As of April 19, 2001, Chapter XXVI of Title I of the *Compendio de Normas de Cambios Internacionales* of the Central Bank of Chile was eliminated and new investments in ADRs by non-residents of Chile, are now governed by Chapter XIV of the *Compendio de Normas de Cambios Internacionales* of the Central Bank of Chile. This was made with the purpose of simplifying and facilitating the flow of capital to and from Chile. According to the new regulations, such investments must be carried out through Chile's Formal Exchange Market and only reported to the Central Bank of Chile. Foreign investments may still be registered with the Foreign Investment Committee under Decree Law 600 of 1974, as amended, and obtain the benefits of the contract executed under Decree Law 600.

The Central Bank is also responsible for controlling incurrence of loan obligations to be paid from Chile and by a Chilean borrower to banks and certain other financial institutions outside Chile. Chapter XIV establishes what type of loans, investments, capital increases and foreign currency transactions are subject to the current Chapter XIV framework. Foreign currency transactions related to foreign loans must be performed through the Formal Exchange Market, and such transactions and the subsequent modifications of original loans must be properly informed to the Central Bank. Transactions prior to April 19, 2001, will continue to be regulated by the previous legal framework, except in cases where an express request has been presented to the Central Bank resigning previous rights to be regulated by the provisions of Chapter XIV. This summary does not purport to be complete and is qualified in its entirety by reference to the provisions of Chapter XIV.

As of December 31, 2012, we had bonds issued in the international markets under Rule 144A/Regulation S of US\$200 million and US\$250 million. On April 3, 2013, we issued US\$300 million 3.625% notes due 2023 the proceeds of which will be used to refinance existing debt and for general corporate purposes. Additionally, we had outstanding bilateral loans through wholly owned subsidiaries in the amount of US\$330 million, which were fully guaranteed by us.

Any purchases of U.S. dollars in connection with payments on these loans will occur with the Formal Exchange Market. There can be no assurance, however, that restrictions applicable to payments in respect to the loans could not be imposed in the future, nor can there be any assessment of the duration or impact of such restrictions if imposed.

10.E. Taxation

### Chilean Tax Considerations

The following describes the material Chilean income tax consequences of an investment in SQM ADRs by an individual who is not domiciled or resident in Chile or any legal entity that is not organized under the laws of Chile and does not have a permanent establishment located in Chile, a ("foreign holder"). This discussion is based upon Chilean income tax laws presently in force, including Ruling No. 324 (1990) of the Chilean Internal Revenue Service and other applicable regulations and rulings. The discussion is not intended as tax advice to any particular investor, which can be rendered only in light of that investor's particular tax situation.

Under Chilean law, provisions contained in statutes such as tax rates applicable to foreign holders, the computation of taxable income for Chilean purposes and the manner in which Chilean taxes are imposed and collected may only be amended by another statute. In addition, the Chilean tax authorities issue rulings and regulations of either general or specific application and interpret the provisions of Chilean tax law. Chilean tax may not be assessed retroactively against taxpayers who act in good faith relying on such rulings, regulations and interpretations, but Chilean tax authorities may change said rulings, regulations and interpretations prospectively.

Cash Dividends and Other Distributions

Cash dividends paid by the Company with respect to the shares, including shares represented by ADRs held by a U.S. holder will be subject to a 35% Chilean withholding tax, which is withheld and paid by the Company, the "Withholding Tax." If the Company has paid corporate income tax, the "First Category Tax", on the income from which the dividend is paid, a credit for the First Category Tax effectively reduces the rate of Withholding Tax. When

a credit is available, the Withholding Tax is computed by applying the 35% rate to the pre-tax amount needed to fund the dividend and then subtracting from the tentative withholding tax so determined the amount of First Category Tax actually paid on the pre-tax income. Under Chilean income tax law, dividends are assumed to have been paid out of our oldest retained tax profits for purposes of determining the rate at which the First Category Tax was paid.

The effective Withholding Tax rate, after giving effect to the credit for First Category Tax, generally is:

(Withholding Tax rate) - (First Category Tax effective rate)

1 - (First Category Tax effective rate)

The effective rate of Withholding Tax to be imposed on dividends paid by the Company will vary depending upon the amount of the First Category Tax paid by the Company on the earnings to which the dividends are attributed. The company distributed an interim dividend in December 2012 corresponding to the business year 2012. The dividend, paid in December 2012, was considered taxable, and the total tax retention rate was approximately 19.1%.

Dividend distributions made in property (such as distribution of cash equivalents) would be subject to the same Chilean tax rules as cash dividends. Stock dividends are not subject to Chilean taxation.

#### **Capital Gains**

Gains from the sale or other disposition by a foreign holder of ADRs outside Chile will not be subject to Chilean taxation. The deposit and withdrawal of the shares in exchange for ADRs will not be subject to any Chilean taxes.

The tax basis of the shares received in exchange for ADRs (repatriation) will be the acquisition value of the shares. The shares exchanged for ADRs are valued at the highest price at which they trade on the Chilean Stock Exchange on the date of the exchange or on either of the two business days preceding the exchange. Consequently, the conversion of ADRs into the shares and the immediate sale of such shares at a price equal to or less than the highest price for Series A shares and/or Series B shares on the Chilean Stock Exchange on such dates will not generate a gain subject to Chilean taxation.

Gain recognized on a sale or exchange of shares (as distinguished from sales or exchanges of ADRs representing such shares) will be subject to both the First Category Tax and the Withholding Tax if either (i) the foreign holder has held the shares for less than one year since exchanging the ADRs for the shares, (ii) the foreign holder acquired and disposed of the shares in the ordinary course of its business or as a regular trader of shares, or (iii) the foreign holder and the purchaser of the shares are related parties within the meaning of Chilean tax law. The amount of the First Category Tax may be credited against the amount of the Withholding Tax. In all other cases, gain on the disposition of the shares will be subject only to a capital gains tax, which is assessed at the same rate as the First Category Tax. Gain recognized in the transfer of common shares that have significant trading volumes in the stock exchange, however, is not subject to capital gains tax in Chile, provided that the common shares are transferred in a local stock exchange authorized by the SVS, within the process of a public tender of common shares governed by the Chilean Securities Market Act. Law No. 20,448 states that common shares must also have been acquired after April 19, 2001, either on a local stock exchange authorized by the SVS, within the referred process of public tender of a common shares governed by the Chilean Securities Market Act, in an initial public offer of common shares resulting from the formation of a corporation or a capital increase of the same, in an exchange of convertible securities subject to public offer, or in the redemption of mutual funds shares. According to Ruling No. 224 (2008) of the Chilean Internal Revenue Service, common shares received by exchange of ADRs are also considered as "acquired on a stock exchange" if the respective ADRs have been acquired on a foreign stock exchange authorized by the SVS (i.e. London Stock Exchange, New York Stock Exchange and Bolsa de Valores de Madrid). Common shares are considered to have a high presence in the stock exchange when they: (a) are registered in the Securities Registry, (b) are registered in a Chilean Stock Exchange, (c) have an adjusted presence equal to or above 25%.

As of June 19, 2001, capital gains obtained in the sale of common shares that are publicly traded in a stock exchange are also exempt from capital gains tax in Chile when the sale is made by "foreign institutional investors" such as

mutual funds and pension funds, provided that the sale is made in a local stock exchange authorized by the SVS, or in accordance with the provisions of the securities market law (Law 18,045). To qualify as foreign institutional investors, the referred entities must be formed outside of Chile, not have a domicile in Chile, and they must be an "investment fund" in according with the Chilean tax law.

The exercise of preemptive rights relating to shares will not be subject to Chilean taxation. Any gain on the sale or assignment of preemptive rights relating to shares will be subject to both the First Category Tax and the Withholding Tax (the former being creditable against the latter).

## Other Chilean Taxes

No Chilean inheritance, gift or succession taxes apply to the transfer or disposition of the ADRs by a foreign holder, but such taxes generally will apply to the transfer at death or by gift of the shares by a foreign holder. No Chilean stamp, issue, registration or similar taxes or duties apply to foreign holders of ADRs or shares.

## Withholding Tax Certificates

Upon request, the Company will provide to foreign holders appropriate documentation evidencing the payment of Chilean withholding taxes.

## **United States Tax Considerations**

The following discussion summarizes the principal U.S. federal income tax consequences to beneficial owners arising from ownership and disposition of the Series A shares and the Series B shares, together the "shares" and the ADRs. The discussion which follows is based on the United States Internal Revenue Code of 1986, as amended, the "Code", the Treasury regulations promulgated thereunder, and judicial and administrative interpretations thereof, all as in effect and available on the date hereof, and is subject to any changes in these or other laws occurring after such date. In addition, the summary assumes that the depositary's activities are clearly and appropriately defined so as to ensure that the tax treatment of ADRs will be identical to the tax treatment of the underlying shares.

For purposes of this summary, the term "U.S. Holder" means a beneficial owner of shares or ADRs that is, for U.S. federal income tax purposes, (a) an individual who is a United States citizen or resident, (b) a corporation or partnership created or organized under the laws of the United States or any political subdivision thereof, (c) an estate, the income of which is subject to U.S. federal income tax regardless of the source, or (d) a trust (i) that validly elects to be treated as a U.S. person for U.S. federal income tax purposes or (ii)(A) if a court within the U.S. is able to exercise primary supervision over the administration of the trust and (B) one or more U.S. persons have the authority to control all substantial decisions of the trust.

The term "Non-U.S. Holder" means, for purposes of this discussion, a beneficial owner of shares or ADRs that is not a U.S. Holder.

If a partnership (or any other entity treated as a partnership for U.S. federal income tax purposes) holds shares or ADRs, the tax treatment of the partnership and a partner in such partnership generally will depend on the status of the partner and the activities of the partnership. Such a partner or partnership should consult its own tax advisor as to its consequences.

The discussion that follows is not intended as tax advice to any particular investor and is limited to investors who will hold the shares or ADRs as "capital assets" within the meaning of Section 1221 of the Code and whose functional currency is the United States dollar. The summary does not address the tax treatment of U.S. Holders and Non-U.S. Holders that may be subject to special U.S. federal income tax rules, such as insurance companies, tax-exempt organizations, financial institutions, persons who are subject to the alternative minimum tax, or persons who are broker-dealers in securities, who hold the shares or ADRs as a hedge against currency risks, as a position in a "straddle" for tax purposes, or as part of a conversion or other integrated transaction, or who own (directly, indirectly or by attribution) 10% or more of the total combined voting power of all classes of the Company's capital stock entitled to vote or 10% or more of the value of the outstanding capital stock of the Company.

As of this date, there is currently no applicable income tax treaty in effect between the United States and Chile. However, in 2010, the United States and Chile signed an income tax treaty that will enter into force once the treaty is ratified by both countries. There can be no assurance that the treaty will be ratified by either country. The following summary assumes that there is no applicable income tax treaty in effect between the United States and Chile.

The discussion below does not address the effect of any United States state, local, estate or gift tax law or foreign tax law on a U.S. Holder or Non-U.S. Holder of the shares or ADRs. U.S. HOLDERS AND NON-U.S. HOLDERS OF SHARES OR ADRs SHOULD CONSULT THEIR OWN TAX ADVISORS TO DETERMINE THE PARTICULAR CONSEQUENCES UNDER ANY SUCH LAW OF OWNING OR DISPOSING THE SHARES OR ADRs.

For purposes of applying U.S. federal income tax law, any beneficial owner of an ADR generally will be treated as the owner of the underlying shares represented thereby.

TO ENSURE COMPLIANCE WITH U.S. TREASURY DEPARTMENT CIRCULAR 230, INVESTORS ARE ADVISED THAT: (A) ANY DISCUSSION OF U.S. FEDERAL TAX ISSUES IN THIS FORM 20-F IS NOT INTENDED OR WRITTEN TO BE RELIED UPON, AND CANNOT BE RELIED UPON, BY INVESTORS FOR THE PURPOSE OF AVOIDING PENALTIES THAT MAY BE IMPOSED ON SUCH INVESTORS UNDER THE U.S. INTERNAL REVENUE CODE OF 1986, AS AMENDED; (B) SUCH DISCUSSION IS INCLUDED BY THE COMPANY IN CONNECTION WITH THE PROMOTION OR MARKETING (WITHIN THE MEANING OF CIRCULAR 230) BY THE COMPANY OF THE TRANSACTIONS OR MATTERS ADDRESSED HEREIN; AND (C) INVESTORS SHOULD SEEK ADVICE BASED ON THEIR PARTICULAR CIRCUMSTANCES FROM AN INDEPENDENT TAX ADVISOR.

Cash Dividends and Other Distributions

The U.S. Treasury Department has expressed concern that depositaries for ADRs, or other intermediaries between the holders of shares of an issuer and the issuer, may be taking actions that are inconsistent with the claiming of U.S. foreign tax credits by U.S. holders of such receipts or shares. Accordingly, the analysis regarding the availability of a U.S. foreign tax credit for Chilean taxes and sourcing rules described below could be affected by future actions that may be taken by the U.S. Treasury Department.

The following discussion of cash dividends and other distributions is subject to the discussion below under "Passive Foreign Investment Company Considerations". The gross amount of a distribution with respect to shares or ADRs generally will be treated as a taxable dividend to the extent of the Company's current and accumulated earnings and profits, computed in accordance with U.S. federal income tax principles. A dividend distribution will be so included in gross income when received by (or otherwise made available to) (i) the U.S. Holder in the case of the shares or (ii) the depositary in the case of the ADRs, and in either case will be characterized as ordinary income for U.S. federal income tax purposes. Distributions in excess of the Company's current and accumulated earnings and profits will be applied against and will reduce the U.S. Holder's tax basis in the shares or ADRs and, to the extent distributions exceed such tax basis, the excess will be treated as gain from a sale or exchange of such shares or ADRs. U.S. Holders that are corporations will not be allowed a deduction for dividends received in respect of distributions on the shares or the ADRs. For example, if the gross amount of a distribution with respect to the shares or ADRs exceeds the Company's current and accumulated earnings and profits by US\$10.00, such excess will generally not be subject to a

U.S. tax to the extent the U.S. Holder's tax basis in the shares or ADRs equals or exceeds US\$10.00. The Company does not maintain calculations of its earnings and profits under U.S. federal income tax principles. Accordingly, U.S. Holders should assume that any cash distribution made by us will be treated as a dividend for U.S. federal income tax purposes.

If a dividend distribution is paid in Chilean pesos, the amount includable in income will generally be the U.S. dollar value, on the date of receipt by the U.S. Holder in the case of the shares or by the depositary in the case of the ADRs, of the peso amount distributed, regardless of whether the payment is actually converted into U.S. dollars. The amount of any distribution of property other than cash will be the fair market value of such property on the date of distribution. Any gain or loss resulting from currency exchange rate fluctuations during the period from the date the dividend is includable in the income of the U.S. Holder to the date the pesos are converted into U.S. dollars will be treated as ordinary income or loss.

A dividend distribution will be treated as foreign source income and will generally be classified as "passive category income" or in the case of certain U.S. Holders "general category income" for U.S. foreign tax credit purposes. If Chilean withholding taxes are imposed on a dividend, U.S. Holders will be treated as having actually received the amount of such taxes (net of any credit for the First Category Tax) and as having paid such amount to the Chilean taxing authorities. As a result, the amount of dividend income included in gross income by a U.S. Holder will be greater than the amount of cash actually received by the U.S. Holder with respect to such dividend income. A U.S. Holder may be able, subject to certain generally applicable limitations, to claim a foreign tax credit or a deduction for Chilean withholding taxes (net of any credit for the First Category Tax) imposed on dividend payments. The rules relating to the determination of the U.S. foreign tax credit are complex and the calculation of U.S. foreign tax credits and, in the case of a U.S. Holder that elects to deduct foreign taxes, the availability of deductions, involve the application of rules that depend on a U.S. Holder's particular circumstances. U.S. Holders should, therefore, consult their own tax advisors regarding the application of the U.S. foreign tax credit rules to dividend income on the shares or ADRs.

Subject to the discussion below under "Information Reporting and Backup Withholding", if you are a Non-U.S. Holder, you generally will not be subject to U.S. federal income or withholding tax on dividends received by you on your shares or ADRs, unless you conduct a trade or business in the United States and such income is effectively connected with that trade or business.

#### **Capital Gains**

A U.S. Holder will generally recognize gain or loss on the sale, redemption or other disposition of the shares or ADRs in an amount equal to the difference between the amount realized on the sale or exchange and the U.S. Holder's adjusted basis in such shares or ADRs. Thus, if the U.S. Holder sells the shares for US\$40.00 and such U.S. Holder's tax basis in such shares is US\$30.00, such U.S. Holder will generally recognize a gain of US\$10.00 for U.S. federal income tax purposes. Subject to the discussion below under "Passive Foreign Investment Company Considerations", gain or loss upon the sale of the shares or ADRs will be capital gain or loss if the shares or ADRs are capital assets in the hands of the U.S. Holder. Capital gains on the sale of capital assets held for one year or less are subject to U.S. federal income tax at ordinary income tax rates. Net capital gains derived with respect to capital assets held for more than one year are eligible for reduced rates of taxation. Gain or loss realized by a U.S. Holder on the sale or exchange of shares or ADRs will be U.S.-source income. In addition, certain limitations exist on the deductibility of capital losses by both corporate and individual taxpayers. Any tax imposed by Chile directly on the gain from such a sale would generally be eligible for the U.S. foreign tax credit; however, because the gain would generally be U.S.-source, a U.S. Holder might not be able to use the credit otherwise available. U.S. Holders should consult their own tax advisors regarding the foreign tax credit implications of the sale, redemption or other disposition of a share or ADR.

Subject to the discussion below under "Information Reporting and Backup Withholding", a Non-U.S. Holder of ADRs or shares will not be subject to United States income or withholding tax on gain from the sale or other disposition of ADRs or shares unless, in general (i) such gain is effectively connected with the conduct of a trade or business within the United States or (ii) the Non-U.S. Holder is an individual who is present in the United States for at least 183 days

during the taxable year of the disposition and certain other conditions are met.

## **Passive Foreign Investment Company Considerations**

A Non-U.S. corporation will be classified as a "passive foreign investment company", or a PFIC, for U.S. federal income tax purposes in any taxable year in which, after applying certain look-through rules, either (i) at least 75% of its gross income is "passive income" or (ii) at least 50% of the average value of its gross assets is attributable to assets that produce "passive income" or are held for the production of passive income. Passive income for this purpose generally includes dividends, interest, royalties, rents and gains from the sale of stock (including gains from the sale of stock of certain subsidiaries), partnership interests, securities or commodities.

Based on certain estimates of our gross income and gross assets and the nature of our business, the Company believes that it was not classified as a PFIC in 2012. The Company's status in future years will depend on its assets and activities in those years. If the Company were a PFIC for 2012 or for any prior or future taxable year during which a U.S. Holder held shares or ADRs, such U.S. Holder of shares or ADRs generally would be subject to additional filing requirements, imputed interest charges and other disadvantageous tax treatment (including the denial of taxation at the lower rates applicable to long-term capital gains with respect to any gain from the sale or exchange of shares or ADRs).

Information Reporting and Backup Withholding

Payments of dividends on the shares or ADRs and the proceeds of sale or other disposition of the shares or ADRs within the United States by holders may be subject to U.S. information reporting and backup withholding. A U.S. Holder generally will be subject to U.S. information reporting and backup withholding (currently at a rate of 28%) unless the recipient of such payment supplies an accurate taxpayer identification number, as well as certain other information, or otherwise establishes an exemption, in the manner prescribed by United States law and applicable regulations. U.S. information reporting and backup withholding of U.S. federal income tax at the same rate may also apply to Non-U.S. Holders that are not "exempt recipients" and that fail to provide certain information as may be required by United States law and applicable regulations. Any amount withheld under U.S. backup withholding is not an additional tax and is generally allowable as a credit against the U.S. Holder's federal income tax liability upon furnishing the required information to the IRS.

In addition, certain U.S. Holders, electing nonresident aliens and residents of a U.S. possession may be required to report information with respect to their investment in shares or, it is assumed, ADRs to the Internal Revenue Service. Investors who fail to report required information could become subject to substantial penalties and/or an extended statute of limitations.

HOLDERS ARE URGED TO CONSULT THEIR OWN TAX ADVISORS REGARDING THE APPLICATION OF U.S. INFORMATION REPORTING AND BACKUP WITHHOLDING RULES TO THEIR PARTICULAR CIRCUMSTANCES.

## ITEM 11. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

As explained elsewhere in this Annual Report, we transact our businesses in more than 110 countries, thereby rendering our market risk dependent upon the fluctuations of foreign currencies and local and international interest rates. These fluctuations may generate losses in the value of financial instruments taken in the normal course of business.

We, from time to time and depending upon then current market conditions, review and re-establish our financial policies to protect our operations. Management is authorized by our Board of Directors to engage in certain derivative contracts such as forwards and swaps to specifically hedge the fluctuations in interest rates and in currencies other than the U.S. dollar.

Derivative instruments used by us are generally transaction-specific so that a specific debt instrument or contract determines the amount, maturity and other terms of the hedge. We do not use derivative instruments for speculative purposes.

*Interest Rate Risk*. As of December 31, 2012, we had approximately 21% of our financial debt effectively priced at Libor, and therefore significant increases in the rate could impact our financial condition.

Interest rate fluctuations, due to the uncertain future behavior of markets, may have a material impact on our financial results.

We have short and long term debt valued at LIBOR plus a spread. We are partially exposed to fluctuations of this rate, as we hold hedging derivative instruments to hedge a portion of our liabilities subject to LIBOR rate fluctuations.

As of December 31, 2012, approximately 21% of our current financial obligations were subject to LIBOR rate fluctuation and therefore, significant increases in the rate may impact our financial position. A 100 basis points variation in this rate may trigger variations in financial expenses of approximately US\$3.1 million. Notwithstanding, this effect is significantly counter-balanced by the returns of our Company's investments that also relate to LIBOR.

In addition, as of December 31, 2012, our total financial debt is primarily long-term, with 8% of maturities less than 12 months, which decreases the exposure to changes in the interest rates.

Exchange Rate Risk. Although the U.S. dollar is the primary currency in which we transact our businesses, our operations throughout the world expose us to exchange rate variations for non-U.S. dollar currencies. Therefore, fluctuations in the exchange rate of such local currencies may affect our financial condition and results of operations. To lessen these effects, we maintain derivative contracts to protect the net difference between our principal assets and liabilities for currencies other than the U.S. dollar. These contracts are renewed periodically depending on the amount covered in each currency. Aside from this, we do not hedge potential future income and expenses in currencies other than the U.S. dollar with the exception of the Euro and Chilean peso. We estimate annual sales in Euros and expenses in Chilean pesos, and depending on the circumstances we secure the exchange difference with derivative contracts.

The following is a summary of the aggregate net monetary assets and liabilities that are denominated in non-U.S. dollar currencies as of December 31, 2012, 2011 and 2010. Figures do not include our financial hedging positions for year-end:

|                    | 2012      | 2011      | 2010      |
|--------------------|-----------|-----------|-----------|
|                    | Th US\$   | Th US\$   | Th US\$   |
| Chilean pesos      | (473,976) | (275,756) | (130,289) |
| Brazilian real     | (1,421)   | (1,500)   | (1,638)   |
| Euro               | 45,809    | 56,053    | 94,900    |
| Japanese yen       | 954       | 1,876     | 1,206     |
| Mexican pesos      | 652       | (2,862)   | (1,660)   |
| South African rand | 25,565    | 19,849    | 6,763     |
| Dirhams            | 17,044    | 14,615    | 24,168    |
| Other currencies   | 19,443    | 16,855    | 16,234    |
| Total, net         | (365,930) | (170,650) | 9,684     |

We monitor and attempt to maintain our non-dollar assets and liabilities position in balance and make use of foreign exchange contracts and other hedging instruments aiming to minimize our exposure to the risks of changes in foreign exchange rates. As of December 31, 2012, for hedging purposes we had open contracts to buy U.S. dollars and sell Euros for approximately US\$310.1 million (EUR235million) and sell South African rand for approximately US\$30.8 million (ZAR260.5 million), as well as forward exchange contracts to sell U.S. dollars and buy Chilean pesos for US\$75.5 million (CH\$36,237 million). As of this date, all of our UF and Chilean pesos bonds were hedged with cross-currency swaps to the U.S. dollar for approximately US\$ 515.2 million.

Also, we had open forward exchange contracts to buy U.S. dollars and sell Chilean pesos to hedge our time deposits in Chilean Pesos for approximately US\$245.21 million (CH\$117,629 million) and forward contracts to buy U.S. dollars and sell Chilean pesos for approximately US\$70.1million (CH\$33,645million) hedging our fertilizer trading business in Chile.

The information contained in Item 11. Quantitative and Qualitative Disclosures About Market Risk, contains statements that may constitute forward-looking statements. See "Cautionary Statement Regarding Forward-Looking Statements" in this Annual Report, for safe harbor provisions.

## ITEM 12.D. AMERICAN DEPOSITARY RECEIPTS

## **Depositary Fees and Charges**

The Company's American Depositary Receipts ("ADR") program is administered by The Bank of New York Mellon (101 Barclay St., 22 Fl.W., New York, NY 10286), as Depositary. Under the terms of the Deposit Agreement, an ADR holder may have to pay the following service fees to the Depositary:

Service Fees Fees

Execution and delivery of ADRs and the surrender of ADRs \$0.05 per share

## **Depositary Payments Fiscal Year 2012**

The Depositary has agreed to reimburse certain expenses related to the Company's ADR program and incurred by the Company in connection with the program. In 2012, the Depositary reimbursed expenses related to investor relations for a total amount of US\$94,912.00.

| Not applicable  |
| ITEM 14. MATERIAL MODIFICATIONS TO THE RIGHTS OF SECURITY HOLDERS AND USE OF PROCEEDS   |
| Not applicable.   |
| ITEM 15. CONTROLS AND PROCEDURES  |
| (a) Disclosure Control and Procedures   |
| SQM management, with the participation of the Company's Executive management, including the Company's Chief Executive Officer and Chief Financial Officer, evaluated the effectiveness of the design and operation of our disclosure controls and procedures, pursuant to Exchange Act Rules 13(a)-15(b), as of the end of the period covered by this Annual Report. Based upon that evaluation, management with the participation of the Chief Executive Officer |

The procedures associated with our internal controls are designed to provide reasonable assurance that our transactions are properly authorized, assets are safeguarded against unauthorized or improper use, and transactions are properly recorded and reported. However, through the same design and evaluation period of the disclosure controls and procedures, the Company's management, including the Company's Chief Executive Officer and Chief Financial Officer, recognized that there are inherent limitations to the effectiveness of any internal control system regardless of how well designed and operated. In such a way they can provide only reasonable assurance of achieving the desired control objectives and no evaluation can provide absolute assurance that all control issues or instances of fraud, if any, within the Company have been detected.

and Chief Financial Officer have concluded that the Company's disclosure controls and procedures are effective in providing reasonable assurance that material information is made known to management and that financial and

non-financial information is properly recorded, processed, summarized and reported.

There were no significant changes in our internal controls over financial reporting that occurred during the period covered by this Annual Report that have materially affected, or are likely to materially affect our internal control over financial reporting.

## (b) Management's Annual Report on Internal Control Over Financial Reporting

SQM Management is responsible for establishing and maintaining adequate internal control over financial reporting. The Company's internal control over financial reporting is designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of the financial statements for external purposes in accordance with generally accepted accounting principles.

Because of its inherent limitations, internal control over financial reporting may not necessarily prevent or detect some misstatements. It can only provide reasonable assurance regarding financial statement preparation and presentation. Also, projections of any evaluation of effectiveness for future periods are subject to the risk that controls may become inadequate because of changes in conditions or because the degree of compliance with the polices or procedures may deteriorate over time.

Management assessed the effectiveness of its internal control over financial reporting for the year ended December 31, 2012. The assessment was based on criteria established in the framework "Internal Controls — Integrated Framework" issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO). Based on the assessment, SQM management has concluded that as of December 31, 2012, the Company's internal control over financial reporting was effective.

## (c) Attestation Report of the Registered Public Accounting Firm

PriceWaterhouseCoopers Consultores, Auditores y Compañia Limitada ("PWC"), the independent registered public accounting firm that has audited our Consolidated Financial Statements, has also issued an attestation report on the Company's internal control over financial reporting as of December 31, 2012. This attestation report appears on pages F-1 and F-2 under Item 18 Financial Statements.

#### (d) Changes in internal control over Financial Reporting

There were no changes in the Company's internal control over financial reporting that occurred during 2012 that have materially affected, or are reasonably likely to materially affect, the Company's internal control over financial reporting.

ITEM 16. [Reserved]

## ITEM 16A. AUDIT COMMITTEE FINANCIAL EXPERT

The Board of Directors has determined that the Company does not have an audit committee financial expert within the meaning of the regulations adopted under Sarbanes-Oxley Act of 2002.

Pursuant to Chilean regulations, the Company has a Directors' Committee whose main duties are similar to those of an audit committee. Each of the members of the Directors' Committee is a member of the audit committee. See 6.C. Board Practices.

Our Board believes that the members of the Directors' Committee have the necessary expertise and experience to perform the functions of the Directors' Committee pursuant to Chilean regulations.

ITEM 16B. CODE OF ETHICS

We have adopted a Code of Business Conduct that applies to the Chief Executive Officer, the Chief Financial Officer and the Internal Auditor, as well as, to all our officers and employees. Our Code adheres to the definition set forth in Item 16B of Form 20-F under the Exchange Act.

No waivers have been granted therefrom to the officers mentioned above.

The full text of the code is available on our website at <a href="http://www.sqm.com">http://www.sqm.com</a> in the Investor Relations section under "Corporate Governance".

Amendments to, or waivers from one or more provisions of the code will be disclosed on our website.

## ITEM 16C. PRINCIPAL ACCOUNTANT FEES AND SERVICES

The table sets forth the amount of fees billed for each of the last two fiscal years by our independent auditors, PricewaterhouseCoopers Consultores, Auditores y Compañía Limitada ("PwC") for the 2012 and 2011 fiscal year, in relation to audit services, audit-related services, tax and other services provided to us (in thousands of U.S. dollars).

|                    | 2012  | 2011  |
|--------------------|-------|-------|
| Audit fees         | 1,365 | 1,165 |
| Audit-related fees | 172   | -     |
| Tax fees           | 233   | 19    |
| Other fees         | 65    | -     |
| Total fees         | 1,835 | 1,184 |

Audit fees in the above table are the aggregate fees billed by PwC in 2012 and 2011, in connection with the audit of our annual Consolidated Financial Statements, as well as the review of other statutory filings.

Audit-related fees in the above table are fees billed by PwC in 2012 and 2011 for assurance and related services that are reasonably related to the performance of the audit or review of our financial statements and are not reported under "Audit Fees."

Total fees in the above table are fees billed by PwC in the amount of US\$1.84 million in 2012, and in the amount of US\$1.18 million in 2011.

## Directors' Committee Pre-Approval Policies and Procedures

Chilean law states that public companies are subject to "pre-approval" requirements under which all audit and non-audit services provided by the independent auditor must be pre-approved by the Directors' Committee. Our Directors' Committee approves all audits, audit-related, tax and other services provided by our auditors.

Any services provided by our auditors that are not specifically included within the scope of the audit must be pre-approved by the Directors' Committee prior to any engagement.

## ITEM 16D. EXEMPTIONS FROM THE LISTING STANDARDS FOR AUDIT COMMITTEES

| Not applicable.  |

## Report of Independent Registered Public Accounting Firm

To the Board of Directors and Shareholders of Sociedad Química y Minera de Chile S.A.

In our opinion, the accompanying consolidated statement of financial position and the related consolidated statements of income, comprehensive income, cash flows and of changes in equity present fairly, in all material respects, the financial position of Sociedad Ouímica y Minera de Chile S.A. and its subsidiaries at December 31, 2012 and December 31, 2011, and the results of their operations and their cash flows for each of the two years in the period ended December 31, 2012 in conformity with International Financial Reporting Standards as issued by the International Accounting Standards Board. Also in our opinion, the Company maintained, in all material respects, effective internal control over financial reporting as of December 31, 2012, based on criteria established in *Internal* Control - Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO). The Company's management is responsible for these financial statements, for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting, included in Management's Report on Internal Control Over Financial Reporting appearing under Item 15. Our responsibility is to express opinions on these financial statements and on the Company's internal control over financial reporting based on our integrated audits. We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audits to obtain reasonable assurance about whether the financial statements are free of material misstatement and whether effective internal control over financial reporting was maintained in all material respects. Our audits of the financial statements included examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements, assessing the accounting principles used and significant estimates made by management, and evaluating the overall financial statement presentation. Our audit of internal control over financial reporting included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, and testing and evaluating the design and operating effectiveness of internal control based on the assessed risk. Our audits also included performing such other procedures as we considered necessary in the circumstances. We believe that our audits provide a reasonable basis for our opinions.

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (i) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (ii) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (iii) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

/s/ PricewaterhouseCoopers

Santiago, Chile

To the Shareholders and the Board of Directors of

Sociedad Química y Minera de Chile S.A.:

We have audited the accompanying consolidated statement of comprehensive income of Sociedad Química y Minera de Chile S.A. comprehensive income is the responsibility of the Company's management. Our and subsidiaries ("the Company") for the year ended December 31, 2010. This consolidated statement of responsibility is to express an opinion on this consolidated financial statement based on our audit.

We conducted our audit in accordance with the standards of the Public Company Accounting Oversight Board (United States of America). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audit provides a reasonable basis for our opinion.

In our opinion, the consolidated financial statement referred to above present fairly, in all material respects, the consolidated results of operations of Sociedad Química y Minera de Chile S.A. and subsidiaries for the year ended December 31, 2010, in conformity with International Financial Reporting Standards (IFRS), as issued by the International Accounting Standards Board ("IASB")

ERNST & YOUNG LTDA.

Santiago, Chile, March 01, 2011

#### Note 1 – Identification and Activities of the Company and Subsidiaries

#### 1.1

#### Historical background

Sociedad Química y Minera de Chile S.A. (the "Company" or "SQM") is an open stock corporation organized under the laws of the Republic of Chile, Tax Identification N° 93.007.000-9. The Company was constituted by public deed issued on June 17, 1968 by the Notary Public of Santiago, Mr. Sergio Rodríguez Garcés. Its existence was approved by Decree No. 1,164 on June 22, 1968 by the Ministry of Finance, and it was registered on June 29, 1968 in the Registry of Commerce of Santiago, on page 4,537 N° 1,992. SQM's headquarters are located at El Trovador 4285, Fl. 6, Las Condes, Santiago, Chile. The Company's telephone number is +56 2 425-2000.

The Company is registered with the Securities Registry of the Chilean Superintendence of Securities and Insurance ("SVS") under No. 0184 dated March 18. 1983 and is subject to the inspection of the SVS.

#### 1.2 Main domicile where the Company performs its production activities

The Company's main domiciles are: Calle Dos Sur plot No. 5 - Antofagasta; Arturo Prat 1060 - Tocopilla; Administración Building w/n - Maria Elena; Administración Building w/n Pedro de Valdivia - María Elena, Former Florencia office w/n - Sierra Gorda, Anibal Pinto 3228 - Antofagasta, Kilometer 1378 5 Norte Highway - Antofagasta, Coya Sur Plant w/n - Maria Elena, kilometer 1760 5 Norte Highway - Pozo Almonte, Pampa Yumbes w/n - Tal-tal.

1.3

#### Codes of main activities

The codes of the main activities as established by the SVS include codes:

- 1700 Mining
- 2200 Chemical products
- 1300 Investment

#### 1.4Description of the nature of operations and main activities

The Company's products are mainly derived from mineral deposits found in northern Chile, where the Company mine and processes caliche ore and brine deposits. The caliche ore in northern Chile is the world's largest commercially exploited source of natural nitrates and contains the only known nitrate and iodine deposits in the world. The Brine deposits of the Salar de Atacama, a salt-encrusted depression within the Atacama desert in northern Chile, contain high concentrations of lithium and potassium as well as significant concentrations of sulfate and boron.

Note 1 – Identification and Activities of the Company and Subsidiaries (continued)

#### 1.4 Description of the nature of operations and main activities, continued

From the Company's caliche ore deposits, the Company produces a wide range of nitrate-based products used for specialty plant nutrients and industrial applications, as well as iodine and iodine derivatives. At the Salar de Atacama, its extracts brines rich in potassium, lithium, sulfate and boron in order to produce potassium chloride, potassium sulfate, lithium solutions, boric acid and bischofite (magnesium chloride). The Company produces lithium carbonate and lithium hydroxide at our plant near the city of Antofagasta, Chile, from solutions delivered from the Salar de Atacama. The Company markets all of these products through an established worldwide distribution network, in more than 100 countries worldwide and generate most of its revenue from foreign countries.

The Company's products are divided into six categories, which are also classified as operating segments: specialty plant nutrition, iodine and derivatives, lithium and derivatives, industrial chemicals, potassium, and other products and services, each of which is described below.

**Specialty plant nutrients:** This segment is characterized by being closely related to its customers for which we employ specialized staff who provide expert advice in best practices for fertilization according to each type of crop, soil and climate. Within this segment, potassium derivative products and specially potassium nitrate have a leading role in their contribution to crop development ensuring improvements in post-crop life, in addition to improving quality, flavor and fruit color. Potassium nitrate, which is sold in multiple formats and as a part of other specialty mixtures, is complemented by sodium nitrate, potassium sodium nitrate, and more than 200 fertilizing mixtures.

**Iodine and derivatives:** The Company is the largest producer of iodine in the world, which is a product widely used in the pharmaceutical, technology and nutrition industries. Additionally, iodine is used as X-ray contrast media and polarizing film for LCD displays.

**Lithium and derivatives:** The Company's lithium is mainly used for manufacturing rechargeable batteries for cell phones, cameras and notebooks. Through the manufacturing of lithium-based products, SQM provides significant materials to address challenges such as the efficient use of energy and raw materials. Lithium is not only used for rechargeable batteries and in new technologies for electric vehicles, but is also used in industrial applications to lower melting temperature and to help reduce energy costs.

| Notes to the consolidated financial statements as of December 31 2012   |
|---|
| Note 1 – Identification and Activities of the Company and Subsidiaries (continued)  |
| 1.4Description of the nature of operations and main activities, continued   |
| <b>Industrial Chemicals:</b> Industrial chemicals products are used as supplies for a number of production processes. SQM has more than 30 years of experience participating in this segment producing sodium nitrate, potassium nitrate, boric acid and potassium chloride. Industrial nitrates have increased in importance over the last few years due to their use as storage means for thermal energy at solar energy plants, which are widely used in countries such as Spain and the United States in their search for decreasing CO <sub>2</sub> emissions. |
| <b>Potassium:</b> Potassium is a primary essential macro-nutrient, and even though it does not form part of the plant's structure, has a significant role for developing basic crop functions, improving quality, increasing post-crop life, improving flavor, its amount of vitamins and its physical appearance. This segment also includes potassium chlorate and potassium sulfate, both extracted from the salt layer located under the Salar de Atacama.  |
| Other products and services: Includes revenues from commodities, provision of services, interest, royalties and dividends.  |
| 1.5 Other background  |
| Employees   |
| As of December 31, 2012 and 2011, the Company's permanent employees were 5,643 and 4,902, respectively.   |
| F-16  |

## Note 2 - Bases of presentation for consolidated financial statements (continued)

#### 2.1 Financial statements

The consolidated financial statements of Sociedad Química y Minera de Chile S.A. and subsidiaries, have been prepared in accordance with International Financial Reporting Standards (IFRS) as issued by the International Accounting Standards Board (IASB).

The accounting policies used in the preparation of these consolidated Financial Statements are described below and comply with each IFRS in force at their date of presentation.

#### 2.2 Basis of measurement

The consolidated financial statements have been prepared on the historical cost basis except for the following material items:

- -inventories are recorded at the lower of cost and net realizable value;
- -other current and non-current financial liabilities are carried at amortized cost;
- -financial derivatives are presented at fair value; and
- -staff severance indemnities and pension commitments are recorded at actuarial value.

## Note 2 - Bases of presentation for consolidated financial statements (continued)

#### 2.3 Accounting pronouncements

## **Accounting pronouncements**

At the date of these consolidated financial statements, the following accounting pronouncements have been issued by the IASB for which term application date is not yet effective.

|               | Standards                                 | Mandatory application for periods beginning: |
|---------------|---|--|
| IAS 19        | Employee Benefits                         | January 1, 2013                              |
| <b>IAS 27</b> | Separate Financial Statements             | January 1, 2013                              |
| <b>IAS 28</b> | Associates and Joint Ventures             | January 1, 2013                              |
| IFRS 9        | Financial Instruments                     | January 1, 2013                              |
| IFRS 10       | Consolidated financial statements         | January 1, 2013                              |
| IFRS 11       | Joint arrangements                        | January 1, 2013                              |
| IFRS 12       | Disclosure of Interests in Other Entities | January 1, 2013                              |
| IFRS 13       | Fair Value Measurement                    | January 1, 2013                              |

## IAS 19 Revised "Employee Benefits"

Issued in June 2011, supersedes IAS 19 (1998). This revised standard amends the recognition and measurement of defined benefit plan expenses and termination benefits. Additionally, it includes amendments to disclosures of all employee benefits.

## IAS 27 "Separate Financial Statements"

Issued in May 2011, supersedes IAS 27 (2008). The scope of this standard is restricted solely to separate financial statements, given that the aspects linked to the definition of control and consolidation were removed and included in IFRS 10. Its early adoption is allowed together with IFRS 10, IFRS 11 and IFRS 12 and the amendment to IAS 28.

## IAS 28 "Associates and Joint Ventures"

Issued in May 2011, supersedes IAS 28 (2003). It includes the requirements for associates and joint ventures that have to be equity accounted following the issue of IFRS 11. Its early adoption is allowed together with IFRS 10, IFRS 11 and IFRS 12 and the amendment to IAS 27.

## IFRS 9 "Financial Instruments"

Issued in December 2009, amends the classification and measurement of financial assets.

Subsequently, this standard was amended in November 2010 to include the treatment and classification of financial liabilities. Early adoption is permitted.

## IFRS 10 "Consolidated Financial Statements"

Issued in May 2011, supersedes SIC 12 "Consolidation – Special Purpose Entities" and portions of IAS 27 "Consolidated Financial Statements". It establishes clarifications and new parameters for the definition of control, as well as the preparation of consolidated financial statements. Its early adoption is permitted together with IFRS 11, IFRS 12 and amendments to IAS 27 and IAS 28.

## Note 2 - Bases of presentation for consolidated financial statements (continued)

#### 2.3 Accounting pronouncements, continued

#### IFRS 11 "Joint Arrangements"

Issued in May 2011, supersedes IAS 31 "Interests in Joint Ventures" and SIC 13 "Joint Controlled Entities". Its amendments include the elimination of the concept of jointly-controlled assets and the possibility of proportional consolidation of entities under common control. Its early adoption is permitted together with IFRS 10, IFRS 12 and amendments to IAS 27 and IAS 28.

## IFRS 12 "Disclosure of Interests in Other Entities"

Issued in May 2011, is applicable for entities with investments in subsidiaries, joint ventures and associates. Its early adoption is permitted together with IFRS 10, IFRS 11 and amendments to IAS 27 and IAS 28.

## IFRS 13 "Fair Value Measurement"

Issued in May 2011, gathers in one single standard the method for measuring fair value of assets and liabilities and disclosures required for this purpose and incorporates new concepts and clarifications for measurement.

3.6 3.4

|               | Improvements and Amendments                        | Mandatory application for: |
|---------------|--|----------------------------|
| IAS 1         | Presentation of Financial Statements               | July 1, 2012               |
| IFRS 7        | Financial Instruments: Information to be disclosed | January 1, 2013            |
| <b>IAS 32</b> | Financial Instruments: Presentation                | January 1, 2014            |
| IAS 16        | Property, Plant and Equipment                      | January 1, 2013            |
| IAS 32        | Financial Instruments: Presentation                | January 1, 2013            |
| IAS 34        | Intermediate Financial Information                 | January 1, 2013            |
| IFRS 10       | Consolidated Financial Statements                  | January 1, 2013            |
| IFRS 11       | Joint Agreements                                   | January 1, 2013            |
| IFRS 12       | Disclosures of participation in other entities     | January 1, 2013            |

#### IAS 1 "Presentation of Financial Statements"

Issued in June 2011, the main amendment is that it requires that items in Other Comprehensive Income must be classified and grouped by assessing whether they will be reclassified to subsequent periods. Early adoption of the new classification requirements is permitted.

## IFRS 7 "Financial Instruments: Information to be disclosed"

Issued in December 2011. Improves disclosures of compensation of financial assets and liabilities, in order to increase the convergence between IFRS and Generally Accepted Accounting Principles in the United States. These disclosures are centered on quantitative information related to financial instruments, which are included in the consolidated financial statements. Its early adoption is permitted.

#### IAS 32 "Financial Instruments: Presentation"

Issued in December 2011. Explains the requirements for the compensation of financial assets and liabilities. Specifically, it indicates that the right to compensation must be available as of the date of the financial statements and not dependent on a future event. The right to compensation also must be legally binding for the counterparty in the normal course of the business, as well as in cases of non payment, insolvency, or bankruptcy. Its early adoption is permitted.

## Note 2 - Bases of presentation for consolidated financial statements (continued)

## IAS 16 "Property, Plant, and Equipment"

Issued in May 2012. Clarifies that spare parts and service equipment should be classified as Property, Plant, and Equipment, instead of inventories, whenever it meets the definition of Property, Plant, and Equipment.

#### IAS 32 "Presentation of Financial Instruments"

Issued in May 2012. Clarifies that the treatment of income taxes related to equity distributions and transaction costs.

## IAS 34 "Intermediate Financial Information"

Issued in May 2012. Clarifies the requirements to present assets and liabilities by segments, during interim periods, confirming the same requirements applicable to the annual financial statements.

# IFRS 10 Consolidated Financial Statements, IFRS 11 "Joint Agreements", IFRS 12 Disclosures of participation in other entities"

Issued in June 2012. Clarifies that it is necessary to apply these standards on the first day of the annual period in which the regulations are adopted. Therefore, it could be necessary to make modifications to comparative information presented in such periods, if the evaluation of control over investments results in that recognized according to IAS 27/SIC 12.

Management is currently evaluating the adoption of the standards, amendments and interpretations described above; however, they are not expected to have a significant impact on the consolidated financial statements.

## Note 2 - Basis of presentation for consolidated financial statements (continued)

#### 2.4

#### Transactions in foreign currency

## (a) Functional and presentation currency

The Company's consolidated financial statements are presented in United States Dollars ("U.S. Dollars" or "US\$"), which is the Company's functional and presentation currency and is the currency of the primary economic environment in which it operates.

Consequently, the term foreign currency is defined as any currency other than the U.S. Dollar.

The conversion of the financial statements of foreign subsidiaries with functional currency other than the U.S. Dollars is performed as follows:

- -Assets and liabilities using the exchange rate prevailing on the closing date of the consolidated financial statements.
  - Statement of income account items using average exchange rates for the year.
  - Equity accounts are stated at the historical exchange rate on the transaction date.

Foreign currency translation differences which arise from the conversion of financial statements of subsidiaries are recorded in the account "Foreign currency translation differences" within equity.

#### (b) Basis of conversion

#### **Domestic subsidiaries:**

Assets and liabilities denominated in Chilean Pesos and other currencies other than the U.S. Dollar as of December 31, 2012 and December 31, 2011 have been translated to U.S. Dollars at the exchange rates prevailing on those dates. The corresponding Chilean Pesos were converted at Ch\$479.96 and Ch\$519.20 per US\$1.00 as of December 31, 2012 and 2011 respectively.

The values of the UF (a Chilean Peso-denominated, inflation-indexed monetary unit) used to convert the UF denominated assets and liabilities as of December 31, 2012 amounted to Ch\$22,840.75 (US\$47.59) and Ch\$22,294.03 (US\$42.94) as of December 31, 2012 and 2011 respectively.

## Note 2 - Basis of presentation for consolidated financial statements (continued)

## 2.4 Transactions in foreign currency, (continued)

## Foreign subsidiaries

The exchange rates used to translate the monetary assets and liabilities expressed in foreign currencies at the closing date of each period in respect to the U.S. Dollar are as follows:

| 12/31/2012 | 12/31/2011   |
|------------|--|
| US\$       | US\$   |
|            |  |
| 2.04       | 1.88   |
| 2.75       | 2.77   |
| 4.92       | 4.30   |
| 86.58      | 77.74  |
| 0.76       | 0.77   |
| 12.99      | 13.98  |
| 1.05       | 1.03   |
| 0.62       | 0.64   |
| 8.47       | 8.10   |
| 1.00       | 1.00   |
| 479.96     | 519.20   |
| 47.59      | 42.94  |
|            | US\$  2.04 2.75 4.92 86.58 0.76 12.99 1.05 0.62 8.47 1.00 479.96 |

## (c) Transactions and balances

Non-monetary transactions and balances denominated in a currency other than the U.S. Dollar are translated using the exchange rate at the transaction date. Monetary assets and liabilities denominated in a foreign currency are translated at the exchange rate of the functional currency prevailing at the closing date of the Consolidated Statement of Financial Position. All differences are recorded to the Statement of Income with the exception of all monetary items that provide an effective hedge for a net investment in a foreign operation. These items are recognized in Other Comprehensive Income upon the disposal of the investment, at which time they are recognized in the Statement of Income. Tax charges and credits attributable to exchange differences on those monetary items are also recorded in Other Comprehensive Income.

Non-monetary items that are measured in terms of historical cost in a foreign currency are translated using the exchange rates at the dates of the initial transactions. Non-monetary items measured at fair value in a foreign currency are translated using the exchange rates at the date when the fair value is determined.

## Note 2 - Basis of presentation for consolidated financial statements (continued)

## 2.4 Transactions in foreign currency, continued

## (d) Group entities

The profit or loss, assets and liabilities of all entities with a functional currency other than the U.S. Dollar are translated to the presentation currency as follows:

Assets and liabilities are translated at the closing date exchange rate as of the date of the Consolidated Statement of Financial Position.

- Income and expenses are translated at average exchange rates for the year.

All resulting foreign currency exchange differences are recognized in the foreign currency translation difference reserve in Equity.

In consolidation, foreign currency exchange differences which arise from the conversion of a net investment in foreign entities are recorded Equity (other reserves). At the disposal date, these exchange differences are recognized in the Statement of Comprehensive Income as part of the gain or loss from the sale.

#### 2.5 Basis of consolidation

#### (a) Subsidiaries

Subsidiaries are all entities over which the Company has the ability to govern financial and operating policies generally accompanying a shareholding of more than one half of the voting rights. The Company also assesses the existence of control where it does not have more than 50% of the voting power but is able to govern the financial and operating policies by virtue of de-facto control. De-facto control may arise in circumstance where the size of the group's voting rights relative to the size and dispersion of the holdings of other shareholders give the Company power to govern the financial and operating policies.

Subsidiaries are consolidated from the date in which control is transferred to the Company and are excluded from consolidation on the date in which this control ceases to exit.

Intercompany transactions, balances, income and expenses on transactions between group companies are eliminated. Profits and losses resulting from intercompany transactions that are recognized in assets are also eliminated. All subsidiaries apply the same accounting policies as described in Note 3.

Non-controlling interest represent the portion of a subsidiary's net assets and operating results not owned directly or indirectly by the parent company.

<sup>(</sup>a) On December 14, 2011, Fertilizantes Naturales S.A. changed its legal name to SQM Iberian S.A.

<sup>(</sup>b) Effective November 30, 2012, this entity was merged with SQM Potasio S.A.

Comercial Agrorama Ltda. is consolidated as the Company has control through its subsidiary Soquimich Comercial S.A.

(d) This subsidiary was incorporated on April 7, 2011.

## Note 2 - Basis of presentation for consolidated financial statements (continued)

2.5

#### Basis of consolidation, continued

## (b) Equity accounted investments

Interests in companies in which control is exercised together with another company (joint ventures) or in which the Company has significant influence (associated companies) are accounted for using the equity method. Significant influence is assumed to exist when the Company has interest exceeding 20% of the investee's equity. Under the equity method, the investment is initially recognize at cost, and the carrying amount is increased or decreased to recognize the Company's share of the profit or loss of the investee after the acquisition date. The Company's investments include goodwill identified upon acquisition.

The Company's share of post acquisition profit or loss is recognized in the Statement of Income. When the Company's share of losses in an investee equals or exceeds its interest, the Company does not recognize further losses unless it has incurred a legal or constructive obligations or made payments on behalf of the investee.

The Company determines at each reporting date whether there is any objective evidence that the investments are impaired. If impaired, the Company recognizes an impairment loss in the Statement of Income as the difference between the recoverable amount of the investee and its carrying value.

Unrealized profits and losses resulting from transactions with investees are recognized in the consolidated financial statements to the extent of unrelated investor's interest in the investee. Unrealized losses are eliminated unless the transaction provides evidence of loss from impairment of the assets transferred. The reporting dates and accounting policies of the investees are consistent with those adopted by the Company.

#### 2.6 Segment reporting

Operating segments are reported in a manner consistent with the internal reporting provided to the chief operating decision maker "CODM". The CODM, who is responsible for allocating reserves and assessing performance of the operating segments, has been identified as a committee comprised of the Chief Executive Officer, and the Executive Vice President & Chief Operating Officer. The following operating segments are based on the information provided to

the CODM and the organizational structure of the Company:

- -Specialty plant nutrients
- -Industrial chemicals
- Iodine and derivatives
- -Lithium and derivatives
- -Potassium
- -Other products and services

# 2.7 Significant accounting judgments, estimates and assumptions

Significant accounting judgments, estimates and assumptions by management to prepare these consolidated financial statements include:

- Inventory provisions allowances on slow-moving obsolete in inventories.
- Future costs for and the timing of the closure of mining facilities.
- -The determination of the fair value of certain financial and non-financial assets and derivative financial instruments.
  - The determination and allocation of fair values in business combinations.

Although these estimates have been made considering information available as of the date of preparation of these consolidated financial statements, it is possible that future events may require their modification. Changes would be recorded prospectively, recognizing the effects of any changes in estimates in future consolidated financial statements. There have been no significant changes in the methodology or assumptions used in these estimates.

## Note 3 – Significant accounting policies

#### 3.1

#### Cash and cash equivalents

Cash equivalents consist of short-term, highly liquid investments that are readily convertible into known amounts of cash and are subject to low risk of change in value, with original maturities of three months or less from the date of acquisition.

#### 3.2

#### Financial assets

The Company classifies its financial assets under the following categories: at fair value through profit or loss, loans and trade receivables, financial assets held-to-maturity and financial assets available-for-sale. The classification depends on the purpose for which financial assets were acquired. Management determines the classification of its financial assets at the time of initial recognition.

At each reporting date management assesses whether there is any objective evidence that a financial asset or a group of financial assets is impaired. A financial asset or a group of assets is deemed to be impaired if and only if there is objective evidence of impairment as a result of one or more events that has occurred after the initial recognition of the asset or group of assets (a "loss event") and that loss event or events has an impact on the estimated future cash flows of the financial asset or the group of financial assets that can be reliably estimated.

#### (a) Financial assets at fair value through profit or loss

Financial assets at fair value through profit or loss are financial assets held for trading. A financial asset is classified in this category if it is acquired mainly for the purpose of being sold in the short-term. Derivatives are also classified as acquired for trading unless they are designated as hedges. Assets under this category are classified as current assets if expected to be settled within 12 months, and their changes in fair value are directly recognized in profit or loss.

#### (b) Loans and trade receivables

Loans and trade receivables are non-derivative financial assets with fixed or determinable payments not quoted in any active market. These are included in current assets, except for maturities greater than 12 months from the end of the reporting period, which are classified as non-current assets. The Company's loans and receivables consist of "trade and other accounts receivable" and "cash and cash equivalents" in the Statement of Financial Position (notes 6.1 and 9.2).

#### (c) Financial assets held to maturity

Financial assets held-to-maturity are non-derivative financial assets with fixed or determinable payments and fixed maturities which management has the positive intention and ability of holding to maturity. If a significant amount of financial assets held to maturity were to be sold, the full category would be reclassified as available for sale. Assets in this category are stated at amortized cost.

### Note 3 – Significant accounting policies (continued)

### 3.3 Financial derivatives and hedge transactions

Derivatives are recognized initially at fair value as of the date in which the derivative contract is entered into and subsequently remeasured at fair value. The method for recognizing the resulting gain or loss depends on whether the derivative has been designated as a hedge instrument and if so, the nature of the item being hedged. The Company designates certain derivatives as either:

- (a) Fair value hedges of recognized assets and liabilities or firm commitments (fair value hedges).
- (b) Hedging a forecasted risk associated with a recognized asset or liability or a highly possible forecasted transaction (cash flow hedge).

At hedge inception, the Company documents the relationship between hedging instruments and hedged items, as well as their risk management objectives, and the strategy for undertaking different hedging transactions. The Company also documents its evaluation both at hedge inception and at each reporting period, whether derivatives used in hedging transactions are highly effective in offsetting changes in fair values or in cash flows of hedged items.

The fair value of derivative instruments used for hedging purposes is shown in Note 10.3. (Hedge assets). Movements in the cash flow hedge reserve are classified as a non-current asset or liability if the remaining hedged item is more than 12 months, and as a current asset or liability if the remaining maturity of the hedged item is less than 12 months. Other derivatives are classified as a current asset or current liability, with the change in their fair value recognized directly in profit or loss.

(a) Fair value hedge

Changes in the fair value derivatives that are designated and qualify as fair value hedges are recorded to profit or loss, as applicable. The change in the fair value of the hedged asset or liability attributable to hedged risk is also recognized in profit or loss.

For fair value hedges related to assets or liabilities recorded at amortized cost, the adjustment of the fair value is amortized against profit or loss during the period through maturity. Any adjustment to the carrying value of a hedged financial instrument for which the effective rate is used is amortized to profit or loss at its fair value attributable to the hedged risk.

### Note 3 – Significant accounting policies (continued)

If the hedge no longer meets the criteria for hedge accounting, the fair value not amortized is immediately recognized in profit or loss.

(b) Cash flow hedges

The effective portion of changes in the fair value of derivatives that are designated and qualify as cash flow hedges is recognized in other reserves within equity. The gain or loss related to the ineffective portion is immediately recognized in profit or loss.

Amounts accumulated in equity are reclassified to profit or loss in periods when the hedged item affects profit or loss, such as when the hedged interest income or expense is recognized, or when a forecasted transaction occurs. When the hedged item is the cost of a non-financial asset or liability, amounts recorded in equity are transferred to the initial carrying value of the non-financial asset or liability.

Should the expected firm transaction or commitment no longer be expected to occur, amounts previously recognized in equity are transferred to profit or loss. If a hedge instrument expires or is sold, or when a hedge no longer meets the criteria for hedge accounting, any amounts previously recognized in equity are maintained in equity until the expected firm transaction is ultimately recognized in profit or loss.

#### 3.4 Trade and other receivables

Trade and other receivables relate to non-derivative financial assets with fixed and determinable payments and are not quoted in any active market. These receivables arise from sales involving products and services to customers.

These assets are initially recognized at their fair value, which is equivalent to their face value, and subsequently at amortized cost according to the effective interest rate method less a provision for impairment loss. An allowance for impairment loss is established for trade receivables when there is objective evidence that the Company will not be able to collect amounts which are owed to it according to the original terms of receivables.

3.5 Inventory

Inventories are stated at the lower of cost and net realizable value. Cost is determined based on the weighted average method. The cost of finished goods and products-in-process includes direct costs of materials, direct labor, and other direct costs and related overheads incurred to transform raw materials into finished products, including expenses incurred in transporting inventories to their current location and condition. Net realizable value represents is the estimated sales price in the ordinary course of business less all estimated costs expected to be incurred in the sales and distribution process.

The Company evaluates the net realizable value of inventories at the end of each reporting period, recording a provision with a charge to income when circumstances are warranted. When the circumstances previously causing the reserve cease to exist, or when there is

### Note 3 – Significant accounting policies (continued)

clear evidence of an increase in the net realizable value due to a change in the economic circumstances or prices, the previous estimate is modified accordingly. Provisions on the Company's inventories are made based on a technical studies covering the different variables affecting finished products such as density and humidity, among other factors.

Raw materials, and supplies for production inventories are recorded at the lower of acquisition cost or market value. Acquisition cost is calculated according to the weighted average cost method.

3.6

#### **Intangible assets**

Intangible assets consist of goodwill, water rights, rights of ways related to electric lines, and computer software licenses.

(a)

Goodwill

Goodwill represents the excess of the consideration transferred over the net fair value of assets acquired and liabilities assumed in the acquisition of subsidiaries.

For purposes of impairment testing, goodwill acquired in a business combination is allocated to each cash generating unit "CGU", which is expected to benefit from the synergies of the combination. Each CGU to which goodwill is allocated represents the lowest level within the entity at which the goodwill is monitored for internal management purposes.

Goodwill impairment reviews are conducted annually, or more frequently if events or changes in circumstances indicate a potential for impairment. The carrying value of goodwill is compared to its recoverable amount, which is the higher of value in use and the fair valueless cost to sell. Any impairment is recognized immediately as an expense and is not subsequently reversed.

(b) Water rights

Acquired water rights represent water from natural sources and are recorded at acquisition cost. Depending on the contractual terms, water rights can be granted on a perpetual basis or be subject to a fixed term. Water rights with a contractual fixed term are amortized over the life of the agreement. Water rights granted on a perpetual basis are not amortized; however, they are subject to an annual impairment assessment.

(c) Right of way for electric lines

As required for the operation of industrial plants, the Company acquires rights of ways in order to install wires for electric lines on third party land. Amounts paid are capitalized and charged to income according to their contractual lives.

### Note 3 – Significant accounting policies (continued)

(d)

Computer software

Acquired computer software licenses are capitalized based on initial acquisition costs and costs incurred to prepare them for their intended use. These costs are amortized over their estimated useful lives.

Expenses related to internally developed IT programs are recognized when incurred. Costs directly attributable to the development of unique and identifiable IT programs are recognized as intangible assets to the extent such IT will generate future economic benefits. IT development costs are amortized over their estimated useful lives, which does generally not exceed three years.

#### 3.7

### Property, plant and equipment

Property, plant and equipment assets are stated at acquisition cost, net of accumulated depreciation, amortization and impairment losses that they might have experienced. Acquisition cost includes the following when applicable:

Interest expense incurred during the construction period directly attributable to the acquisition, construction or production of qualifying assets, includes those that require a substantial period prior to being ready for their intended use. The interest rate used to capitalize interest corresponds to the project's specific financing or, should this not exist, the average borrowing rate of Company. Interest expenses are not capitalized for periods which exceed the normal term of acquisition, construction or installation of the asset, such as in the case of delays, interruptions, or temporary suspension of the project due to technical, financial, or other issues.

(b) Future costs the Company will incur related to the closure of its facilities at the end of their useful life are recorded at the present value of expected future disbursements required to settle the obligation.

Construction-in-progress is transferred to property, plant and equipment in operation once the assets are available for their intended use and the related depreciation and amortization begins on that date.

Extension, modernization or improvement costs that represent an increase in productive, capacity or efficiency, or an extension of the useful lives of property, plant and equipment are capitalized as a an increase in the cost of the related assets. All maintenance, preservation and repair expenses are charged to expense as incurred.

Property, plant and equipment components are depreciated using the straight-line method over estimated useful lives. When components of property, plant and equipment have different useful lives, these components are recorded and depreciated separately. The useful lives are reviewed annually and revised as necessary. The useful lives used for the depreciation and amortization of assets included in property, plant and equipment are presented below.

## **Note 3 – Significant accounting policies (continued)**

| Types of property, plant and equipment | Life<br>minimum | Life<br>maximum |
|--|-----------------|-----------------|
| Buildings                              | 3               | 60              |
| Plant and equipment                    | 3               | 35              |
| Information technology equipment       | 3               | 10              |
| Fixtures and fittings                  | 3               | 35              |
| Moto vehicles                          | 5               | 10              |
| Other property, plant and equipment    | 2               | 30              |

Gains or losses generated from the sale or disposal of property, plant and equipment are recognized as income (or loss) in the period and calculated as the difference between the asset's net sales value and its carrying value.

The Company obtains property rights and mining concessions from the Chilean Ministry of Mining. Property rights are generally obtained through payment of mining licenses and minor registration expenses, along with annual license fees. Annual license fees are recorded as prepaid expenses and amortized over their twelve month effective period. Amounts attributable to mining concessions acquired from third parties, which are not from the Chilean State, are recorded at their acquisition cost.

### 3.8 Impairment of non-financial assets

Assets subject to depreciation and amortization are reviewed for impairment whenever events or changes circumstances indicate that the carrying value may not be recoverable. For purposes of assessing impairment, assets are grouped at the lowest level for which there are separately identifiable cash flows. An impairment loss is recognized for the excess of the carrying value of the asset over its recoverable amount. The recoverable amount of an asset is the higher between the fair value of an asset or CGU, less selling costs and its value in use. Assets other than goodwill, that suffered an impairment are reviewed for possible reversal of the impairment at each reporting date.

### 3.9 Financial liabilities

The Company classifies its financial liabilities under the following categories: at fair value through profit or loss, trade payables, interest-bearing loans, or derivatives designated as hedging instruments. Management determines the

classification of its financial liabilities at the time of initial recognition.

Financial debt obligations are recorded at face value and as non-current when their maturity is greater than 12 months and as current when maturity is less than twelve months. Interest expenses is recognized in profit and loss when incurred.

Financial liabilities are derecognized when the obligation is repaid, settled or expires.

| otes to the consolidate | d financial | statements as | s of | December | 31 | 2012 |
|-------------------------|-------------|---------------|------|----------|----|------|
|-------------------------|-------------|---------------|------|----------|----|------|

### Note 3 – Significant accounting policies (continued)

(a) Financial liabilities at fair value through profit or loss

Financial liabilities are classified at fair value when these are held for trading or designated in their initial recognition at fair value through profit or loss. This category includes derivative instruments not designated for hedge accounting.

### (b) Trade payables

Trade payables are obligations to pay for goods or services that have been acquired in the ordinary course of business from suppliers. Trade payables are initially recognized at fair value and are subsequently stated at their amortized cost using the effective interest rate method.

#### (c) Interest-bearing loans

Loans are initially recognized at fair value and are subsequently stated at amortized cost using the effective interest rate method. Amortized cost is calculated considering any premium or discount from the acquisition and includes transaction costs which are an integral part of the effective interest rate.

## 3.10 Current and deferred taxes

Corporate income tax for the year is determined as the aggregate of current taxes from all of the consolidated companies. Current taxes are calculated on the basis of the tax laws enacted or substantively enacted as of the Statement of Financial Position in the countries where the Company and its subsidiaries operate and generate taxable income.

Deferred tax is recognized using the liability method on temporary differences arising between the tax basis for assets and liabilities and their carrying amounts in the consolidated financial statements. Deferred income taxes are calculated using the tax rates expected to be applicable when the assets are realized or the liabilities are settled.

In conformity with current Chilean tax regulations, the provision for corporate income tax and taxes on mining activity is recognized on an accrual basis, presenting the net balances of accumulated monthly tax provisional payments for the fiscal period and associated credits. The balances of these accounts are presented in current income taxes recoverable or current taxes payable, as applicable.

Tax on companies and variations in deferred tax assets or liabilities that are not the result of business combinations are recorded in statement of income accounts or equity accounts in the Consolidated Statement of Financial Position, considering the origin of the gains or losses which have generated them.

## **Note 3 – Significant accounting policies (continued)**

The carrying value of deferred tax assets has been reviewed and reduced to the extent there will not be sufficient taxable income to allow the recovery of all or a portion of the deferred tax assets. Likewise, deferred tax assets that are not recognized were evaluated and not recognized if it was not more likely than not, that future taxable income will not allow for recovery of the deferred tax asset.

With respect to deductible temporary differences associated with investments in subsidiaries, associated companies and interest in joint ventures, deferred tax assets are recognized solely provided that it is more likely than not that the temporary differences will be reversed in the near future and that there will be taxable income with which they may be used.

Deferred tax assets and liabilities are offset if there is a legally enforceable right to offset tax assets against tax liabilities and the deferred tax is related to the same tax entity and authority, and there is intention to settle the balances on a net basis.

## 3.11 Obligations related to employee termination benefits and pension commitments

Obligations to the Company's employees are established in accordance with agreements in force and formalized through collective employment agreements and individual employment contracts. In the case of certain United States employees, benefit obligations are in accordance with a defined benefit pension plan, which was terminated in 2002. Liabilities for these obligations are recognized in the Statement of Financial Position using values established by actuarial calculations, which consider various assumptions including mortality rates, employee turnover, interest rates, retirement dates, future salary increases, and inflation.

Actuarial gains and losses generated by changes in previously defined obligations are directly recorded in profit or loss for the year. Actuarial gains and losses and gains resulting from differences between the estimate and actual behavior of the actuarial assumptions are recorded in equity in other comprehensive in the period in which they arise.

3.12

The Company has a cash settled shared based payment plan whereby executives and senior management receive cash payments based on changes in the Company's share price over a vesting period. The fair value of the vested portion of the awards is recorded as a liability and premeasured each reporting period using a Black Scholes model. Changes in the fair value of the awards are recorded directly to profit and loss for the period.

### Note 3 – Significant accounting policies (continued)

#### 3.13

#### Other provisions

Provisions are recognized for environmental restoration, legal claims and other matters when the Company has a present legal or constructive obligation as the result of a past event; its probable that resources must be used to settle the obligation; and a reliable estimate can be made of the amount of the obligation.

Provisions are measured at the present value of the expenditures expected to required to settle the obligation using pretax discount rate that reflects the liability's specific risks The increase in the provision over time is recognized as a finance cost.

#### 3.14

### Revenue recognition

Revenue includes the fair value of considerations received or receivable for the sale of goods and services. Revenue is presented net of value added tax and rebates and discounts. Revenue is recognized when its amount can be reliably measured, it is probable that the future economic benefits will flow to the Company, and the specific conditions for each type of revenue related activity have been met, as follows:

## (a) Sale of goods

Sales of goods are recognized when the Company has delivered products to the customer, the customer has total discretion on the distribution channel and the price at which products are sold and there is no obligation pending compliance that could affect the acceptance of products by the customer. The delivery does not occur until products have been shipped to the customer or confirmed as received by customers when the related risks of obsolescence and loss have been transferred to the customer and the customer has accepted products in accordance with the conditions established in the sale, the acceptance period has ended, or there is objective evidence that those criteria required for acceptance have been met.

Sales are recognized in consideration of the price set in the sales agreement, net of volume discounts and other credits at the date of the sale. Volume discounts are evaluated in consideration of annual foreseen purchases and in accordance with the criteria defined in agreements.

## (b) Sales of services

Revenue associated with the rendering of services consist primary of rental income and related services provided, and is recognized considering the degree of completion of the service as of each reporting date provided that the results can be reliably estimated.

Note 3 – Significant accounting policies (continued)

### 3.15 Exploration expenses

Exploration expenses are capitalized pending determination of the economic viability. Exploration expenses related to non economically minable reserves are charged to expense. Exploration expenses associated with the future development of economically mineable mineral reserves are capitalized as other non-financial assets until such time as mined. Expenses associated with mineral reserves in development are reclassified to Inventory and amortized according to the estimated mineral content.

## 3.16 Research and development costs

Research and development costs are expensed in the period incurred, with the exception of property, plant and equipment acquired for use in research and development activities.

#### 3.17 Environmental expenditures

Amounts incurred for environmental protection and improvement as recorded as environmental expenses in profit and loss. The cost of facilities, machinery and equipment used for the same purpose are considered property, plant and equipment and capitalized as such.

#### 3.18 Minimum dividend

According to the Chilean Corporations Act, a publicly traded corporation must pay dividends according to the policy decided at the General Shareholders' Meeting each year, with a minimum of 30% of the net income for the year if the corporation does not have unabsorbed accumulated deficit from prior years, unless it otherwise decided by unanimous vote of the shareholders.

3.19

Earnings per share

Basic earnings per share is calculated by dividing profit attributable to equity holders of the Company by the weighted average number of ordinary shares outstanding during the year. The Company has not conducted any type of operation, which would give rise to a potential dilutive effect on its earnings per share.

There have been no significant changes in accounting policies during 2012.

| N | Intes | to the | consolidated | financial | statements as | of Decem | iher 31 | 2012 |
|---|-------|--------|--------------|-----------|---------------|----------|---------|------|
|   |       |        |              |           |               |          |         |      |

## Note 4 – Financial risk management

### 4.1 Risk Management Policy

The Financial Risk Management Policy of the Company is oriented towards safeguarding the stability and sustainability of Sociedad Química y Minera de Chile S.A. and subsidiaries in relation to all such relevant financial uncertainty.

The operations of the Company are subject to certain financial risk factors that may affect the financial position results of operations or cash flow. Among these risks, the most relevant are market risk, liquidity risk, foreign exchange rate risk, bad debt risk, and interest rate risk.

There may be additional unknown risks or other known risks that might also affect the commercial operations, the business, the financial position or the results of the Company, but the Company believes at this time they are not significant.

The financial risk management structure includes identifying, determining, analyzing, quantifying, measuring and controlling these events. Management, in particular Finance Management, is responsible for constantly assessing the financial risk. The Company uses derivatives to hedge a significant portion of these risks.

### 4.2 Risk Factors

### 4.2.1 Market Risk

Market risks are those uncertainties associated with fluctuations of market variables that affect the assets and liabilities of the Company, such as:

a) Country risk

The economic position of the countries where the Company has a presence may affect its financial position. For example, the sales carried out in emerging markets expose SQM to risks related to economic conditions and trends in those countries. On the other hand, inventories may also be affected by the economic situation of these countries and/ or the global economy, amongst other probable economic impacts.

b) <u>Price volatility risk</u>

The prices of the products of the Company are affected by the fluctuations of international prices of fertilizers and chemical products and changes in productive capacities or market demand, all of which might affect the Company's business, financial condition and operational results.

### Note 4 – Financial Risk Management (Continued)

c)

## Commodities price risk

The Company is exposed to changes in the prices of raw materials and energy which may have an impact on its production costs, thus giving rise to instability in the results.

At present, the Company has direct annual expenses of approximately US\$130 million related to oil related products, natural gas and equivalents, and approximately US\$60 million for electricity. Variations of 10% in the prices of energy the Company requires to operate would involve in the short term movement of costs amounting to US\$19 million.

#### 4.2.2 Uncollectible Accounts Risks

A contraction of the global economy and the potentially negative effects in the financial position of the Company's clients may extend the accounts receivable collection time for SQM, increasing the Company bad debt exposure. While measures have been taken in order to minimize this risk, the global economy may trigger losses that might have a material adverse effect on the business, financial position or the results of the Company's operations.

To mitigate these risks, SQM actively controls debt collections and uses measures such as, credit insurance, letters of credit, and prepayments with regard to certain accounts receivable.

### 4.2.3 Foreign Exchange Risk

As a result of its influence in the determination of prices, its relationship with costs of sales, and since a significant part of our business is carried out in U.S. Dollars, the functional currency of SQM is the U.S. Dollar. However, the global business activities of the Company expose it to foreign exchange fluctuations of several currencies with respect to the U.S. Dollar. Therefore, SQM has derivate contracts to mitigate the exposure of its main balance mismatches (net assets) in currencies other than the U.S. Dollar against foreign exchange fluctuations. Those contracts are periodically updated depending upon the mismatch amount to be covered in these currencies.

A significant portion of the costs of the Company, particularly wages, is related to the Chilean Peso. Therefore, an increase or decrease in the exchange rate against the U.S. Dollar would affect the net income of SQM. At December 31, 2012, approximately US\$440 million of the costs of the Company are related to the Chilean Peso. A significant portion of the effect of such obligations in the balance is covered derivatives that hedge the mismatch of balance in this currency.

At December 31, 2011, the Company had outstanding derivative instruments designated as hedging currency and interest rate risks associated with all Chilean Peso and UFdenominated bond obligations, with a fair value of US\$ 56.1 million. As of December 31, 2012, the fair value was US\$100.6 million, in each case in favor of SQM.

| N | Intes | to the | consolidated | financial | statements as | of Decem | iher 31 | 2012 |
|---|-------|--------|--------------|-----------|---------------|----------|---------|------|
|   |       |        |              |           |               |          |         |      |

#### Note 4 – Financial Risk Management, Objectives and Policies (continued)

On December 31, 2012, the Chilean Peso to U.S. Dollar exchange rate was Ch\$ 479.96 for US\$ 1.00 and at December 31, 2011 it was Ch\$ 519.20 for US\$ 1.00.

#### 4.2.4 Interest rate risk

Interest rate fluctuations, due to the uncertain future behavior of markets, may have a material impact on the financial results of the Company.

The Company has short and long term debts valued at LIBOR plus a spread. The Company is partially exposed to fluctuations of this rate, as SQM currently holds derivative instruments to hedge a portion of its liabilities subject to LIBOR rate fluctuations.

As of December 31, 2012, approximately 21% of the Company's current financial obligations were subject to LIBOR rate fluctuation and therefore, significant increases in the rate may impact its financial position. A 100 basis points variation in this rate may trigger variations in financial expenses of approximately US\$3.1 million. Notwithstanding, this effect is significantly counter-balanced by the returns of the Company's investments that also relate to LIBOR.

In addition, as of December 31, 2012, the Company's total financial debt is primarily long-term, with 8% of maturities less than 12 months, which decreases the exposure to changes in the interest rates.

| Not | es to | the cons | solidated. | financial | statements as | of Decen | nher 31 | 2012 |
|-----|-------|----------|------------|-----------|---------------|----------|---------|------|
|     |       |          |            |           |               |          |         |      |

#### Note 4 – Financial Risk Management, Objectives and Policies (continued)

### 4.2.5 Liquidity Risk

Liquidity risk relates to funding requirements to comply with payment obligations. The Company's objective is to keep financial flexibility by comfortably balancing funding requirements and cash flows from the regular business conduct, bank loans, public bonds, short term investments, and negotiable instruments, among others.

The Company has an important capital expense program which is subject to change over time.

On the other hand, world financial markets go through contraction and expansion periods that are not foreseeable in the long term and may affect SQM's access to financial resources. These factors may have a material adverse impact on the business, financial position, and operational results of the Company.

SQM constantly monitors that its obligations and investments match, taking care as part of its financial risk management strategy of the obligations and investments maturities from a conservative perspective. As of December 31, 2012, the Company had non-committed and available working capital bank credit lines for a total of US\$530 million.

The position in other cash and cash equivalents generated by the Company is invested in highly liquid mutual funds which have an AAA risk rating.

#### 4.3 Risk Measurement

The Company has methods to measure the effectiveness and efficiency of corporate risk strategies, both prospectively and retrospectively.

#### Note 5 – Background of consolidated companies

## 5.1 Parent's separate assets and liabilities

The assets and liabilities of the legal entity Sociedad Química y Minera de Chile S.A. before the effects of consolidation consists of the following:

| 12/31/2012 | 12/31/2011 |
|------------|------------|
| ThUS\$     | ThUS\$     |

| Assets      | 3,908,259   | 3,626,748   |
|-------------|-------------|-------------|
| Liabilities | (1,775,476) | (1,813,914) |
| Total       | 2,132,783   | 1,812,834   |

## **5.2** Controlling entity

In accordance with the Company's By-Laws, no shareholder can control more than 32% of the Company's voting shares; therefore, there is no controlling shareholder.

### **Note 5 – Background of consolidated companies (continued)**

### 5.3 Joint arrangements of the controlling interest

Sociedad de Inversiones Pampa Calichera S.A., Potasios de Chile S.A. and Global Mining Investments (Chile) S.A. together form the Pampa Group, and are the owners of 30.50% of SQM 's issued, subscribed and fully-paid shares as of December 31 2012. Additionally, Kowa Company Ltd., Inversiones La Esperanza (Chile) Limitada. Kochi S.A. and La Esperanza Delaware Corporation, together the Kowa Group, are the owners of 2.08% of SQM S.A.'s currently issued, subscribed and fully-paid shares as of December 31, 2012.

In December 2006, the Pampa and Kowa groups entered into a joint venture agreement in regards to the management of their ownership of the Company's shares. However, both the Pampa Group and the Kowa Group have informed SQM, the SVS, and the relevant stock markets in Chile and the United States that they are not currently, nor have they ever been, related parties between themselves. Therefore, neither the Pampa Group, nor the Kowa Group individually control more than 32% of the voting right shares of SQM S.A.

A detail listing of the Company's subsidiaries is provided in note 5.4.

#### **Note 8 – Related party disclosures (continued)**

#### 8.2 Detail of related parties and transactions with related parties

Transactions between the Parent (SQM S.A) and its subsidiaries are part of the Company's common transactions. Their conditions are those customary for this type of transactions in respect of terms and market prices. In addition, these have been eliminated in consolidation and are not detailed in this note.

Maturity terms for each case vary by virtue of the transaction giving rise to them.

As of December 31, 2012, 2011 and 2010, there were no allowances for doubtful accounts related to balances pending of transactions with related parties as there was no impairment to them.

Set forth below are the transactions with related parties as of December 31, 2012, 2011 and 2010.

#### Note 8 – Related party disclosures (continued)

# 8.4 Board of directors and senior management

1) Board of directors

The Company is managed by a Board of Directors which is composed of eight regular directors who are elected for a three-year period. The present Board of Directors was elected by the shareholders at the Ordinary Shareholders' Meeting of April 28, 2011.

As of December 31, 2012, the Company has an Audit Committee made up of three members of the Board of Directors. This Committee performs those duties provided in Article 50 bis of Law No. 18,046 of the Chilean Corporation Act.

During the periods covered by these financial statements, there were no pending balances receivable and payable between the Company, its directors or members of Senior Management other than those related to remuneration, fee allowances and profit-sharing. In addition, there were no transactions conducted between the Company, its directors or members of Senior Management.

2) Directors' Compensation

For the years ended December 31, 2012 and 2011, Directors' compensation was as follows:

A payment of a monthly fixed gross amount of UF 300 to the Chairman of the Company's Board of Directors and a) UF 50 in favor of the seven remaining board members regardless of their attendance at Board meetings or the number of meetings attended during the related month.

A payment in domestic currency in favor of the Chairman of the Company's Board of Directors consisting of a b) variable and gross amount equivalent to 0.35% of profit for the period effectively earned by the Company during each fiscal year.

A payment in domestic currency in favor of each Company's directors excluding the Chairman of the Board, c)consisting of a variable and gross amount equivalent to 0.04% of profit for the period effectively earned by the Company during each fiscal year.

The fixed and variable amounts indicated above will not be subject to any charge between them, and those expressed as a percentage will be paid immediately after the shareholders at the respective Annual General Shareholders' Meeting of the Company approve the consolidated financial statements, the annual report, the report by the account inspectors and the report of external auditors for each fiscal year.

#### Note 8 – Related party disclosures (continued)

#### 8.4 Board of directors and senior management, continued

The remuneration of the Audit Committee is detailed as follows:

a) A payment of a monthly, fixed and gross amount of UF 17 in favor of each of the three Directors who are a part of the Company's Audit Committee regardless of the number of meetings conducted during the respective month.

A payment in domestic currency and in favor of each of the three Directors of a variable and gross amount b) equivalent to 0.013% of the Company's profit for the period effectively earned by the Company during fiscal years 2012 and 2011.

- The remunerations and profit sharing paid to members of the Board of Directors and Audit Committee during 2012 and 2011 amount to ThUS\$3,973 and ThUS\$3,030, respectively.
- As of December 31, 2012 and 2011, the global compensation paid to the 120 top executives amounted to 4)ThUS\$32,888 and ThUS\$22,509, respectively. This includes monthly fixed salary and variable performance bonuses.
- 5) Additionally, the Company has retention bonuses for the Company's executives. The amount of these bonuses is linked to the price of the Company's shares and is payable in cash between 2012 and 2016 (See note 15).
  - 6) No guarantees have been constituted in favor of the Company's management.

The Company's Directors and senior management do not receive or have not received any benefit during the period 7) ended December 31, 2012 and 2011 or compensation related to pensions, life insurance, paid time off, profit sharing, incentives, or benefits due to disability other than those mentioned in the preceding paragraphs.

One of the Company's Board of Directors is member of the Ultramar Group. Operations with between the Company 8) and the Ultramar Group consisted of approximately ThUS\$22,577 and ThUS\$13,751 for the years ended December 31, 2012 and 2011, respectively.

9) No guarantees have been constituted in favor of the directors.

#### **Note 9 – Financial instruments (continued)**

#### 9.2 Trade and other receivables, continued

The detail of allowance is as follows:

| Allowance and write-offs                 | 12/31/2012 | 12/31/2011 | 12/31/2010 |
|--|------------|------------|------------|
|  | ThUS\$     | ThUS\$     | ThUS\$     |
| Allowance for non-renegotiated portfolio | 20,191     | 21,961     | 19,000     |
| Write-offs for the period                | (1,398 )   | (3,288     | (118 )     |
| Total                                    | 18,793     | 18,673     | 18,882     |

a) Credit risk concentration

Credit risk concentrations with respect to trade receivables are reduced due to the large number of entities included in the Company's client database and their distribution throughout the world.

#### 9.3 Hedging assets and liabilities

The balance represents derivative instruments measured at fair value which have been classified as hedges from exchange and interest rate risks related to the total obligations relating to bonds of the Company in Chilean Pesos and UF (and the exchange risk in Chilean Pesos of the Company's investment plans). As of December 31, 2012. The face value of cash flows in Cross Currency Swap contracts agreed upon in U.S. Dollars amounted to ThUS\$515,156 as of December 31, 2011 such contracts amounted to ThUS\$ 405,486, and as of December 31, 2010 such contracts amounted to ThUS\$ 410,618.

Amounts recorded in the effect on profit or loss column consider the mark - market effects of the contracts in force as of December 31, 2012, 2011 and 2010.

#### **Note 9 – Financial instruments (continued)**

#### 9.3 Hedging assets and liabilities, continued

Derivative contract maturities are detailed as follows:

| Series | Contract amount ThUS\$ | Currency     | Maturity date |
|--------|------------------------|--------------|---------------|
| C      | 71,841                 | UF           | 12/01/2026    |
| G      | 33,673                 | Chilean peso | 01/05/2014    |
| H      | 146,360                | UF           | 01/05/2013    |
| I      | 56,041                 | UF           | 04/01/2014    |
| J      | 92,440                 | Chilean peso | 04/01/2014    |
| M      | 46,463                 | UF           | 02/01/2017    |
| O      | 68,338                 | UF           | 02/01/2017    |

The Company uses cross currency swap derivative instruments to hedge the possible financial risk associated with the volatility of the exchange rate associated with Chilean Pesos and UF. The objective is to hedge the exchange rate financial risks associated with bonds payable. Hedges are documented and tested to measure their effectiveness.

Based on a comparison of critical terms, hedging is highly effective, given that the hedged amount is consistent with obligations maintained for bonds denominated in Chilean Pesos and UF. Likewise, hedging contracts are denominated in the same currencies and have the same expiration dates of bond principal and interest payments.

#### **Hedge Accounting**

The Company classifies derivative instruments as hedging that may include derivative or embedded derivatives either as fair value hedge derivative instruments, cash flow hedge derivative instruments, or hedge derivative instruments.

#### a) Fair value hedge

Changes in fair values of derivative instruments classified as fair value hedge derivative instruments are accounted for in gains and losses immediately along with any change in the fair value of the hedged item that is attributable to the risk being hedged.

The Company documents the relationship between hedge instruments and the hedged item along with the objectives of its risk management and strategy to carry out different hedging transactions. In addition, upon commencement of the period hedged and then on a quarterly basis the Company documents whether hedge instruments have been efficient and met the objective of hedging market fluctuations for the purpose of which we use the effectiveness test. A hedge instrument is deemed effective if the effectiveness test result is between 80% to 120%.

The hedge instruments are classified as effective or not effective on the basis of the effectiveness test results. This note includes the detail of fair values of derivatives classified as hedging instruments.

#### **Note 9 - Financial instruments (continued)**

#### 9.3 Hedging assets and liabilities, continued

#### b) Cash flow hedges

Cash flow hedges cover exposure to the cash flow variations attributable to a risk associated with a specific transaction that is very likely to be executed, that may have material effects on the results of the Company.

#### 9.4 Financial liabilities

#### Other current and non-current financial liabilities

As of December 31, 2012 and 2011, the detail is as follows:

#### 9.8

#### Financial assets pledged as guarantee

On November 4, 2004, the Company's subsidiary Isapre Norte Grande maintains a guarantee equivalent to the total amount owed to its members and healthcare providers, which is managed and maintained by Banco de Chile. Assets, in the form of restricted cash pledged as guarantees as of December 31, 2012 and 2011 were ThUS\$571 and ThUS\$428, respectively.

#### 9.9 Estimated fair value of financial instruments and financial derivatives

Although inputs used to estimate the fair value of financial assets and liabilities represent Management's best estimate, they are subjective in nature and involve assumptions related to the current economic and market conditions, as well as underlying risk features. The methodologies and assumptions used to value each financial instrument depend on the risk profile and underlying characteristics of instrument as follows:

- Cash equivalent approximates fair value due to the short-term maturities of these instruments.
- Other current financial liabilities are considered at fair value equal to their carrying values.
- Interest-bearing liabilities with original maturity of more than a year, fair values are calculated at discounting contractual cash flows at their original current market values with similar terms.
- Forward and swap contracts fair value is determined using quoted market prices of financial instruments with similar characteristics.

**Note 9 - Financial instruments (continued)** 

#### 9.9 Estimated fair value of financial instruments and financial derivatives, continued

Details of the carrying values and estimated fair values of the Company's financial instruments is as follows:

|  | 12/31/2012     |            | 12/31/2011     |            |

| - Unsecured obligations                        | 20,135         | 20,135     | 17,129         | 17,129     |
| Total other current financial liabilities      | 152,843        | 152,843    | 161,008        | 161,008    |
| Current and non-current accounts payable       | 207,944        | 207,944    | 183,032        | 183,032    |
| Other non-current financial liabilities:       |                |            |                |            |
| - Bank loans                                   | 379,119        | 401,065    | 329,150        | 348,218    |
| - Unsecured obligations                        | 1,067,075      | 1,137,363  | 907,877        | 1,074,907  |
| Total other non-current financial liabilities: | 1,446,194      | 1,538,428  | 1,237,027      | 1,423,125  |

Fair value hierarchies are as follows:

<sup>-</sup> Level 1: Quoted prices (unadjusted) in active markets for identical assets and liabilities.

Level 2: Inputs other than quoted prices that are observable for the asset or liability either directly (prices) or indirectly (derived from prices).

## Edgar Filing: CHEMICAL & MINING CO OF CHILE INC - Form 20-F

- Level 3: Inputs for the asset or liability that are not based on observable market data, or unobservable inputs.

The valuation techniques used to determine the fair value of our hedging instruments are those indicated in level 2.

#### Note 11 - Intangible assets and goodwill (continued)

#### 11.2 Disclosures on intangible assets and goodwill, continued

The estimated useful life for software is 3 years. For other finite useful life assets, the amortization period corresponds to their contractually defined period. Indefinite useful life intangible assets primarily consist of water rights and rights of way, which do not expire.

The minimum and maximum useful lives of intangible assets are as follows:

Estimated useful lives or amortization rate Minimum life or rate Maximum life or rate

| Rights of way and water rights | Indefinite | Indefinite |
|--------------------------------|------------|------------|
| Other intangible assets        | Indefinite | Indefinite |
| Rights of way and water rights | 1 year     | 16 years   |
| Trademarks                     | 1 year     | 5 years    |
| Software                       | 2 years    | 3 years    |

The Company has no internally generated intangible assets.

#### **Note 12 - Property, plant and equipment (continued)**

#### 12.3 Detail of property, plant and equipment pledged as guarantee

There are no title restrictions or guarantees associated with property, plant and equipment.

#### 12.4 Additional Information

1) Leased property, plant and equipment

At December 31, 2012 and 2011, the Company had no leased assets.

2) Interest capitalized in construction in-progress

The cost of capitalized interest is determined by applying the average or weighted average of all financing costs -incurred by the Company to the month end balances of construction in progress. The effective interest rate used to capitalize interest on construction in progress was 7% for the years ended December 31, 2012 and 2011.

For the years ended December 31, 2012 and 2011, capitalized interest amounted to ThUS\$14,156 and ThUS\$22,249, respectively.

#### Note 13 – Employee benefits

| Pension Plan               | 409    | 1,413  | 702    |
| Total                      | 40,896 | 33,684 | 28,710 |

**Note 13 Employee benefits (continued)** 

#### 13.2

#### Policies on employee benefits

Short-term benefits for active employees are represented by salaries, social welfare benefits, paid time-off, sickness, other leaves of absence, profit sharing and incentives, and non-monetary benefits such as healthcare, housing, and subsidized or free goods or services. These benefits will be paid in a term which does not exceed twelve months. The Company only provides compensation and benefits to active employees, with the exemption of SQM North America as described in Note 13.5 below.

Bonuses paid to the Company's employees are disbursement in the first quarter of the following year, which is calculated based on profit for each reporting period in consideration of the employee appraisal process.

Benefits related to vacations are provided in accordance with the Labor Code which indicates that employees with more than a year of service will be entitled to annual holidays for a period not lower than fifteen paid business days per year. The Company provides the benefit of two additional vacation days per year.

Staff severance indemnities represent payments due to employees upon their separation from the Company including for retirement, involuntary and voluntary termination, disability, or death. Actual payments made to employees at the time of separation are calculated based on years of service and a percentage of employees final year's salary as stipulated in established agreements between the Company and its employees and in accordance with local obligations. The Company recognizes a liability for severance indemnities using an actuarial model on an employee by employee basis considering the terms of individual employee contracts.

#### 13.3

#### Other long-term benefits

Other long-term benefits relate to staff severance indemnities and defined benefit pension obligations and are recorded at their actuarial value and consist of the following

> 12/31/2012 12/31/2011 ThUS\$

Staff severance indemnities at actuarial value ThUS\$

| Staff severance indemnities, Chile       | 33,731 | 27,574 |
|--|--------|--------|
| Other obligations in companies elsewhere | 700    | 614    |
| Total other non-current liabilities      | 34,431 | 28,188 |
| SQM North America's pensions plan        | 409    | 1,413  |
| Total post employment obligations        | 409    | 1,413  |

#### Note 13 - Employee benefits (continued)

#### 13.4 Chilean staff severance indemnities

The change in severance indemnities calculated at the actuarial value are as follows:

|                          | 2012     | 2011     |
|--------------------------|----------|----------|
|                          | ThUS\$   | ThUS\$   |
| Opening balance          | (28,188) | (27,208) |
| Current cost of service  | (8,087)  | (7,871)  |
| Interest cost            | (1,037)  | (1,106)  |
| Actuarial gain/loss      | 40       | (151)    |
| Exchange rate difference | (2,237)  | 2,693    |
| Contributions paid       | 5,078    | 5,455    |
| Balance                  | (34,431) | (28,188) |

The liability for staff severance indemnities in accordance with an actuarial model, use the following significant assumptions:

|  | 12/31/201 | 2 | 12/31/201 | 1  |
|--|-----------|---|-----------|----|
| Mortality rate                           | RV - 201  | 1 | RV - 201  | 10 |
| Actual annual interest rate              | 6         | % | 6         | %  |
| Annual voluntary turnover rotation rate: |           |   |           |    |

The methodology followed to determine the accrual for all employees considereds RV-2010 turnover and mortality rates established by the Chilean Superintendence of Securities and Insurance to calculate pension-related life insurance reserves in Chile according to the Accumulated Benefit Valuation or Accrued Cost of Benefit Method, which is an established methodology in IAS 19 Retirement Benefit Costs.

The discount rate of 6% is based on the Company's long-term borrowing rates.

The Company retains the full obligation for the payment of staff severance indemnities upon separation without establishing a separate fund or restriction of assets for payment of such obligations, which is typically referred to as an unfunded plan.

#### **Note 13 - Employee benefits (continued)**

#### 13.5

#### **Defined benefit pension obligations**

SQM North America had a defined pension plan the SQM North America Retirement Income Plan, which was terminated in 2002 and replaced with a 401K plan, that does not generate future obligations to the Company. The obligations under this terminated plan are calculated measuring the expected future forecasted staff severance indemnity obligation using a net salary gradual rate of restatements for inflation, mortality and turnover assumptions discounting the resulting amounts to their present values.

The table below establishes the status of amounts recognized in the Consolidated Statement of Financial Position:

|  | 2012    | 2011    | 2010    |
|--|---------|---------|---------|
|  | ThUS\$  | ThUS\$  | ThUS\$  |
| Variation in projected benefit obligation (liability):                 |         |         |         |
| Benefit liability at the beginning of year                             | 6,620   | 6,548   | 6,972   |
| Cost of service  | 1       | 1       | 1       |
| Interest cost  | 406     | 413     | 427     |
| Actuarial loss   | (236)   | (46)    | (374)   |
| Benefits paid  | (309)   | (297)   | (297)   |
| Benefit obligation (liability) at year-end                             | 6,482   | 6,619   | 6,549   |
| Change in the plan's assets:   |         |         |         |
| Fair value of the plan's assets at beginning of year                   | 5,206   | 5,847   | 5,082   |
| Contributions by the employer  | 436     | 189     | 192     |

| Accrued liability pension plan   | (409)   | (1,413) | (702)   |
| Items not yet recognized as net regular pension-related cost elements: |         |         |         |
| Net actuarial loss at the beginning of year                            | (2,954) | (2,111) | (3,131) |
| Amortization during the period   | 131     | 84      | 155     |
| Net gain or loss during the period                                     | 580     | (927)   | 865     |
| Adjustment made to recognize the minimum pension-related liability     | (2,243) | (2,954) | (2,111) |

#### **Note 13 - Employee benefits (continued)**

The change in the defined benefit obligation over the years is as follows:

|  | 2012<br>ThUS\$ | 2011<br>ThUS\$ | 2010<br>ThUS\$ |
|--|----------------|----------------|----------------|
| Costs or benefits of services earned during the period | 2              | 1              | 1              |
| Cost of interest in benefit liability                  | 406            | 413            | 427            |
| Actual return in plan's assets                         | 739            | (532)          | (869)          |
| Amortization of loss from prior periods                | 131            | 84             | 154            |
| Net gain for the period                                | (344)          | 973            | 492            |
| Net regular pension-related expense                    | 142            | 57             | (205)          |

#### 13.6

#### **Shared based compensation**

The Company maintains a share based compensation plan to encourage retention of its top 40 executives. Individuals receive annual cash payments based on changes in SQM's share price. Compensation for each individual is calculated as the differential between the average prices of the SQM's Series B shares as traded on the Santiago Stock Exchange during April of each year compared to a base price of US\$50 per share. Individuals are awarded a fixed number of shares over a five year vesting period through 2016.

Share based award activities are as following:

| 2012      | 2011   |
|-----------|--|
| 2,340,000 | 3,370,025  |
| 103,500   | -  |
| 103,500   | -  |
| 139,500   | 1,030,025  |
| 2,200,500 | 2,340,000  |
| 40 months | 48 months  |
| US\$57.93 | US\$53.85  |
|           | 2,340,000<br>103,500<br>103,500<br>139,500<br>2,200,500<br>40 months |

Compensation expense under the plan amount to ThUS\$3,142 and ThUS\$11,200 for the years ended December 31, 2012 and 2011, respectively.

Note 14 - Disclosures on equity

#### 14.1 Capital management

The Company's primary capital management object is to administer the financial debt and capital of SQM and its subsidiaries, ensure continuing operations and long term business continuity, ensure financing of new investments in order to maintain steady growth, have an adequate capital structure in accordance with economic cycles that have an impact on the business and the nature of the industry, and maximize the value of SQM and its subsidiaries over the medium the mid and long term.

Capital management adheres to the limits specified in the Financial Policy approved at the General Ordinary Shareholders Meeting, which established a maximum level of consolidated leverage of 1.5 times equity. This limit can only be exceeded to the extent that Management has previously been granted express authorization at the previous Shareholders Meeting.

Additionally, capital management must meet external capital requirements (or covenants) established in SQM's financial obligations, which regulates the debt limit to 1.4 times equity.

Together with the overall debt level the Company seeks to maintain a reasonable maturity profile of its financial obligations, ensure financial ratios between short-term and long-term maturities, and the relationship they maintain with the distribution of the Company's assets. Consequently, the Company has maintained in recent periods current ratio levels in exess of 3.0.

| Leverage                           | 1.02       | 1.08      | Total Liability divided by Equity   | Total Liabilities / Total Equity   |

<sup>(1)</sup> Assumes absolute value of various accounts

The Company's capital requirements vary depending on: working capital requirements, financing of new investments and dividends, among others. SQM manages its capital structure and makes adjustments based on prevailing economic conditions, in order to mitigate the risks associated with adverse market conditions and to take advantage of opportunities to improve overall liquidity.

There have been no changes in the capital management objectives or policies within the years covered by these consolidated financial statements.

During the years ended December 31, 2012 and 2011 the Company did not issue any new shares.

#### **Note 14 - Disclosures on equity (continued)**

#### 14.4 Disclosures on reserves in equity

#### Reserves for currency exchange conversion

This balance reflects retained earnings for changes due to the translation of subsidiaries financial statements into U.S. Dollars.

#### Reserve for cash flow hedges

This balance reflects changes in the fair value of derivative financial instruments classified as hedging changes in cash flows associated with UF-and Chilean Peso-denominated debt obligations.

#### Reserve for actuarial gains or losses in defined benefit plans

This balance reflects changes in the actuarial gains and losses in the calculation of defined benefit obligations, refer to Note 13.5.

#### Other reserves

Other reserves correspond to the acquisition of the remaining interest in SQM Iberian S.A., which was already controlled by the Company upon the acquisition date of the additional interest.

Changes in these reserves consist of the following:

|  | 12/31/2012 | 12/31/2011 | 12/31/2010 |
|--|------------|------------|------------|
|  | ThUS\$     | ThUS\$     | ThUS\$     |
| Reserve for currency exchange conversion                       | (330       | (1,251)    | 1,530      |
| Reserve for cash flow hedge                                    | (16,522)   | (10,230)   | (9,207)    |
| Reserve for actuarial gains or losses in defined benefit plans | (2,243)    | (2,954)    | (2,036)    |
| Other reserves   | (1,677)    | (1,677)    | -          |

Total other reserves (20,772 ) (16,112 ) (9,713 )

#### **Note 14 - Disclosures on equity (continued)**

#### 14.5 Dividend policies

As required by Article 79 of the Chilean Companies Act, the Company is required to distribute a cash dividend in an amount equal to at least 30% of its consolidated profit for the period for year unless and except to the extent it has a deficit in retained earnings (losses not absorbed in prior years), or as otherwise determined by a unanimous vote of shareholders.

The dividend policy defined by the Shareholders' General Meeting is:

Distribution and payment in favor of each shareholder of a final dividend which will be equivalent to 50% of profit for the period.

Distribution and payment, if possible during the year, of a provisional dividend which will be recorded against the aforementioned final dividend, This provisional dividend will normally be paid during the last quarter of the year and its amount can not exceed 50% of the retained earnings for distribution obtained during the year, which are reflected in the Company's financial statements as of September 30 of each year.

The distribution and payment by the Company of the remaining balance of the final dividend related to profit for the year in up to two installments, which must be paid prior to June 30 of the following year.

An amount equivalent to the remaining 50% of the Company's profit for the year will be retained and used to finance -operations and one or more of the Company's investment projects with no prejudice of the possible future capitalization of this investment.

- The Board of Directors does not consider the payment of any additional or interim dividends.
- The application of the Company's dividend policy is dependent upon final profit for the year, and in future, to the Company's regular forecasts and the existence of conditions or events that could affect them. Any significant change in the Company's dividend policy or in events and conditions that may affect the Company's dividend policy will be timely communicated to all shareholders.

#### 14.6 Provisional dividends

On November 20, 2012, the Company reported to the SVS, that the Company's Board of Directors agreed to pay and distribute a provisional dividend of approximately US\$0.94986 per share. The dividend was paid on December 12, 2012 from accumulated profits during the first nine months of 2012, in favor of all Shareholders registered in SQM Shareholders Register as of December 5, 2012. The dividend was paid in equivalent Chilean Pesos, based on U.S. Dollar exchange rate as published in the Official Gazette on December 5, 2012.

#### **Note 14 - Disclosures on equity (continued)**

On April 26, 2012, in the Thirty-Seventh General Ordinary Shareholders' Meeting, the payment of a definite dividend of US\$1,03679 per share was approved because of the net profit obtained during the 2011's commercial exercise, to that dividend, should be discounted US\$0.73329 per share that has already been paid on account of provisory dividend and the remainder, then amounting to US\$0.30350 per share, will be paid and distributed in favor of SQM's shareholders who are registered in the corresponding Record, during the fifth working day before the date when this will be paid, such last amount, in case that correspond, will be paid in its equivalent in CLP (Chilean Peso) according to the value of "Dólar Observado" or "U.S. Dollar" published in the Official Gazette of April 26, 2012.

On November 22, 2011, it was reported to the Superintendence of Securities and Insurance that the Board of Directors of Sociedad Química y Minera de Chile S.A., in its meeting on November 22, 2011, unanimously agreed to pay and distribute the provisional dividend referred to in SQM's current "2011 Dividends Policy" which was informed to SQM's General Annual Ordinary Shareholders Meeting that was held on April 28 of this year, this, for the essential purpose of being able to pay and distribute as of December 19, 2011, a provisional dividend of US\$0.73329 per share –and which is approximately equivalent to the total amount of US\$193 million and the latter corresponds to 50% of the distributable net income of the fiscal year 2011 that has been accrued at September 30, 2011, the above, is charged against the net income of said fiscal year, in favor of the Shareholders who appeared registered in SQM's Shareholders Registry by the 5 working day prior to December 19, 2011, and in its equivalent in Chilean pesos according to the value of the "Observed dollar" or "USA dollar" that appears published in the Official Gazette on December 13, 2011.

At the Annual Board of Directors meeting held on April 28, 2011, the Directors unanimously agreed to pay a final dividend of US\$0.7259 per share in relation to net profit for the year, notwithstanding the above, US\$0.41794 per share was already paid as an interim dividend, and this amount should be subtracted from the final dividend detailed above, line with this, the balance, amounting to US\$0.30798 per share, will be paid and distributed among shareholders of the Company who are registered with their respective shareholders registry as of the fifth business day prior to the day in which this dividend will be paid.

Dividends presented deducted from equity are:

|   | 12/31/2012 | 12/31/2011 | 12/31/2010 |
|---|------------|------------|------------|
|   | ThUS\$     | ThUS\$     | ThUS\$     |
| Dividends attributable to controlling interests | 253,438    | 270,915    | 173,527    |
| Dividends payable                               | 76,267     | 82,120     | 5,831      |

Defendant : Vladimir Roco Alvarez, Compass Catering S.A. y SQM S.A.

Date : August 2012

Court :1st Civil Court Antofagasta

Reason : Damages related to attempted sexual abuse

Status : Answer to the complaint

Claim amount: ThUS\$200

The Company has only registered a provision for estimated losses in those lawsuits described above in which the probability of loss is considered to be more likely than not.

The Company and its subsidiaries have been involved and will likely continue to be involved either as plaintiffs or defendants in certain judicial proceedings that have been and will be heard by the Arbitral or Ordinary Courts of Justice who will make the final decision. Those proceedings governed by the appropriate legal regulations are

intended to exercise or oppose certain actions or exceptions related to specific mining claims either granted or to be granted and that do not or will not have an adverse affect on the development of the Company and its subsidiaries.

#### **Note 16 - Contingencies and restrictions (continued)**

#### 16.1 Lawsuits and other relevant events, continued

Soquimich Comercial S.A. has been involved and will probably continue being involved either as plaintiff or defendant in certain judicial proceedings through which it intends to collect and receive the amounts owed, the total claim value of which is approximately ThUS\$700.

The Company has made efforts and continues making efforts to obtain payment of certain amounts that are still owed. Such amounts will continue required using judicial or non-judicial means by the plaintiffs, until the actions and exercise related to these actions are currently in full force and effect.

The Company and its subsidiaries have not received legal notice of any claims other than those mentioned above. The claims detailed above seek to annul certain mining claims that were purchased by SQM and it subsidiaries, the proportional purchase value of which, with respect to the portion affected by the superimposition, exceeds the nominal and approximate amount of ThUS\$150. The claims seek payment of certain amounts allegedly owed by the Company due to its own activities, which exceed the approximate, nominal and individual amount of ThUS\$150.

#### 16.2 Restrictions to the management or financial limits

Credit Agreements executed by the Company and its subsidiaries with national and foreign banks and international bonds outstanding, require the Company comply with the following consolidated financial ratios:

- Maintain a minimum Net Worth of ThUS\$900,000.
- Maintain a Net Financial Debt to EBITDA ratio no greater than 3.00:1.00.
  - Maintain a Leverage ratio no greater than 1.40:1.00.

Maintain an Operating Subsidiaries' Interest Indebtedness ratio, defined as the sum of SQM Salar S.A. and SQM Industrial S.A. financial debt over Total Current Assets, no greater than 0.30:1.00.

The calculated ratios mentioned above are as follows:

| Indicator  | 12/31/2012 | 12/31/2011 |
|--|------------|------------|
| Net Worth ThUS\$                                 | 2,187,446  | 1,864,380  |
| Net Financial Debt/EBITDA                        | 0.83       | 0.79       |
| Leverage   | 1.02       | 1.08       |
| Debt SQM Industrial and SQM Salar/Current Assets | 0.04       | 0.05       |

#### **Note 16 - Contingencies and restrictions (continued)**

Covenants included in notes issued outside of Chile require that the Company will not consolidate with or merge into any other entity or convey or substantially transfer its properties and assets to another entity, unless (i) the successor entity will be an enity existing under the laws of the United States (or any State thereof or the District of Columbia) or Chile and will assume, by a supplemental indenture, the due and punctual payment of the principal, premium, if any related, and interest in respect of all the outstanding notes and the performance of every covenant in the indenture on the part of the Company to be performed or observed, (ii) immediately after giving effect to such transaction, no event of default, and no event which, after notice or lapse of time, or both, would become an event of default, will have happened and be continuing; and (iii) the Company will have delivered to the Trustee an officer's certificate and opinion of counsel stating that such consolidation, merger, conveyance or transfer and such supplemental indenture comply with the foregoing provisions relating to such transaction. In case of any such consolidation, merger conveyance or transfer (other than a lease), such successor entity will succeed to and be substituted for the Company as obligor on the notes, with the same effect as if it had been named in the Indenture as such obligor.

In addition, SQM is required to provide quarterly financial information.

The Company and its subsidiaries are in full compliance with all limitations, restrictions and obligations mentioned above.

#### 16.3 Commitments

The SQM Salar S.A. entered into a royalty agreement with the CORFO which requires annual payments to CORFO for the commercialization of certain mining properties owned by CORFO and the related products produced from these mining properties. Annual royalties are calculated based on the sales of each type of product. The contract expires in 2030. Royalties amounted to ThUS\$27,193 and ThUS\$23,951 for the years ended December 31, 2012 and 2011, respectively.

#### 16.4 Restricted or pledged cash

Isapre Norte Grande Ltda, in compliance with requirements established by the Chilean Superintendence of Healthcare, which regulates the running of pension-related health institutions, maintains a guarantee of financial instruments, delivered in the form of deposits, in the custody and administration of Banco de Chile. This guarantee, according to

the regulations issued by the Chilean Superintendence of Healthcare is the equivalent of the total amounts owed to its members and medical providers. Banco de Chile reports the present value of the guarantee to the Chilean Superintendence of Healthcare and Isapre Norte Grande Ltda, on a daily basis. As of December 31, 2012 and 2011, the guarantee amounted to ThUS\$571 and ThUS\$428, respectively.

## **Note 16 - Contingencies and restrictions (continued)**

## 16.5 Securities obtained from third parties

Security received from third parties (distributors) to guarantee Soquimich Comercial S.A.'s compliance with contractual obligations derived from the distribution and sale of fertilizers amounted to ThUS\$4,126 and ThUS\$4,467 as of December 31, 2012 and 2011, respectively. The following entities have provided securities:

| T. co                          | 12/31/2012 | 12/31/2011 |  |
|--------------------------------|------------|------------|--|
| Entity name                    | ThUS\$     | ThUS\$     |  |

## Note 17 - Earnings per Share

Basic earnings per share are calculated by dividing net income attributable to the Company's shareholders by the weighted average of the number of shares outstanding during that period,

As expressed, earnings per share are detailed as follows:

| Basic earnings per share                      | 12/31/2012<br>ThUS\$ | 12/31/2011<br>ThUS\$ | 12/31/2010<br>ThUS\$ |
|---|----------------------|----------------------|----------------------|
| Earnings attributable to owners of the parent | 649,167              | 545,758              | 382,122              |
| Number of common shares in circulation        | 263,196,524          | 263,196,524          | 263,196,524          |
| Basic earnings per share (US\$ per share)     | 2.47                 | 2.07                 | 1.45                 |

The Company has not entered into any operation or issued any securities or financial instruments with a potential dilutive effect. Therefore diluted earnings per share is the same as basic earnings per share.

## Note 18 - Effect of fluctuations on the foreign currency exchange rates

# a) Foreign currency exchange differences recognized in profit or loss except for financial instruments measured at fair value through profit or loss:

|  | 12/31/2012 | 12/31/2011 | 12/31/2010 |
|--|------------|------------|------------|
|  | ThUS\$     | ThUS\$     | ThUS\$     |
| Conversion foreign exchange gains (losses) recognized in the result of the year Conversion of foreign exchange reserves attributable to the owners of the controlling entity | (26,787 )  | (25,307 )  | (5,807 )   |
|  | 921        | (2,781 )   | 296        |
| Conversion of foreign exchange reserves attributable to the non-controlling entity   | 61         | (109)      | 367        |

## b) Reserves for foreign currency exchange differences:

Foreign currency exchange differences are detailed as follows:

| Detail   | 12/31/2012 | 12/31/2011 | 12/31/2010 |

# c) Functional and presentation currency

The functional currency in these companies corresponds to the currency of the country of origin of each entity, and its presentation currency is the U.S. Dollar.

## Note 18 - Effect of fluctuations on the foreign currency exchange rates (continued)

- d) Reasons to use one presentation currency and a different functional currency
- -The total revenues of these subsidiaries are associated with the local currency.
  - The commercialization cost structure of these companies is affected by the local currency.
  - The equities of these companies are expressed in local currency (Chilean peso).

Note 19 - Environment

19.1 Disclosures of disbursements related to the environment

The Company is concerned with protecting the environment both in its production processes and with respect to products manufactured. This commitment is supported by the principles indicated in the Company's Sustainable Development Policy. The Company is currently operating under an Environmental Management System (EMS) that has allowed it to strengthen its environmental performance through the effective application of the Company's Sustainable Development Policy.

Operations that use caliche as a raw material are carried out in desert areas with climatic conditions that are favorable for drying solids and evaporating liquids using solar energy. Operations involving the open-pit extraction of minerals, due to their low waste-to-mineral ratio, generate remaining deposits that slightly alter the environment. A portion of the ore extracted is crushed, a process in which the emission of particulates. Currently this operation is only conducted at the Company's Pedro de Valdivia operations.

Many of the Company's products are shipped in bulk at the Port of Tocopilla, Chile. In 2007, the city of Tocopilla was declared a zone saturated with MP10 particles mainly due to the emissions from electric power plants that operate in that city. In October 2010 the Decontamination Plan for Tocopilla was put in place. Accordingly, the Company has committed to taking several measures to mitigate the effects derived from bulk product movements in the port. These measures have been successfully implemented since 2007.

The Company carries out environmental monitoring plans based on specialized scientific studies, Within this context, the Company entered into a contract with the National Forestry Corporation (CONAF) aimed at researching the activities of flamingo groups that live in the Salar de Atacama lagoons. Such research includes a population count of the birds, as well as breeding research. Environmental monitoring activities carried out by the Company at the Salar de Atacama and other systems in which it operates are supported by a number of studies that have integrated diverse scientific efforts from prestigious research centers, including Dictuc from the Pontificia Universidad Católica in Santiago and the School of Agricultural Science of the Universidad de Chile.

Note 19 - Environment (continued)

19.1 Disclosures of disbursements related to the environment (continued)

Furthermore, within the framework of the environmental studies that the Company is conducting, the Company performs significant activities in relation to the recording of Pre-Columbian and historical cultural heritage, as well as the protection of heritage sites, in accordance with current Chilean laws. These activities have been specifically performed in the areas surrounding our Maria Elena and Nueva Victoria plants. This effort is being accompanied by cultural initiatives within the community and the organization of exhibits in local and regional museums.

As emphasized in its Sustainable Development Policy, the Company strives to maintain positive relationships with the communities surrounding the locations in which it carries out its operations, as well as to participate in communities' development by supporting joint projects and activities which help to improve the quality of life for residents. For this purpose, the Company has focused its efforts on activities involving the rescue of historical heritage, education and culture, as well as development, and in order to do so, it acts both individually and in conjunction with private and public entities.

19.2 Detail of information on disbursements related to the environment

Cumulative disbursements as of December 31, 2012 in related to investments in production processes, verification and control of compliance with environmental ordinances and laws relative to industrial processes and facilities, amounted to ThUS\$23.207 and are detailed as follows:

Note 19 - Environment (continued)

19.3 Description of each project, indicating whether they are in process or have been completed

#### **SQM Industrial S.A.**

**IQ8G:** Improvement of restrooms, expanding their capacity, and improving water storage. The project is in process.

**JQEZ:** Purchasing and installing Bertrams Boilers in Coya Sur Prill in order to improve the level of combustion, and decreasing and controlling the emission of fumes into the environment. The project is in process.

**JQH9:** Purchasing Bertram's boilers in order to improve the combustion levels, decreasing and controlling the emission of fumes to the environment. The project is in process.

**MNYS:** Preparation and execution of geoglyphs conservation; editing and publishing a related book, implementing a learning center, and construction of a collection deposit. These are compensation measures of the Technological Change Maria Elena project. The project is in process.

**MP5W:** Normalization of fuel storage and distribution system in SQM installations. The project is in process.

**MPQU:** Construction of warehouses for dangerous chemicals in order to comply with current regulations and decrease the chance of high risk accidents.

**MQ8M:** Performing maintenance to structures and closing monitoring stations in Maria Elena. The project is in process.

**MQA8:** Standardization of the gas network in peripheral casinos; stage 1: projects include: CS, Lagarto, Yodo, PV, Toco and Rancho 6. The project is in process.

**MQAJ:** Improving the water and sewer network in Maria Elena to improve operations. The project is in process.

**MQBM:** Implementing archeological measures in Maria Elena – Toco site, such as the archeological registry, analysis of lithic materials, and generating reports, among others. The project is in process.

**MQHF**: To equip a sewage plant in Toco according to DS 594, including a changing room for operators and contractors, among other improvements. The project is in process.

**MQK2:** Decontaminating equipment and other items contaminated with PCBs in accordance with applicable regulations. The project is in process.

**PPC1:** Purchasing and replacing equipment contaminated with PCB and obsolete equipment without spare parts. The project is in process.

#### **Note 19 - Environment (continued)**

**PPNK:** Control of the ammonia gas in the crystal plant stoppage. The project is in process.

**PPZU:** Normalize and certify fuel tanks in the María Elena, Coya Sur and Pedro de Valdivia plants. The project is in process.

**SQ7X:** Obtaining and recording information of components and finished products of SQM in the ECHA database to comply with the requirements of REACH regulation of the European Union. The project is in process.

**TQA2:** Improving the Villa Prat sewage system. The project is in process.

**CQLX:** Construction in each place a field of approximately 145 m<sup>2</sup>. The project is in process.

**JOL7:** Improve product recovery and to control emissions. The Project is in process.

**JQ8K:** Building a new drying plant in Coya Sur. The project is in process.

**FP55** – **FPXA:** These 2 projects have a final objective consisting in the installation of a sea water sucking system of 87 km from the Mejillones area to the SQM facilities located in Pampa Blanca. The projected expenses correspond only to the filing of the EIA of the PB mine zone and the EIA of the PB expansion. Both projects are in process.

**JQB6:** Preparation and filing of the EID of project NPT4 of Coya Sur, which increases the salt production capacity. The project is in process.

**PQLV**: Elaboration of the DIA Pedro de Valdivia Mine. The project is in process.

SOM S.A.

**AQ0A:** To enable the use of water rights granted in several wells in the Conaf Pampa del Tamarugal reservation and to move them outside of the Tamarugo Forest and the reservation to reduce the environmental impact of its development. The project is in process.

**IPFT:** Implementing measures committed in various projects related to the Nueva Victoria mine, and updating Nueva Victoria's operations, including evaporation ponds in the Iris. The project is in process.

**IPXE:** To implement the environment follow-up plan of Project Pampa Hermosa in Salar de Llamara. The project is in process.

**IPXF:** To implement the environment follow-up of plan of Project Pampa Hermosa in Pampa del Tamarugal. The project is in process.

**IQ08:** Various projects associated with water reservoirs in Pampa del Tamarugal and Salar de Llamara, including constructing and enabling observation and monitoring wells, pumping tests, and construction of roads over the hard sand terrain of the Salar crust. The project is in process.

#### **Note 19 - Environment (continued)**

**IQ0C:** Improving the area adjacent to Route 5, enabling the development of a self-guided tour of the Cantón de Lagunas area to understand the Salar's history. The project has been completed.

**IQ1K:** Construction of the observation wells in Sur Viejo to comply with the environmental commitments proposed in the EIS of Pampa Hermosa and to be able to monitor the water reservoir adjacent to these wells. The project has been completed.

**IQ1M:** To implement various environmental commitments included in the EIS project "Pampa Hermosa" to safeguard the puquíos zone that is in the Salar de Llamara water reservoir. The project is in process.

**IQ3S:** Improving the storage installations of dangerous raw materials in Nueva Victoria. The project is in process.

**IQ52:** Enabling and expansion of environment offices in Nueva Victoria. The project is in process.

**IQ53:** To perform a survey for the new location of the Soronal abduction trace in Project Pampa Hermosa (RCA  $N^{\circ}$  890/2010). The project is in process.

**IQ54:** Implementing various environmental commitments acquired through the environment assessment of the project Pampa Hermosa (RCA N°890/2010). The project is in process.

**IQ9V:** To support the development of agriculture and tourism industries in the location of Quillagua, through productive measures, technical assistance and marketing. The project is in process.

**PQB9:** Installing two larger SO2 extractors at the end of the process. The project is in process.

**IQLR:** Updaing the design, implementation and operation of mitigation measures in the puquíos at Salar Llamara. The project is in progress.

**MQLQ:** Design and implement a fumes scrubbing system to mitigate SO2 emissions, aligned with our Sustainable Development Policy. The project is in progress.

**IQ6M – IQ6N:** Preparation and filing of the EID of the Project "Nueva Victoria Mine Expansion." The projected expenses only include filing the EID. The project is in process.

**IP83:** Preparation and filing of the EID of the Project "Extension TLN-15". The projected expenses only include the environment document filing. The project is in process.

**IQOW**: Enable a heritage interest deposit in Humberstone Historic Saltpeter Office to store materials of cultural interest recovered in the site from project under execution ZMNV.

**IQPJ:** The project consists of the implementation of the cultural measures compromised in the Environmental Evaluation for the mining areas. The measures will be implemented depending on the requirements of the Mining Operation of the VPONV, project in execution.

**Note 19 - Environment (continued)** 

SQM Salar S.A.

**LQFD:** Construction of exchange offices for the comfort for our employees. The project is in process.

**LQG8:** Increase the capacity of the garbage facilities at the Toconao Camp to avoid problems associated with gathering and handling garbage. The project is in process.

**LQ38:** Compliance with the current regulations and observations raised by SEREMI. The project is in process.

**LQAK:** Construction of garbage facilities in the MOP and SOP lunchrooms to increase waste capacity. The project is in process.

**CQ4M:** Regulating electrical facilities including changing of cables, and electric and illumination control panels, as well as installing restrooms with showers for permanent contractor personnel. The project is in process.

#### Notes to the consolidated financial statements as of December 31 2012

**CQ8U:** Improving the condition and capacity of the exchange rooms in Salar del Carmen. The project is in process.

**LP82:** Support development of demonstration fields and provide technical assistance agriculture improvements such as watering practices. The project is in process.

**LPTF:** Perform required semi-annual reports to present improvements and optimizations at environmental control points, and the knowledge of improvements in geologic and hydrogeologic variables near Salar de Atacama. The project is in process.

**LPTJ**: Acquisition of equipment to ensure the operating continuity of the TAS and OR plants, the change in the current control system of TK's drinking water, wastewater, and wastewater elevation chambers. The project has been completed.

**LQDM:** Certification of the liquid fuel storage tanks. The project is in process.

**LQI6:** Elaboration and update of our EIA associated with operations in the Atacama Salt Deposit. The project is in process.

**LQNI:** Elaboration and document application for the DIA of the project "Drying and compacting KCl facility expansion". The considered expenses, only includes the environmental mitigation costs. The project is under execution.

#### SIT S.A.

**TQNA:** Installation of a meteorology station in order to measure the speed and direction of wind in the south sector of Tocopilla to comply with commitments made to local authorities. The project is in process.

**MQ6Y:** To maintain and repair the Bureau of Exchange in María Elena and Tocopilla to comply with Decree No. 594. The project is in its completion stage.

#### **Note 19 - Environment (continued)**

**TPR8**: Reduce the generation of industrial waste through the use of vacuum and no-washing technologies through implementing a vacuum system that avoids the use of water and therefore the generation of liquid industrial waste. The project is in process.

**TPYX:** To comply with commitments to decrease emissions of particulate material towards the city of Tocopilla. The project is in process.

**TQAP:** To decrease the environmental pollution and product losses associated with product storage. The project is in process.

**TQAV:** Paving and maintenance of internal roads at the port of Tocopilla to decrease pollution and to comply with the Supreme Decree related to the local saturated zone. The project is in process.

**TQM2:** Recovering operating conditions through modification to the duct yard  $N^{\circ}1$ , thus being able to diminish the environmental pollution. The project is in process.

**TQLY:** Eliminate the possible ambient contamination that may exist in working areas. The project is in process.

**TQQ5:** This project will reduce emissions of particulate matter, and minimize the environmental impact in neighboring communities. This project is under commission.

#### **SQM POTASIO S.A.**

**IQ4C:** Supply, construction and assembly of osmosis and septic wells and related plant at the Iris camp. The project is in its completion stage.

#### **SQM Nitratos S.A.**

**PQI9:** Construct new wells to replace the current ones with a modern waste water treatment technology. The project is in process.

#### Notes to the consolidated financial statements as of December 31 2012

**IQMH:** Creating storage area for dangerous substances. The project is in process.

**IQDN**: Building a parapet to form a squared or rectangular pool with an impermeable membrane covering in order to be used as mud deposit. The project is in process.

Note 20 - Other current and non-current non-financial assets

The detail of other current and non-current assets consists of the following:

|                                     | 12/31/2012 | 12/31/2011 |
|-------------------------------------|------------|------------|
| Other non-financial assets, current | ThUS\$     | ThUS\$     |
| Domestic Value Added Tax            | 42,136     | 46,243     |
| Foreign Value Added Tax             | 9,306      | 5,879      |
| Prepaid mining licenses             | 1,512      | 1,228      |
| Prepaid insurance                   | 8,278      | 6,979      |
| Other prepayments                   | 494        | 236        |
| Other assets                        | 6,094      | 3,227      |
| Total                               | 67,820     | 63,792     |

|   | 12/31/2012 | 12/31/2011 |
|---|------------|------------|
| Other non-financial assets, non-current | ThUS\$     | ThUS\$     |
| Exploration and evaluation expenses (1) | 16,839     | 21,395     |
| Guarantee deposits                      | 571        | 428        |
| Other assets                            | 272        | 2,829      |
| Total                                   | 17,682     | 24,652     |

Assets for the exploration or evaluation of mineral resources are amortized to the extent that the explored or evaluated area has been exploited. Amortization is based on a variable rate applied to extracted tons determined through measured mineral reserves and exploration costs. Capitalized expenses under current development are reclassified to inventory and are amortized according to the estimated ore reserves. Expenses associated with future economically producible reserves are presented under Other non-current assets. Those expenses incurred on properties with an ore grade that is not economical are directly charged to profit and loss. Amounts associated with the exploration and assessment of mineral resources presented under inventory are ThUS\$6,174 and ThUS\$3,699 as of December 31, 2012 and 2011, respectively.

Note 20 - Other current and non-current non-financial assets (continued)

#### - Reconciliation of changes in assets for exploration and mineral resource evaluation, by type

The change in exploration and evaluation assets consists of the following:

| Reconciliation   | 12/31/2012<br>ThUS\$    |   | 12/31/2011<br>ThUS\$      |   |
|--|-------------------------|---|---------------------------|---|
| Balance as of<br>January 1   | 21,395                  |   | 21,350                    |   |
| Additions Depreciation and amortization Transfers and other charges            | 843<br>(2,080<br>(3,319 | ) | 3,777<br>(1,883<br>(1,849 | ) |
| Assets for exploration and assessment of mineral resources, net, final balance | 16,839                  |   | 21,395                    |   |

#### Note 21 - Operating segments

## 21.1 Operating segments

#### **General information**

Amounts disclosed in each operating segment is the same as that reported to the CODM for purposes of allocating resources and assessing performance. Each segment represents a strategic business unit that offers distinct products and services. Each segment is managed separately as each business requires different technologies and marketing strategies.

Information related to assets and liabilities, and income and expenses that cannot be assigned to a specific segment is included under the "Corporate Unit." The CODM assesses performance of the operating segments based on gross profit and net income without any specific adjustments.

Sales between segments are carried out at arm's length under similar terms and conditions as those made to third parties. Revenues from third parties is reported to the CODM in a manner consistent with that in the Statement of Income.

Assets and liabilities are not disclosed by segments as this information is not easily available, certain assets can not be separable as to their specific activity, and because this information is not used by the CODM. All assets and liabilities are disclosed in the category "amounts not assigned."

## **Note 21 - Operating segments (continued)**

# 21.2 Information on operating segments as of December 31, 2012 as of December 31, 2011 and December 31, 2010:

| 1 | 21 | '3 | 1/ | 2 | U | 1 | 2 |

**Note 21 - Operating segments (continued)** 

#### 21.5 Information about geographic areas

The Company disclose geographic information of its income from regular activities from external clients and for assets excluding financial instruments, assets associated with income taxes, assets associated with employee benefits and rights derived from insurance contracts.

#### 21.6 Information on main customers

The Company has no external customers who individually represent 10% or more of consolidated revenues or accounts receivable. Concentration of credit risk associated with trade and other accounts receivable is limited due to the significant number of customers in the Company's portfolio and its worldwide distribution.

This table corresponds to the summary from Note 22.2 to 22.6 required by the SVS.

#### Note 23 - Income Tax and Deferred Taxes

#### 23.1 Current tax assets:

|   | 12/31/2012 | 12/31/2011 |
|---|------------|------------|
|   | ThUS\$     | ThUS\$     |
| Monthly provisional income tax payments, Chilean companies current year | 23,713     | 1,758      |
| Monthly provisional income tax payments, Chilean companies prior year   | 2,430      | -          |
| Monthly provisional income tax payments, foreign companies              | 1,979      | 857        |
| Corporate tax credits (1)   | 144        | 394        |
| Corporate tax absorbed by tax losses (2)                                | 1,968      | 1,756      |
| Total   | 30,234     | 4,765      |

These credits correspond to corporate tax payment made in April of the following year. These credits include, amongst others, training expense credits (SENCE) and property, plant and equipment acquisition credits that are equivalent to 4% of the property, plant and equipment purchases made during the year. In addition, some credits relate to donations the Company has made during 2012 and 2011.

(2) Generation of non-operating losses (NOL's), which must be imputed or recorded in the Retained Taxable Profits Registry (FUT).

In accordance with the laws in force and as provided by article 31, No. 3 of the Income Tax Law, when profits are recorded in the FUT that have not been withdrawn or distributed are totally or partially absorbed by NOL's, the corporate tax paid on such profits (20%, 17%, 16,5%, 16%, 15%, 10% depending on the year in which profits were generated) will be considered to be a provisional payment with respect to the portion representing the absorbed accumulated tax profits.

#### **Note 23 - Income Tax and Deferred Taxes (continued)**

#### 23.1 Current tax assets, continued

Taxpayers are entitled to apply for a refund of this monthly provisional income tax payments on the absorbed profits recorded in the FUT registry via their tax returns (Form 22).

Therefore, the provisional payment for absorbed profits (PPAP) recorded in the FUT is in effect a recoverable tax, and as such the Company records it as an asset.

#### 23.2 Current tax liabilities:

| Current tax liabilities         | 12/31/2012 | 12/31/2011 |
|---------------------------------|------------|------------|
|                                 | ThUS\$     | ThUS\$     |
| Companies incorporated in Chile | 13,408     | 67,543     |
| Companies incorporated abroad   | 10,206     | 7,868      |
| Tax under article 21            | 10         | 7          |
| Total                           | 23,624     | 75,418     |

Income tax is determined based on the Chilean fiscal rate applied, and as per Act 20,630, was fixed at 20% beginning with the fiscal year ending December 31, 2012. The provision for royalty is determined by applying the tax rate determined for net operating income (NOI). Both concepts represent the estimated amount the Company will pay for income tax and specific tax on mining activities.

#### 23.3 Tax earnings

The Company and its subsidiaries have recorded the following consolidated balances for retained tax earnings, income not constituting revenue subject to income tax, accumulated tax losses and credit for shareholders:

12/31/2012 12/31/2011 12/31/2010 ThUS\$ ThUS\$ ThUS\$

| Taxable profits with credit rights (1)    | 1,262,201 | 1,053,651 | 602,536 |
|---|-----------|-----------|---------|
| Taxable profits without credit rights (1) | 138,535   | 150,234   | 86,920  |
| Taxable loss                              | 9,931     | 15,069    | 21,630  |
| Credit for shareholders                   | 294,146   | 242,143   | 123,322 |

**Note 23 - Income Tax and Deferred Taxes (continued)** 

#### 23.3 Tax earnings, continued

The FUT is a chronological registry where the profits generated and distributed by the Company are recorded. The object of the FUT is to control the accumulated tax profits of the Company that may be distributed, withdrawn or (1) remitted to the owners, shareholders or partners, and the final taxes that must be imposed, thereon called in Chile Global Aggregate Tax (that is levied on persons resident or domiciled in Chile), or Withholding Tax (that is levied on non resident persons).

The FUT Register contains profits with credit rights and profits without credit rights, which arise out of the inclusion of the net taxable income determined by the Company or the profits received by the Company that may be dividends received or withdrawals made during the period. Profits without credit rights represent tax payable by the Company within the year and filed the following year, therefore they will be deducted from the FUT Registry the following year. Profits with credit rights may be used to reduce the final tax burden of owners, shareholders or partners, which upon withdrawal are entitled to use the credits associated with the relevant profits. In summary, companies using the FUT Registry to maintain control over their profits that have not been distributed to the owners and the relevant credits associated with such profits.

#### 23.4 Income tax and deferred taxes

Assets and liabilities recognized in the Statement of Financial Position are offset if and only if:

1 The Company has legally recognized before the tax authority the right to offset the amounts recognized in these entries; and

Deferred income tax assets and liabilities are derived from income tax related to the same tax authority on the same entity or tax subject; or different entities or tax subjects who intend either to settle current fiscal assets and liabilities for their net amount, or to realize assets and pay liabilities simultaneously in each of the future periods in which the Company expects to settle or recover significant amounts of deferred tax assets or liabilities.

Deferred income tax assets recognized are those income taxes to be recovered in future periods, related to:

| (a) deductible temporary differences;  |
|--|
| (b) the offset of losses obtained in prior periods and not yet subject to tax deduction; and   |
| (c) the offset of unused credits from prior periods.   |
| The Company recognizes a deferred tax asset when there is certainty that these can be offset with tax income from subsequent periods, losses or fiscal credits not yet used, but solely as long as it is more likely than not that there wil be tax earnings in the future against which to charge to these losses or unused fiscal credits. |
| Note 23 - Income Tax and Deferred Taxes (continued)  |
| Deferred tax liabilities recognized refer to the amounts of income taxes payable in future periods related to taxable temporary differences.   |
| d.1 Deferred income tax assets and liabilities net as of December 31, 2012 are detailed as follows:  |
| F-168  |
|  |
|  |

| Description of deferred income tax assets and   | Assets | Liabilities <sup>3</sup> | * |
|---|--------|--------------------------|---|
| liabilities                                     | ThUS\$ | ThUS\$                   |   |

| Balances to date   | 125,222   | 98,290  |   |

Disclosures of income tax expense (income)

The Company recognizes current tax and deferred taxes as income or expenses, and they are included in profit or loss, unless they arise from:

- (a) a transaction or event recognized in the same period or in a different period, outside profit or loss either in other comprehensive income or directly in equity; or
- (b) a business combination.

## Note 23 - Income Tax and Deferred Taxes (continued)

#### **Note 23 - Income Tax and Deferred Taxes (continued)**

#### 23.4 Income tax and deferred taxes, continued

The Company does not recognize any deferred tax liability in cases of taxable temporary differences associated with investments in associated companies or interest in joint ventures, because the following two conditions are jointly met:

- (a) the parent, investor or interest holder is able to control the time for reversal of the temporary difference; and
  - (b) It is more likely than not that the temporary difference is not reversed in the foreseeable future.

In addition, the Company does not recognize deferred income tax assets for all deductible temporary differences from investments in associated companies or interests in joint ventures because it is not possible to meet for the following requirements:

- (a) Temporary differences are reversed in a foreseeable future; and
- (b) The Company has tax earnings, against which temporary differences can be used.

The Company has estimated that the method that discloses more significant information for the users of its financial statements is the reconciliation of tax expense (income) to the result of multiplying income for accounting purposes by the tax rate in force in Chile. This option is based on the fact that the both SQM entire amount of tax expense (income) and considering that amounts from subsidiaries incorporated in foreign countries have an insignificant amount of tax expense (income).

#### **Note 23 - Income Tax and Deferred Taxes (continued)**

#### 23.4 Income tax and deferred taxes, continued

Tax periods potentially subject to verification:

The Company and its subsidiaries are potentially subject to income tax audits by tax authorities in each country of operations based on the statutory time limits of each country.

Tax audits, due to their nature, are often complex and may require several years for ultimate resolution. A summary of tax periods that are potentially subject to verification, in accordance with tax regulations in force in the country of origin for our primary tax jurisdictions is provided below:

a) Chile

According to article 200 of Decree Law No, 830, the tax authority shall review for any deficiencies in tax settlements and returns, by applying a requirement of 3 years term from the expiration of the legal deadline when payment should have been made. Besides, this requirement was extended to 6 years term for the revision of taxes subject to declaration, when such declaration was not filed or has been presented maliciously false.

b) United States

In the United States, the tax authority may review tax returns for up to 3 years from the expiration date of the tax return, In the event that an omission or error is detected in the tax return of sales or cost of sales, the review can be extended for a period of up to 6 years.

c) Mexico:

In Mexico, the tax authority can review tax returns up to 5 years from the expiration date of the tax return.
